WHEREAS, William Moore and Cebrella L. Moore, of Charlevoix, Michigan, made and delivered a certain mortgage, bearing date the 9th day of October, A. D. 1912, to Charles Hosmer, of Charlevoix, Michigan, to secure payment of the sum of Twelve Hundred Dollars ($1,200) and interest, which said mortgage was duly recorded in the Register of Deeds of the County of Charlevoix, Michigan, on the 9th day of October, A. D. 1912, in liber 4 of mortgages, on page 1 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 2 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charlotte Hosmer, to Charles Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 3 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 4 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charlotte Hosmer, to Charles Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 5 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 6 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charlotte Hosmer, to Charles Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 7 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 8 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 9 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 10 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 11 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 12 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 13 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 14 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 15 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 16 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 17 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 18 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 19 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 20 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 21 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 22 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 23 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 24 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 25 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 26 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 27 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 28 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 29 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 30 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 31 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. D. 1912, and recorded in said Register of Deeds in said County of Charlevoix, in liber 4 of mortgages, on page 32 of said County of Charlevoix, and said mortgage and the notes accompanying said mortgage were duly assigned by said Charles Hosmer, to Charlotte Hosmer, of Detroit, Michigan, by an assignment bearing date the 9th day of October, A. RECLAIMING ABANDONED FARMS

By H. A. C. TAYLOR

THE name "abandoned" or "run-down" farm conjures to the imagination visions of many a dear old homestead with the memories of days gone by, with large room, big fireplace, big kitchen with open fireplace the well of pure water, roof, sides and barns long ago bested but quickly brought back to productive vigor, the barn grown with ivy and woodbine, would be the original timbers as of yore, force corners overgrown to brush and shrubs a general air of sad neglect yet having the appearance of having once been a productive and carefully tended farm.

To others these words call up the name implies—rundown places abandoned by owners who could no longer make them pay, or even furnish enough money to keep them up in repair, places with old, antiquated houses, disused wells, tumbledown barns and unproductive lands.

There are many farms to fit both descriptions, those of the latter description being the kind "abandoned farms while there are many of the former which, while going on, can be brought back.

These old homes have that peculiarly disagreeable smell of aged wood, and if very old will have those fireplaces of antique pattern, entirely unsuited to present-day needs, but perfect distributors of cold.

In most places where these old fireplaces and chimneys exist, it were better far to have pulled down and replaced with chimneys built on approved modern lines, which would be not only safer, more sanitary and more pleasing in appearance, but probably add room to the house to be utilized as a bathroom or washhouse, making a two-fold advantage. These old chimneys harbor rats and mice, and prove delightfully convenient for these coats to travel at will over the entire structure.

I am convinced that the man of moderate means buying a farm would not move on to the place until early in the spring for these reasons. The cost of living through the winter with a comparatively small income, buying vegetables which the land should supply next year, keeping up the payments on insurance, taxes, interest, etc., becomes a serious drain on a small capital, and should be seriously considered.

In my ignorance I thought living on a farm would be cheap, as compared to that of the city, but I found out differently. Some of my neighbors, owing to there being no competition, and no chance to utilize bargains, they's neighbors demand market prices for produce and one pays high prices for all farm stock purchased.

The main question was to obtain a monthly income wherewith to meet expenses through the winter and the thoughts turned to cows. Here again I lost out.

Paying the head of cow for $110, I spent considerable money for expensive feed before I saw any returns at all from the sale of the milk.

One cow was fresh when purchased, two were to calve the following month, the fourth in two months and the fifth in four months, though at that time she was giving about eight quarts of milk per day. As a matter of fact, two were fed two months and ten days before calving, the fourth a heifer, was fed three months and the fifth six months before freshening. The man I bought from gave me a square deal, as far as he could, but he was uncertain of his freshening dates.

The cows were fed liberally, a well-balanced ration, and three months after purchase milk was sold to the town creamery on contract at 32 cents per can of eight and one-half quarts, and as the maximum of milk production was five cans, the profits, if the thrown production could be maintained, was largely mythical.

Had I bought ten or twelve cows as good as those I did buy, my profits would have been more satisfactory, and had I bought cows just fresh even paying $10 more per cow, I should have satisfied my loss.

About fifteen tons of hay had been cut the previous summer, which, being stored in the barn, went with the farm, so that only the concentrated, bran, linseed meal and roots used were paid for in cash. Figuring the feed at the market prices, there was a possible profit on $2 per month per cow during the period of gestation. This is not taking into consideration the cost of the ice during the summer or the labor of caring for cows, so small a herd as five

FARMING FOR TERRAPIN

By A. D. HART

A few years ago, it looked as if the farmer who had a brook terrapin was doomed to extermination. The supply was a rapidly decreasing one and the price was becoming prohibitive. Then the experts of the United States Bureau of fisheries began their investigations, and as a result of a number of years of study and experiments a profitable industry has been saved to the death adder known and dreaded, and supply saved from extinction. This valuable work was done largely at the laboratory of the bureau of fisheries at Beaufort, N. C. It was begun in 1909 with the establishment of a small pound on the shore of an island in the harbor, where 50 adult terrapin were placed.

In building the pond a very favorable location was chosen, including in it the greatest variety of natural environments, including dry sandy ground, always above water, suitable for crawling and laying, grass, ground usually above water, farther down a muddy tidewater marsh, and still farther a sub marine bottom covered with never less than two feet of constantly changing salt water, with the rise and fall of the tide. During the last five years the pound has been enlarged from time to time, to accommodate the ever-increasing family of little terrapin. A house, 25x40x15 feet in size, for use in winter, has also been built, with glass side facing the south. Here many of the young are kept in wooden tanks with sloping bottoms, the water and constantly renewed three inches of water.

These terrapin are fed twice a week, with fish, fresh or salted, while others of the same hatching, are allowed to hibernate in certain sections of the pound, as they would do under natural conditions.

From among the first hatchings of 1909 a few have attained a growth of five inches, measuring along the plastron, or lower shell. These were turned loose during the past summer among the older ones in the spacious breeding ground. From the batch of 1910, 285 young were secured, 420 in 1911, and 860 in 1912.

With the rise of the breeding season of 1913, 1,000 little terrapin were taken from the hatchery. As in former years these have been placed in a series of smaller compartments containing salt water and sand. By protecting the young from rats, mink, and other enemies are saved that, older animals, including the adult terrapin, have been destroyed, being preyed upon, especially during the breeding season, when their shells are soft—by all manner of marsh food, as well as by the human poacher. The bureau of information furnished the bureau of fisheries, authentic data, that brook terrapin hunters—those who make their living from these and kindred occupations and who are always on the lookout for the highly prized terrapin, confirm the statement that it is exceedingly rare to find a diamond back terrapin under two years of age in a wild state. Owing to their determinations during the first and second years, it is fair to assume that a greater percentage are destroyed than survive. In captivity the records of the laboratory show that 95 per cent of the young are saved.

Returns to the season of 1912 all terrapin hatched on the laboratory grounds had been from native stock taken in the immediate vicinity of Beaufort. For experimental purposes during the late summer and fall of 1912, over one hundred adults from widely different sections of the country were added, some coming from the Chesapeake and many large ones from Texas. Among the latter is one female measuring more than eight inches on the lower shell. The addition of this stock accounts for the great increase over former years in the number of young already taken from the hatching box. The methods employed by the government have necessarily been along the slow and tedious road of research, thoroughness and experiment until the life history and habits of the animals have been learned. It then became possible to formulate plans for propagation and cultivation of the species under "moderation."

It's the addition of the new stock, a new variety of terrapin is now in evidence. Whereas the average number of eggs during a season from one female terrapin has been 12, it is now a right thing for terrapin to the government experiment station, to produce 30 eggs at each. It is well known that turtles of all kinds, including the terrapin, are very little cold if forced to do so by being well fed and well cared for, and that the larger the eggs the more chicks are produced. It is found that they often make a second laying, this is especially the case in the Carolinas, where the temperature and the water remain warm much longer than in waters farther north.

It will be recognized that, in a private enterprise of this character, to insure success and permanency, absolute cleanliness is imperative, for it will be seen from the government report that the natural habitat of the terrapin is on the open, tide-swept sure pans and constantly changing salt water with the tide.

Since the completion of these ponds, they have been stocked with 3,200 terrapin. Eleven hundred of these are mature females of laying size and age, the remainder being from two inches to five inches in length. These terrapin have been purchased from time to time, many of them out of season, by special permit from the state authorities for breeding purposes and to encourage propagation. It is interesting to learn that "no young were taken from the hatching box during the past season.

Providing the same policy adopted at the government hatchery, this company allows the old stock to hibernate, when the young are warmly housed and fed. It has been noted at the government ponds that hibernation usually begins about October 20. This, however, is not a hard and fast rule, as many of the older ones are seen during warm days later in the fall, crawling lazily around, even after they have been for a time in their winter quarters.

Another fact in connection with the artificial raising of terrapin is their eating. Whereas the average number of eggs during a season from one female terrapin has been 12, it is now a right thing for terrapin to the government experiment station, to produce 30 eggs at each. It is well known that turtles of all kinds, including the terrapin, are very little cold if forced to do so by being well fed and well cared for, and that the larger the eggs the more chicks are produced. It is found that they often make a second laying, this is especially the case in the Carolinas, where the temperature and the water remain warm much longer than in waters farther north.

It will be recognized that, in a private enterprise of this character, to insure success and permanency, absolute cleanliness is imperative, for it will be seen from the government report that the natural habitat of the terrapin is on the open, tide-swept sure pans and constantly changing salt water with the tide.

Since the completion of these ponds, they have been stocked with 3,200 terrapin. It has been noted at the government ponds that hibernation usually begins about October 20. This, however, is not a hard and fast rule, as many of the older ones are seen

DISEASE WILL FOLLOW WAR

Certain That It Must Be Years Before Travelers Can Tour Europe in Comfort

War's terrors will not be over in Europe with the ceasing of the cannon's roar. A more deadly foe—disease—will stalk the ravaged land after the cessation of hostilities and it behooves the traveler to think of this before planning his trips abroad.

The miles of trenches in northern France and Belgium will be the breeding places of germs. Every battlefield is already a pest region. The graves of thousands of ruined towns in western Europe, unfortunate Poland and Serbia are making hotbeds of germ life. It will take months to purify the water of streams supplying these regions before disease can be stamped out.

The great war hospitals are being equipped to battle with the coming scourge and the staff of all hospitals enlarged with doctors and nurses from every land to fight the conflict that is to follow the dawn of peace.

Typhus and cholera, the two most dreaded of epidemic diseases, it is predicted by eminent sanitarians and bacteriologists, will reign supreme this summer and undoubtedly reach its war zenith in the allied countries. Thirty thousand cases of typhus have already been reported in Servia. In one town alone, it is said, a hundred patients are dying daily of the dread malady. Typhus and cholera cases are present in some communities and more are to be expected with warmer weather.

According to cabled dispatches epidemics are raging in Germany, Turkey and Palestine. Thus there remains but little territory in Europe immune from the threatened danger. The situation and privation that will inevitably follow the war will remain with Europe's health for an indefinite period. Mr. Hamlin, who recently made a tour Europe as he did 12 months ago, without hurting fear of sickness.—Kalkhen Hamlin in Leslie's Weekly.

Trieste in History.

As a business city, Trieste, now looming so large in the public eye, since Italy declared war, is tremendously successful, and therefore large sums of money in public facilities are the best that modern technic can devise, and many millions of dollars have been expended in carrying their undertaking to conclusion. In 1910 nearly 12,000 vessels, representing a total of about 4,200,000 tonnage, entered and cleared at the Trieste harbor. The population numbers 229,475, of whom about 170,000 are of Italian descent. The new part of the city has been built largely upon land reclaimed from the sea, streets are broad and straight and its buildings are substantial and modern in architecture. Ancient (Trieste), the Roman colonia, one of the (castles) was probably established under the reign of Vespasian. After the decay of Rome, Trieste was repeatedly attacked in its course for centuries. It was captured by Venice in 1202. In a fierce struggle with the Venetian conquerors for the sea, it was taken and destroyed, but they placed themselves under the protection of Leopold III of Austria.

Lady French's Canteens

Lady French is at the head of the canteens which are being operated in Belgium for the benefit of the British soldiers. The need for such canteens is caused by the mention factor in the state of all of which probably enlarged with doctors and nurses from every land to fight the conflict that is to follow the dawn of peace.

Typhus and cholera, the two most dreaded of epidemic diseases, it is predicted by eminent sanitarians and bacteriologists, will reign supreme this summer and undoubtedly reach its war zenith in the allied countries. Thirty thousand cases of typhus have already been reported in Servia. In one town alone, it is said, a hundred patients are dying daily of the dread malady. THE SANDMAN IN STORY

By Mrs. F. A. WALKER

CARRIE'S FAITH

Little Nellie sold matches on the streets of a big city where crowds of people passed, and the cars and big trucks ran back and forth, but one day she did not see one of the heavy teams in time to run and the horses knocked her to the pavement and the wheels passed over her poor little legs. A big, kind-hearted policeman lifted her tenderly and carried her in his arms to a hospital that was near.

After the doctor had done all he could to make her comfortable she was put in a nice, clean bed in a room with many other little girls.

The white-capped nurses tried to quiet her sobs and gave her some medicine and soon the pain grew less and Nellie asked, "Were the others run over, too?"

"No," said the nurse, "all the little girls you see in the beds are sick, but not all of them have broken legs. You must go to sleep."

Nellie woke the next morning and saw the little girl in the bed next lookin at her with big brown eyes and a sad white face.

"Good morning," she said to Nellie, "I hope you are better, I'm in pain very bad now."

Nellie told her she was not suffering then, she asked her how long she had been there.

"Oh! I have been here a long time," she replied. "My hip is hurt and I can't be healed up for years. My name is Carrie. What is yours?"

Nellie told her, and said she suffered with the sick hip.

"Does it hurt you very bad," Carrie told her, "and then they give me quieting medicine, but I do not cry if I can help it, because the nurses have so much to do, and then I may get well if I am brave."

That night, when the lights were low and everything was quiet, Nellie heard Carrie call her name very softly and said: "Are you asleep?"

"No," answered Nellie.

"I want to talk to you," said Carrie, "I am so frightened. I heard the doctor and the nurse talking to-night, and the doctor said: 'It must be done to save her life.' It is her only chance.' And the nurse said: 'Poor little girl! Do you think she will pull through?' I am afraid they are trying to take me to the operating room tomorrow. I have had my prayers, but I cannot go to sleep. Do you know anything about Jesus?"

"I have heard mother talking about him once at a mission," said Nellie, "and she said he was coming to ask him to take care of you and he would."

"Do you think he will take care of Carrie, 'but, you see, there are so many in this ward and we all look alike in bed and we are so far from home here he might not know me, and I want him to take my poor little hip and I am so tired of suffering and now I am afraid. What can I do?"

"You can put your head out of bed upon the pillow and then ask him to care for the little girl who lives in a cut of bed?"

"Oh I could," said Carrie. "I will pray now."

After a few minutes she spoke again:

"Good night, Nellie; I have told him!" she said, and then both little girls went to sleep.

In the morning, when the nurse came she found Carrie's hand resting on the pillow. "There was a smile on her face. My prayer has been answered, and she had gone home where she would never feel pain again.

SOAP BUBBLES ARE AMUSING

No Reason Why Youngsters Should Not Make Huge Success Out of Innocent Indoor Pastime.

You can amuse any number of your child friends with soap bubbles, indoors or out, and they will allow you to use an old bankset spread over a table, to make a soft pad. Around this table invite your guests to sit. Each child should have a little bowl of Dutch soap and dentin, and each also should have a pussy clay pipe.

Blow the pipe very gently, you can die the bowls and wind the stems of the pipes with baby ribbon.

The bowls should be filled with a mixture made from boiling shaved castile soap in water. To every pint of this liquid a tablespoonful of glycerin is added. Let the children take turns, blowing from the bowl, making the bubbles grow to an enormous size.

You may offer little prizes for the bubble lasting longest, that which is most full of color, and for the largest one blown.

Group people have often enjoyed such parties, and there is no reason why you youngsters shouldn't make such an affair a great success.

Odd Swimming Device.

ler at the rear end. Running forward is an extension of the tube with the screw wheel that operates the shaft and hand-as for driving it. The "swimmer," or inventor, as he is called, has merely to turn the handles and the engine is started revolving, pushing him through the water at a rapid rate. If he wants to go straight ahead he turns the handles to port, or starboard, or "Paris" I recited the odd ode of the gun deck.

"Your little craft vanished from the gun deck, and I was left to the wolves of the Polaric. Vice-Admiral Insurbia."

And Adele, peerless Adele, wasted into pity, and I thought I was proud of me. I could see, and her faithful eyes, that she was hurt.

"What is it?" sharply challenged his companion officer.

"We have handed off the Seeker and she is making for the protection of the big marine. Set position to give the little one a shot as she passes in range."

"Dulce is a daring little vixen!"

"Yes, and troublesome—a worry to the admiralty, with her quick ways and daring dodging. It will be a feather in our cap to end her. Get her sure, and the admiralty will see to promotions."

The shooter seemed heedless of profit. The downward rocket to dart past us. The big cruiser seemed to be her goal. I moved nearer to the silver gun, unnoticed and envied. An officer handed me his glass. I leaned once and shuddered.

"Direct heaven!" I exclaimed, irreflectively.

"What is that?" sharply asked the officer.

"Nothing, I stammered, and handed back the glass. "Thanks!"

I was given a seat upon the gun deck of the Polaric. I had made out the commander of the Seeker, the vice-admiral, and, fearlessly viewing the outlook of collision or attack was a fine, well seasoned, gray-haired old man, her left shoulder, a favorite adornment of the girl I loved.

Then Adele was with her father! It was now a race; the Seeker getting to the shoulder of the big cruiser before the Polaric could half traverse and get a broadside at her. As the Seeker neared, neared, the Polaric maneuvered. The gunner had his clear pelas, for the Polaric had shut down steam and was nearly motionless. As the gunner watched and waited, I followed the swift course of the Seeker with distended eyes and bated breath.

To save the Seeker come squarely across her bow. The gunner fighting. Then he drew back and his hand broke the electric switch which ignited the cap fuse. Adelt the cooked and fixed focus of the glass smiting with the progress of the Seeker. It was the hand of a seasoned gunner, and he knew his mark.

My love! I had but an instant to see the Seeker, to slip through a curve echoed in my ears as the gunner, torn from the electric switch, went full on top of him.

Then rapid orders rang out. The Polaric started to get her near side of the scudding runaway.

They were all right ready when a startling, a remarkable thing transpired. The Seeker made straight for the bow of the big cruiser. Two main mouth sheet steel doors swung open. In the arms of the cruiser turned to Seeker. The giant gates reclosed, leaving the Seeker out of view, secure in the safety well of the mother ship.

I was landed two hours later. The officers of the Polaric viewed me grimly, and I was called to consultation with the gunner. They did not voice their suspicions however.

Was not until after I had been my drug consignment safe in the hands for which it was intended, the enemy sling before my marriage to Adele, a month later at Paris I recited the odd

"Your little craft vanished from the gun deck, and I was left to the chill clasped by the protecting arms of a cruiser." I told Vice-Admiral Insurbia.

And Adele, peerless Adele, wasted into pity, and I thought I was proud of me. I could see, and her faithful eyes, that she was hurt.

"What is it?" sharply challenged his companion officer.

"We have handed off the Seeker and she is making for the protection of the big marine. Set position to give the little one a shot as she passes in range."

"Dulce is a daring little vixen!"

"Yes, and troublesome—a worry to the admiralty, with her quick ways and daring dodging. It will be a feather in our cap to end her. Get her sure, and the admiralty will see to promotions."

The shooter seemed heedless of profit. The downward rocket to dart past us. The big cruiser seemed to be her goal. I moved nearer to the silver gun, unnoticed and envied. An officer handed me his glass. I leaned once and shuddered.

"Direct heaven!" I exclaimed, irreflectively.

"What is that?" sharply asked the officer.

"Nothing, I stammered, and handed back the glass. "Thanks!"

I was given a seat upon the gun deck of the Polaric. I had made out the commander of the Seeker, the vice-admiral, and, fearlessly viewing the outlook of collision or attack was a fine, well seasoned, gray-haired old man, her left shoulder, a favorite adornment of the girl I loved.

Then Adele was with her father! It was now a race; the Seeker getting to the shoulder of the big cruiser before the Polaric could half traverse and get a broadside at her. As the Seeker neared, neared, the Polaric maneuvered. The gunner had his clear pelas, for the Polaric had shut down steam and was nearly motionless. As the gunner watched and waited, I followed the swift course of the Seeker with distended eyes and bated breath.

To save the Seeker come squarely across her bow. The gunner fighting. Then he drew back and his hand broke the electric switch which ignited the cap fuse. Adelt the cooked and fixed focus of the glass smiting with the progress of the Seeker. It was the hand of a seasoned gunner, and he knew his mark.

My love! I had but an instant to see the Seeker, to slip through a curve echoed in my ears as the gunner, torn from the electric switch, went full on top of him.

Then rapid orders rang out. The Polaric started to get her near side of the scudding runaway.

They were all right ready when a startling, a remarkable thing transpired. The Seeker made straight for the bow of the big cruiser. Two main mouth sheet steel doors swung open. In the arms of the cruiser turned to Seeker. The giant gates reclosed, leaving the Seeker out of view, secure in the safety well of the mother ship.

I was landed two hours later. The officers of the Polaric viewed me grimly, and I was called to consultation with the gunner. They did not voice their suspicions however.

Was not until after I had been my drug consignment safe in the hands for which it was intended, the enemy sling before my marriage to Adele, a month later at Paris I recited the odd

"Your little craft vanished from the gun deck, and I was left to the chill clasped by the protecting arms of a cruiser." I told Vice-Admiral Insurbia.

And Adele, peerless Adele, wasted into pity, and I thought I was proud of me. I could see, and her faithful eyes, that she was hurt.

"Your little craft vanished beyond those stout metal gates like a child clasped by the protecting arms of a mother." Adele quoted softly.

And Adele, peerless Adele, wasted into pity, and I thought I was proud of me. I could see, and her faithful eyes, that she was hurt. Tell me that he believed me worthy of her.

Quarantined.

In one of the little mountain towns of the state a contagious disease was held last summer for the first time. The fact was advertised for the benefit of people living in the adjoining counties, especially did not understand what it was all about. Across the front of the little hotel of the village was flung a banner bearing the words "Quarantined." Up to this hotel one day drove an old negro in a spacious wagon, continuing a few vegetables, which he hoped to sell to the proprietor, but he was met by a former occasion. But when he saw the banner with its ominous word he was seized with a trembling and began to go into the machine, or even get out of the wagon. When the proprietor appeared, the old fellow hesitatingly asked, "What disease this, sah? Typhoid fever, boss?"—Youth's Companion.

When Spot Played Cupid.

I was acquainted with a sweet young woman who married a dentist her occasionally for about two years. Among her late husband's possessions left to her was a small fox terrier, a great pet of mine. While calling one evening the one day Spot jumped on my knee and tried to lick my face.

"Mat, don't let him lick your face," said she called the dog, who quickly jumped on her lap. "Pattiss the dog, she said to it." "Think Mel is as fond of you as I am. Ask him would he like to own you himself. But he must never take you from me—I must go wherever you go."

I called the dog back to me and said: "Pattiss, tell your mamia I want to own you." I own both now. God bless the dog! I never had the nerve to propose.—Chicago Tribune.

What is a MS. Worth?

What is the value of a stolen manuscript of an unpublished play? The author had to set a value in a lawsuit last week, which was decided naturally in favor of the play. But once its search for a lost umbrella will estimate there of manuscript potatoes, half a cupful of butter, salt, pepper and a cupful of milk. Mix all together, put into a buttered baking dish and bake for thirty-quarters of an hour in a moderate oven. Serve hot.

The hottest battle does over was fought.

Bad I will you where and when?

On the maps of the world you will find it not.

It was fought by the mothers of men.

DAINTY SEASONABLE DISHES.

When one wishes to serve a fruit cocktail a little unusual in combination with the usual ingredients, a French potato ball, made from the edible portion of watermelon or a mixture of musk, honeydew and cantaloupe could be used if so desired. Cut out these melon balls a sauce of orange juice or other combinations of juices which will or may be used in the cocktail cups. This is an especially attractive dish for a luncheon or a supper. Take of Course the melon should be well chilled. It is best to cut the balls ice after preparing them and serve well chilled.

Lemon Heart.—This sounds out of season, but is perfectly allowable by the calendar in three weeks time and wash well, slice in uniform sized slices. Place in a pan with a piece of bacon to a crisp brown, take out the bacon and add a small sliced onion, fry the onion and add a little flight yellow add the heart slices and fry to a rich brown, then add a cupful and lay in the browned meat, add to the fat in the pan a cupful of soup stock and a tablespoonful of flour, add a bay leaf, a clove of garlic and a teaspoonful of salt, cook covered for two hours. Five minutes before serving add the bacon. Serve with new potatoes and spinach.

Spanish Pepper Pot.—Scrub and boil six pounds of honeycomb tripe, cook in two waters until nearly tender. Add to the tripe water a small knuckle of veal, a piece of chill pepper (red hot), three whole cloves, two bay leaves, a pinch of marjoram and sage, salt, pepper and a clove of garlic ground to a paste. While this is cooking, boil dried lima beans until tender, drain and add to the tripe. Thicken the gravy and pour over all. Fried Eggplant—Cut peeled eggplant into one-fourth-inch slices. Press to remove some of the juice by placing the slices under a weight. Dust with salt and pepper and dip in a thin fritter batter, then fry a gold en brown in hot fat.

SWEET CORN DISHES.

The dish which is said to have originated with the Indians and is called succotash is made in good enough for any table. Put seven ears of sweet corn in a boiling pan or butter in butter, and add a quart of boiling water and simmer for half an hour, adding a stalk dipped in cold water to prevent the husks from burning. Cut the corn and add a little cream and butter and season with salt and pepper and dip in a thin fritter batter, then fry a gold en brown in hot fat.

Hulled Corn.—Take three-fourths of a cupful of pegged corn a tablespoonful of soft water, the white of one egg and a third of a cupful of sugar, a dash of salt and a half teaspoonful of vanilla. Shake and chopped nut meats and candied cherries. Add the white of the corn, beat the egg and add the sugar, combine the mixture and add salt and vanilla. Drop on waxed paper and shape in a flat cake, using a knife dipped in cold water to prevent the mixture from sticking and cherries and nuts in a slow oven until brown.

Egg Biscuit.—Sift together one quart of flour and two teaspoonfuls of baking powder. Rub into this two tablespoonfuls of butter. Add two well beaten eggs, one teaspoonful of sugar and a teaspoonful of salt. Mix together with a cupful of milk, roll and cut into biscuits and bake in a cold oven 20 minutes.

Graham Health Bread.—Dissolve a yeast cake in half a cupful of water with one teaspoonful of sugar. Add a tablespoonful of graham and two of white flour, a teaspoonful of salt, two tablespoonfuls of olive oil, one-half cupful of New Orleans molasses, one half cupful of large currants and floured and one quart of lukewarm water. Mix and beat hard with a spoon for three minutes, then keep in a warm place over night. Grease three bread tins and fill with the sponge, again put to rise in a warm place and when risen bake 45 minutes in a moderate oven.

The KITCHEN CABINET

Our whole life is a story more or less fairy-like, according to how we will read it by a coarser light when it is ended.—Dickens.

SEASONABLE FOODS.

A most delightful luncheon dish which may be used as a dessert or as a relish is this. Hollow out six sponge cakes or cup cakes and mix with the crumbs a few broken nuts, whipped cream, sweetened and flavored, a pinch of salt and eight chopped maraschino cherries with a tablespoonful of the cordial. Fill the cakes and garnish the top with whipped cream and a cherry. Place on glass plates with a paper doily under the base.

Chicken and Eggplant.—Take three cupfuls of stock and three small egg plants, a half cupful of cooked chicken and a half cupful of bread crumbs, one egg, two tablespoonfuls of butter, one tablespoonful of flour, two tablespoonfuls of orange juice and one of lemon juice, a little grated onion and salt and pepper. Cover the eggplant with boiling water and cook, covered, 20 minutes. Cut in two and scoop out the inside, leaving the shell thick enough to hold its shape. Cook the onions in one-half cupful of stock and the chicken, chopped fine, one tablespoonful of butter, a beaten egg and seasoning. Fill the shells and bake 40 minutes, basting with stock and orange juice. Melt the remaining butter, add flour and brown, when smooth add the stock. Stir until thick and serve highly seasoned with the egg plant.

Chicken au Gratin.—Take a cupful of cold cooked chicken, one-half cupful of grated cheese, four tablespoonfuls of cooked rice, one cupful of tomato sauce, bread crumbs, salt and pepper. Cut the chicken into small pieces, butter a baking dish, place a layer of chicken at the bottom, then a layer of cooked rice. Pour some tomato sauce over this, sprinkle with bread crumbs, grated cheese and salt and pepper. Repeat this until the dish is full, having the last layer of bread crumbs. Place in a hot oven to brown.

Celeanon.—Take six cupfuls of cold cooked rice, three of mashed potatoes, half a cupful of butter, salt, pepper and a cupful of milk. Mix all together, put into a buttered baking dish and bake for thirty-quarters of an hour in a moderate oven. Serve hot.

Ever Eat "Pond Fowl?"

Since we have become so closely allied with our Canadian cousins we seem to have learned a good deal from so many John's about "Frog eaters," or the French Canadian brethren, who have been fighting so strenuously in Flanders, the Dardanelles, Egypt, Africa, and should the French ever offer them this delicacy they will find that our Canadians will gobble them up with no small relish. The taste for frogs legs is left familiar to our French Canadian, but has been acquired by English Canadians, and even by Scotch Canadians, who, as a rule, are more conservative in regard to food. In Canada, however, frogs are not always plainly styled "Frogs" on the menu card. The culpionous name for the delicacy in many dining halls is "Pond Fowl."

Some Fighters.

"Women oughtin' to have the vote when they can't fight."

"Why, what's the matter with them? Haven't they ever seen them come up to the scratch?"

"Yes, I've seen them come up to the scratch with a rolling pin, and I've seen them come up to the scratch with a flat iron, and I've seen them come up to the scratch with a mop, and I've seen them come up to the scratch with a pair of scissors, and I've seen them come up to the scratch with a pair of tongs, and I've seen them come up to the scratch with a dish pan, and I've seen them come up to the scratch with a dish mop, and I've seen them come up to the scratch with a pair of bellows, and I've seen them come up to the scratch with a pair of shoes, and I've seen them come up to the scratch with a pair of stockings, and I've seen them come up to the scratch with a pair of suspenders."—Puck.

Mexican boy—say in Spanish: Dient, Mr. Bull, now is the time to sun.

The boy was right and the bitter did it. The boy ever got more joy and enrichement of the flesh of a bull than that boy did out of that bunt."—The Outlook.

System.

"Dasher belongs to a great many lodges, doesn't he?"

"Yes, indeed! he has to use a card index system to keep track of the passwords."—Puck.

Children Cry For Fletcher's CASTORIA

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhœa. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS Bears the Signature of Chas. H. Fletcher.

In Use For Over 30 Years

The Kind You Have Always Bought

THE CENTAUR COMPANY, NEW YORK CITY.

Exact Copy of Wrapper.

INDIVIDUALITY AS A FACTOR

Impossible to Separate What Is, and Must Be, the Part of Man's Own Being.

Any attempt to define the ultimate spirit of the individual seems doomed to fail.

There is a saying of Bishop Butler's which might well be recommended to the philosopher: "Everything is what it is, and not another thing."

So individuality is simply individuality: and the attempt to discover some further meaning for the word can only lead to error.

We might be tempted, for instance, to suggest that a man's true ego is nothing more than his character.

But individuality goes deeper even than character.

Character changes; the individual remains the same.

Thus a man who in his youth is honest may, meet with temptations that make him a thief; so, too, the sentimentalist may become a cynic.

The changing character is no more than a manifestation of the individuality unchanged.

HAIR OR NO HAIR?

It Is Certainly Up to You and Cuticura. Trial Free.

Hot shampoos with Cuticura Soap, followed by light dressings of Cuticura Ointment, rubbed into the scalp, will tend to clear the scalp of dandruff, soothe itching and irritation and promote healthy hair growing conditions. Nothing better, cleanser, purer. Sample each free by mail with Book. Address postcard, Cuticura, Dept. XY, Boston. Sold everywhere.—Adv.

No Place for That Boy.

"Joseph," said the grocer to his new boy, "what have you been doing in the back room so long?"

"Flickin' the dead flies out of the currants, sir!" Joseph answered proudly.

"The grocer's lip curled. "Do thats what you were doing, is it, Joseph?" he said. "And your father told me that he knew you would be a help in the grocery trade. Well, Joseph, you'd better apply for the ministry."—London Opinion.

Luck.

"Of course, said Noah, "this deluge is going to be attended with a lot of inconvenience and discomfort, but there is one thing about the business that may be regarded as very lucky."

"What's that?" asked Japhet.

"Submarines haven't been invented yet."

A Suggestion.

Mrs. Scrapper—I talked to you till I'm worn to a wrastle.

Scrapp—Why not shut up for repairs?

Drink Denison's Coffee. For your health's sake.

Starting Trouble.

"My husband says he has an idea—"Your husband is always boasting."—Houston Post.

Landlord Likes Chess Players.

"Is he a chess player?" a landlord asked a prospective tenant. "I much prefer to have my house occupied by chess players."

"No, I am not a chess player and I can't account for such a singular preference," replied the would-be tenant.

"It is simple enough," said the landlord. "Chess players move so seldom that they make great deliberation."—New York Globe.

WITH BARNS FULL OF STOCK

Didn't Look Much Like Hard Times in Western Canada.

"Last year I had 1,000 head of stock on my farm in Western Canada, and I carried my stock through the winter without any feed except what they could get for themselves. Hard times! Why, I didn't know what they were. I made a big profit on my stock and I had more than I could handle on my farm

WOULD TEMPT THE EPICURE

No Modern Dish Can Be Accounted Superior to the Squirrel Stew of the Early Days.

Young squirrel, new potatoes and lime peas stewed together in an iron pot, over a hickory wood fire. As Harry Lauder says, "Ye canna beat it."

In the early days it was a prime favorite in Kentucky, and the pioneers of Missouri brought a yearning for it with them when they came overland from the lime-Green state and settled along the rivers and creeks in Missouri.

There were plenty of squirrels in the woods of Missouri in those days, and in the middle of June, when new potatoes were about the size of walnuts, and early peas were big enough in the shell, the old man, or the big great boy of the family, would lift the long-barreled squirrel rifle and powder horn down from the pegs over the fireplace and go out after a "mess" of young squirrels. At that time in June they were just large enough to dress well.

A hunter who would shoot a squirrel anywhere except through the head was accounted a mighty poor shot. And it had to be shot in the head or not at all, for a squirrel is a wary animal. As the hunter crept around one side of the tree the squirrel goes around the other side, keeping the tree between him and the enemy, but occasionally he hops out to see what is going on, and that is the hunter's chance.

Half a dozen squirrels in enough for a mess. While the head of the family is dressing them the womenfolk are preparing a half peck of new potatoes and rubbing off the tender red skins, and shelling a quart or two of new peas. Squirrel, potatoes and peas are put into the pot together.

It must be an iron pot. Any old settler will tell you that there is a flavor and a tang to "stews" stewed in an iron pot that modern pots and pans never impart. The ingredients must be allowed to simmer, not to boil briskly, but slow gently over a slow fire until the whole mass is thoroughly disintegrated. Then it is dished out and eaten with piping hot biscuits, a chunk of corn pone, dipped into the juicy stew, and washed down with it, improves it.

Anyone who has eaten of this dish will tell you that in all the range of cookery there is nothing quite so good.

The tender young squirrel meat has fallen away from the bones, the new potatoes have melted, the peas have imparted to the whole a faint green tint, and all have blended together in a savory mess redolent of corn buds and lime blossoms.

The Growing Age.

According to Dr. Lindsay Wyneoom boys and girls between ten and sixteen years of age need a great deal of sleep. Laniman, he declares, is an indication that they are growing. Poor marks in school, he avers, are not so much primary parents are wont to believe.

Terrorized.

"Does your former husband ever get behind in his alimony?" "Not a. He have threatened to no here to him in stanty if he does."—Boston Transcript.

A very uncommon freak of nature has taken been observed on the north side of Little Traverse Bay, in the shape of a snow white crow, which mingles with a flock that makes its home on and about the Thomas Kneale farm. It all white except a spot on its tail and breast, and furnishes a strange contrast to its companions. There is no doubt about its existance whatever, as it has been seen several times by trainmen on the Cadillac Handle company's road, which runs through the north part of the county, and also by John C. Wright.

WANTED—A maid of refinement to wait at in the care of a 7-year-old girl. Some sewing required.

TOOM ANNER 5. THE IDO.

DAY AND NIGHT AUTO RACING AT WEST MICHIGAN FAIR.

Night automobile races will be seen for the first time in this part of the country Friday and Saturday, Sept. 24 and 25 at the West Michigan State Fair track. Many noted drivers will participate, among whom are Wild Bill Endicott, of Indianapolis Speedway fame, Arthur Klein, America's youngest racing star, Captain Harvey Kennedy, with his Edwards Special, which led Darius Resta for almost 60 laps of the last Grand Prix race, run at the San Francisco exposition, and several others. Eddie Hickenbacher's famous record-holding Maxwell will also participate.

Night racing proved such a success in New York City July 5th and 10th that a third meeting will be run, after which the cars will start on their journey to Grand Rapids. Races will also be run at the Panama-Pacific International Exposition, from October 20th to November 4th.

Klein's mile in 49-4-5 seconds made at Brigeton Beach on the night of July 5th, proves that night racing has been made as fast as day racing. There will be amateur and night events at the West Michigan State Fair. Eight events will make up each separate program.

Among the events arranged will be a long-distance motor derby. This will be for a purse of $1,500 divided into three prizes, while a total of $3,000 in prizes will be given for the entire night performance, with $2,000 posted for the afternoon events, making $5,000 in all. With this program it is hoped that most of the cars which competed at Brighton Beach will be entered at Grand Rapids.

SPECIAL NOTICE.

Dr. Thos. Cummings, of Henderson, Ky., will preach in the Methodist church Sunday morning. Dr. Cummings is pastor of the First Presbyterian church. He is an elegant speaker. Mrs. Goetz, of Indianapolis, will sing. A special invitation is extended to all.

FORD STARTERS $10.00.

J. McCreery, Charlevoix, Mich.

Petoskey News: D. C. Chilcote, clarinet player for the band of the celebrated "Tom's Cabin" company, which gave two performances here Wednesday disappeared shortly after the matinee performance late Wednesday afternoon and has not been seen or heard from since. The man has been suffering for some time from nervousness and was in a very weak condition at the close of the afternoon show. He is said to have little or no chance for recovery and that he has offtimes said that some day he would make away with himself. He was a man of about twenty-six years of age, about five feet seven inches high and weighed about a hundred and thirty pounds. When last seen he wore a straw hat, serge suit, tan shoes with cloth tops, had on a gray sweater with a red border and wore glasses. Marshal Crawford and the police of the city as well as a number of the fire fighters, members of the show company and others searched until early Thursday morning but could find no trace of him. Marshal Crawford holds the theory that the man has drowned himself either by leaping off the dock or breakwater. The bloodhound which was put on the trail is said to have followed the scent to the shore end of the wharf. Evidence that Chilcote had planned to do away with himself or at least disappear were found in the dressing rooms of the Temple Theatre.

First publication Aug. 19

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office, in the City of Charlevoix, in said County, on the 12th day of August, A. D. 1915.

Present, Hon. Nathan Kesler, Judge of Probate.

In the matter of the estate of Jacob Vanden, deceased.

William J. Gallagher having filed in said court his petition praying that administration of said estate be granted to Joseph Gallagher or some other suitable person.

It is ordered that the 6th day of September, A. D. 1915, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for hearing said petition, and that all persons interested in said estate appear before said court at said time and place, to show cause why a license to sell the interest of said estate to said real estate should not be granted.

It is further ordered that said petitioner give notice to the persons interested in said estate of the pendency of said petition, and the hearing thereof, by causing a copy of this order to be published in the Charlevoix County Sentinel, a newspaper printed and circulated in said county.

NATHAN KESLER, Judge of Probate.

SIDNEY C. A. CORRELL, Judge of Probate.

THERE is absolutely no danger of a kick in using the New Ford Starter. See J. McCreery, at Hoss' Drug Store.

A MEDICINE CHEST FOR 25c.

In this chest you have an excellent remedy for Toothache, Bruises, sprains, Stiff Necks, Backache, Neuralgia, Rheumatism and for most emergencies. One 25c bottle of Sloan's Liniment does it all—this because these ailments are symptoms, not diseases, and are caused by congestion and inflammation. If you doubt, ask those who use Sloan's Liniment, or better still, buy a 25c bottle and prove it. All Druggists.

COMING BACK TO CHARLEVOIX, MICH.

UNITED DOCTORS SPECIALIST WILL AGAIN BE AT THE HOTEL CHARLEVOIX MONDAY, SEPT. 6, 1915. ONE DAY ONLY.

Hours: 10 A.M. to 5 P.M.

Remarkable Success of These Talented Physicians in the Treatment of Chronic Diseases—Offer Their Services Free of Charge

The United Doctors, licensed by the State of Michigan for the treatment of deformities and nervous and chronic diseases of men, women and children, offer to all who call on this trip, consultation, examination, advice free, making no charge whatever, except the actual cost of treatment. All that is asked in return for these valuable services is that every person treated will state the result obtained to their friends and thus prove to the sick and afflicted in every city and locality, that all last treatments have been discovered that are reasonably sure and certain in their effect.

These doctors are among America's leading stomach and nerve specialists and are experts in the treatment of chronic diseases and so great and wonderful have been their results that in many cases it is hard to find the dividing line between skill and miracle.

Diseases of the stomach, intestines, liver, blood, skin, nerves, heart, spleen, kidneys or bladder, rheumatism, sciatica, diabetes, bed-wetting, tape worm, leg ulcers, weak lungs and those afflicted with long-standing, deep seated, chronic diseases, that have baffled the skill of the family physicians, should not fail to call. Deformities often has been cured in sixty days.

According to their system no more operations for appendicitis, gall stones, tumors, goiter, piles, etc., as these diseases are treated without operation or hypodermic injection.

They were among the first in America to earn the name of "Bloodless Surgeons," by doing away with the knife with blood and with all pain in the successful treatment of those dangerous diseases.

If you have kidney or bladder trouble being a two ounce bottle of your urine for chemical analysis and microscopic examination.

No matter what your ailment may be, no matter what others may have told you, no matter what experience you may have had with other physicians, it will be to your advantage to see them at once. Have it forever settled in your mind. If your case is incurable they will give you such advice as may relieve and stay the disease. Do not put off this duty you owe yourself or friends or relatives who are suffering because of your sickness, as a visit at this time may help you.

Wives and old run-down men or women, no matter what your ailment, consult them. It costs you nothing.

Remember, this last free offer is for this visit only.

Married ladies come with their husbands and minors with their parents. adv.

P. M. "No Respector of Persons."

WORMS CAUSE MANY CHILDREN'S ILLS.

Worms, by thousands, rob the child of nourishment, stunt its growth, cause Constipation, Indigestion, Nervousness, Irregular Appetite, Fever and sometimes Spasms. Kickapoo Worm Killer gives relief from all these. One-fourth to one or three pleasant candy lozenges, taken as directed, kill and remove the Worms, regulate your child's bowels and restore its health and vitality. Get an original 50c box from your Druggist. Don't endanger your child's health and future. When an sure and simple a remedy can be had.

Foolish Pessimism.

There are so many of us who are inclined to look on the darkest side of things. It is rather hard to say that the majority of persons are pessimists, but it certainly seems to be true. Perhaps they do not really outnumber the optimists, but they talk so much of how hard luck is and worry so constantly that they make a far wider impression than the cheerfulists who go along the bright, sunny side, confident that the morrow will be just as bright as the present.

Local and Personal Notes

NEW ADVERTISEMENTS

J. L. Crane
M. A. Levinson & Co.
A. E. Mason Dept. Store.
C. Danto & Son
S. M. Sou & Sons

Dr. Will Lewis, of Luther, Mich. was here over Sunday.

Mrs. Church and daughter, of Chicago, are visiting Mr. and Mrs. A. M. Dulberg.

The Charlevoix Masonic fair automobile was won by a Petoskey lady. Just our luck!

Forrest Kane, who has an excellent position in Pontiac, is home on a visit of a week or more.

Attention Sisters: The W. R. C. meet again Sept. 2nd. Don't forget there are to have a pot-luck supper.

Raymond, the youngest son of Frank Pearl, of this city, a soldier in the U. S. army at Brownsville, Texas, was killed by a Mexican bullet on the 10th inst. said

The steamer City of Boyne ran an excursion to Boyne City Friday evening on the occasion of the republican banquet, leaving here at seven o'clock sharp.

The steamboat Pierce, the founder of which was announced last week, was found last Thursday high and dry on the west side of North Fox Island, and is a total wreck.

Mr. and Mrs. A. Loenberg, of Detroit, are visiting relatives and friends here. Mrs. Loenberg will be remembered as Miss Tillie Cohen, formerly a popular Charlevoix girl.

The resort business has been so unsatisfactory this season that the G. R. & I. railroad management have already pulled off an train each way daily from their regular schedule.

Miss Kists, who arrived here one day last week in a touring car from Terre Haute, is stopping from her car in front of the Hotel Michigan, broke her leg. Dr. Wilkinson reports her doing well.

General Manager Schlegell, of the Michigan Telephone Co., chose Charlevoix for his summer vacation sojourn. Other officials of the same company have been here for some time arranging for needed improvements.

Probate Judge E. R. Harris of Antrim county has been named by Governor Ferris as one of the delegates to the Panama-Pacific exposition, which goes to be held in San Francisco September 13th to 20th.

Mrs. George Emrey (nee Anna Gilbraith,) is here with her mother for a visit. George is in a Grand Rapids hospital nursing a broken leg that he dragged down from Alaska nearly a year ago, which failed to knit properly.

Miss Helen Mary Meech, daughter of Mr. and Mrs. Arthur Meech of East Jordan, and great granddaughter of Mr. and Mrs. F. J. Meech, of this city, left this week for Asheville, N. C., on account of pronounced development of tubercular symptoms.

The auxiliary schooner Mary Ethel cleared from this port Wednesday with fifty members of the Torch Lake V. M. C. A. camp, for the Soo and intermediate points. They stop and camp wherever night overtakes them, and were the jollest lot of lads you could wish to see.

Oats are being harvested all over Michigan. The heavy early rains of August kept the farmers of the south part of the state from carrying on this work at the usual time, and now Northern Michigan is as far along with this work as is the south part. Oats is a fine crop this year and the price is reported good. Farmers stand to make a little money from their oats crop this year.

Last Wednesday evening Mr. and Mrs. W. H. Miller gave a dinner and reception in honor of their son and daughter-in-law, Mr. and Mrs. Leon Miller, of Petoskey, it being the first anniversary of their marriage. It was a "cotton" wedding, and the house decorations were suggestive of southern plantation days. Only immediate friends of the family were present, but the gathering was a goodly one in numbers and good will.

This year of all others, the man who has a silo will find he has a great money maker. The prospects are that much of the corn will not ripen. A large acreage has been replanted. This replanted corn is just getting a start, but will not have a chance of getting ripe this year because the fields are so wet from the recent rains that it is impossible to cultivate sufficiently. So much of the corn crop cannot mature even with a late fall that the price of corn will undoubtedly be high. The only way for farmers, stockmen and dairymen to feed their cattle economically and successfully this coming winter is by having plenty of silo room to take care of this immature corn crop.

Mrs. Charles Jones, formerly of this city, now residing in Detroit, is here visiting friends.

Edward Hirsh and family, of Akron, Ohio, are occupying John Cook's residence on Mason street.

Clare Coulter, of this city, is traveling in the west for the Quaker Oats Co., and making good.

Anthony McCafferty, of Escanaba, was here the first of the week visiting his brother, Capt. F. McCafferty.

It is positively settled that both Michigan Senators will attend the republican banquet at Boyne City Friday night.

Hervoy Campbell was ordered to the Soo one day last week to join the steamer Sinaloa, of which he is chief engineer.

The steamer Hum was laid up Saturday, Sunday and Monday by a broken crank. Sears' motor boat Harry L. took her place.

County Clerk Lewis has received his blank hunter's licenses. Every hunter for anything in the game line, whether he be resident or non-resident, must get a license.

Able Moore was the winner of the skating contest at the rink on Saturday night. After the race Moore gave an exhibition of fancy skating. Large crowds were present all three nights.

The postmaster and, in fact, the whole dogwood postoffice crew, were made happy Thursday morning by the arrival of a big, husky boy at the home of the postmaster. Grandpa and Grandma Weaver are equally joyous.

A large number of steel-head trout are being caught in Pine Lake and South Arm by reacrters. On Monday one was caught near Monroe Creek that tipped the scales at seven pounds. It was caught with an ordinary casting rod, and put up a great fight.

A law now in effect in Michigan exempts from taxation, for five years out over and wild lands in tracts of eighty acres or less, purchased for home purposes, on which the owner actually lives and improves at least two acres each year for five years.

Mrs. Milo Eaton, a pioneer resident of this city, who has been for some time visiting her daughters in the west, died suddenly of acute stomach trouble, at the summer home of her daughter, Mrs. Clara M. Law, at Santa Monica, Cal., on Friday, August 20th, 1915. Interment was at Riverside, Cal., the home of Mrs. Law.

The Baptist are to run two big excursions this week on the steamer City of Boyne, to Boyne City. The first, on Thursday night, by the Baptist Young People's Union. Boat leaves Wilbur dock at 8 o'clock p. m. The second excursion will be run Friday night, leaving Wilbur dock at 7 p. m. Stops will be made each evening at Belvedere and Ion docks. Good music on both trips. The boat will arrive at Boyne City in time for all to hear Senator Rose ("our future president") speak. Round trip on either Thursday or Friday night, only 25 cents.

Last Tuesday the laws passed by the last legislature became effective. Among the new enactments are several calculated to make the liquor laws of the state more effective. One will make the shipment of booze into dry territory a little more difficult by placing greater restrictions around the transportation, which makes it obligatory on the transportation companies' representatives as well as the seller and the consumer to make certain affidavits that the booze may lessicon about signing and swearing to, for the penalty for perjury is severe and should be a deterrent.

Two automobile camping outfits passed through this city going north last Sunday. One of them, which we had the pleasure of inspecting, had on board the owner, his wife and two young daughters. The outfit embraced a tent, big roll of blankets, box of cooking utensils, etc. They camp wherever night overtakes them, usually selecting a grove near a spring or stream. They buy milk and eggs of the farmers, and thoroughly enjoy the gypsy life, although they are able to stop at hotels. There have been several of these parties passed through here this season. To one mind it is an ideal way of spending a vacation.

The big barbecue that was pulled off by the Ellsworth business men at that place last Wednesday was far and away the most successful event of the kind ever held in this part of the state. There were fully two thousand visitors present and all were satisfied. The program was more than carried out, for while they advertised one ball game they gave the people two—Central Lake vs. Ellsworth, in which Ellsworth won, and the Merchants vs. Farmers, in which the merchants were successful. The addresses were fine and everybody had their fill of roast ox. The Ellsworth business men are to be congratulated on this successful event.

AS TO THE MAKING OF PINS

Process Is An Intricate and Interesting One, All Conducted by Machinery.

To make a pin is an intricate process, but it is all done by machinery. A spool of brass wire running on steel posts is fed into jaws which bite off the length of the pin. A small length is left to make the head, which is formed by three rapid blows of a hammer which moves forward one-twentieth of an inch at each blow. The pin then drops to an incline in which are grooves deep enough to admit the shank, but not the head. As the pin moves down its point comes in contact with a cylinder with a file-like surface, which causes the pin to turn around so that it is sharpened on all sides.

It next drops into a receptable where a layer of tissue is placed, and then a layer of finely ground tin until the pan is filled. Heat and a chemical solution coat the pins with tin. They are then polished in a barrel revolving rapidly. They are placed in the papers by a machine, which seizes the paper and crimps it into divisions as wide as the length of the pins.

The bottom of the box is made of square steel bars, which allow the shanks but not the heads of the pins to pass through. The bars are in motion, thus shaking down the pins until a row is formed, when they are clamped in place by the bars. A fold of paper is pushed up against them and pressed into place. This is repeated until the paper is full, when another takes its place. It all sounds intricate, but being done by machinery it is rapid and cheap, else we could not have the billions of pins that we waste.—Exchange.

Kid Glove Making in France.

The superiority of French kid gloves over all others is due above all to the perfection of the skins, the kids being reared in villages by peasants who own only a few goats and, therefore, take great care of them. Another reason is that in France one workman takes the prepared skin and manipulates it himself right up to the finished glove.—Newark News.

AN ARGUMENT WITHOUT PREMISES

Washington is again confronted with German "frightfulness" in the sinking without warning of the steamship Arabic, westward bound, and the drowning of two American citizens. Coming so soon after the president's warning that further acts of this nature would be considered "unfriendly," relations between the two governments are strained to the breaking point.

In Germany's answer to the president's notes the Kaiser's government has dwelt with remarkable emphasis upon the American export to the enemic allies of arms and munitions—a right guaranteed by international law.

Up to the great war, there had not been a battlefield of any importance in 30 years across which German-made or Austrian-made rifles did not hurl their bullets—which, too, probably came from the same source. The British in South Africa faced German-made bullets after the Boer supply of Kynoch ammunition ran out, and this ammunition came from Germany, bearing on its base the cabalistic D W M, and was sold to the Boer agents, and smuggled into South Africa months after the war started.

The Russians fired Krupp-made field guns at the Japanese in the war in Manchuria, and the ammunition for both the field guns and for the rifles came from Germany. Half the bullets hissing across the stricken fields of Mexico in the past four or five years of tribulation have been German bullets. The rifles of the regulars and Diaz came from Germany, or from Belgium under German patents.

The nations of the world use as their instruments of slaughter German or Austrian rifles and ammunition almost without exception. Consider the list, then smile at the indictment of America's course coming from Teutonic sources.

The Kaiser's ambition to be Emperor of the World breaks no opposition in the form of international law or solemn treaties; they are but "scraps of paper." The baby-killer of Europe, slaughterer of the innocent, self-constituted representative of heaven, arrays himself with Turkey and incites a Mohammedan decree of holy war against the Christian enemies of Germany. And this man preaches.

PRIMARY MONEY IS APPORTIONED

County Treasurer George Weaver has received a check from Lansing for Charlevoix county's share of the primary school money. It totals $46,296.-06, and is apportioned to the city of Charlevoix and the various townships as follows:

Bay	$ 1,044.05
Boyne Valley	3,145.00
Chandler	900.76
Charlevoix City	5,776.69
Evangeline	13,982.40
Eveline	2,625.03
Hayes	1,766.25
Hudson	910.00
Marion	1,711.30
Melrose	1,413.00
Norwood	1,276.75
Peaine	871.35
St. James	1,656.35
South Arm	9,189.00
Wilson	1,626.66
	$46,296.05

This money is now available and will be used by the various districts in paying salaries of teachers. The above amount figures at the rate of $7.67 per capita.

DIED AT RIPE OLD AGE.

Simon Alcock, who departed this life in this city last Thursday morning, was born in England a little more than 88 years ago. He came to Canada while yet a young man, coming to Charlevoix in 1885, making his home here since.

"Dad," as he was popularly known among us, retained the vigor and cheerfulness of youth up to a very recent date, and up to within five years or less, ago, he has joined the deer hunters of the north woods.

His wife predeceased him several years ago. He was the father of eight living children—Mordical, of Newmarket, Ont.; James and Mrs. Aggie Flammerfelt, of British Columbia; Lafayette, of Detroit, and Archie, Mrs. Charles Cary, Mrs. Sandy Shear and Mrs. Chas. Jeffries, of Charlevoix.

SPECIAL NOTICE.

Dr. Allen B. Philpott, pastor of First Christian church, Indianapolis, Indiana, will speak at the Baptist church Sunday morning at 10:30. His theme will be, "The Church Invincible."

You should hear this great man on this great subject.

Notice to Our Patrons:

We have just installed at quite a heavy expense, a new station Fairbanks wagon scale, and invite those visiting, weighing done to call and look it over. We shall try at all times to keep it in perfect balance and will give our patrons the best possible service.

E. M. Sun & Sons,
The Reliable Hardwarehouse.

ANNOUNCE ENGAGEMENT.

Last Thursday afternoon Mrs. H. C. Cooper entertained at her home, a few of the most intimate friends of Miss Mary Kirchner. She was assisted in receiving by Mrs. W. A. Cline and Mrs. W. E. Barney.

An entirely new game of "Hearts" was played on the lawn, at which Miss Hallie Bon was the most successful. Later, the guests were invited to the dining room, where the color scheme of pink and white was entirely carried out in the refreshments as well as in the decorations. Extending from the ceiling, and fastened at each corner of the table with pink and white sweet peas, were streamers of wide pink and white ribbon. In the center of the table was a large bouquet of pink and white asters, and extending from this were narrow pink and white ribbons. Attached to the end of these were the favors—pink and white sweet peas. As each guest received her favors, she found at the end of the ribbon, and concealed in the center piece, a small envelope in which were cards announcing the engagement of Miss Mary Alice Kirchner, of Saginaw, to Mrs. Cooper's son, Clinton Gurley Cooper. As the guests departed, they left hosts of good wishes.

COMPANY I. STANDS SECOND.

One of the most remarkable achievements in the history of the Michigan National Guard stands to the credit of Co. I. of East Jordan in the August encampment at Grayling.

At the officers' meeting of the regiment Friday night, in summing up all tests in competitive field work, the Flint company won the cup. Co. I. got tying second.

The two companies were so close on points that the regimental board hesitated some time before making the award, finally deciding that it would hardly be right to give first to a new company. Colonel Bourns declared it to be the most remarkable record ever made in his regiment by a new company.

Co. I. next year will go after the cup, and they will get it.

"SEPTEMBER MORN."

The music of "September Morn," which will be exploited at the Opera House Thursday, Sept. 2, contains some lovely movements and many dreamy melodies. Nothing could be more charming than the serenade, "Beautiful Dreams I'm Dreaming," which is central to the record act. The ensembles and choruses are superior to anything heard since the passing of Gustav Lander's "Prince of Pilsen." The music for the comic duets is a revelation in that out of chaos, and if one can sit through "September Morn's entire tumble of musical nothing is not once bored, that person must be billous.

The acting success of "September Morn" is Harry Fields, who plays the character of the art dealer Rudolph Plastric. Miss Verstice Martyn, as Argentina, the actress and tango dancer can only be described as a delicious symposium—combination of everything attractive. The costuming of the comedy is more gorgeous than the glittering dreams of "Arabian Night."

AUTOMOBILE SUNDAY

All the people who ride in, or drive a car, are especially invited to the M. E. church, Sunday morning, when Rev. Thos. Cummings, of Henderson, Ky., Mrs. Goetz of Indianapolis will sing. Let every driver bring his friends.

ANNUAL MEETING.

The annual meeting of the First Baptist church will be held Wednesday evening, Sept. 1, at 8 o'clock p. m. All officers of the church are earnestly requested to be in attendance at the meeting which closes the business for this year, and formulates plans for the coming year.

Very respectfully,
LLOYD C. VINYARD, Pastor.

POULTRY SHOW AT WEST MICHIGAN FAIR.

"A chicken is just a chicken until it goes to the fair, then we call it a bird," says James J. Tucker, of Royal Oak, one of the best poultry judges in the country, whose critical eye will decide who gets the money at the West Michigan Fair September 20-24.

E. A. Knapp, of Grand Rapids, who will have charge of the poultry department at the fair has just completed arrangements with Mr. Tucker to act as judge in this department, a fact that assures a successful display in that division.

Mr. Tucker had several other prior engagements, but when shown the 1915 premium list of the West Michigan Fair he accepted the job of picking the prize winners from several thousand birds that farmers and breeders will bring to the fair this fall.

"The poultry premium list of the West Michigan Fair for 1915 is one of the best balanced lists I have ever seen," writes Mr. Tucker, "and I am certain that you will get the poultry breeders to come to the fair. Then too, your Fair Association has always taken good care of exhibitors. You have large, well-lighted and ventilated buildings, and an up-to-date system of universal cooping that displays the birds to best advantage. In Mr. Knapp you have a man that has the good will of all poultry fanciers in this state, and I am certain that he will give you a show that will break all records."

A glance at the poultry premium list of the West Michigan Fair shows large cash premiums offered on all American, Asiatic, Mediterranean and English breeds. Also special prizes for Bantams, other than game stock; turkeys, ducks, geese and other barnyard fowls.

BOARD OF EDUCATION

August 17, 1915.

Regular meeting of the Board was called to order by president Hampton.

Trustees present, Hampton, Bridge, Gordon, Glanford and Hiller.

The Treasurer's report shows a balance on hand of $6,036.37.

The following bills were presented and read:

GENERAL FUND

100. Fred Cook, filling flag pole	$ 2.50
101. Fred Cook, repairs, Hall	1.00
102. Chas. Nordman, labor	2.00
103. Chas. Nordman, hauling coal	1.50
104. Chas. Nordman, labor and expenses	3.00
105. Gilbert Miller, labor	36.00
106. Gilbert Miller, labor	36.00
107. Chas. Nordman, supplies	2.50
108. Chas. Nordman, supplies	1.00
109. Chas. Nordman, labor	2.00
110. John Hayes, labor	1.50
111. Chas. Nordman, labor	2.00
112. Chas. Nordman, supplies	1.00
113. Robt. Winkler, labor	1.50
114. Chas. Nordman, labor	2.00
115. Gilbert Miller, labor	36.00
116. Fred Hewett, labor	2.00
117. Chas. Nordman, labor	2.00
LIBRARY FUND	
118. C. M. Gaylord, supplies	$ 1.20
119. Chas. Nordman, supplies	1.00
120. A. M. Dolbeare, Janitor	5.00
	$192.20

Moved and supported that the bills be read be allowed and the secretary be instructed to draw orders on the various funds for the amount of each respective bill. Motion carried.

Moved and supported that the Treasurer's bond with W. J. Rachow, J. L. Crane, John Burns and H. S. Harsha as sureties be approved. Motion carried.

These minutes were read and approved and on motion the board adjourned.

E. J. HILLER, Secretary.

SPECIAL NOTICE.

Mrs. G. Schuster, Instructor and Miss Ethel Cummings, of Henderson, Ky., will preach in the Methodist church Sunday morning, Sept. 5. Mrs. Goetz, of Indianapolis, will sing. Let every driver bring his friends.

A MEDICINE CHEST FOR 25c.

In this chest you have an excellent remedy for Toothache, Bruises, sprains, Stiff Neck, Backache, Neuralgia, Rheumatism and for most emergencies. One 25c bottle of Sloan's Liniment does it all—this because these ailments are symptoms, not diseases, and are caused by congestion and inflammation. If you doubt, ask those who use Sloan's Liniment, or better still, buy a 25c bottle and prove it. All Druggists.

Ours is the only form of business in the world that does not ask you to spend money.

We ask you to keep it at the—

Charlevoix County Bank

of Nicholls, Buttars and Bridge

Bank Resources . . . . . $285,000.
Private Resources of Owners 150,000.

Making a total of over $400,000. for the security of our depositors.

Everybody is earning money now; better put by a little and let it earn 4 percent.

Interest will be added twice a year

JOHN NICHOLLS, President.
A. F. BRIDGE, Cashier.

WOULD TEMPT THE EPICURE

No Modern Dish Can Be Accounted Superior to the Squirrel Stew of the Early Days.

Young squirrel, new potatoes and June peas, stewed together in an iron pot, over a hickory wood fire. As Harry Lauder says, "Ye canna beat it."

In the early days it was a prime favorite in Kentucky, and the pioneers of Missouri brought a yearning for it with them when their cabins overlooked from the Blue Grass state and settled along the rivers and creeks in Missouri.

There were plenty of squirrels in the woods of Missouri in those days and in the middle of June, when new potatoes were about the size of walnuts, and early peas were big enough in the shell, the old man, or the biggest boy of the family, would lift the long-rifled squirrel rifle and ponder how down from the pegs over the fireplace and go out after a "mess" of young squirrels. At that time in June they were just large enough to stew well.

A hunter who would shoot a squirrel anywhere except through the head was accounted a mighty poor shot. And it had to be shot in the head or not at all, for a squirrel is a wary animal. As the hunter goes around one side of the tree the squirrel goes around the other way, keeping the tree between him and the hunter, but occasionally he peeps out to see what is going on, and that is the hunter's chance.

Hard as down squirrels is enough for a mess. While the head of the family is dressing them the womenfolk are grubbing out a half peck of new potatoes and rubbing off the tender red skins, and shelling a quart or two of new peas. Squirrel, potatoes and peas are put into the pot together.

It must be an iron pot. Any old settler will tell you that there is a flavor and a taste to "vittles" stewed in an iron pot that modern pots and pans never impart. The ingredients must be allowed to simmer, not to boil briskly, but stew gently over a slow fire until the whole mass is thoroughly disintegrated. Then it is ladled out and eaten while piping hot. A chunk of corn pone, dipped into the juicy stew and mumbled with it, improves it.

Anyone who has eaten of this dish will tell you that in all the range of cookery there is nothing quite so good. The tender young squirrel meat has fallen away from the bones, the new potatoes have melted, the peas have imparted to the whole a faint green-ish hue, and all have blended together in a savory mass redolent of June buds and June blossoms.

The Growing Age.

According to Dr. Lindsay Wyncoop, boys and girls between ten and sixteen years of age need a great deal of sleep. Laziness, he declares, is an individual thing. Some are lazy at ten, some at sixteen, he says, are not so serious as many parents are wont to believe.

Terrorized.

"Does your former husband ever get behind in his alimony?" "Not he. I have threatened to go back to him instantly if he does."—Boston Transcript.

A very uncommon freak of nature has lately been observed on the north side of Little Traverse Bay. In the shape of a snow white crow, which, mingles with a flock that make its home on and about the Thomas Kneale farm. It all white except a spot on its tail and breast, and furnishes a strange contrast to its companions. There is no doubt about its existence whatever, as it has been seen several times by members of the Cadillac Handle company's road, which runs through the north part of the county, and also by John C. Wright.

WANTED—A maid of refinement to act as companion to care of a 7-year-old girl. Some sewing required. Apply

ROOM AMBER 5, THE IRIS.

DAY AND NIGHT AUTO RACING AT WEST MICHIGAN FAIR.

Night automobile racing will be seen for the first time in this part of the country Friday and Saturday, Sept. 24 to 25 at the West Michigan State Fair track. Many noted drivers will participate, among whom are Wild Bill Endicott, of Indianapolis Speedway fame; Arthur Klein, America's youngest racing star; Captain Harvey Kennedy, with his Edwards Special, which led Darius Hests for almost 60 laps of the last Grand Prix race, run at the San Francisco exposition, and several others. Eddie Rickenbacker's famous record-holding Maxwell will also participate.

Night racing proved such a success in New York City July 5th and 10th that a third meeting will be run, after which the cars will start on their journey toward Grand Rapids. Races will also be run at the Panama-Pacific International Exposition, from October 26th to November 4th.

Klein's mile in 49 4-5 seconds made at Brigeton Beach on the night of July 5th, proves that night racing has been made as fast as day racing. There will be minute and night events at the West Michigan State Fair. Eight events will make up each separate program.

Among the events arranged will be a long distance motor derby. This will be for a purse of $1,500 divided into three prizes, while a total of $3,000 in prizes will be given for the entire night performance, with $2,000 posted for the afternoon events, making $5,000 in all. With this program it is hoped that most of the cars which competed at Brighton Beach will be entered at Grand Rapids.

SPECIAL NOTICE.

Dr. Thos. Cummings, of Henderson, Ky., will preach in the Methodist church Sunday morning. Dr. Cummings is pastor of the First Presbyterian church. He is an elegant speaker. Mrs. Goetz, of Indianapolis, will sing. A special invitation is extended to all.

FORD STARTERS $10.00.

J. McCROREY, Charlevoix, Mich.

Petoskey News: D. C. Cinchey, clarinet player for the band of the "Uncle Tom's Cabin" company, which gave two performances here Wednesday, disappeared shortly after the matinee performance late Wednesday afternoon and has not been seen or heard from since. The man has been suffering for some time from tuberculosis and was in a very weak condition at the close of the afternoon show. He is said to have little or no chance for recovery and that he has oftimes said that some day he would make away with himself. He was a man of about twenty-six years of age, about five feet seven inches high and weighed about a hundred and thirty pounds. When last seen he wore a straw hat, serge suit, tan shoes with cloth tops, had on a grey sweater with a red border and wore glasses. Marshal Crawford and the police of the city as well as a number of the fire fighters, members of the show company and others searched until early Thursday morning but could find no trace of him. Marshal Crawford holds the theory that the man has drowned himself either by leaping off the dock or breakwater. The bloodhound which was put on his trail is said to have followed the scent to the shore end of the wharf. Evidence that Cinchey had planned to do away with himself or at least disappear were found in the dressing rooms of the Temple Theatre.

Beaver Island News

Daniel Dooley of Chicago was home visiting his father and mother Mr. and Mrs. Francis Dooley.

Miss Grace Bonner returned home from Escanaba.

Mr. and Mrs. G. Rix, of Kokomo, Ind., returned home after a month's visit on the Island.

Annie Gallagher of Chicago returned home last week.

Miss Josephine Duffy went to Chicago last week.

Dan T. Gallagher made a business trip to Charlevoix last week.

Mrs. Carl Miller of Charlevoix was over visiting her father and mother, Mr. and Mrs. Francis Dooley.

J. McDonald of Escanaba is here visiting his daughter Mrs. Hugh P. Boyle.

Miss Mae Gallagher spent Sunday with her parents.

W. J. Gallagher went to Charlevoix on business.

The City of Boyne had an excursion from Charlevoix to Beaver Island Sunday.

Mrs. Hugh P. Boyle returned home after spending two months at Escanaba visiting friends.

Mr. Morton of Detroit returned home after spending two weeks at the Daniel Cottage.

Miss Margaret Barry returned home last week after spending a year visiting her sister Mrs. Ed. B. Gallagher.

Fr. Reynolds of Chicago is here on a visit.

Mrs. F. Olson and family are visiting friends.

Mrs. Dan R. Green went to Charlevoix on a visit last week.

Mr. Andrew Gallagher was at Charlevoix last week visiting friends.

M. and Mrs. M. J. Bonner and family of Charlevoix spent several days here visiting friends.

COMING BACK TO CHARLEVOIX, MICH.

UNITED DOCTORS SPECIALIST WILL AGAIN BE AT THE HOTEL CHARLEVOIX MONDAY, SEPT. 6, 1915. ONE DAY ONLY.

Hours: 10 A. M. to 8 P. M.

Remarkable Success of These Talented Physicians in the Treatment of Chronic Diseases. Offer Their Services Free of Charge

The United Doctors, licensed by the State of Michigan for the treatment of deformities and nervous and chronic diseases of men, women and children, offer to all who call on this trip, consultation, examination, advice free, making no charge whatever, except the actual cost of treatment. All that is asked in return for these valuable services is that every person treated will state the result obtained to their friends and they prove to the sick and afflicted in every city and locality, that at last treatments have been discovered that are reasonably sure and certain in their effect.

These doctors are among America's leading stomach and nerve specialists and are experts in the treatment of chronic diseases and so great and wonderful have been their results that in many cases it is hard to find the dividing line between skill and miracle.

Diseases of the stomach, intestines, liver, blood, skin, nerves, heart, spleen, kidneys or bladder, rheumatism, sciatica, sleeplessness, bowelting, tape worm, leg ulcers, weak lungs and those afflicted with long-standing, deep seated, chronic diseases, that have baffled the skill of the family physicians, should not fail to call. Deafness often has been cured in sixty days.

According to their system no more operations for appendicitis, gall stones, tumors, goiter, piles, etc., as these diseases are treated without operation or hypodermic injection.

They were among the first in America to earn the name of "Bloodless Surgeons," by doing away with the knife with blood and with all pain in the successful treatment of these dangerous diseases.

If you have kidney or bladder trouble bring a two ounce bottle of your urine for chemical analysis and microscopic examination.

No matter what your ailment may be, no matter what others may have told you, no matter what experience you may have had with other nerve specialists, it will be to your advantage to see them at once. Have it forever settled in your mind. If your case is incurable they will give you each advice as may relieve and stay the disease. Do not put off this duty you owe yourself or friends or relatives who are suffering because of your sickness, as a visit at this time may help you.

Worn-out and run-down men or women, no matter what your ailment, consult them, it costs you nothing.

Remember, this last free offer is for this visit only.

Married ladies come with their husbands and minors with their parents. adv.

WORMS CAUSE MANY CHILDREN'S ILLS.

Worms, by thousands, rob the child of nourishment, starve its growth, cause Constipation, Indigestion, Nervousness, Irregular appetite, Fever and sometimes Spasms. Kickapoo Worm Killer gives relief in all these. One-fourth to one of these pleasant candy lozenges, taken as directed, kill and remove the Worms, regulate your child's bowels and restore its health and vitality. Get an original 50c box from your Druggist. Don't endanger your child's health and future when so sure and simple a remedy can be had.

Foolish Pessimism.

There are so many of us who are inclined to look on the darkest side of things. It is rather hard to say that the majority of persons are pessimists, but it certainly seems to be true. Perhaps they do not really outnumber the optimists, but they talk so much of how hard luck is and how they are constantly that they make a far wider impression than the optimists who go along the bright paths, serenely confident that the morrow will be just as bright as the present.

AS TO THE MAKING OF PINS

Process Is An Intricate and Interesting One, All Conducted by Machinery.

To make a pin is an intricate process, but it is all done by machinery. A spool of brass wire is running on steel posts in *rod* into jaws which bite off the length of the pin. A small length is left to make the *head*, which is formed by three rapid blows of a hammer—which moves forward one-twentieth of an inch at each blow. The pin then drops to an anvil, the jaws are grooved deep enough to admit the shank, but not the head. As the pin moves down its first grooves in contact with a cylinder with a file-like surface, which scores the pin to turn around so that it is sharpened on all sides.

It next drops into a receptable where a layer of pins is placed, and then a layer of flux covers the top. If the pin is filled, first add a chemical solution cast the pins with it. Then we then polished in a barrel revolving rapidly. They are placed in the papers by a machine, which seizes the paper and crimps it into divisions as wide as the length of the pins.

The bottom of the box is made of square steel bars, which allow the shanks but not the heads of the pins to pass through. The bars are in motion, thus shaking down the pins until a row is formed, when they are clamped in place by the bars. A fold of paper is pasted up against them and pressed into place. This is repeated until the paper is full, when another takes its place. It all sounds intricate, but being done by machinery it is quick and cheap, else we could not have the millions of pins that we waste.—Exchange.

Kid Glove Making in France.

The superiority of French kid gloves over all others is due chiefly to the perfection of the skins, the hide being reared in villages by peasants who over only a few goats and, therefore, take great care of them. Another reason is that in France one workman takes the prepared skin and manipulates it himself right up to the finished glove.—Newark News.

Local and Personal Notes

NEW ADVERTISEMENTS

J. L. Crane
M. A. Leonard & Co.
A. E. Mason Dept. Store.
C. Dante & Son
S. M. See & Sons

Dr. Will Lewis, of Luther, Mich., was here over Sunday.

Mrs. Church and daughter, of Chicago, are visiting Mr. and Mrs. A. M. Dolberg.

The Charlevoix Masonic fair automobile was won by a Petoskey lady. Just as deserved luck.

Forrest Kane, who has an excellent position in Pontiac, is home on a visit of a week or more.

Attention Sisters: The W. R. C. meets again Sept. 2nd. Don't forget that we are to have a potluck supper.

Raymond, the youngest son of Frank Pearl, of this city, a corporal in the U. S. army at Brownsville, Texas, was killed by a Mexican bullet in the recent raid.

The steamer City of Boyne will run an excursion to Boyne City Friday evening on the occasion of the republican banquet, leaving here at seven o'clock sharp.

The steamboatmen Pierce, the founding of which was announced last week, was found last Thursday high and dry on the west side of North Fox Island, and is a total wreck.

Mr. and Mrs. A. Loenberg, of Detroit, are visiting relatives and friends here. Mrs. Loenberg will be remembered as Miss Tibbie Cohen, formerly a popular Charlevoix girl.

The resort business has been so unsatisfactory this season that the G. R. & I. railroad management have already pulled off one train each way daily from their regular schedule.

Miss Kintz, who arrived here one day last week in a coaring car from Terre Haute, in stopping from her car in front of the Hotel Michigan, broke her leg. Dr. Wilkinson reports her doing well.

General Manager Schlegell, of the Michigan Telephone Co., chose Charlevoix for his summer vacation sojourn. Other officials of the same company have been here for some time arranging for needed improvements.

Probate Judge E. R. Harris of Antrim county has been named by Governor Ferris as one of the delegates to the Pan-American road irrigation congress to be held in San Francisco September 13th to 20th.

Mrs. George Emrey (nee Anna Galbraith,) is here with her mother for a time. George is a Grand Rapids hospital nursing a broken leg that he dragged down from Alaska nearly a year ago, which failed to knit properly.

Miss Helen Mary Meech, daughter of Mr. and Mrs. Arthur Meech of East Jordan, and grand daughter of Mr. and Mrs. F. J. Meech of this city, left last week for Asheville, N. C., on account of pronounced development of tubercular symptoms.

The auxiliary schooner Mary Ethel cleared from this port Wednesday with fifty members of the Torch Lake Y. M. C. A. camp, for the Soo and intermediate points. They stop and camp wherever night overtakes them, and when the jollest lot of lads you could wish to see.

Oats are being harvested all over Michigan. The rains of the early part of August kept the farmers off the south part of the state from carrying on this work at the usual time and now Northern Michigan is so far along with this work as is the south part. Oats is a free crop this year and the price is reported good. Farmers stand to make a little money from their oats crop this year.

Last Wednesday evening Mr. and Mrs. W. H. Miller gave a dinner and reception in honor of their son and daughter-in-law, Mr. and Mrs. Leon Miller, of Petoskey, it being the first anniversary of their marriage. It was a "cotton" wedding, and the honoree orations were suggestive of southern plantation days. Only immediate friends of the family were present, but the gathering was a goodly one in numbers and good will.

This year of all others, the man who has a silo will find he has a great money maker. The prospects are that much of the corn will not ripen. A large acreage has been re-planted. This replanted corn is just getting a start, but will not have a chance of getting ripe this year because the fields are so wet from the recent rains that it is impossible to cultivate sufficiently. So much of the corn crop cannot mature even with a late fall that the price of corn will undoubtedly be high. The only way for farmers, stockraisers and dairymen to feed their cattle economically and successfully this coming winter is by having plenty of silo room to take care of this immense corn crop.

Mrs. Charles Jones, formerly of this city, now residing in Detroit is here visiting friends.

Edward Hirsh and family, of Akron, Ohio, are occupying John Cook's residence on Mason street.

Clare Coulter, of this city, is traveling in the west for the Quaker Oats Co., and making good.

Anthony McCafferty, of Escanaba, was here the first of the week visiting his brother, Capt. P. McCafferty.

It is positively settled that both Michigan Senators will attend the republican banquet at Boyne City Friday night.

Harvey Campbell was ordered to the Soo one day last week to join the steamer Onaiso, of which he is chief engineer.

The steamer Hum was laid up Saturday, Sunday and Monday by a broken crank. Bears' motor boat Harry L. took her place.

County Clerk Lewis has received his blank hunters's licenses. Every hunter for anything in the game line, whether he be resident or non-resident, must get a license.

Allie Moore was the winner of the skating contest at the rink on Saturday night. After the race Moore gave an exhibition of fancy skating. Large crowds were present all three nights.

The postmaster and, in fact, the whole dogoned postoffice crew, were made happy Thursday morning by the arrival of a big, husky boy at the home of the postmaster. Grandpa and Grandma Weaver are equally joyous.

A large number of steel-head trout are being caught in Pine Lake and South Arm by reporters. On Monday one was caught near Monroe Creek that tipped the scales at seven pounds. It was caught with an ordinary casting rod, and put up a great fight.

A law now in effect in Michigan exempts from taxation for five years cut over and wild lands in tracts of eighty acres or less, purchased for home purposes, on which the owner actually lives and improves at least two acres each year for five years.

Mrs. Milo Eaton, a pioneer resident of this city, who has been for some time visiting her daughters in the west, died suddenly of acute stomach trouble, at the summer home of her daughter, Mrs. Chas. M. Law, at Santa Monica, Cal., on Friday, August 20th, 1915. Interment was at Riverside, Cal., the home of Mr. Law.

The Baptist are to run two big excursions this week on the steamer City of Boyne, to Boyne City. The first on Thursday night, by the Baptist Young People's Union. Boat leaves Wilbur dock at 8 o'clock p. m. The second excursion will be run Friday night, leaving Wilbur dock at 7 p. m. Stops will be made each evening at Bohemian and Ironton docks. Good music on both trips. The boat will arrive at Boyne City in time for all to hear Senator Root ("our future president") speak. Round trip on either Thursday or Friday night, 50c cents.

Last Tuesday the laws passed by the last legislature became effective. Among the new enactments are several calculated to make the liquor laws of the state more effective. One will make the shipment of booze into dry territory a little more difficult by placing greater restrictions around the transportation, which makes it obligatory on the transportation companies' representatives as well as the seller and the consumer to make certain affidavits that the boozer may hesitate about signing and swearing to, for the penalty for perjury is severe and should be a deterrent.

Two automobile camping outfits passed through this city going north last Sunday. One of them, which we had the pleasure of inspecting, had on board the owner, his wife and two young daughters. The outfit embraced a tent, big roll of blankets, box of cooking utensils, etc. They camp wherever night overtakes them, usually selecting a grove near a spring or stream. They buy milk and eggs of the farmers, and thoroughly enjoy the gypsy life, although they are able to stop at hotels. There have been several of these parties passed through here this season. To our mind it is an ideal way of spending a vacation.

The big barbecue that was pulled off by the Ellsworth business men at that place last Wednesday was far and away the most successful event of the kind ever held in this part of the state. There were fully two thousand visitors present and all were satisfied. The program was more than carried out, for while they advertised one ball game they gave the people two—Central Lake vs. Ellsworth, in which Ellsworth won, and the Merchants vs. Farmers, in which the merchants were successful. The addresses were fine and everybody had their fill of roast ox. The Ellsworth business men are to be congratulated on this successful event.

AN ARGUMENT WITHOUT PREMISES

Washington is again confronted with German "frightfulness" in the sinking without warning of the steamship Arabic, westward bound, and the drowning of two American citizens. Coming so soon after the president's warning that further acts of this nature would be considered "unfriendly," relations between the two governments are strained to the breaking point.

In Germany's answer to the president's notes the Kaiser's government has dwelt with remarkable emphasis upon the American export to the extent sales of arms and munitions—a right guaranteed by international law.

Up to the great war, there had not been a battlefield of any importance in 50 years across which German-made or Austrian-made rifles did not hurl their bullets—which, too, probably came from the same source. The British in South Africa faced German-made bullets after the Boer supply of Krupp-made ammunition ran out, and this ammunition came from Germany, bearing on its base the arsenic D. W. M., and was sold to the Boer agents, and smuggled into South Africa months after the war started.

The Russians fired Krupp-made field guns at the Japanese in the war in Manchuria, and the ammunition for both the field guns and for the rifles came from Germany. Hot the bullets hissing across the stricken fields of Mexico in the past four or five years of tribulation have been German bullets. The rifles of the regulars of Diaz came from Germany, or from Belgium under German patents.

The nations of the world use as their instruments of slaughter German or Austrian rifles and ammunition almost without exception. Consider the last, then smile at the indictment of American's course coming from Teutonic sources.

The Kaiser's ambition to be Emperor of the World brooks no opposition in the form of international law or solemn treaties, they are but "scraps of paper." The baby-killer of Europe, slaughterer of the innocent, self-constituted representative of heaven, arrays himself with Turkey and incites a Mohammedan decree of holy war against the Christian enemies of Germany. And this man preaches.

PRIMARY MONEY IS APPORTIONED

County Treasurer George Weaver has received a check from Lansing for Charlevoix county's share of the primary school money. It totals $46,250.66, and is apportioned to the city of Charlevoix and the various townships as follows:

Bay	$ 1,044.05
Boyne Valley	3,140.00
Chandler	930.20
Charlevoix City	5,777.60
Evangeline	13,062.40
Eveline	2,022.30
Hayes	1,766.25
Hudson	910.00
Marion	1,711.30
Melrose	1,413.00
Norwood	1,216.75
Peaine	1,217.50
St. James	1,658.85
South Arm	9,160.00
Wilson	1,085.00
	$46,250.66

This money is now available and will be used by the various districts in paying salaries of teachers. The above amount figures at the rate of $7.85 per capita.

DIED AT RIPE OLD AGE.

Simon Alcock, who departed this life in this city last Thursday morning, was born in England a little more than 85 years ago. He came to Canada while yet a young man, coming to Charlevoix in 1866, making his home here since.

"Dad," as he was popularly known among us, retained the vigor and cheerfulness of youth up to a very recent date, and up to within five years, or less, ago he hobbled the deer hunters of the north woods.

His wife predeceased him several years ago. He was the father of eight living children—Mordical, of Newmarket, Ont.; James and Mrs. Apple, of Hammerfest, of British Columbia; Lafayette, of Detroit, and Archie, Mrs. Charles Cary, Mrs. Sandy Short and Mrs. Chas. Jeffries, of Charlevoix.

SPECIAL NOTICE.

Dr. Allen B. Philpott, pastor of First Christian church, Indianapolis, Indiana, will speak at the Baptist church Sunday morning at 10:30. His theme will be, "The Church Invincible."

We should hear this great man on this great subject.

Notice to Our Patrons:

We have just installed at quite a heavy expense, a new six-ton Fairbanks wagon scale, and invite those wishing weighing done to call and look it over. We shall try at all times to keep it in good condition and will give our patrons the best possible service.

S. M. See & Sons,
The Reliable Hardwarmen.

ANNOUNCE ENGAGEMENT.

Last Thursday afternoon Mrs. H. C. Cooper entertained at her home, a few of the most intimate friends of Miss Mary Kirchner, the was assisted in receiving by Mrs. W. A. Cline and Mrs. W. R. Barney.

An entirely new game of "Hearts" was played on the lawn, at which Miss Hallie Bon was the most successful. Later, the guests were invited to the dining room, where the color scheme of pink and white was entirely carried out in the refreshments as well as in the decorations. Extending from the ceiling, and fastened at each corner of the table with pink and white sweet peas, were streamers of wide pink and white ribbon. In the center of the table was a large bouquet of pink and white asters, and extending from this were narrow pink and white ribbons. Attached to the end of these were the favors—pink and white sweet peas. As each guest received her favorite, she found at the end of the ribbon, and concealed in the center piece, a small envelope on which were cards announcing the engagement of Miss Mary Alice Kirchner of Saginaw to Mr. Cooper's son, Clinton Gorley Cooper. As the guests departed, they left hosts of good wishes.

COMPANY I STANDS SECOND.

One of the most remarkable achievements in the history of the Michigan National Guard stands to the credit of Co. I of East Jordan in the August encampment at Grayling.

At the officers' meeting of the regiment Friday night, in summing up all tests in competitive field work, the Fort company took the top. Co. I, getting second.

The two companies were so close on points that the regimental board hesitated some time before making the award, finally deciding that it would hardly be right to give first to a new company. Colonel Boucher declared that it is the most remarkable record ever made in his regiment by a new company.

Co. I next year will go after the cup, and they will get it.

"SEPTEMBER MORN"

The music of "September Morn," which will be exploited at the Opera House Thursday, Sept. 2, contains some lovely movements, full of dreamy thoughts. Nothing could be more charming than the serenade, "Beautiful Dreams I'm Dreaming," which is incidental to the second act. The ensembles and choruses are superior to anything heard since the passing of Gustav Leonder's "Prince of Pilsen." The music for the comic duets is a revelation in the best of ballad. No one can sit through "September Morn's entire tuneful of money and dance and be bored one hour, that person must be bilious.

The acting success of "September Morn" is Harry Fusher, who plays the character of the art dealer Rudolph Plastric. Miss Vernice Martyn, as Argentina, the actress and tragic dancer can only be described as a delicious symposium—combination of everything attractive. The costuming of the comedy is more gorgeous than the glittering dreams of "Arabian Night."

AUTOMOBILE SUNDAY

All the people who ride in, or drive a car, are especially invited to the M. E. Church, Sunday morning, Aug. 29th. Rev. Thos. Cummings of Henderson, Ky. Mrs. Goetz of Indianapolis will sing. Let every driver bring a friends.

ANNUAL MEETING.

The annual meeting of the First Baptist church will be held Wednesday evening, Sept. 1, at 8 o'clock p. m. All officers of the church are earnestly requested to be in attendance at this meeting which closes the business for this year, and formulates plans for the coming year.

Very respectfully,
LLOYD C. VINYARD, Pastor.

POULTRY SHOW AT WEST MICHIGAN FAIR.

"A chicken is just a chicken until it goes to the fair. Then we call it a bird," says James J. Tucker of Royal Oak, one of the best poultry judges in the country, whose critical eye will decide who gets the money at the West Michigan Fair September 20-24.

E. A. Knapp, of Grand Rapids, who will have charge of the poultry department at the fair has just completed arrangements with Mr. Tucker to act as judge in this department, a fact that assures a successful display in that division.

Mr. Tucker had several other prior engagements, but when shown the 1915 premium list of the West Michigan Fair he accepted the job of judging the prize winners from several thousand birds that farmers and breeders will bring to the fair this fall.

"The poultry premium list of the West Michigan Fair for 1915 is one of the best balanced lists I have ever seen," writes Mr. Tucker "and I am certain that you will get the poultry breeders to come to the fair. Then too, your Fair Association has always taken good care of exhibitors. You have large, well-lighted and ventilated buildings, and an up-to-date system of universal cooping that displays the birds to best advantage. In Mr. Knapp you have a man that has the good will of all poultrymen in Michigan, and I am confident that he will give you a show that will break all records."

A glance at the poultry premium list of the West Michigan Fair shows large cash premiums offered on all American, Asiatic, Mediterranean and English breeds. Also two special prizes of Bantams, other than game stock; turkeys, ducks, geese and other barnyard fowls.

BOARD OF EDUCATION

August 17, 1915.

Regular meeting of the Board was called to order by president Hampton.

Trustees present, Hampton, Bridge, Nordquist, Glassford and Hiller.

The Treasurer's report shows a balance on hand of $6265.97.

The following bills were presented and read:

GENERAL FUND

486. Fred Cooke, freight	$ 2.75
487. Joel Cook, lumber	2.00
488. Joel Cook, lumber	1.60
489. Chas. Saxton, int. and exchange	.50
490. Cloid Newman, int. and exchange	.50
491. Joel Cook, lumber	2.00
492. Joel Cook, lumber	1.60
493. F. S. Blanchard, supplies	11.10
494. Joel Cook, lumber	1.60
495. Fred Cooke, labor	3.75
496. Fred Cooke, labor	3.75
497. Fred Cooke, labor	3.75
498. Charlevoix Courier, paper and printing	16.25
499. Joel Cook, lumber	1.60
500. Joel Cook, lumber	1.60
501. Joel Cook, lumber	1.60
502. Joel Cook, lumber	1.60
TEACHERS FUND	
119. A. C. McClung & Co., books	$ 1.40
120. Ginn & Co., books	1.12
121. Silver, Burdett & Co., books	1.12
122. A. R. Dennett, teacher	30.00
	$106.10

Moved and supported that the bills be read be allowed and the secretary be instructed to draw orders on the various funds for the amount of each respective bill. Motion carried.

Moved and supported that the Treasurer's bond with W. J. Rachow, J. L. Crane, John Burns and H. S. Harsha as sureties be approved. Motion carried.

These minutes were read and approved and on motion the board adjourned.

E. J. HILLER, Secretary.

SPECIAL NOTICE.

Mrs. G. Schuster, Instructor and Dealer in Art Needle Work in Reed City, Michigan, will call on you soon with the samples of her work. Please reserve her a share of your Xmas orders.

A MEDICINE CHEST FOR 25c.

In this chest you have an excellent remedy for Toothache, Bruises, sprains, Stiff Neck, Backache, Neuralgia, Rheumatism and for most emergencies. One 25c bottle of Sloan's Liniment does it all—this because these ailments are symtoms, not diseases, and are caused by congestion and inflammation. If you doubt, ask those who use Sloan's Liniment, or better still, buy a 25c bottle and prove it. All Druggists.

Ours is the only form of business in the world that does not ask you to spend money.

We ask you to keep it at the—

Charlevoix County Bank

of Nicholls, Buttars and Bridge

Bank Resources . . . . . $285,000.
Private Resources of Owners 150,000.

Making a total of over $400,000. for the security of our depositors.

Everybody is earning money now! better put by a little and let it earn 4 percent.

Interest will be added twice a year

JOHN NICHOLLS, President.
A. F. BRIDGE, Cashier.

The DISCOVERY of VANADIUM

THE credit for discovering the new element vanadium, almost, but not quite, belongs to Andres del Rio, professor of mineralogy in the Royal School of Mines of the City of Mexico. This honor would be wholly his had he not hesitated his own discovery

Del Rio was born in Madrid, November 10, 1764, and graduated from the University of Alcala, distinguished in 1795. On account of his extraordinary aptitude in the natural sciences, and particularly in chemistry, he was pensioned and sent by the government to study in Germany, France and England. He spent about twelve years in those countries, principally in the study of mineralogy and mining, and was associated with the leading scientists, among others Lavoisier. After his return to Spain he was named, in 1795, by royal order as one of the group of professors to establish the Royal School of Mines in Mexico City. The royal order named Del Rio as professor of chemistry, but on his request this was changed to mineralogy. The schools opened in April, 1796. In 1799 Del Rio was sent as deputy to the Spanish Cortes, where he championed the cause of Mexican independence. He returned to Mexico in 1824, but in 1829 on the expulsion of the Spaniards he went to the United States. He afterwards returned, and died in the City of Mexico on May 23, 1849. The district of Andres Del Rio in the state of Chihuahua, where the city of Batopilas and the mines of the same name are located, is called after the distinguished scientist.

In 1801 Prof. Del Rio in examining some brown lead ores from the mines of Zimapan, in what is now the state of Hidalgo, believed that he had discovered a new element different from chromium and uranium and this he named erithronium. It was in reality what we now know as vanadium. The discovery was a genuine one, and had the matter rested there the name that Del Rio gave the new element would have been its name now, and he would have been the undisputed discoverer thereof. Unfortunately for the Mexican professor was a little too much under the glamour of the French school, and so when Collet Descotils published an article in which he stated that Del Rio's erithronium was nothing more than impure chromium Del Rio accepted the French professor's judgment and in the Anales de Ciencias Naturales of Madrid in 1802 retracted his former claim to discovery and stated that the substance was a lead chromate. Del Rio had been right and the French school wrong, for the element does not even belong in the chromium group. So the matter rested until 1830 the Swedish scientist, N. G. Sefstrom, rediscovered the element among the slags of the Taberg iron ores and named it vanadium, which name it still bears. It is sometimes stated that the name chosen by Sefstrom was in honor of the Scandinavian goddess Vanadis. This is not strictly correct. In the Norse mythology the gods were divided into two stocks, Aesir and Vanir, or Asa and Vana. Hoeord, Byer and Freyja were of the stock Vanir, hence Vanadis. The word may be taken as the surname of a number of gods and goddesses, although perhaps most often used in connection with Freyja, the Norse Venus.

Sefstrom, the discoverer, now later Professor, obtained the pure element, although Berzelius published what he thought to be its atomic weight, 137 and the formulae for its oxides. The English chemist, Sir Henry B. Roscoe, in investigating the Swedish specimens found that he had other prior investigators had dealt with nitrides or carbides of the element, and that instead of belonging to the chromium group or subgroup vanadium should be placed in the group with arsenic and phosphorus.

Vanadium is a silver-white metal and readily oxidized. It has a atomic weight of 51.2, is monogamic, has a very high electrical resistivity, and melts at about 1,680 degrees C. It is one of the most difficultly reduced and hardest of the metallic elements. Fortunately for its use it can be, it is quite possible to reduce the metal to its pure state. Such a reduction would be too costly. It can be reduced, however, quite easily as an alloy, particularly as an alloy of iron, ferrovanadium, containing approximately one part of vanadium and two parts of iron. Again, fortunately, this alloy has a melting point 1,200 degrees C. to 1,300 degrees C., sufficiently low to further alloy with molten steel, which would be difficult if the pure vanadium having a melting point over 300 degrees C. higher.

Vanadium is one of the most widely disseminated of all the elements, although commercially available deposits are comparatively rare. It is found in the ashes of many vegetable products and in the ashes of plants. In addition to Mexico, it was first discovered, vanadium has been found in Colorado, Utah, Oklahoma, New Mexico, and other parts of the United States; in Peru, Sweden, Australia, Spain, England, Turkestan, Chili and Argentina.

The chief ores from which vanadium is or may be derived are patronite, carnotite, vuccoite, vanadinite and sepiolite. Coal is a source of vanadium. Ash from the Rockvale Colorado coal is per cent vanadium oxide. Coal from the Mendoza District in Argentina contains about five pounds of vanadic acid per ton. It is then like plates made without the use of vanadium. No immediate results, however, followed the Perkin experiments, and it was not for years at this time, no adequate supply of vanadium was in sight. About 1899 Henry Mark, of the Armour of Sheffield in an address before the British Iron and Steel Institute declared that vanadium was the master weapon of the steel metallurgist. At this time price of vanadium alloy was very high and the supply limited. As the greater advances, however made in the use of vanadium in the steel industry followed the experiments and practical applications of J. Kent Smith of Liverpool. Mr. Smith's work has been principally in the production of the various grades of vanadium alloys, and he has supervised personally the initial use of vanadium in most of the leading steel mills of England and the continent and some in the United States.

About 1905 the supply of vanadium began to increase to a large degree, due to the purchase of the Minas Ragra deposits in Peru by the American Vanadium company, also to the development of mines in other parts of Peru, Spain and elsewhere. From having been a rare metal, owing to the large output it became available in quantities claimed to be unlimited, as a steel-making element. The claims made by its users are that it has accomplished wonders in crucible steel and in open-hearth steel, that it gives cast iron greater strength and endurance, and that copper and aluminum are remarkably improved for certain purposes by its addition. It is used in steel for engine axles and frames, in transmission shafts and gears, in wire springs, in piston rods, hydraulic cylinders, tires, tools, boiler plates, belts, gun shields, projectiles, armor plates, gun barrels, motor springs, and in crankings and forgings generally.

The claim is made that in steel making it unites with the nitrides and oxides and carries them into the slag. The quantity of vanadium that will remain in the slag is proportional to the amount of scavenging thus done by it. Investigations have shown that the slag containing will consume about one-fifth of the vanadium.

The alloy, ferrovanadium, is introduced into the steel by a very simple process. In the crucible process the alloy is broken into small bits and put into the charge with the second addition of the manganese. In the acid open-hearth process the alloy in larger pieces is dropped into the bath when the flame has been blanketed. In the basic open-hearth practice the alloy broken small is run through a spout that empties into the ladle in which the molten steel is being poured. A similar method is followed in the Bessemer and Tropenas practice and also in the cupola practice for cast iron. In the latter, the alloy is crushed quite fine.

It is claimed that vanadium increases largely the resistance of metals to repeated alternation, that the steel is stronger and tougher and respond more uniformly to heat treatment than steel without vanadium. One of the principal advantages in the use of vanadium steels in the future will no doubt be that it will enable the steel man to reduce weight in such constructions as locomotives, cars, machinery, etc., through the use of a smaller amount of the stronger and tougher steel. The question of weight has become serious not only in locomotives but in other forms of machinery. Another great economy claimed for vanadium steel is its greater durability. If this can be established, it would of itself more than justify its more extensive use.

PAW'S EXPERIENCE.

Little Lemuel—Say, paw, does every man have a bump of wisdom?

Paw—He does before he gets married, son. After that the bump becomes a dent.

THE REVERSE.

"A doctor reverses the usual order."

"How?"

"He must exercise resignation when he heals patients."

CAUSE AND EFFECT.

Hyker—Old Sniffers has stopped drinking.

Pyker—Well, that is certainly to his credit.

Hyker—Don't you believe it. It's due to his lack of credit.

A SURE CURE.

"Physicians have demonstrated that rattle snake venom does not cure epilepsy.

"It will cure it all right if the physicians will permit the rattlesnake to administer it."

INDIAN GOES TO WEST POINT

Sylvester Long-Lance, Appointed to Federal Position by the President.

Sylvester Long-Lance, the first full-blooded Indian to receive an appointment to the military academy at West Point, is a member of the class which was graduated this year from St. John's school at Manlius, N. Y. Long-Lance, who is a student at the school, is one of the very few boys who have kept up in their work, and was also active in athletics.

"He is a graduate of the Carlisle Indian school, which he attended before he was twelve years old. Some time ago he determined to become an army officer. President Wilson became interested in him, and several weeks ago Long-Lance received notification that he had been selected as one of the president's appointees to the military academy.

"The first Indian to receive an appointment to West Point was David Julian, a Creek, the New York Journal reports. He was born in Alabama, that region, November 16, 1836. He was a cadet of the military academy from September 18, 1857, until July 1, 1861, when he was graduated and appointed a brevet second lieutenant in the sixth infantry.

On the explosion of his graduation cannon, September 21, 1857, he resigned from the army to become a cotton planter in his native state. During the war in Florida in 1856, against the Seminoles, Monroe became captain of a company of Creek volunteers and became a major in the Confederate army.

THE SANDMAN STORY

By Mrs. F. A. WALKER

THE NEW ROOSTER

"The old White Rooster is dead," said Black Hen, putting her head through the bars of the pasture.

"You don't say so," replied Madam Pig. "Did he die a natural death?" she inquired.

"No," said Black Hen, "he was too old and tough to eat. This morning when the hens opened their eyes he was on the floor of the henhouse with his toes in the air."

"Where will they bury him?" asked Madam Pig.

"I do not know," replied the Black Hen, as she ran to a group of hens she saw not far away.

"The rooster took him away," said one, "and now I wonder who will take his place."

"He was here a long time and he crowed beautifully," said Speckled Hen. "It will be hard to find his equal."

That afternoon the farmer came into the yard and from under his arm a few a rooster. He was black, with red and yellow mixed in his feathers, and he was young. As the hens gazed at him he seemed to feel the importance of his position, for he strutted through the yard without turning his head. When he reached the pigpen he flew to the top of the fence and, spreading out his wings, turned around and crowed as might fall upon his gorgeous colors.

"Is he as handsome?" said Black Hen.

"He isn't so large as White Rooster," said Speckled Hen. Then the rooster crowed three times. Madam Pig ran to the pasture.

"He crows well," she remarked to her mate, "but I am afraid he is too young."

The rooster spread his wings again proudly in the sunshine of the various grades of vanadium alloys, and he has supervised personally the initial use of vanadium in most of the leading steel mills of England and the continent and some in the United States.

About 1905 the supply of vanadium began to increase to a large degree, due to the purchase of the Minas Ragra deposits in Peru by the American Vanadium company, also to the development of mines in other parts of Peru, Spain and elsewhere. From having been a rare metal, owing to the large output it became available in quantities claimed to be unlimited, as a steel-making element. The claims made by its users are that it has accomplished wonders in crucible steel and in open-hearth steel, that it gives cast iron greater strength and endurance, and that copper and aluminum are remarkably improved for certain purposes by its addition. It is used in steel for engine axles and frames, in transmission shafts and gears, in wire springs, in piston rods, hydraulic cylinders, tires, tools, boiler plates, belts, gun shields, projectiles, armor plates, gun barrels, motor springs, and in crankings and forgings generally.

The claim is made that in steel making it unites with the nitrides and oxides and carries them into the slag. The quantity of vanadium that will remain in the slag is proportional to the amount of scavenging thus done by it. Investigations have shown that the slag containing will consume about one-fifth of the vanadium.

The alloy, ferrovanadium, is introduced into the steel by a very simple process. In the crucible process the alloy is broken into small bits and put into the charge with the second addition of the manganese. In the acid open-hearth process the alloy in larger pieces is dropped into the bath when the flame has been blanketed. In the basic open-hearth practice the alloy broken small is run through a spout that empties into the ladle in which the molten steel is being poured. A similar method is followed in the Bessemer and Tropenas practice and also in the cupola practice for cast iron. In the latter, the alloy is crushed quite fine.

It is claimed that vanadium increases largely the resistance of metals to repeated alternation, that the steel is stronger and tougher and respond more uniformly to heat treatment than steel without vanadium. One of the principal advantages in the use of vanadium steels in the future will no doubt be that it will enable the steel man to reduce weight in such constructions as locomotives, cars, machinery, etc., through the use of a smaller amount of the stronger and tougher steel. The question of weight has become serious not only in locomotives but in other forms of machinery. Another great economy claimed for vanadium steel is its greater durability. If this can be established, it would of itself more than justify its more extensive use.

New Sport for Boys

high speeds. The rider rests on the seat and keeps his feet off the ground. The small wheels are also raised off the ground. The rider is actually being carried by the hoop alone. The device is so light that it can be immediately controlled by placing the feet on the ground, whether it is desired to stop or slacken the speed, as well as to bring it to a stop.

The unicycle is made in three sizes, the smallest having a 4-inch hoop, the medium a 6-inch hoop, and the largest a 8-inch hoop. The respective weights of these three machines are 22, 23 and 25 pounds. There is no chance for injury to the operator of the unicycle, and anyone weighing even in excess of 150 pounds can safely ride on any of the models.

MORAL TONIC FOR THE BOYS

Scientist MacDonald Praises Baseball Games—Calls Them Source of Energy Into Right Channel.

Arthur MacDonald, a well-known scientist of Washington, said the other day:

"I consider baseball one of the greatest inventions for boys and young men that exists. It directs the surplus physical energy of youth into the right channel, for otherwise this energy might be employed in wrong ways, causing disturbances, moral and physical ills. Baseball is one of the most effective and practical means of prevention whose power and influence are not national but world-wide.

"Some years ago there was a great clashing and confusion among the boys and young men of this country, and that there are very few who could not pass a better examination on baseball than on any of the studies in school.

"This being perfectly true there is a chance for the game to do, and do matter how much it may be abused by the ignorant and misguided managers and players. There are some people who see a permanent banning of baseball in the national sport on account of the activities of the Federal league which has caused some lack of confidence in the professional end of the game. But there are plenty of signs that this disgust is only temporary. Crowds are throwing back to the game as it becomes evident that outlaw league ball is being conducted strictly on the level and for the interest of the spectators.

Dangerous.

"Now, suppose children, one of your sons, for instance, should come home next day you should bring him an apple. Would he be one way of serious going for evil?" said the Sunday school teacher.

A little girl raised her hand.

"Well, Elizabeth," said the teacher, "what do you think?"

"Then," said Elizabeth, firmly, "he would think you again to get such an apple."

Willing to Forget It.

"Dearest young man," said the father to the young man who was offering a painful interview in the wood shed, "next time we do a lot you too. Don't you have to whip you."

"But, papa," queried the youngster, "can't you just stop without telling me next time?"

He Only Was Sick.

Little Maggie—I does my dolly mos' sick mamma.

Mamma—What seems to be the matter with her, dear?

Little Maggie—I fear she isn't digest all so sawdust—hai her's eated.

REWARD OF DISHONESTY

"Once upon a time," began the teacher, "there was a boy who started to Sunday school one Sunday morning. Their way led past a fine orchard where the trees were bending down with ripe, luscious apples. One of the brothers proposed going into the orchard and getting some fruit but the other refused and sped away, leaving his companion greedily devouring the apples.

"Now, it happened that the owner of the orchard saw them, and the next day rewarded the good boy who refused to steal his apples by giving him a shilling. He got a prize for his honesty, and what do you suppose the other boy got for his dishonesty?

"He got the apples," yelled every member of the class.—Anecdotal Standard.

NEW SPORT FOR SMALL BOYS

Recently Devised Type of Vehicle Known as "Unicycle" Affords Much Amusement for Youths.

What promises to be a most popular sport for boys is offered by a recently devised type of vehicle known as the "unicycle." In reality, this vehicle consists of a large hoop on which the operator is supposed to carry the seat and provided with two smaller wheels, says World's Advance. The hoop is made of wooden hoop-ladder pipe welded into a ring, while the frame is of drawn tubing.

The unicycle affords much fun to the boys and is a sport that is entirely unique and incomparable to all existing ones. Its main use is for coasting, in which it is possible to attain

"You Don't Say So," Replied Madam Pig.

here is someone to make them stand around. Old White Rooster let them rule him, and he pecked at a hen that was in his path.

"Isn't he disagreeable!" said Speckled Hen. "Did you see him push Yellow Hen?"

"Yes," said Black Hen, "but everybody is picking at him "cut because he is a newcomer."

"The new rooster cannot crow as loudly as White Rooster," said Speckled Hen the next morning. "He did not even open his face for a long time after the new rooster crowed."

"He does not seem to be just splendid," said Black Hen; "he makes everybody stand around, and I do not blame him. I think the old hens are very rude to him."

The new rooster was a great chicken and confusion among the hens and chicks was quite noticeable, but as it came near a brood of chicks ran the new rooster quick as a flash flew at them.

Whether the suddenness of the attack surprised the hens so much that he forgot to swoop a chicken in the flight or whether he was a coward, we do not know, but the new rooster was here in a minute. He walked away as though nothing had happened and went into the barn, lies rolling about roofed after him, but he did not look at one of them.

"Somebody must tell him," said Black Hen. "We never had such a protector before. He should be told that we think he is brave."

So Speckles Hen stepped up to the new rooster.

"We wish to thank you," she said, "for saving the chickens, and we are glad to have among us a rooster who is so brave." The new rooster strutted, but he said not a word. "We very high."

"I thank you," he said, "one and all, but I only did my duty. A rooster should be a protector of his flock as well as cock of the walk," and he turned and walked away. "I'll keep them in their place," he said to himself, "never do to be friendly with those hens. I'll show them I am old enough to run this yard. What they need

The Quaker Paper

We have built up the biggest Roofing and Building Paper mills in the World by selling materials that last—at reasonable prices.

Certain-teed

Roofing

Our Certain-teed Roofing is giving excellent service on houses and factories all over the world in all kinds of climate. It is made in two weights, a generator of 1, 2 and 15 years for 1, 2 or 3 ply respectively, and it is backed by responsibility of nearly a million. Try Certain-teed. It isn't a specimen, but a regular product. Sold everywhere.

A Queer World.

This is a queer world. In one end of town a woman who has drinked herself enough to eat no kind the children might have milk for supper will pick up a piece of newspaper and see a big beefsteak wrapped in it. In another part of the other end of town has just paid $100 for a Pekingese poodle.—Cincinnati Inquirer.

SOFT WHITE HANDS

Under Most Conditions If You Use Cuticura. Trial Free.

The Soap to cleanse and purify, the Ointment to soothe and heal. Nothing better or more effective at any price than these fragrant supercreamy emollients. A one-night treatment will test them in the severest form of red rough, chapped and sore hands.

Cuticura Soap, Ointment and Talcum Block. Address postcard, Cuticura, Dept. XY, Boston. Sold everywhere.—Adv.

Dinner From a Lobster's Claw.

The Bath Times had not long ago in its columns a press release that one might have while for supper will pick up a piece of newspaper and see a big beefsteak wrapped in it. In another part of the other end of town has just paid $100 for a Pekingese poodle.—Cincinnati Inquirer.

A Telephone Quirk.

Did you ever notice that if you place the mouthpiece of the telephone against your chest, instead of before your mouth, it makes no apparent difference to your audition? If you are talking over a desk instrument, it is often easier to hold it against the chest than to the mouth. Simply hold the transmitter to your chest and talk into the cone air. The entire chest will vibrate in unison with the voice and will transmit the sound vibrations over the telephone as well as your voice.—The American Boy.

ALLOW NOTHING TO WASTE

Everything of the Slightest Value Is Utilized by the Thrifty People of France.

What becomes of old sardine boxes, tomato cans, meat disks, fruit cans, and cans of all kinds?

In this country they are usually tumbled into some waste lot or down by the side of the road, where they are left in unsightly heaps.

But the people do better in France, where nothing is allowed to go to waste. They gather them up, and use them—to cut into tin soldiers. The making of tin soldiers is not an insignificant or unimportant item, as, by many means. There was published not long ago an item saying that the manufacture had reached great artistic excellence, and that "a certain eminent German officer has found it possible to represent military operations on a large scale by their means." He has "thirty-five thousand tin soldiers, foot soldiers, horsemen, and artillerymen, with all necessary equipments and the scenery and with them he goes through evolutions, and works out interesting problems of military tactics.

In France, too, the old boots and shoes are collected, and every part is used over again. The work is mostly done by convicts in prisons. They take the boots and shoes to pieces and soak them; then the uppers are cut into "fillets" or ribbons or if they are too far gone for that, a particular kind of pressed leather is made by some chemical action. The soils are sewed and sold, and the scraps go to the farmers to fertilize their fields.

Who would have thought it possible to make anything out of old cans? Yet it is said that many of the finest musical instruments, and some of those used by engineers, are manufactured from the steel that first did duty as cans. The steel cans are cut and very best quality and finest temper; ignorance and knowledge the world over is "looking up."

It is easy to believe that there is a place in Canada where they make paper from sawdust. It is a kind of paper pulp, rolled on to great sheets, for the purpose of sheathing; then is, for using on housings before the clapboards are put on. Wood pulp made of poplar and aspen, has long been used, mixed with the rags in the paper mills, in the manufacture of paper. It is a new thing to convert sawdust into paper.

Where the largest quantity of lead pencils is made, the sawdust of the cedar wood is saved and distilled, a valuable oil is extracted, every ounce of which is sold at good figures."

So an old saying has, at last, come, in a cast-off shoe, and a rusty pruning knife. Nothing need be lost, and, consistently now, and a heap of sawdust and the waste from a lead-pencil manufactory have furnished employment to be of actual use in the world.—Youth's Companion.

Oil of Cheapodium as a Poison.

There has been much discussion in medical literature as to the occasional poisonous effects of oil of cheapodium, and, as well of wormseed, which is used in commercial bookworm and of roundworm. Some experiments to determine accurately the relation of various animals to such effects have been recently reported by Walter W. Salant and E. K. Nelson. The toxicity of this substance was found to be directly proportional to the amount of increased by feeding rich carbohydrate diets. Cumulative effects were observed in different animals. Circulatory, digestive and respiratory systems themselves into the apostles of Christ, and no more for the Satan himself is transformed into an angel of light. Therefore it is no great thing if his ministers also be transformed as the ministers of righteousness; whose end shall be according to their works."

These men, and sometimes women, act as ministers of the Word and take to themselves great virtue because they dress like ministers, and teachers of the Word as bankers, and thus secure the trust of the people in many cases. Many of these seem to be very sincere—insincerity and affectation are not proofs of hypocrisy; ably the pastors are not true to the Word of God, or are ignorant themselves of virtue, or possibly are raising doubts on the authority and integrity of the Scriptures.

Suggested Remedies.

What is the remedy for this evil? We must first test the systems which they have adopted and see if they do not. This, in its last analysis, means a holy life and an equally holy spirit, and, if it be the spirit of God, we welcomed. Of the modern Satanic delusions there is hardly one but breaks down at this point. In all cases the foundation of these delusions are not right with God, and are soon known not to be right with man.

From the days of the apostles to the present time there has been a faith once for all delivered to the saints that has not changed.

If a person has been reared in the Baptist, Presbyterian, Methodist, Episcopal, Lutheran, or, indeed, in any of several other denominations, and has certain great truths on which these bodies agree. If he has been fortunate enough not to have a faithful pastor, but he has the teachings of the church, often in perverted form, which is substantially true to the gospel. Let him hold to these whatever may be the issue.

Of course, the best answer to these delusions is a thorough knowledge of the Bible, but, many Christians who do not have this, are tossed to and fro, and consequently cannot use it, as they should, in the defense of the faith. In these false systems are presented to the Christian he should steadily insist on the Bible, and, if he be able to meet the arguments that are buried beneath the rubbish, he will be able to meet the Bible standpoint. Standing firm and asking God for help, he will soon get his feet sure on his path ground.

Faith First Requisite.

The first word of a Christian is not "I know," but "I believe." He professes not a science, but a faith, and he accepts not a theory, but a gospel.

Satan's Present-Day Tactics

By REV. J. H. RALSTON
Secretary of Correspondence Department, Moody Bible Institute of Chicago.

TEXT—Having a form of godliness but denying the power thereof. II Timothy 3:5.

The words of this text have been very properly used ever since Paul first wrote them to application to formality in the individual Christian life; as something possible to realize but out of connection with spiritual power. The individual may possess all there is in Christian profession, but may be destitute of spiritual regeneration, eminently proper in his conduct, and to the world seem to be deeply spiritual, but at the same time be utterly devoid of power.

Satan's Modern Tactics.

But there is an application of the words other than to the individual Christian life. Satan is a subtle adversary of man since his creation, is working today as he always has been and he makes use of the best methods within his power. In the earlier days of Christianity the methods he used were those of intimidation, of persecution, of fire and sword, of the rack and the stake, which was time only, and was the balance which remained to the final after the war was over, he was deposited in the name of Count Sallan, a well-known painter of the Dutch school, at 19 years if has note than quintupled itself.

Treat Ulcers With Sugar.

Sugar, as a dressing, for ulcers is advocated by Dr. Alfred A. O'Brien of Bradford, England, in a letter to the British Council. He says that in the medium sized crystals for many years, having learned of it from the old woman who was treating an ulcer on her own leg in this manner, and has tested it in a new manner, in the New York Medical Journal says that "the bacteria of Marburg, Germany, also uses sugar, also has found it invaluable as a dressing in all sorts of tuberculous lesions.

Color Made in Noted.

During a recent rendition of the Russian composer Tschaikowsky's "Pathetique" which is described as a fantastic tonal poem, by an assembly chestra in Carnegie hall at New York, a "color organ" was employed in all the author's chromatic scores with the orchestration.

Various color hues and tints merging and blending with each other appeared in a mass of diaphanous masses forming a screen on the stage before the audience.—Popular Mechanics.

SEEING LIFE with JOHN HENRY

By George V. Hobart

John Henry on Servant Problem

WHEN Peaches and I get tired of the Big Town—tired of its noises and bustle—tired of being tickled to death as we cross a street; tired of watching grocers and butchers hold flue blazer the highest price; tired of that's our cue to grab a chopchop and beat—out to Uncle Peter Grant's farm and bungalow in the wilds of Westchester, which he calls Troubyroosal.

Just to even matters up, Uncle Peter and his wife visit us once in a time in our summer apartment by the Big Town.

Uncle Peter is a very stout old gentleman. When he squeezes into our little flat the walls act as if they were bowlegged.

Uncle Peter always goes through the folding doors sideways, and everytime he sits down, the man in the apartment below thinks he has brought more the piano so often.

Aunt Martha is Uncle Peter's wife and she weighs more and breathes offener.

When the two of them visit our little cage at the same time the janitor has to go out on the front stoop of the building with a view to catching it if it falls.

When we reached Troublyroosal we found Aunt "Cousin Elsie" Schulz who also a visitor there.

"Cousin Elsie" is a sort of privileged character in Troublyroosal. Nobody remembers enough to call her Elsie Schulz. "Cousin Elsie" just is and she rules the roost.

They call her "Cousin Elsie" just to make it more friendly and familiar.

Three or four years ago Elsie married Gustave Bierbauer and quit her job.

"Cousin Elsie" believes that conversation was invented for her exclusive use, and the war she can grab a bundle of the English language and break it up in a collision.

Language is the same to Elsie as a siphon is to a Norbalt—and that's a whole lot.

Two years after their marriage old Gustave stopped living so abruptly that the coroner had to sit on him. The gang around Troublyroosal felt that Gustave had died from a rush of words to his throat.

The coroner also found, upon further examination, that all of these words had formerly belonged to Elsie, with the exception of a few which were called the property of Gustave's favorite bartender.

After Gustave's exit, Aunt Marta tried to get Elsie back on her job, but she said it was "too hard work." Elsie Schulz, and finally married Hinrich Schulz, and finally married Hinrich Schulz, and finally married Hinrich

DISEASE IS SPREAD BY RATS

Their Migratory Habits Explain Many Facts Connected With Dissemination of Plague Germs.

That the migratory habits of rodents have a bearing upon the spread of disease is not generally known, but the United States public health service, as a result of experiments conducted in plague epidemic work at New Orleans, asserts that such is the case. This is but another illustration that the field of preventive medicine is extensively broad, and investigators therein must be thoroughly familiar with the life history and habits of flies, mosquitoes, ticks and even rodents.

Several hundred captured rats were marked for purposes of identification by having their ears punched, care being taken not to render them conspicuous, as fellow rodents wage relentless warfare upon those which appear different from their kind. They were then released in the heart of the city, and allowed to shift for themselves. Trapping was carried on in all sections, and each rat was labeled as to the locality caught. Fully one-quarter of the rats made widespread excursions, that is, they were recaptured at points from one to four miles from where they were liberated. In one instance a rat traveled 19 blocks, crossing one of the widest and busiest streets in the city, where there was no subterranean passage and was retaken within 60 hours from the time of its liberation. From the experiments it is concluded that the semi-domesticated rat has migratory habits similar to wild animals, and that these habits are influenced by abundance or scarcity of food, facility for harborage, or the presence of natural enemies. It is also believed that certain inexplicable instincts tend to make the rat a wanderer. That in this instance the "homing" instinct was not responsible for the migration of rodents explains many facts connected with the dissemination of plague; it will also doubtless prove enlightening to those who have attempted to exterminate rats for economic reasons. The Indian plague commission, was of the opinion that rats seldom journeyed from one section of the city to another, but the organization of the public health office is quite the opposite. As a measure of the success of trapping operations, it is interesting to note that over one-half of the rodents liberated were recaptured within a month.

NO LAW WILL STOP FLIRTING

And Trouble Seems to Lie Rather With the Girls Than With the Boys.

Every person of sense knows that there is danger in flirting, but no law will stop the practice or relieve it of its danger. The trouble lies in the girls rather than the boys. We have been accustomed to think of our girls as too modest and refined to flirt. Most of them are, but the proportion that is not is altogether too large—larger than need be. Nowadays when a girl goes to work in store or factory she seems to think she has been emancipated from home control, and all too often the parents make no attempt to free her from this delusion. The consequence is that she is in constant danger because she is likely in her new-found freedom to follow the course of the pleasure-seekers among her companions. Proper home training and control of the girl until she has acquired knowledge of the dangers that beset a young girl in the world are better preventives of flirting and its accompanying evils than all the laws that all the legislatures could pass.—Rochester Union and Advertiser.

Where Politeness Ends.

The Moors are the politest and most genial people taken as a whole that are to be found anywhere, a writer in Travel reports in describing a visit to Fez. Politeness ends, however, it seems, in the vicinity of the mosque of Moulai Idris founder and protector of Fez. The streets are barred off by poles, and Christians, Jews and even animals are forbidden to enter. A few days before our arrival a Frenchman had been almost beaten to death for trespassing in this quarter," the traveler says. The tourist naturally made no attempt to take photographs in this section; elsewhere the noisy natives did not object to his use of the camera—western invention not usually welcomed in Mohammedan towns.

Aesop on Preparedness.

A wild boar was whetting his tusks against a tree, when a fox coming by asked why he did so, "for," said he, "I see no reason for it; there is neither hunter nor hound in sight, nor any other danger that I can see at hand." "True," replied the boar, "but when the danger does arise I shall have something else to do than to sharpen my weapons."

It is too late to whet the sword when the trumpet sounds to draw it.—Philadelphia Ledger.

Coleridge—the Last Phase.

Professor Saintsbury in his autobiographical sketch entitled "Notes of a Life," tells of a visit he paid to Coleridge, then living at Highgate, of whom he remembers only two things. (1) that he was an old, infirm, opaque man; (2) that he told me he had thrown overboard all speculative philosophy, finding perfect satisfaction in the first chapter of the gospel of John."

TOUR COUGH CAN BE STOPPED.

Using care to avoid draughts, exposure, sudden changes, and taking a treatment of Dr. King's New Discovery, will positively relieve, and in time will surely rid you of your Cough. The first dose soothes the irritation, breaks your Cough, and stops it in a short time. Dr. King's New Discovery has been used successfully for 47 years and is guaranteed to cure you. Money back if it fails. Get a bottle from your druggist, it costs only a little and will help you much.

AIR CRAFT GUNNING SPORT OF THE WAR

Soldier That Does the Work Is Prince of Artillery.

"ARCHIBALD" IS A TERROR.

Allies Give Nickname to Their Busy Anti-air Craft Gun, Which Is Removed From Place to Place in a Private Car—Aeroplanes Can Withstand Much Shell Fire.

A crack and a whish through the air. No sound is more familiar at the front where the artillery is never silent—the sound of a shell breaking from a gun muzzle and its shrill flight toward the German line to pay them back for some shell they have sent, writes a correspondent from the British headquarters in France.

Only this which did not pass out over the landscape in a long parabola on toward the German lines. It went right up into the heavens at about the angle of a skyrocket, for it was Archibald who was on the job.

Six or seven thousand feet over the British trenches there was something like big as your hand against the blue of the summer sky. This was the target—a German aeroplane.

Wings of Intelligence.

Other features of life at the front may grow commonplace, but never the work of the plane—those wings of the army's intelligence. If they might fly as low as they pleased they might have an idea that they owned the sky. Archibald rushes the fighting. It is the business of the tribe to sidetrack. The aviator cannot hit back except through its allies, the German batteries, on the earth. But all that the aviator can see is mottled landscape. From his side Archibald dies no post mortem.

Archibald's propensities are entirely peripatetic. He is the vaudeville of the army. Locate him—and he is gone. He is the only gun which keeps regular hours like a Christian gentleman. All the others are at any hour night or day. Aeroplanes do not go up at night, and when the planes are up Archibald has no interest in the war.

Way he was named Archibald nobody knows. As his foal name is Archibald, the nickname probably it comes from some association with the idea of archery.

Has His Private Car.

Archibald, who is quite the swallow of the army, has his own private car built especially for him. While the aeroplanes are out of the lines prow sleek from inaction, the aeroplanes have taken their places. All the romance and risk of modern warfare.

Such of the cavalry's former part as the plane do not play Archibald plays. He keeps off the enemy's scouts. Do you scoff from your office of corps and smartness in this theater of France where all the old glamour of war is lacking? You will find it in the attention of Archibald.

Ask the man who is not used for Archibald. Here you see your target, which is not close-hauled, and the human management now wanted and taken, reaches without any wind German, and the target is a bird—a man bird. Puffs of smoke with tongues of flame dart from the enemy's lines. They have a bore before our arrival a Frenchman had been almost beaten to death for trespassing in this quarter." the traveler says. The tourist naturally made no attempt to take photographs in this section; elsewhere the noisy natives did not object to his use of the camera—western invention not usually welcomed in Mohammedan towns.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or telephone, H. S. HARSHA.

WELL, NOW, WHAT IS THE USE

If You Feel That Way About Anything, It Certainly Is "No Use"—to You.

Sometimes people ask: "What's the use of dressing children so nicely?" "What's the use of spending time on a flower garden? What's the use of poetry? Why not say it in plain English? We answer: What's the use of the dimple on the baby's cheek, or the sheen on the pigeon's neck, or the flash of the bluebird's wing, or the fragrance of the rose? Singularly enough, the poet is regarded by many as an unpractical and unproductive member of society—a drone in the hive of industry. Many people believe that it would be better to put a pick and shovel into his hands and set him at some "useful task." But happily, life is not constituted solely on the pick-and-shovel principle. The earth is not flat, and the sky is not very near. Fortunately for us all, this little globe of ours is on the most comfortable of journeys, bathing itself in the very elements of magic as it rides, and surrounded by the unutterable poetry of the blue and opaque which surges through every star and every cloud, every crystal dew and every smallest grain of dust in our garden path.—Gems.

Well Classified.

The Kansas story of how the farmers put beer kegs instead of wheels on their binders, in order to harvest in a dry country, reminds the reference classmate the old story that was often told in the Civil war days, the division was young in Kansas.

There was a law that permitted the sale of liquor for medical, mechanical and scientific purposes. A farmer came in the day and offered to purchase a gallon of stuff from the local druggist. He came to the druggist's book, in which all sales and the purpose for which the liquor was to be used were recorded. "What are you going to use it for—medical, mechanical or scientific purposes?" asked the drug clerk. "You might as well put it down as mechanical," responded the farmer. "I'm goin' to have a barn raisin'."—Kansas City Journal.

An Almanac Monopoly.

The sale of almanacs was once a lucrative monopoly. Queen Elizabeth granted the sole right to publish "almanacs and prognostications" to the Stationers' company, and James I extended the privilege to the Universities of Oxford and Cambridge, but for centuries the universities have been permitted to issue printed calendars. It monopoly ended when the plan of the king to the privilege of granting or withholding permission to issue calendars—a novelty perhaps from days when kings asserted their right to monopolize all things—was from the times and seasons—was definitely disposed and proclaimed nonexistent. Now anybody can say what's what anywhere.—London Chronicle.

Suggested a Settlement.

Mr. Golden had a new office boy. A few days after his arrival some money was missed from the cash drawer.

Calling the new boy into the private office, Mr. Golden said severely:

"There is ten dollars gone from my cash drawer, Albert. Now you and I are the only people who have keys to that drawer."

"Well," replied the boy cheerfully, "guess we each pay five dollars and say no more about it."—Settlement.

Business and Pleasure.

The man who makes his business a pleasure is likely to live a good deal longer and get a good deal farther than the man who makes his pleasure a business.—Chicago Record-Herald.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate Office in the City of Charlevoix, in said County, on the 13th day of August, A. D. 1915.

Present: Hon. Newman Cummings, Judge of Probate.

In the matter of the estate of John Vincent, Deceased.

William Gaisacker having filed in said court his petition, praying for license to sell certain real estate belonging to said estate, it is ordered that the 6th day of September next, at ten o'clock in the forenoon, at said probate office, be appointed for hearing said petition, and that the heirs-at-law of said deceased, and all persons interested in said estate, are required to appear at a session of said court, then to be holden at the Probate Office, in the City of Charlevoix, and show cause why a license to sell the interest of said estate in said real estate should not be granted.

And it is further ordered that said petitioner give notice to the persons interested in said estate of the pendency of said petition, and the hearing thereof, by causing a copy of this order to be published in the Charlevoix Sentinel, a newspaper printed and circulated in said County, for three successive weeks previous to said time of hearing.

NEWMAN CUMMINGS, Judge of Probate.

(First Publication July 29.)

Notice for Publication.

Department of the Interior,

U. S. Land Office at Marquette, Michigan, July 26, 1915.

OUR PUBLIC FORUM

IX—Peter Radford

On "Back to the Soil With Wall Street"

When Wall Street wants good business men she usually goes back to the soil to get them. That financial thoroughfare is said to be honeycombed with men who have plowed barefooted, who have drunk branch water, eaten cornbread and molasses and slept on the floor in their early days. A man is more capable of holding the reins of business who knows how to drive a team of mules, shear a sheep or put a ring in a sheep's nose. A man is better equipped to meet the problems of life who in his youth has walked the log across the creek to get to school, counted the girls at husking bees and pitched horse shoes Saturday afternoon. A man who has spent the moonlight nights of his youth possum hunting, going to protracted meetings and occasionally turning down the community at a spelling match has the right sort of stuff in him to make a good business man. The activities of most of the large business organizations of America it is said were, with a very few exceptions, raised on the farm, and even some the cleak, pitch hay, chop wood, milk the cows or slop the hogs as early as they can remember anything.

The farmers look to these capable and loyal sons of the soil to assist in the solution of the business problems of agriculture. Wall Street is reputed to be capable of financing everything from a Y. M. C. A. to a war, so why not finance agriculture? It is not sufficient to lend money to a corporation to lend to a local banker, to lend to a broker to lend to a merchant, to lend to the laundry to lend to a farmer. Such a financial system sound like the house that Jack built, and is just about as useful. Neither is assistance confined to the money or financial interests. The farmer wants to be able to sell the crop. What better security is there than a warehouse receipt for a bale of cotton, a rack of wheat or a bushel of corn and why will such securities not travel by the side of government bonds?

The American farmer is a capable farmer, he is a good citizen and always will fill the nation's granary, larder and wardrobe, but he has nothing to say as fixing the price of his products. The problem confronting the farmers of this nation today is marketing and its solution depends first upon the farmers organizing the concert of action and the co-operation of the financial interests in marketing the crop. Agriculture is the biggest business in America and the only one that has not a financial system adapted to its use.

Gunmakers to the Kaiser.

Ordinarily the Krupps manufacture railway equipment, motor cars and other steel products for purposes of peace, as well as guns. Now, however, the entire establishment is being devoted exclusively to the making of guns and war machines. The immense furnaces are boiling tons of white-hot metal, and the stacks belching forth volumes of black smoke as the great army of gunmakers work in day and night shifts under tremendous war pressure. Busy Berlinas are hoping profitably produced. Guns for naval and coast defense, for siege and fortress purposes, field and mountain guns, antiaircraft guns, guns of all sizes and calibers, with accessories and appointments, such as armored turrets, shields, observation stations, conning towers, armored casemates, disappearing carriages, loading and lifting apparatus for ammunition, great shells torpedoes, shrapnel, tear shot, all kinds of ammunition, armor plate and ordnance wagons, in fact, all the dread implements in the arsenal of war either forth in steady shipments.—Review of Reviews.

Hard-Up King Created Baronetcy.

The title baronet was created, but not invented, by the "British Solomon." It was in King James I. quently in the financial morass of Mr. Micawber, that the earl of Salisbury suggested a scheme whereby 200 gentlemen might be persuaded to pay £1,000 each for the honor of being created baronets, or petty barons. To the king's objection that such a step might give offense to "the general body of the gentry," the cynical Salisbury replied: "Sire, you want the money, which will do you good, while the honor will do the gentry very little harm." This cogent argument convinced the king, and the old chicanery of the kingdom was expanded by the new order of pseudo-barons.

Foodstuffs Contaminated.

A piece of cake was exposed for sale in Philadelphia without adequate protection, then analyzed. It contained sand and coal dust, disintegrated straw fragments, human hair, wood fragments, black lace, yellow and white straw, partly disintegrated, colcynte, aloes and other wood fragments and bits of iron rust

One of the Fastest Cameras.

Capt. H. H. Pour of the United States coast artillery has invented a camera that marks a great advance in the art of photographing swiftly moving objects. It differs from the ordinary camera in size and in the mechanism of its shutter. It is almost four feet high. An electric motor that makes several thousand revolutions a second works the shutter; and since the speed of the motor can be accurately regulated the photographer can determine the length of exposure by the number of revolutions per second. The new camera has photographed bullets in flight, and they left the muzzle of the gun, and afterward, and has shown the cord which connects the bullet and that accompanies the projectile when it emerges from the gun. It may yet help to determine exactly what happens when a modern shrapnel shell explodes, and pay way through solid steel.—Youth's Companion.

Mail Swindlers.

The recent of the mail swindlers is positively appalling. In five years the federal courts have prosecuted 1,000 persons who have been convicted in fleshing from the people. Of this, cars never their victims the enormous sum of $351,000,000. Great is this sum in it represents money, too, to the testimony of the postal authorities, only a comparatively small part of the money fraudulently obtained in that period by the abuse of the mails. Some of the swindlers take warning in time to escape the great army of gumshoers work in day and night shifts under tremendous war pressure. Busy Berlinas are hoping profitably produced. Guns for naval and coast defense, for siege and fortress purposes, field and mountain guns, antiaircraft guns, guns of all sizes and calibers, with accessories and appointments, such as armored turrets, shields, observation stations, conning towers, armored casemates, disappearing carriages, loading and lifting apparatus for ammunition, great shells torpedoes, shrapnel, tear shot, all kinds of ammunition, armor plate and ordnance wagons, in fact, all the dread implements in the arsenal of war either forth in steady shipments.—Review of Reviews.

Hard-Up King Created Baronetcy.

The title baronet was created, but not invented, by the "British Solomon." It was in King James I. frequently in the financial morass of Mr. Micawber, that the earl of Salisbury suggested a scheme whereby 200 gentlemen might be persuaded to pay £1,000 each for the honor of being created baronets, or petty barons. To the king's objection that such a step might give offense to "the general body of the gentry," the cynical Salisbury replied: "Sire, you want the money, which will do you good, while the honor will do the gentry very little harm." This cogent argument convinced the king, and the old chicanery of the kingdom was expanded by the new order of pseudo-barons.

Foodstuffs Contaminated.

A piece of cake was exposed for sale in Philadelphia without adequate protection, then analyzed. It contained sand and coal dust, disintegrated straw fragments, human hair, wood fragments, black lace, yellow and white straw partly disintegrated, colcynte, aloes and other wood fragments and bits of iron rust

Masterlinck's First Failures.

M. Maurice Masterlinck began his literary career with three successive failures, says the London Chronicle.

The first was the publication of a fairy review, which quickly went under; the second, the publication of a volume of poems, which failed to attract attention, and the third was the issue of a play, "La Princesse Malleine," of which he printed just twenty copies with his own hands and gave them away.

A year later chance brought a copy of the play into the hands of M. Octave Mirbeau, who wrote a glowing eulogy of it in Le Figaro, and Masterlinck awoke one morning to find himself famous.

The Southern Ocean.

According to a note in the Geographical Journal, the name "Southern ocean" has been recommended by the British admiralty and formally adopted by the commonwealth of Australia and the Union of South Africa to designate the whole oceanic zone encircling the globe south of Australia, Africa and South America. The name is not unique, however, but it is not to be found in Lippincott's Gazetteer and has been used in a merely tentative way by many geographers. As the admiralty mentions the Antarctic continent as the southern boundary of the body of water, no one is left out of the map for an "Antarctic ocean."

Exhibiting a Poet.

Matthew Arnold was sitting in his study one morning when the butler showed in an American lady and a small boy. The lady said: "Glad to make your acquaintance, Mr. Arnold. I have often heard of you. No, don't trouble to speak, sir! I know how valuable your time is!" Then, turning to the boy, she said: "This is Jim Lenny, the leading critic and poet—somewhat feebler than we had been led to expect!"—A. C. Benson, in Atlantic

A Female Veteran.

He—Isn't that Gen. X. and his daughter over there?

She—Yes. They say that she has been through more engagements than her old father.—Boston Evening Transcript.

Learned Something Worth Knowing.

"As far as I can learn," said an Atchison man to the Globe, "all my little girl learned in school this year is that her eyes are not-mates, that she will have to be vaccinated and that her method of breathing is old-fashioned." To which the Topeka Times retorts: "Well, what's the man complaining about? If his daughter has her eyes filled with proper glasses she will be better able to do the reading that the course demands, even if she did not learn the multiplication table. If she escapes the smallpox and preserves her beauty, she will consider that as valuable by far, time she is twenty as if she had committed the Constitution to memory and knowing how to breathe properly may contribute as much joy and happiness to her fair young life as being able to recite the multiplication table and name the bones in the skull. If attention prepares for fuller, better living, what reason has some local wag got his education in the three Rs in the days of lickin' and larnin' to complain because his children are enjoying it?"—Kansas City Star.

New Metal Coming Into Use.

Steel and bronze, largely used for use in aeroplanes of warfare, bid fair to be replaced by Monel metal, an alloy resembling steel in appearance. It is harder and tougher than nickel steel resists its brittleness, and does not corrode. In this respect it is even better than bronze, which has been used on several of the big racing yachts and on a few of the cruisers. In 1903 experiments were made with bronze and the cup defender of that year, the Vigilant, was the first vessel to be plated with bronze. She was a big success. The bronze gave her a smooth, clean surface, and having a greater tensile strength than steel, it enabled her to be turn out a comparatively light boat, so that the Defender was built for cup defense, and she was plated with aluminum. This made a lightly built hull, but the aluminum corroded and the yacht decayed after a couple of years. Bronze that time was not known to have been used, and the Vanitie, built last year, was the first to have Monel metal tried.

Extra Pay for Beauties.

"Every American boy and girl has an inalienable right to have a good-looking school teacher, and school boards should be willing to pay $15 a month more for comely instructors than for homely ones."

Dr. Henry S. Curtis, New York play expert, expressed that theory in western Kansas school teachers at Great Bend Normal.

Doctor Curtis believes that bright-looking teachers mean better disciplines and more effective teaching.

Doctor Curtis also believes that play should be made compulsory just as education; he is a composite, whose loyalty never waivers, whose devotion never obtrudes itself; who responds to your mood without planting himself upon his tact and who neither misunderstands nor is misunderstood.

After you have taken a few trampings together you understand each other perfectly and can walk for miles without changing his mind unless you request it. He also supplies the furniture, carpets, mats, culinary utensils and other necessaries for their home.

Flag for Canal Governor.

President Wilson, in an executive order recently fixed the official flag of the governor of the Panama Canal Zone as one with a dark blue background, having in the center a white circle with seal of the Canal Zone. It bears the words, "The Land Divided, the World United."

Hard Labor.

Cholito—You look tired, my boy.

Caseroon—Yes, I been working.

"What doing, pray?"

"Winding up my wrist watch, of course."

PAIN WITH SEVERE WOUNDS

Is Comparatively Little, Says Eminent Surgeon, and Much of Our Pity is Wasted.

An eminent army surgeon has said that much of our pity for the victims of severe wounds on the battlefield is in reality wasted. He says that the terribly wounded suffer comparatively little pain, and that men who are wounded unto death pass away without undergoing much suffering.

Surgeons who have experience on the war fields ought to know definitely concerning the amount of pain suffered by the variously wounded. It is known, of course, off the battle line as well as on it, that a comparatively slight injury which involves the tearing of the flesh and the disturbance of the nervous system causes acute pain. Nature, it is said, makes provision that the terribly injured shall not suffer the anguish which ordinarily are considered as the necessary accompaniment of apparently cruel wounds.

It does not seem, however, as if it were exactly human to say that pity for the terribly injured is wasted. The pity is as much for the wound and for the future disablement of the victim as it is for the present pain. Stories which come from layman best out, however, the surgeon's word that the terribly hurt do not suffer much, at least at the time of the infliction of the injury.

One of the firemen on the Lusitania had his right arm blown off at the shoulder clean by an explosion in the engine room or by the torpedo which sent the ship to the bottom. The man did not lose consciousness and managed to make his way to the deck, where he was helped into a boat. He kept himself afloat for nearly half an hour. He was picked up, and later his terrible wound was attended to. He has recovered, and he says that he was hardly conscious of pain until several hours after the injury was inflicted.

Nature is called the mother, sometimes she is cruel and sometimes she is kind. She makes a pin prick hurt and yet tempers suffering when the end goes deep. She works certainly, but doubtless, according to a well-ordained plan of which man as yet has no thorough understanding.—Chicago Evening Post.

MOST REAL FRIEND OF MAN

Dog Is a Comrade Whose Loyalty Never Wavers, Whose Devotion is Certain.

Your dog is ready to go with you anywhere, at any time, through anything, like Good Deeds in the old play. He is sometimes a bore, he is a responsible family possession, a toy, a part of exhibition; he is a comrade, whose loyalty never wavers, whose devotion never obtrudes itself; who responds to your mood without planting himself upon his tact and who neither misunderstands nor is misunderstood.

After you have taken a few tramps together you understand each other perfectly and can walk for miles without changing his mind unless you request it. He also supplies the furniture, carpets, mats, culinary utensils and other necessaries for their home.

Overdoing it.

Hemmandhaw—Ever hear of a place that was uncomfortably comfortable?

Haggerstaff—No, did you? Jear of "Yes."

"Where was it?"

"Bunkbough's house. His wife has so many soft pillows about the place that there is no place to sit."

A Fool Affair.

"Jack took a cocktail first of all."

"What did he take after the cocktail?"

"His wife saw him and he took a hasipoch."

LOVE in a HURRY

by GELETT BURGESS
ILLUSTRATED by RAY WALTERS
COPYRIGHT, BY GELETT BURGESS

SYNOPSIS.

Hall Bondsville, artist-photographer preparing for the day's work in his studio. He is thinking of Carolyn Parker, his sweetheart, of a letter he is to give to Hildegarde Hawthorne, a friend who is visiting Bondsville, Mr. Hawthorne, Hildegarde's father, and Justice of the Peace, Jim Lockwood, Hall Hall's roommate, who has not arrived. Hildegarde and Carolyn are discussing Hall's proposal to their mutual friend, Mrs. Hawk. Hildegarde tells Carolyn she thinks Hall's offer has finally spurred to give Carolyn answer. Carolyn tell Hildegarde Hall's proposal Hildegarde tells Carolyn she thinks Hall's offer has finally spurred to give Carolyn answer. Carolyn tells Hildegarde she will accept Hall's proposal.

CHAPTER IV—Continued.

Hall had gone into a momentary reverie. In his daydreams he had always lived three years with Carolyn, traveled abroad, even to Constantinople had seen her pose near exotic grand dukes on his yacht, had fought two or three duels with offended Italian officers on her account. Lucy had did her Sunday afternoon calls, was married. Just how they were back in New York. There was even a little Hall Bondsville—

"Here! Wake up!"

He was suddenly jerked back into his present, with Carolyn now seated on a couch, impatiently staring at him.

"What's the matter with you, Hall?" she asked, leaning forward curiously. "You haven't got a lump over or anything, have you? I didn't think you dozed."

He laughed nervously. "I suppose you'd laughed at me."

She gave a whoop of joy. "Me, uncle?" she pointed triumphantly at her breast. "Say, Hall, old chap, pass the molasses. We women just eat it up, you know. Makes us fat. I need a lot of it, Exit headache!"

"This was hopeless for Hall. He must get serious or there would be no business in proposing. Her manner gave him the cue—wouldn't she be more amenable to a business offer? "Try it," said his intuition. He walked up to her.

"Carolyn, see here, how would you like it if you thought I'd lain awake all last night thinking about you—you, and the night before, and all last week?"

"Fine! I feel better already. You good to be true, though. Did you, really? Do rumpled his hair affectionately.

"I certainly did. The fact is, Carolyn, I'm pretty desperate about you."

Carolyn winked. "Easy now—easy!" she said aloud.

"That's right though! I've got a case of Carolyn Hallitis good and plenty. It's begun to burn, girl, don't know it?"

Carolyn rose, yawning. "Oh, well, if you're going to be silly, Hall, I think I'd better be going. I'm allow about these proofs anyway."

"Proofs be damned! You're not going—not till I settle this thing. Shall I lam or what? Shall I let you give it the stroke, uncliny? Or do you prefer to administer an opiate?"

He dropped the mock-heroic pose and took up the bluntness. He walked over to her and took her hand. She had no objections whatever, apparently. Gently, it's an honest fact. I want you!"

"Mr. Bondsville, am I really to understand that you are proposing to me?" Carolyn smilingly looked him in the eye.

"Oh, I suppose you think it's a joke, just because I don't speak in blank verse."

"Well, I'll be darned! I believe the man's serious!"

She said nothing for a moment, narrowly scrutinizing him. Hall met her with the same amused tolerant expression. Then she spoke: "Well, Hall, it strikes me you must be pretty sure of me to do it in a twosing, like this. Why, nearly every girl refuse you at first."

Hall interrupted her: "Oh, don't! Carolyn! Please don't!"

Carolyn's face changed. "You don't actually want it, honey?" she asked anxiously, putting a hand on his arm.

"Miss Hill, Why, Carolyn, of course I want it! It's no use, I can't make it theatrical. You have a sense of humor, so have I. Perhaps a girl caught to be entitled to a little serious on such an occasion—or even poetry—I'll try. If it you insist, you know—but, somehow, I can't take my self so seriously. She withdrew her hand frowning. "Oh, that doesn't mean that I don't want to be serious, Carolyn, or rather that I don't want to—I mean—confound it, I'm not convincing myself that I'm even a little bit worth your while.

"Well, then, try to convince me, why don't you?"

"Thank you! I'm trying to do girl! Lord, Carolyn, there's no use in your not believing; you must believe it! I want you something fierce, really I don't want you like a little doll wants ice cream—the way a girl wants a new Easter hat—"

"Heaven, is it really as bad as that?" She turned away. "Oh, Hall, really, you know, you're too ridiculous!"

"Oh, I'm the clown with the doting baby, all right. I laugh and joke while my heart is breaking. Lord, I'm as nervy as a man with a brain-tonic. I just plain want to marry you, Carolyn, that's all. Is that so hard to understand? Try and get it through your head, will you? I want to so bad that I'm making a fool of myself. Why, I'm drunk don't you laugh?"

Hal Carolyn's smile had died. She only nodded and shook hands with him. "Say, Hall, you're all right!" she said, blushing slightly. "Honest, I never thought you could do it like that and get away with it. Come over here and sit down. We'll talk it over." She led him to the couch. He followed her with docility, and sat down beside her.

"Now," she announced, "let's begin over again. I'm not sure I got you. I had no idea you were really in earnest honest. If you have anything upper to say to me, Hall Bondsville, I'll give you just five minutes of my valuable time."

"Don't tease me any more, Carolyn, be implored. "Give me my answer."

"Answer to what?" She stared at him wide-eyed.

"Oh, I suppose you are so accustomed to being proposed to that you don't realize it the moment it's over. Just really, Carolyn, I'm in earnest. I want you. This is the serious proposal thing that has ever happened to me. I don't always accept everything that I'll do. It will ruin me. Carolyn will you say yes?"

She stood her head. No, Hall, I won't."

"Carolyn don't play with me, please. I won't take no for an answer, I tell you. I've got to have you. Don't you care for me at all, Carolyn?"

Carolyn looked him over again and said, "Oh, yes," with a drawl. "Why shouldn't I? You're good-looking—and clever—and—oh, all sorts of things. Yes, I like you all right."

"Oh, don't guy me, Carolyn. I've got to know—immediately! Don't say no—"

"Trying to take me by storm, eh? No use, Hall, old chap!"

Hall jumped up scowling. "Then it's no?"

"See here, Hall, don't be silly. Let me get my breath, won't you? Give me a little time to decide. Really, you know, you are forcing it horribly."

"How long do you want?"

"How much do I get?"

"Till—can you make up your mind by tonight?"

"Oh, I say, you are in a hurry! If I want, I can wait a month. Three months."

"Oh, don't take it that way—only—hang it, I just can't wait."

Carolyn rose and smoothed down her dress. "At midnight, then—in the clock in the old belfry, just like a fairy boat?" She struck an attitude.

"Oh, not midnight—no, let's make earlier than that—I can't possibly wait

"If You Don't Accept Me, — I Don't Know What I'll Do."

till midnight you know. Since time in the evening. You're coming to my parts of evening."

"I suppose I'll have to, to bring my answer. You seem to want me to do most of the work in this affair."

Hall looked at her reproachfully. "Oh, come now! You know I've got to be here—I've invited a lot of people."

"All right, then. I shall run all the way with my hair down and jump into your lap, Hall, and whisper 'Yes—or No—or Yes!' She accented the speech with an absurd gesture of her forefinger.

"I wish you'd take it a little more seriously, Carolyn, honestly I do. I tell you it's a mighty serious thing to me!" He shook his head thoughtfully. "Why, it will change my whole life. It will develop me make me do things I have never done before! It will give me a lot more opportunities I've always wanted—"

Carolyn laid her hand on his arm. "Wait a minute, please!" she said. "I've always known I was an awfully nice girl and all that sort of thing, of course; but I didn't realize I was such a mighty influence in your life. Do you really think that if you marry me it's going to make all that difference to you?"

"Why, I'll be another person! We'll have a glorious time, Carolyn! We'll travel and we'll go—"

Again she interrupted him. "See here, Hall, I haven't any money; you know that, don't you?"

He was properly indignant. "By love, you don't think I'm that kind of a man, do you! I don't care whether you have or not." He waxed prophetic. "Good Lord, Carolyn, do you think I would marry for money?"

"Well, then, I don't see—"

He looked about the studio fatuously. "Oh, I'll—I'll work hard, you know. I'm sure I can earn enough. In fact I have applied prospects, Carolyn, really splendid!"

She gave him another of her long curious glances through half-closed lids. You certainly are attractive this morning, Hall. You darned attractive! I'm almost believe I'll say yes, after all! But no, I must think it over. I don't want to be hypnotized, you know. Good-by, Hall, I'm going." For a scant moment she paused, hesitating, self-conscious, as she looked at him with an expression that was seldom seen on her face. Then she took his hand impulsively. "Oh, Hall, dear—I thought it was all a joke at first—just your fooling—that's why I was so horrid. But now—Then, as Hall attempted to draw her nearer she swung away, once more proud and cynical. "Don't you be too sure of me, though! I may see the funny side of it again, tonight!"

"By Jove, I don't see how I can wait till then," he replied bravely, encircling her waist. "Say, Carolyn—"

His lips were almost upon her—not quite. She burst into laughter as he strained away. "Oh, no, Hall, nothing like that! I've got a long way to go, my dear, before I'm ready for that bunny-hug! You go to work, and let me think! Sure-fire-beautiful! Then, without waiting for an answer, she floated out of the studio.

In the office she came face to face with Flodie. Carolyn stopped and looked at her keenly.

"Why, Miss Fisher," she said, "you ought to get some fresh air, dyou know it! You need a change. You're so pale—" Her intent was kind, but to poor Flodie, who had waited in agony for her to leave, it was infuriating. She looked up, with her white face with wonder.

"I'm so sorry! I frightened you!" Flodie gave a sarcastic smile.

Carolyn stopped, as surprised as if a woody lamb had bitten her. She looked Flodie up, she looked Flodie down. Then hastily she laughed. "Good for you! Always speak up, little one! Be bright and pleasant. It makes customers like you!"

Flodie met her smile for smile. "Thank you so much! And now, would you mind telling me how to take customers?"

Carolyn laughed again. "Well," she said, "I may not be a customer very long. And then perhaps you'll like me!"

Flodie bounced her fountain pen down on the desk and jumped up, eyes snapping. Into the studio she walked, leaving Carolyn standing in the door, she stopped him with a tragic "Well?"

"What d'you think?" he answered. She wants to think it over, too!"

"She didn't accept you, really?" Flodie gasped.

"No, took it as a joke. Liked it, though. What the poor dickens am I going to do?" He looked at his watch. "Here it is nearly eleven o'clock already, and nothing decided yet! Why, I daren't even buy a ring!"

At the word, Flodie gave a sudden gasp, and her hand flew to her heart. "Oh, I wish I could help you!" she sighed.

He smiled patronizingly and nodded. "You! Wish you could? He started for the door of the dark room and paused. "You can't pronounced anyone else can you, Flodie? If I could—you know—I'd—I'd—I'd go and have it over, I could go right ahead!"

She gave him such a look! But the hopelessness of it kept her dumb. Down went her eyes to shut the tears out. Flodie turned away, pretending that it was absolutely necessary that the Spanish chair be moved two inches to the right.

"Say, Flo, you think up some way to beat this game, will you?" With that, he shut himself into the dark room.

Into the chair Flodie sank, staring at space, deep in thought. Her fingers worked together nervously, her brow was puckered. How blind men were! Dead and dumb and blind and half-witted! She could not offer herself, she loved him too well. Oh, never until today did she realize how much Hall meant to her! Now to lose him—oh, if he were really to love she might bear it—but to have him to go like this—look at everyone and not see her—it was insulting—she felt numb at the cleanness, the degradation of it. Oh, she was helpless—the greater the opportunity the less could she avail herself of it. But wasn't there any way of showing him, she wondered; couldn't she make him feel her? Surely she couldn't amount to much, after all, if she had so little magnetism, but she felt dragged and helpless. Her wits were going.

Chicago's Charity.
Chicago yearly spends on its county poor relief fund over $570,000.

ANOTHER NAME FOR ROGUERY

Aim of Some People to Acquire Reputation for Shrewdness—Novel Trick of Wealthy Old Lizzy.

It seems to be the aim of some people to acquire a reputation for shrewdness, which in many cases is only another name for roguery. Such people take a delight in tricking their friends as well as enemies, like the wealthy old lady who occupied her leisure in making patchwork quilts, which she regularly donated to the annual church fairs. They were hideous things, and no nobody wooed, buy them, they were apt to be raffled off in ignominious fashion at the close of the fair, much to the chagrin of the old lady.

One day, just before the fair time, this old lady sent for her lawyer, and had him add a codicil to her will, bequeathing twenty-five dollars to each and every person who should buy a quilt at the church fair. The lawyer assured her that her injunctions to strict secrecy should be faithfully observed, but it was noticed that a sister of the lawyer bought the silk quilt on the very first day of the fair for six years.

When the old lady died the lawyer came smilingly forward with his quilt and his sister, to claim the sum of $150. But he was tricked in turn, as the old lady had neatly cut the codicil from the will!

Very Newest Things in Neckwear

Besides the vogue for furs and for ostrich boas which has caused a future of the passing season, neckpieces of mulles or net and chiffon of silk or chiffon, or combinations of these materials, have proved almost as popular. The effect of much individuality in taste and they are economical patterns and careful work in making that adds from the somewhat tedious work it presents no other difficulties, is it a simply a straight length of the material made fully by shirrings. Pleated ribbons, sometimes scattered from the neck to the waist.

Visible Hoops.

The idea of overdresses is favorable to voiles which show the underwear very prettily, and one of the new ideas which was recently exploited at a leading exhibit was materially helped by the use of voile for the outer dress.

This idea was the introduction of visible hoop skirts. The hoops were covered with ribbon and run between the outer and inner skirts.

Of course, the covering was plainly visible from the outside and it is said that the idea will be reproduced in lingerie dresses.

Autumn Costume.

Seen recently was one of the stunning things evolved for autumn. Of dark blue serge, it was cut in loose circular coat shape and had wide revers outlined with a deep band of embroidered silk. It was lined with white silk and the unique undercoat was of white baby cloth, with medici collar of fine lace.

Pretty or Practical, or Both

Some of this season's underbodices are merely pretty, and others are simply practical, but here are two that are both pretty and practical. What is further in their favor is the fact that they are simplicity itself when it comes to the making of them.

The sateen short blouse of this crepe, chiffon and lace or net, require more than the usual attention to underbodices. In fact some bodices are very sheer and very plain, merely vehicles for dainty and elaborate bodice, which is made as attractively pretty as possible.

At the left of the picture a bodice is shown, made of a wide embroidery of Swiss, in a pretty floral pattern. It is a good, well-worn piece of lawn with a narrow scalloped edging of ecru lace. A sample of this lace is shown at the bottom of the picture. Machine-made ecru of linen thread is cheap and will outlast usually, the garment it trims. Another very durable lace is shown in the torchon edgings of cotton that are as durable as ecru, in fact they do not wear out.

In cutting this underbodice, the pattern is laid on the flouncing in such a way that the front pieces overlap. The bodice may be made to reach only to the waist line, or with a short basque below as shown in the picture. Ribbons run in casings about the waist and top edge, adjust it to the figure, and provide a pretty finishing touch.

The dainty bodice at the right is made of light pink crepe de chine and lace. It is merely a straight strip of the crepe hemmed at one edge. A wide vat or shadow lace is stitched along its scallops to the other edge. Here a narrow beading and edging is one is sewed on.

Shoulder straps of the wide vat lace, edged with the beading lace are sewed to the body. Narrow ribbon is run through the beading and draws the bodice up about the bust, and over the shoulders through the beading to adjust the straps. These ribbons are like the bodice and make a pretty decoration. A small silk rosette of ribbon, conceals a snap fastener at the front.

The waist is adjusted at the belt by a length of flat elastic cord, run in the hem and fastened by a snap fastener.

A length about a third greater than the waist measure is required to adjust this, with medici collar or flat lace.

VAST RICHES HIDDEN

Wealth Brought to Light Only by Death.

London Newspaper Records Cases That Are Remarkable in the Idiosyncrasies of Nature That They Reveal.

After the accidental death of a spinster who had lived in Yorkshire for many years all alone, and in circumstances which suggested poverty, property valued at many thousands of dollars was found in her cottage, which was sadly in need of repair. London Answers states.

Money was discovered all over the house, deeds of property and stocks and shares were found stuffed underneath a mattress. It was also found that the old lady had in two banks over $10,000, nearly $7,000 in the post office savings bank and that she had insured her life in four offices for sums totaling $40,000.

Nor was this all. The whole of the interior of the cottage was literally furnished as walls were hung with valuable oil paintings by well-known artists, and lying about everywhere were rings and other personal adornments, set with diamonds, opals, rubies and other precious stones.

The old lady was slightly when she died her architectural death, and as she had no will, and, it would appear, no relatives, all these good and chattels reverted to the crown.

But this Tewkesbury treasure house shows how misjudgment, wealth made or discovered within a walk of it at Chiswick. This house is one of the oldest in that riverside suburb, and apparently one of the most deserted. Its windows uncurtained, its large grounds a wilderness. Nobody seemed to know much about it, but, of course, the police said it a visit.

The house of 16 rooms proved a perfect cave of Aladdin. The interior was elaborately furnished, while on the walls hung many beautiful paintings, including four by the great master of English masters, Sir Joshua Reynolds.

But this was only the beginning of wonders. Every room was packed with costly treasures. Gold and silver vases were heaped into cupboards, jewelry and precious stones packed loose in chests and drawers.

There were dozens of cases of cutlery, table silver, vases inlaid with gold, valuable pottery, boxes full of silver and jewelry, beautiful embroidery and lace, bed and table linen without end, rugs and skins and a thousand things of interest and value which required a line of panechinsons to remove. No wonder, indeed, when it is added that the tenant drove in indeed, among so much of the rich and rare, a Rolls-Royce motor and 20 autocar-heating stoves!

The discovery of the safe containing much of the more valuable jewelry was due to need, of a mere piece of detective work. Behind a brass bedstead one of the officers noticed that there was a crack in the wall, concealed by roseettes. To all appearances they formed part of the wall paper. But the quick wited searcher cried them all and found that one had revolved. Further investigation revealed the safe.

THE CHARM OF MOTHERHOOD

Enhanced By Perfect Physical Health.

The experience of Motherhood is a trying one to most women and marks distinctly an epoch in their lives. Not one woman in a hundred is prepared or understands how to properly care for herself. Of course nearly every woman nowadays has medical treatment at such times, but many approach the experience with an organism nutrited for the trial of strength, and when it is over her system has received a shock from which it is hard to recover. Following right upon this comes the nervous strain of caring for the child, and a distinct change in the mother results.

There is nothing more charming than a happy and healthy mother of children, and indeed child-birth under the right conditions need be no hazard to health or beauty. The unexplainable thing is that, with all the evidence of shattered nerves and broken health resulting from an unprepared condition, and with simple time in which to prepare, women will persist in going blindly to the trial.

Every woman at this time should rely upon Lydia E. Pinkham's Vegetable Compound, a most valuable tonic and invigorator of the female organism.

In many home once childless there are now children to the cause of the fact that Lydia E. Pinkham's Vegetable Compound makes women normal, healthy and strong.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

—sold by Grocers everywhere.

MICHIGAN RESOURCES and ADVANTAGES

by Augustus C. Carton
COMMISSIONER OF IMMIGRATION

FISH ARE ABUNDANT IN THE STREAMS AND LAKES

The history of the state of Michigan dates from 1837, when the history of her great industries. The great pine forests have been gradually cleared away and the woodsman and the axe have slowly but surely been driven by the husbandman and the plow. The prosperity of Michigan, however, is not dependent upon her pine lumber, for in the passing of the lumberman has approximated, or course, the wealth of her mines and the extent of her manufacturing industries so that only the assurance is even the most pessimistic observer that Michigan is destined to be for many generations the high place which she has for herself among the states of the Union.

Location, Area and Population.

Michigan plays a part in the life of the Kawanee basin and in line with the Mohawk valley of New York, and practically surrounded by the Great Lakes, is a most advantageous location. The state has a population of 2,000,000 people, thus affording an unrecalled market for Northern products. On the whole, Michigan, by her position and through her resources, has played a leading part in the development of the "Old Northwest" and in turn has shared largely in the 15,000,000 spent by the federal government on the harbors and channels on the Great Lakes and to the cheaper freight rates due to these improvements.

Michigan is not merely a state, she is an empire containing 57,000 square of land, exclusive of water, or about 37,000 square miles. This great area of land forming the two peninsulas is equal to a strip of land more than two and one-third miles wide that would reach around the earth at the equator. Michigan is the largest state in the "Old Northwest" and the largest east of Lake Michigan and the Mississippi; is about one-fourth the size of France, of the same area as England and Wales. The lower peninsula is nearly equal in size to one of the five states, Ohio, Indiana, Illinois, Kentucky or Tennessee. The upper peninsula is larger than New England, except Maine, and larger than Delaware and Maryland together.

The population of Michigan (U. S. government census of 1910) is 2,810,173.

The population of the state in 1900 was 2,093,889, showing a decennial increase during the last decade of 716,284, or 34·1-10 per cent. In one century, or from 1810 to 1910, Michigan's population has grown from 4,762 to 2,810,173 and now ranks third in the "Old Northwest" group of states, and eighth in the Union. Michigan's population in the last fifty years has been four times that of the first half of the century.

In the division of the state's population of 2,810,173, 52 5-10 per cent live in the rural communities, while 47 5-10 per cent, or nearly half, live in the cities, while in 1900, or ten years previous, the 50 7-10 per cent of the total population lived in the rural districts and 49 3-10 per cent lived in the cities. That the manufacturing industries of the state have made wonderful strides in the last decade and that the rural communities have been the losers is greater or less degree is evident, and one needs only to point to the fact that in the last ten years the cities have increased 37 3-10 per cent while the rural population, counting the remainder, has increased only 2 per cent, and in many of the best agricultural counties of the state the rural population has greatly fallen off, in some cases as high as 10 per cent.

In Competition With the World.

The resources and product of Michigan are so varied in character that it would be idle to attempt to enumerate them in a single sentence. It could be built around the state of Michigan and the people could go on living for centuries without outside assistance. We could hunt, and warm ourselves from the forests and subterranean fuel—clothe and feed ourselves from the products of our farms, fields and orchards; could build our railroads, telegraph and telephone lines from our own iron and copper mines. Food and recreation could be furnished by our streams and woods, while our manufacturing industries could supply us with every necessity and luxury, from a clothespin to an automobile. While Michigan may be said as an isolated empire, with her people enjoying all the reasonable comforts and luxuries of life, with the exception of cotton, which is not produced in this state, she extends a welcoming hand to those from without who would assist in developing and filling the thousands of acres of available agricultural lands within the state, and a detaining hand to Michigan's sons who would be lured by the alluring siren call of the western states and southwestern Canada.

"The Land Of Plenty With Room For All."

It is barely possible that in the reading of this article by some who have not had an opportunity of knowing the true condition of Michigan's development, the question might arise, Why is there such a large area in Michigan for the newcomer? To those who, if the undeveloped lands in the state are desirable, have had the time to improvement into farms that would be producing crops long ago.

Michigan being a timbered state, the development of her agricultural industries was necessarily slower than some of her sister states farther west that were of the prairie variety and, consequently, could be developed into farms at less expense than the forest areas of the Wolverine state. This, added to the fact that in the early days there was no market for the forest products of southern Michigan, and the timber was only cut as fast as the lands could be converted into farms, has delayed the progress of development somewhat slow.

The timber belt, which has held the center of the stage in Michigan for so many years, has gradually moved northward and its operations have been so complete that, it is now comparatively little timber left for further operations. The result of this is that the lumberman is seeking new fields and the men whose fathers and grandfathers spent their lives in the woods and saw mills are now turning their attention to a vocation comparatively new to them, agriculture and the development of millions of acres of land left in the passing of the lumberman.

While other states have been advertising their opportunities and possibilities, Michigan has stood still in this respect and permitted the western states and northwestern states, not only to take the prospective settler from New York, Ohio and elsewhere, who would make good and become a real asset to the state, but has permitted the taking away of her own sons who also stands for the development of her own lands. The railroads, too, being interested in the long haul of the settler from the East to the Pacific coast, have done their part in the development of the West, the result of this being the passing by and through Michigan from the East to the West are, the going out of Michigan to the West of thousands of good men who would gladly have come or remained, in Michigan, and assisted in the development of her lands, had Michigan's copper notion and possibilities only been brought to their attention.

Lakes and River Systems.

The lakes of Michigan are as essential to its individuality as the ocean and the North sea to the British isles. They are its highways, its fishing ground and its source of supply of pure water for city use. They equalize the temperature, furnish a large number of inland harbors and sites for more than a hundred summer resorts.

The total area of the Great Lakes is 24,604 square miles, with Lake Superior, the largest, having an area of 31,200 square miles; Lake Michigan 22,400 square miles; Lake Huron 23,900 square miles; Lake Erie 9,900 square miles, and Lake Ontario 7,240 square miles. Lake Superior is 267 square miles larger than Lake Erie, Kalamazoo, 7,000 to 10,000 H. P.; Grand River, 10,000 to 12,000 H. P.; Muskegon, 15,000 H. P.; Au Sable, 20,000 to 40,000 H. P.; Huron, 5,000 H. P.; Thunder bay, 1,600 to 2,000 H. P.; Menominee, 20,000 to 30,000 H. P.; St. Mary's falls, 40,000 H. P., and the Manistee upon which only about 1,000 horsepower has yet been developed.

The power in our streams is unlike most other natural resources in that it is not diminished by use, nor is it dependent upon rainfall, which is not used today remains to be used tomorrow, but the energy of water which is allowed to flow on unused neither increases nor conserves the future supply, but is lost forever.

Michigan Ideas of Conservation.

The Michigan idea of conservation is that things are placed here for the use of man and when those things are used for the purpose for which they are best fitted, without waste or unnecessary destruction, all has been done that possibly can be done in the interest of conservation; that in order to conserve some things we must protect and restrain them use and in order to conserve other things we must develop them; that there must be a seed time and that there must be a harvest time, but that no man should be allowed to destroy the seed which is to produce the harvest for the generations that are to follow.

If the Michigan idea of conservation is adhered to, it is not alone possible but altogether probable that the present generation will see the day when many thousand more horsepower will have been developed from the streams of Michigan when the use of electricity for farm purposes will be as common as the use of the telephone today; when every four farmers or crossroads will be installed at night, when the incandescent light will take the place of the kerosene lamp in the home of the farmer; when the cares of the housewife will be lightened by electrically driven washing machines, churns milk separators, etc., and when electrically driven machines will grind the grains of the farm, cut the fodder for the stock, pump water for the horses and cattle, and in other ways lighten the toilsome toil of the farmer by reducing in part farm labor which has grown so difficult to procure.

Electricity produced by water power not only is the cheapest power, but the fact that it can be carried over wires from point to point to an almost unlimited distance, is a very great factor in the buildup up of villas and towns, live within a reasonable distance of the streams of Michigan, and in one of the strongest arguments in favor of its use. The development of Michigan has to a great extent been brought about through the building up of its industrial enterprises. The harness of its water power is the pronounced of its legitimate enterprises, as well as in the enrichment of its agricultural lands, which are dependent for its prosperity and its thriving industries on the Great Lakes, there state on the Great Lakes is about 1,600 miles and affords the state a wonderful fishing ground. It is estimated that there are set, all through the fishing season, over 2,000 pound nets with a total length of 500 miles; over 1,500 miles of gill nets, besides a large number of seines and other nets, and that it requires between six and seven thousand men to attend to these nets. The annual catch is about 50,000,000 pounds. A large part of the catch is from Lakes Huron and Michigan. The total value of the fish taken from Michigan waters is about one-twelfth that of the national fisheries. In addition to the Great Lakes, there are

Northern Michigan

Bellaire Independent: Mr. and Mrs. Ira A. Adams and their nephew, Vincent Madison, are camping on Grass Lake this week.

Resorters on Torch Lake are beginning to be pretty busy fixing their cottages for occupancy and rummaging every time they are absent for any length of time. They have organized a Torch Lake Protective Association, and all offenses will be investigated and the offenders punished in future.

An Italian reservist, who was on his way from Central Lake to join the army in Italy, had a little dispute with a negro chauffeur near Bellaire Monday. The argument grew so interesting that the Italian drew a knife on the negro. About this time the authorities intervened, however, and he was taken to Traverse City and locked up. But as the negro failed to make a complaint, he was released and allowed to go on to the war, where he can murder all he pleases and no one will interfere.

Petoskey News: At the meeting of the city council Monday evening Alderman Grimes, of the fourth ward, and chairman of the light committee, gave notice that at the next meeting he will introduce a resolution directing City Engineer Tripp to make levels, surveys and estimates, based on one of the proposed power dam proposition on Sturgeon river east of Petoskey, of which there was considerable talk early in the summer. Petoskey is spending a lot of good money for coal for its light and power plant and if it could secure a power plant on this stream with sufficient water to operate it successfully the year around a saving of many thousands of dollars would be made by the city.

Boyne Citizen: In anticipation of the visit Uncle Joe Cannon to Boyne City for the Charlevoix County Republican Club banquet which will be held at the Wednesday Friday evening, August 27, E. W. Abbott gave Neil Kratts an order for a special hand cigar for the "old warhorse." The weed is something like a foot long and of corresponding circumference. At first glance it looks like a submarine minus the periscope, but Neil says it is not loaded. Uncle Joe is booked to smoke the weed during the speeches and we have heard that he usually does should he fall to appear. E. W. Abbott will presume with the cigar enough to simulate the "big gun." Someone said the was very appropriate as he was the only Republican in Boyne City bomely enough to carry off the deception.

Bellaire Independent: The community was shocked Wednesday morning to learn that Ernest Bidard, a highly respected citizen of Bellaire, had committed suicide by shooting himself through the head with a .32 calibre rifle. As was his usual custom, Mr. Bidard had arisen early that morning and started a fire in the kitchen range and later went to his workshop nearby. Mrs. Bidard arose and prepared their breakfast, not suspecting anything was wrong until she called her husband and when he failed to answer she went to the work shop where she found him lying in a pool of blood with a bullet wound through his head. Medical aid was summoned but his wound was so grievous that he died within an hour without regaining consciousness.

Central Lake almost had some excitement Monday, and in fact, it now is happened. The Italians, who have been at work laying new rails for the Pere Marquette, received orders that they should return at once to Italy and help fight their country's battles, and if the order was not obeyed, their property would be confiscated and they themselves would be imprisoned from five to fifteen years. Of course the majority of the men decided to go, but as their contract with the railroad had not expired, the P. M. refused to give them passes to return on. A good deal of hot talk followed, and the men threatened to tear up the track and stop traffic, if they were not allowed to return on passes at once. So menacing was their attitude, that Sheriff Kittle was sent for, and he came with deputy sheriff and a posse of husky followers who so struck terror to the hearts of the Italians that they humbly crawled onto the train and rode peacefully away.

Russia's Butterfly Belief.

Small boys and girls in Russia often do not have the joy of butterfly chasing or collecting for the popular and pretty ballet of the peasants is that these swarms of fragile, lovely insects are the earthbound souls of the dead, compelled to linger for some minor expiation of sin. As the nurses of the children of all below royalty are from the peasant class, they inspire in them as an early age how wicked it would be to catch and torture a soul and thus imbue them with a superstition that lasts until they are well grown.—New York Tribune.

GROWING USE OF ASBESTOS

Fiber Is Constantly Increasing Demand and New Fields for Mining Being Developed.

Asbestos, which is rock matter, but nevertheless almost as soft and pliable as cotton or woolen fabric, is a potential life saver. The fireproof theater curtain is made of asbestos, but it has many other uses. It is used in making lumber, roofing, plaster and stucco. Houses that are built largely of asbestos afford their occupants not only complete protection from fire, because it is a "noncombustible," but assure them also the comfort of protection from extreme heat and cold.

The asbestos-producing industry of the United States is growing. For many years we have been the greatest manufacturers and users of asbestos, drawing our raw material from Canada, but we are now getting some as refined fiber in our own country. The most notable feature of the asbestos in history, in 1914 was the development of a new field in Arizona, which is furnishing a grade of fiber that compares very favorably with the Canadian. As the mineral occurs in the Grand Canyon, it is frequently designated Grand Canyon asbestos, although the deposit in that remarkable natural wonder is not yet producing whereas communities. For certain installation the Arizona asbestos is even better than the Canadian product, for it contains a lower percentage of iron. Asbestos of a low grade has been produced in Georgia for many years.—Newark News.

Lines to Be Remembered.

These three are my last words to you: be not afraid of the Turk; that life is worth living and your belief will help create the fact. The "spiritualistic" proof that you are right may not be clear before the day of judgment (or some state of being which that expression may mean symbolize) is reached. But the actual fulfillment of this hope, or the thing that then and there will represent them, was then true to the faithful; and, who here decline to go on, in words like those with which Henry Argyles, and you were not there—William James in "The Will to Believe."

Ships Are All "Ladies."

The word "ship" is masculine in French, Italian, Spanish and Portuguese and feminine in Greek, Swedish and Scandinavian. Perhaps it would be error, suggests the Manchester Journal, to trace the custom of feminine gender back to the Greeks, who called them by feminine names, probably out of deference to Athena, goddess of the sea. But the English speaking sailor assigns no such reason. The ship to him is always a lady, even though she be a man-o'-war. She possesses a waist, collars, laces, bonnets, ties, ribbons, chains, watches and dozens of other distinctly feminine attributes.

Chance for Investment.

"It's remarkable how many things can be bought nowadays on the installment plan," said the city boarder.

"Ain't it, though?" assented Silas Pinnegar. "The last time I was up to the city a feller offered to sell me the biggest skyscraper in Iowa for $100 down and $10 a month."

IN MEMORIUM.

In loving memory of William O. Gallagher, who died Aug. 22, 1914:

One day like one year past
And month crawls on
Yet in our hearts we often pause
That you might be here.
If time and care could death prevent,
Departed would not so soon be spent.
Life was precious, but God did ordain
Your Heavenly home was best for thee.

—NORA.

Myrtle Douglass of Escanaba is visiting her aunt Mrs. T. J. Bonner.

Annie Boyle returned to her home in Chicago after a month's visit with her mother.

Dr. Latroph and wife of Jackson are here with their yacht.

Mamie McCafferty of Chicago is visiting her parents.

Miss Hildegard and Clara Wilkinson of Charlevoix visited Dr. and Mrs. C. E. Roth.

H. Frenkel our Merchant Tailor made a business trip to Charlevoix Saturday.

John J. Peffer of Lake Linden, Mich., is here on his fruit farm.

Irene and Veronica Gillespie went to Charlevoix to visit their sister Mrs.

Additional Locals

Services at Episcopal church Sunday at 11 o'clock a. m., by Rev. Harris, of Petoskey, and each Sunday until further notice.

H. H. Mills, the Traverse City fox farmer, left last week for Bear Lake, where he assumes the management of a fox raising industry backed by St. Louis capital. He takes his stock of foxes with him and combines them with those of the Bear Lake fox raiser, the combination to be the nucleus for a fox raising industry on a large scale. They will specialize in silver and blue foxes.

This is the coldest August in 20 years. This was discovered by Weather Forecaster Chas. L. Mitchell in his aerial observation station on the Chicago federal building. Not only has the temperature for the first 21 days been low, but there have been a greater number of sunless days and more cold, drizzling rain than during most of the midsummer months of the last half century.

The end of the small orchards in Michigan is predicted by Robert G. Graham, chairman of the state agricultural board. "Small orchards have been killed by the scale and other diseases," he says. "Five years from now, as things are going, the farmers will be buying apples for their own use instead of raising them, except, of course, in the fruit districts. The fact is, farming is becoming more and more specialized, and fruit growing is a department by itself. To grow apples successfully it is necessary to spray trees four to six times during the season, and this is something the general farmer will not or cannot do. The small orchard is neglected in the press of plowing, cultivating, harvesting and other farm work."

Climatically, the present season has been very perplexing. In April and May we had much abnormally high temperature. May was cooler, with only now and then a warm day. July and the greater part of August gave us much cool and wet weather, scarcely a day that a straw hat was appropriate. Electric fans have taken a rest. As we write the mercury is well up, and reasoning from the eternal flitness of things, we should have an exceptionally pleasant September and October. Taking it all in all, the season has been anything but satisfactory to resort towns. Steamers are shortening their summer schedule, and all report an unsatisfactory season's business. Under the rule of general average we should have a mild winter.

Petoskey News: We have often wondered if it really paid in the long run to spend your automobile on every pleasant stretch of road you encounter. We know it is quite a temptation when you come to one of these nice level stretches. Most drivers just want to "see her go a little faster" on these stretches and this desire gets many, many people into trouble. Just yesterday two men paid stiff fines in justice court for speeding. They no doubt thought they might gain one trip during the course of the day in their jitney business in Bay View and thus earn forty or fifty cents more and maybe a dollar. They will now have to save, one of them about twenty dollars and the other quite a neat sum more than that to pay their fines, so you see it hardly paid them to speed.

The state board of health is out with a warning regarding the canned asparagus, as already about a dozen deaths have been reported in Michigan from eating the poisonous variety. There is an unusually large crop of poisonous mushrooms this season and it requires an expert to distinguish it from the nonpoisonous variety. There is no antidote to the poison. The fungus looks, smells and tastes like the edible mushroom, yet it is more deadly than a rattlesnake and it gives no warning. The state board give the following advice: "Avoid all mushrooms that are white or mottemash, have a collar on the stem and have a cup at the bottom of the stem that is crisp. Avoid also the mushroom that has a milky juice." To the above we will add one more, in the line of "safty first." So long as potatoes are worth not more than $1.25 a peck, avoid mushrooms altogether.

CONSTIPATION CAUSES MOST ILLS.

Accumulated waste in your thirty feet of bowels causes absorption of poisons, tends to produce fevers, upset digestion. You belch gas, feel sluggish, irritable, almost crazy. It isn't you—it's your condition. Eliminate this poisonous waste by taking one or two Dr. King's New Life Pills tonight. Enjoy a full, free bowel movement in the morning—you feel so grateful. Get an original bottle, containing 36 pills, from your Druggist to-day for 25c.

FOR SALE.—Motorcycle; Wagner; two speed; recently overhauled; good condition; run less than 3,000 miles.

TRAVERSE BAYS TELEPHONE CO., Central Lake, Mich.

FOR SALE CHEAP—Buick runabout. Apply at DANTO'S Store.

Foolish Pessimism.

There are so many of us who are terrified to look on the darkest side of things. It is rather hard to say that the majority of persons are pessimists, but it certainly seems to be true. Perhaps they do not really outnumber the optimists, but they talk so much of how hard luck is, and worry so constantly that they make a far wider impression than the optimists who go along the bright paths, serenely confident that the morrow will be just as bright as the present.

COMING BACK TO CHARLEVOIX, MICH.

UNITED DOCTORS SPECIALISTS WILL AGAIN BE AT THE HOTEL CHARLEVOIX, MONDAY, SEPT. 6, 1915, ONE DAY ONLY.

Hours: 10 A.M. to 8 P.M.

Remarkable Success of These Talented Physicians in the Treatment of Chronic Diseases—Offer Their Services Free at Charlevoix.

The United Doctors, licensed by the State of Michigan for the treatment of deformities and nervous and chronic diseases of men, women and children, offer to all who call on their trip, consultation, examination, advice free, making no charge whatever, except the actual cost of treatment. All that is asked in return for these valuable services is that every person treated will state the result obtained to their friends and thus prove to the sick and afflicted in every city and locality, that at last treatments have been discovered that are reasonably sure and certain in their effect.

These doctors are among America's leading stomach and nerve specialists and are experts in the treatment of chronic diseases and to give their wonderful have been their results that in many cases it is hard to find the dividing line between skill and miracle.

Diseases of the stomach intestines, liver, blood, skin, nerves, heart, spleen, kidneys or bladder, rheumatism, asthma, diabetes, bed-wetting, tape worm, leg ulcers, weak lungs and those afflicted with long-standing, deep seated, chronic diseases, that have baffled the skill of the family physician, should not fail to call. Deafness often has been cured in sixty days.

According to their system no more operations for appendicitis, gall stones, tumors, goiter, piles, etc., as these diseases are created without operation or hypodermic injection.

They were among the first in America to earn the name of "Bloodless Surgeons," by doing away with the knife with blood and with all pain in the successful treatment of these dangerous diseases.

If you have kidney or bladder trouble bring a two ounce bottle of your urine for chemical analysis and microscopic examination.

No matter what your ailment may be, no matter what others may have told you, no matter what experience you may have had with other physicians, it will be to your advantage to see them at once. Have it forever settled in your mind. If your case is incurable they will give you such advice as may relieve and stay the disease. Do not put off this duty you owe yourself or friends or relatives who are suffering because of your sickness, as a wait at this time may help you.

Worn-out and run-down men or women, no matter what your ailment, consult them. It costs you nothing.

Remember, this last free offer is for this visit only.

Married ladies come with their husbands and women with their parents.

LOST—Bronze leather bag containing six dollars or over, lingered watch and one key and book of stickers. Finder leave at 308 Belvedere avenue and receive reward.

P. M. "The Way to God."

WAS A THOUGHTFUL SUITOR

Assured Father His Daughter Would Not Have Home Like She Had Been Used To.

"Young man," inquired her father sternly, "will you give her a home like the one she has been used to?"

"No," replied the truthful suitor, "for there will be no grumpy father to come home and make everyone miserable by his kicking over trifles and swearing at matters in general. There will be no mother to scold her from morning to night for wasting time; merely because she wants to be neat. There will be no big brother to amuse her for not doing half of his work, and no little brother to make enough noise to drive her crazy when her head aches. There won't be any younger sister to insist on reading some trashy novel while she does all the work. She will not have with me a home like she has been used to, not if I can help it."—Boston Journal.

Peculiar "Soft" Drinks.

Among the prohibition drinks consumed by the Russians is shechita, composed of honey, pepper, hot water and boiling milk. Bilinda has been described by non-Russians as by no means a fascinating tipple, but it is declared to be much more alluring than a concoction of the Laplanders, made of hot water and meat, strongly flavored with tallow, and also with reindeer blood, if any be available.

Local and Personal Notes

Siberia has nothing on us.

See "September Morn" at the opera house tonight.

Leslie Crane was home from college a few days last week.

H. E. Aldrich, of Cadillac, is here on account of the serious illness of his mother.

Mr. and Mrs. W. A. Rawson, of Chicago, have been guests of Capt. and Mrs. Geo. Weaver the past week.

Married, August 29th, Mr. Fred Ercfourth to Miss Irene Rosendadt. Rev. Lloyd C. Vinyard officiating.

Slim Baker returned Tuesday from Grand Rapids, where he underwent a successful operation for cataract on his eye.

Harsha's Real Estate Agency, last week sold two fine lots on Dixon Ave., to Mr. A. Salem Musselman of the Oriental Palace.

"September Morn" which plays at the Charlevoix Theatre tonight (Thursday) is the biggest musical show that ever played Charlevoix.

Every train and boat is taking the summer visitors home, and the season of 1915 will soon go into resort history as a mostly fraud on all concerned.

The many friends of Mrs. A. G. Aldrich will be pained to learn of the very critical illness of that estimable lady. Her recovery is extremely doubtful.

Douglas Nettleton, one of the efficient clerks at the Ivy drug store this season, has accepted a good position in a Lansing drug store, and left for that city yesterday.

The retreat of the Dominican Sisters just closed at Big Rapids resulted in a number of new recruits, including one of the former teachers and the housekeeper returns. Four of the teachers for the ensuing year will be new.

Mr. and Mrs. W. J. Rachow have reoccupied their home at 220 Park Ave., after spending the summer months at Lake Michigan.

Wonder how it is that the Boyne City Herald has bought a Ford?

Schools open in this city Monday, September 13th.

The quite serious illness of her mother, called Mrs. J. S. Ackert to Petoskey Monday.

Mrs. F. P. Geiken, of Pelleton, has been spending a week at the Geiken home on Belvedere avenue.

Congressman Scott was in the city Sunday in his auto, on his way from the Boyne City gathering to the Soo.

Chas. E. Cox is building a cottage on Burns street, north side. When completed it will be occupied by his son, Lou E.

Next Sunday will be the last trip of the steamship Manitou, and Capt. Billy Finnegan will turn his attention to the winter wood pile.

Some one says that just twenty years ago we had just such a summer. Taint so, Mr. Weather man, we mean the glacial period. We was here.

Is it spring nestling in the lap of summer, autumn nestling in the lap of spring, or summer nestling in the lap of winter, or what is Sam Hill is it, anyway.

Andrew Johnson, formerly in the employ of Fred H. Myers, is here on a visit. He is now living at Fon du Lac, Wis, where he is manager of a cigar store of the United Cigar Stores Co.

Wednesday of last week the new law law went into effect making it unlawful to sell cigarettes to anyone under twenty-one years of age, unlawful for anyone under that age to smoke the "nails," and unlawful to allow the smoking by minors on anyone's premises. The fine is not to exceed $10 and five days in jail for each violation.

Lucy Bacon, who was so terribly burned about two months ago, died at Petoskey hospital last Friday morning. This case was a most distressing one, and awakened the profound sympathy of the entire community, including summer sojourners. This sympathy manifested itself in a practical way, doing much to calm the suffering of the young girl, and console the deeply stricken family.

A mass meeting of temperance workers from all parts of the lower peninsula will be held in Lansing Nov. 10th to plan for the state-wide prohibition campaign of next year. The meeting will be under the auspices of the Grange and the Gleaners and the Anti-Saloon League and the Women's Christian Temperance Union and allied organizations opposed to the saloon. It is anticipated that this will be the largest gathering of workers ever held in the state.

The Boyne Citizen under date of Friday, Aug. 27, says: "There are twenty-five hundred resorters at Walloon Lake and the trade is a prize worth working for, yet Boyne City as a whole appears indolent while Petoskey business men are going more than half way to secure the trade. The latter Sanpoetee City Walloonists at their own expense just recently and they have their good road within three miles of that lake. It is time something more was done here than mere talk. Action is needed and that at once."

The United States weather bureau says that for the region of the central states and great lakes this is the coldest August in twenty years. Not only was the temperature for the first twenty-one days lower, but there were a greater number of sunless days and more cold, drizzling rain in most sections than during most of the midsummer months of the last half century.

Manager A. F. Bridge of the Charlevoix Theatre, received the following telegram from John Stronsack, Manager of the Randolf Theatre, August 30th: "September Morn played here tonight. Fine business, delighted our theatre patrons. Good clean bright musical comedy presented by excellent company of artists, scenic equipment complete. Costumes beautiful and rich. This is absolutely unsolicited and hope your people take advantage of this musical treat."

A large delegation of Charlevoix Odd Fellows attended the annual picnic of the Order at Harton's Bay Tuesday, and the event is pronounced one of the most successful and enjoyable of any, yet held. Many of the ladies were along. After the picnic dinner, Chancellor Commander Norcum called the meeting to order in the M. E. Church. A short business session was in order, after which the chairman introduced Judge P. W. Wagner, Rev. Bennett, of East Jordan; Pres. Att'y. Sweeney of Petoskey; Rev. Duffey, of Boyne City, all of whom gave a short talk on Odd Fellowship. The big feature of the day was the ball game, Horton's Bay and Boyne City vs. East Jordan and Charlevoix. The score was even 8-8, although Charlevoix got the worst end of it by one spread anthe. It was not decided where the picnic would be held next year.

Life-Saving Rifle.

The rifle shoots over the parapet while the marksman is in complete safety in the trench without necessity for exposing himself to the fire of the enemy. It is a rifle invented by a well-known sportsman and big game hunter of England. The feature of this invention is that the rifle is held vertically instead of being held horizontally. This is accomplished by a curved deflecting tube fixed to the muzzle of the gun, that changes the course of the projectile from the vertical to the horizontal, as it leaves the gun.

In spite of the enormous friction that must accompany this change of direction the tube, as shown by actual tests, is not subject to excessive wear while the effective range of a rifle equipped with this device is between 100 and 150 yards. The rifle is aimed by means of a periscope consisting of two mirrors, one fixed to the upper end and the other to the lower end of a tube that is mounted on the rifle barrel.

Persian Groom Furnishes Home.

In Persia the bridegroom is obliged to give a certain sum of money in addition to other presents. If he is in moderate circumstances he gives his bride two complete dresses, a ring and a mirror. He also supplies the household utensils, such as cooking utensils and other necessaries for their home.

Origin of the Bicycle.

The modern bicycle seems to have had its origin in 1816. P. H. Fischer, a mechanic of Schweinfurt, Germany added pedal cranks to the velocipede. Quite independently Ernest Michaux bit upon the same idea in 1855. Rubber tires seem to have been first used in 1868 by M. Thevenon of Lyons.

As It is Today.

Aunt Mary (visiting in the city)—"I want to hear at least one of your famous grand opera operas and then added pride crept into her voice). Nephew (in office boy)—"Jimmy, get us some tickets for the vaudeville and movies."—Life.

REPUBLICAN BANQUET

G. O. P. Festivities at Boyne City Doubled All Previous Banquets in Attendance and Enthusiasm.

If a doubt existed in the mind of any modern Thomas of the vitality of the republican party in Charlevoix, that doubt was dispelled if he attended the annual banquet of the Charlevoix County Republican Club at Boyne City last Friday night. It went so far beyond the expectations of the local committee that it was positively embarrassing. "Mack" Harris actually lost the equipoise for which he is noted.

Two siftings were provided in the big dining room of the Hotel Wolverine, and another in the community. It was a "bummer." As a matter of fact, very few people care much for the gastronomic features of an event of this kind; it is the "feast of reason and the flow of soul" that constitutes the soul of the banquet. And here is where the committee did great work. Here is the roster:

Both Michigan U. S. Senators.
One present Congressman.
One former Congressman.
One present state senator.
There were also present many prominent professional and business men who have kept themselves thus far unnoticed in the glamour of official life. They came in numbers from Antrim, Emmet, Cheboygan and Otsego counties. And all came sloping over with republican enthusiasm and serene confidence. There was music by an orchestra and melodious song by our own Wilkinson Quartet. It was eleven o'clock before toastmaster W. J. Pearson began the grind of the program, and here is what he gave us:

Affairs in Michigan—State Senator J. Lee Morford.

The Experiences of a New Congressman in a New District—Hon. Frank D. Scott.

The Present Administration—Hon. G. J. Dickema.

Tariff for Revenue Only—U. S. Senator Chas. E. Townsend.

Foreign Affairs—U. S. Senator William Alden Smith.

In addition to the banquet program Senator Townsend addressed a large crowd in the park in the early evening. The dining room was not vacated until two o'clock in the morning.

Senator Smith paid Charlevoix the honor of a visit on his way to Boyne City, taking lunch at the Belvedere and spending the afternoon visiting with old friends.

The membership of the club was greatly increased.

DEVASTATING FROST

Northern Michigan Sorely Stricken by a Frost That Transcends Record of Decades

Although Northern Michigan is not alone in its affliction, we were hit hard by the frost of Friday night. It beat the record of many years. Indeed, in the opinion of the writer in this section of almost half a century, we cannot recall a summer frost as disastrous. Along the lake and bay shores much acreage escaped, but it may be said safely that in Antrim and Kalkaska counties fifty percent of the crops are ruined. Potatoes, corn, beans, and other fall vegetables were hard hit. The seed bean crop, which promised so splendidly, and which embarrassed the next grower's acreage by corn and potatoes, and which yields a very substantial profit, touched the farmer's pocket the deepest. Cucumbers a crop of special local value, in view of the recently established salting station, is very badly damaged.

There is no denying the fact that the farmer have met with a reverse that will affect their bank accounts.

METHODIST CHURCH MAKES A GOOD SHOWING

A review of the work of the First M. E. Church for the fiscal year ending September 1st, reported at the Fourth Quarterly Conference, by the pastor and officers of the church, shows a very gratifying increase in all departments of church work.

Twenty-five conversions during the past year and fifty accession to church membership, there has been an increase of about two hundred dollars in the Missionary offering over last year, and that was the best in the history of the local church.

The Sunday School and Epworth League both showed a very satisfactory, healthy growth.

The Pastor, Rev. Quinton Walker, was given a unanimous invitation to return for another year.

A Pathetic Appeal

A Charlevoix business man recently received the following letter from a well known Indian:

Say, Mr. M——

"If you ask you today I glad you help me little I want trout money 50 cent. Please, I want buy my shoes right away now, I pay for it next week soon day I working here town. I don'd cheat you my name is J—— W—— You help me please."

Fire Insurance Legislation—Of Interest to Every Owner of Property. Advance In Rates on Dwellings.

The legislature of Michigan has recently enacted a law which took hold on August 28th, to provide supervision of rate making bureaus and prohibit discriminating in fire insurance rates.

For your information we give some of the salient features:

1. (Sec. 1.) Every fire insurance company shall maintain or be a member of a rating bureau.

2. (Sec. 5.) No fire insurance company or rating bureau shall fix or charge any rate which discriminates unfairly between risks of essentially the same hazards and the same degree of fire protection.

3. (Sec. 11.) The State Banking Commissioner, Attorney-General and Insurance Commissioner shall constitute the Board to receive written complaints of discrimination and shall have power to order unfair discrimination removed. No such discrimination shall be required to increase the rate of hazard. It shall be shown that the increase is justifiable.

4. (Sec. 16.) Violations of the provisions of the law by any company, bureau or agent shall suspend for their authority to transact business in the state until it shall have paid the State a penalty of one hundred ($100) for each violation.

The above clearly establishes the fact that there will be no more cutting of rates, in order to get business, as each agent is bound by the same laws and rules and the same rates to make up what company or companies he is representing. At the same time the owners of property can rely upon the fact that if their policy is written in proper form that they have been given the same and only rate upon which their property can be written. There will be no use from this on to go looking for a bargain in insurance rates.

The standard rate heretofore on dwellings has usually been 65c per hundred dollars for a term of three years. This rate has been increased to 25c per annum for two and one-half times that for a three year policy making it 75c for three years as compared with 65c heretofore. All unoccupied cottages, or homes vacant in the winter and used only as a summer home, will be charged annum or two and one-half times that rate for three years making it $1.50 per hundred dollars insured for three years. Business blocks and other property remains about the same.

DISASTROUS CONFLAGRATION

Midnight Blaze at Boyne City Disturbs Banquet Festivities—Big Industrial Plant Destroyed

At midnight Friday, as Senator Townsend was in the midst of an eloquent address at the Charlevoix County Republican Club banquet at Boyne City, a big siren fire alarm almost threw a panic into the banqueters. But, after a pause, during which local residents retired, the program was filled without interruption, Senator William Alden Smith finishing his masterly speech while the entire city was illuminated by the towering flames that destroyed one of Boyne City's most important industrial plants—the big hardwood flooring plant, which was to have been started up Monday. It was one of the most disastrous and spectacular fires in the history of Northern Michigan.

The flames were first discovered about midnight and despite all efforts of the fire department and auxiliary apparatus it was impossible to save the plant. Mill No. 1 of the White company was saved, however, by almost superhuman efforts of the department, which had stream after stream from every available source in the city. No. 1 mill was built about three years ago and was the scene of a big fire some time ago.

A conservative estimate of the loss places it at $250,000, but it will easily reach $300,000. As near as can be learned there is about $175,000 insurance on the destroyed plant, which had just started operations and would have been the means of resuming operations at mill No. 1, which supplied raw material to be manufactured into flooring. The fire will be a large temporary loss of employment until the matter can be adjusted and in a severe blow to the city.

The city fire department showed its efficiency in preventing the flames from spreading into adjacent rows of lumber piled along the docks near the burning structure and from getting into mill No. 1.

CARD OF THANKS

Charlevoix, Aug. 30, 1915.

To the people of Charlevoix:

Words are poor substitutes to express the gratitude we feel toward you, and to Mrs. Baker in particular, for the loving aid and sympathy extended to us during the illness and death of our beloved daughter Lucy.

Charles A. Bacon and Family.

MICHIGAN LIQUOR INSTRUCTIONS

"All shipments to consignees in local option territory in Michigan must contain on the outside of the package, in addition to the statements required by the federal law, the name and address of the consignor and the statement that the liquors are for personal or family use of the consignee, or for medicinal, mechanical, chemical, scientific or sacramental purposes. Agents at local option points in Michigan must be careful not to deliver shipments which are intended for illegal sale or distribution and not for the personal or family use of the consignee. Except in the case of clubs, they must make no deliveries to persons who have paid the tax required of persons engaged in permitting the manufacture and sale of any such liquors.

Agents at local option points will be supplied with a separate book for keeping a record of liquor deliveries; this book must be carefully kept and open to public inspection during business hours. In addition the law requires that all the company's way-bills and records covering shipments of liquor into local option territory shall be open at all business hours to inspection by any public official whose duty it is to enforce the prohibition laws.

Under a recent act of the Michigan Legislature, effective August 28, 1915, it shall be necessary for the consignee of intoxicating liquors in local option territory to file at the destination office an affidavit. A separate affidavit is not required for each shipment, but any number of deliveries may be made to a consignee whose affidavit is on file.

LALONDE-MULLEN

Married, Tuesday morning, at St. Mary's Catholic church, by the pastor, Mr. Thomas Lalonde, of East Jordan, to Miss Madeline Mullen, of this city. The wedding was a quiet affair, only the immediate relatives and friends of the contracting parties being present.

After the wedding luncheon Mr. and Mrs. Lalonde left for a month's travel in California and other western points.

The bride has been one of the most popular of Charlevoix's bred girls, having hosts of warm personal friends. The young couple have the most cordial good wishes of the community. The Sentinel extends its warmest congratulations.

Charlevoix will be the home of Mr. and Mrs. Lalonde.

Ours is the only form of business in the world that does not ask you to spend money.
We ask you to keep it at the—
Charlevoix County Bank
of Nicholls, Buttars and Bridge

Bank Resources . . . . . $285,000.
Private Resources of Owners 150,000.

Making a total of over $400,000. for the security of our depositors.

Everybody is earning money now; better put by a little and let it earn 1 percent.

Interest will be added twice a year

JOHN NICHOLLS, President.
A. F. BRIDGE, Cashier.

Strength Organization Service

These three essentials are conspicuous in The Charlevoix State Savings Bank: (1)—Strength of resources and management, inspiring confidence. (2)—A complete, efficient and vigorous organization which assures full and very choice service, and (3) that spirit of service which seeks to give clients the most satisfactory banking accommodations.

You can avail yourself of this united strength, organization and service by opening your account with this bank.

We pay 4 per cent. interest on Savings accounts. Open an account today. Telephone No. 100 or call at our bank and any officer will answer your questions.

CHARLEVOIX STATE SAVINGS BANK

LOVE in a HURRY

by GELETT BURGESS

ILLUSTRATED by RAY WALTERS

COPYRIGHT BY GELETT BURGESS

SYNOPSIS.

Hall Bonbrake, a pilot photographer, proposes to Miss Fleda Fisher, a stenographer, and makes a mess of it. Fleda is the daughter of a party he is to give in the studio that night, and that he wants to make a big financial shape. Mr. Donovan, a theatrical manager, is to be the guest of honor. Hall tells Fleda just what he wants her to do, and she promises to give him an engagement ring. Hall's friend, Rosamund Gale, is to be his wife, and Hall asks her to meet him. Rosamund is at the time her mother agrees to give him an allowance if he will marry her. Fleda, in her hurry, gives Hall a ring, and promises to give him an answer at the party.

CHAPTER V.

Suddenly she sat up and looked round from her pillows. She was barely alive again immediately. If love made her stupid and blind, hate could revive her. Rosamund Gale! The again of her stood before the ship. Hall was again, now, of all times, when everything was sakes. Rosamund! Fleda, the beauty model, Rosamund, the beautiful. Rosamund the cultured, the refined. She did dabbled her, from her hair to her heels, dabbled her sane, her mannerisms, her manners, and, most of all, her photographs. Hall Bonbrake used her often for his commercial pictures which he sold for advertisements, for magazine covers, for calendars.

Spring—Miss Gale in damp cleverness cloth with apple blossoms. The Summer—Miss Gale in silk-and-lace gesticulating; and so on—Fleda always admiring the great artist with an irritated "Chou!" before she put them away. She would have been glad to slap Rosamund. Hall posed her, arranged draperies, touched her hair, moved her hands, and a quarter hour ago for Fleda.

"Say, where's Hall?" Rosamund made a picture of herself in the doorway. Golden fair, lightly colored, pretty, even voluptuous, always in striking original costumes daringly "artistic." Fleda, with all her clumsiness, her curls, her "lines," and her stream-cleaning, felt that the full disconcertive effect of her beauty. She had the air of one who is quite used to being stared at and admired.

Fleda rose, her face set. "Mr Bonbrake is busy, Miss Gale," she said, and walked toward the office, as if to brush the visitor back.

"Oh, I know he would recognize no more menial; she swept into the room and glided down the place. "All right, I'll hang round a while till he's free. Say, Miss Fisher, that we cut a couple of these last poses, will you? I want to give one to a gentleman friend. Here—take this box out there and hang it up, while you're so fine. Fetch one, dear."

"Oh, certainly!" said Fleda, took the box and—the absent-minded fool—dropped it. Rosamund made an angry gesture. "Oh, I'm sorry—I'm so careless." said Fleda. Then carrying it serviliy, so that a full foot of it dragged along the floor, she marched out of the studio, chin up.

Rosamund looked about for a cigarette, and found a box on a taboret. "Oh, Miss Fisher!" she sang, "bring me a match, will you?" Then she yawned, and threw herself lazily on the couch. She began to stretch.

Fleda, returning, noticed that Rosamund always put her much silk stocking, that she's one stocking had been torn." She noticed that Rosamund's shirtwaist was quite fresh, noticed that her nails though highly polished, were not well-shaped, well—clean. One heel was a bit run over, her monotone ring needs cleaning; here, set real and quite imitation, a dubious laughness a little with the pearl; "Hi, rip in her glove. There was nothing an ordinary man would have seen, nothing that would have hurt, for hate the whole effect, even had he seen it. But Fleda saw and damned and said no word.

"Here are the matches, Miss Gale. I'll look up the prints this afternoon, when I have more time."

"Oh, thanks. Have a cig?" Rosamund held them up impertinently. "Oh, don't you smoke?" Very sarcastic was Rosamund's tone. "No, you don't, look it, exactly." She laughed easily, confident of her own superior appearance.

Fleda's lips grew white. It would not take quite much to make her cry. "Oh, I hardly expect you to understand," she managed to say, and turned to go.

"Oh, I understand you all right, I guess, say, what are all those fancy evergreen wreaths doing out to the office, anyway? She was blowing rings very prettily.

"Oh, Mr. Bonbrake is going to have a party tonight."

"Really? I'd have to ask him about that." She examined her finger nails. "I believe I'll come."

"I'm sorry but the invitations were all sent out over a week ago, Miss Gale."

"Mine must have been accressed wrong."

"I don't think I ever make that kind of a mistake."

"No," said Rosamund deliberately, "this mistake you make is in supposing that you run this place."

Fleda swept her. "Well, you set me such a good example, you know, Miss Gale—really."

The door opened, and Hall came out of the dark room blinking.

"Hello, Hall! How's the boy?" said Rosamund, and rearranged her pose quickly and deftly.

But Fleda, to dry her eyes in the office—to sweep her innocent little form in all, anyway? "to wait and wonder, to worry and grow ever more fearful, as the minutes reached her with the "Hello, Hall!" She ran her fingers through his hair.

Hall had a queer new sensation of pleasure. So he had thought and planned for marriage and his millions; but, with Rosamund warm and soft in his arms, her hair in his eyes, her breath beating so near—Rosamund had made a large, fine, fine, fine mistake. For the moment, if not in love with her, he was at least fascinated. She set his blood afire. His embrace was not all the simulation, when he said:

"Then we must be married immediately! I can't wait, Rosamund. What's the use of being engaged? I want you now—today!"

"Does your married life seem home like, my boy?"

"Oh, yes. My office clerks are exactly like the rows number used to make."—Chicago News.

SOME VERY QUEER COSTUMES

Gorgeous Raiment Has Been Common to Many Famous Writers—Dickens's Green Velvet Trousers.

The London Daily Chronicle, in its interesting "miscellaneous" column, says: "A listing of gorgeous raiment such as characterized Bulwer Lytton even in his youth, has been common to many famous writers. Disraeli as a young man sauntered the town by an evening dress and prising green velvet trousers, a canary-colored waistcoat, and a coat with lace cuffs. Dickens, likewise, was fond of a certain bright green waistcoat, which he wore to accompaniment with a vivid scarlet tie, and he turned up at Prith's studio one day in a sky-blue overcoat with red cuffs. Even more fearful and wonderful was Dumas' appearance at an exhibition. A perception in a stage on which were depicted a number of little red demons disporting themselves amid flames, of yellow fire. 'My costume was a grand success, he

"Rosamund, see here!" This time he could.

Of course he followed her. "Now, Rosamund dung herself down on the succeeded in getting her hand. "You're simply got to come. Why, you'll make that crowd stare! There isn't one of them that can come anywhere near you, for looks. I'll be awfully proud of you."

"Why?" Her hand moved in his, with the slightest possible caress. She put something into her blue eyes that made them burn with tenderness.

Hall drew her greatly toward him and whispered: "Come over here, and I'll tell you."

She hesitated a second, then permitted a closer contact, arranging it so that she could look up at him dream fly. Well, what?" Now her eyes went down. Her fingers worked nervously. Very sure work, for that sort of a girl.

His arm tightened about her, he drew her head still nearer his. Coquetant she protested mutely, then, with a sigh she shut her eyes and allowed. Hall kissed her once, twice—twice. She clutched his hand tightly.

When she did raise her little it was to look at him with big, pleading, wondering eyes. There were tears in them, almost. "What do you want to kiss me for, Hall?"

He kissed her again. "Why shouldn't I want to?"

The time had come. She jumped to her feet. "Hall, I'm going! I can't ever come here again. You've spoiled everything! I'm only fun for you, but—but—" she looked a sobbing. "I can't play at it that way!" She turned and walked to the window.

Hall followed her. She heard—she knew—he was coming. "I didn't mean—I'm sorry—I'm sorry!" Hall was moorishly relenting to lose all.

"You mean—Rosamund!" He stopped, his hip up and looked at her back. Rosamund could not be so backward or ridiculous. The dedalian gold had granted her the superb gift of self-assurance, the self-assurance of a large, perfectly graceful attitude, a picture hat and rounded pride. A keeper man would have looked for more shame than this, at such of the effrontedness of drawing, something of convincing intensity. Perhaps Hall himself, at any other time when his mind was free, might have had a suspicion that all was not genuine. But now he saw only a woman who loved him tenderly, and on whose emotion he had carelessly played. A wave of tenderness for her swept over himself. Rosamund had lashing touched her keen nerve; but it was colored, also, with the pride of the male in his conquest. The chase had already excited him, she was more beautiful and fond, his vicinity—conquered by his force of personality. Try as he might, to analyze this harmless, his spirit rose triumphant over his sympathy. The woman was his!

Then, with the thought, a lightning flashed to his brain. How was the thing to do? He must be married before midnight. Why not Rosamund? Hall knew. She was ready, willing to be so, affectionate, a beauty whom he could be proud to exhibit as his wife. Mrs. Royalton might give him prestige, introduce him to a smart set; Jack Dunn, as his director, with lofty ones—and position; but where would he find a more the compelling beauty of Rosamund Gale? Carolyn, perhaps, but she refused to be his mate—too, too of the socially elect, and she knew it. Rosamund? Had not Jack mind the full fragrance of its charms? Hall was in a whirling instant—time with a swift rush, he had her in his embrace.

"Rosamund—dear Rosamund!" he exclaimed softly. "I did mean it—I want you, dear! Let pals love you!" How careful he was to be honest! "I want you—for my wife, Rosamund! I need have you!" He held her tight and close; he kissed her more and more fervently.

Slowly, slowly, she lifted her blue eyes to his. "Really, Hall? Really?" Smiling through her tears, she nestled close.

"Then you do really love me, Rosamund?" Hall asked, after a minute of demonstration.

"Oh, Hall!" She ran her fingers through his hair.

Hall had a queer new sensation of pleasure. So he had thought and planned for marriage and his millions; but, with Rosamund warm and soft in his arms, her hair in his eyes, her breat beating so near—Rosamund had made a large, fine, fine, fine mistake. For the moment, if not in love with her, he was at least fascinated. She set his blood afire. His embrace was not all the simulation, when he said:

"Then we must be married immediately! I can't wait, Rosamund. What's the use of being engaged? I want you now—today!"

pretty, did you know it? I've never seen you look so well!"

Rosamund needed no more of an invitation. "Well," she said comfortably, "if you really want me, I'll promise to make some of that smart bunch of yours look like washwomen and that's no myth, either. Say, Hall, I've got a new dress I'm dying to have you see—smart as pepper! It's some rag, I believe me! Can I go the limit?" She circled her corsage, indicating a daringly lowcut neck.

He laughed and nodded. "Oh, you can get away with anything in the world in fashion. By love, you'd look all right in jumper and overalls."

"Good idea! Let's try it some time." Queen of the Bricklayers." She knew a graceful attitude.

"Lord, you are pretty!" Hall said mechanically, watching her.

She gave him a look, caught a new expression on his face, and decided to work it up. Her first step was to say reflectively, as she cast down her golden lashes, "Say, Hall, I don't know—I guess I'd better not come tonight, though, after all. I don't believe you want me."

"Of course I want you, Rosamund!" He went up to her and tried to take her hand. "Do come—please!"

"Why, there aren't any girls, exactly like the rows number used to make."—Chicago News.

Prayer.

If father gets the notion in his head that he is going to accomplish everything by prayer it makes it hard for mother, who has to get up early each morning in order that the children may have clothes and food and grub. I also knocking on prayer, mind you, but I don't pray for things that you can get without it.—Atchison Globe (Kan.) Mail.

Last Corn Land

Southeast Missouri Reclaimed Lands

the only remaining underdeveloped corn land in the United States.

Land that will double, triple and quadruple in price just as sure as day follows night. Corn land will in the future as it has in the past and does at the present command the highest price. 50,000 acres of good, rich, alluvial, cut-over, hardwood, both drained and undrained, level as the living chute of the Nile; no rocks, hills or gumbo, but mellow sandy loam soil, always works well, short mild winters, long growing seasons, abundant yields of all staple crops, corn, wheat, alfalfa, clover, timothy, cow peas, potatoes. Two crops a year off of the same land. Land owned by Himmelberger-Harrison Lumber Company, the largest hardwood manufacturers in Missouri, largest land owners in Southeast Missouri. Men who have in the last 15 years sold over 100,000 acres of this same kind of land to over 1,000 different people, all of whom have made good. They have never had a complaint. Not one acre of this tract of the property. Sales from February first to August 10th, 19,864 acres to 119 different people. Can you beat it? In tracts of 40 acres up. 10% cash, 10 annual installments with 6% interest. Warranty Deed backed by over $2,000,000 assets on the payment of only 10% in cash. Can you equal it? *Come see our corn land.*

ENTIRELY A STATE OF MIND

So Just Feel Glad, You Have the Secret of Longevity and the Years Are Yours.

Centenarians all know why they have been blessed with long years. It is because they never drank, or because they did drink; because they never smoked, swore, quarreled, worried, sat up late of nights, or because they did all these things, yet counteracted the evil effects with diets of milk, mush, cornbread or an apple a day. Neighbors and relatives and doctors may wonder why the tools of time has proved incapable. But the subjects of their wonder have never any doubts. They know exactly why they and death keep apart.

An intimate study of the character of centenarians might reveal the true formula for long life. These centenarian old folk all have one thing in common, and that is perfect confidence. They are never troubled with misgivings, never afflicted with self-questioning. If a person is absolutely certain that he is going to defeat time, perhaps that is as effectual as it is with the man who is absolutely certain that he is going to defeat a case of typhoid. Confidence may be a good anodyne for sleeplessness, a worthy aid to digestion, a protector against accident.

The records indicate that it does not matter so great that the candidate for a hundred be abstemious or moderately indulgent, careful with his food or reckless, as that he feel sure that he has the secret of longevity. So, it would seem, the first duty of aspirants is to cultivate a dogmatic set of opinions.—Toledo Blade.

TOASTS OF "FIVE CAPTAINS"

No Record of What Happened After the Last Glass Was Turned Upside Down.

Here is an interesting clipping from an American publication in 1854. It is entitled "Five Captains:"

"There were five captains chanced to meet—one Russian, one Turk, one Frenchman, one American and one Englishman. One proposed a champagne supper, each one to give a toast of his own native country or pay for the wine drunk.

"The Russian: 'Here's to the stars and bars of Russia, that were never pulled down.'

"The Turk: 'Here's to the moons of Turkey, whose corners were never clipped.'

"The Frenchman: 'Here's to the cock of France, whose feathers were never picked.'

"The American: 'Here's to the Stars and Stripes of the United States of America, who never failed to defeat.'

"The Englishman: 'Here's to the rampant, roaring lion of Great Britain—that tore down the stars and bars of Russia, clipped the wings of Turkey, picked the feathers of the cock of France and ran like h——l from the Stars and Stripes of the United States of America."—St. Louis Post-Dispatch.

The Man's Mistake.

Out of loyalty to his own sex the manager of the women's suit department had discharged his young woman stenographer and hired a man. The first batch of letters dictated to the man were written to about a hundred old customers, whom he invited to assume privately a lot of exclusive garments before they were placed on sale. The day after the letters were mailed the women flocked into the store, but the fire that burned in their eyes was the fire of the avenger rather than of the bargain hunter. One word which each woman had underlined in her letter explained their wrath. The garments, so the manager had meant to say, had been designed for women of stock figure, such as they possessed, but the male stenographer had drawn on the alphabet and had written "bustles."

"No woman on earth would have been guilty of such a mistake," proved the manager.

"The next took the girl stenographer back her job back.—Philadelphia Ledger.

He Beat the Clock.

"I once conceived the beautiful idea," says a Philadelphia school teacher, "of requiring that my pupils should write for their day exercise a brief account of a baseball game.

"One boy sat through the period seemingly wrapped in thought, while the others worked hard and turned in their narratives. After school I approached the desk of the hazard

"'I'll give you five minutes to write that description, I said sternly. 'If it is not done by that time I shall punish you.'

"The lad promptly concentrated all his attention upon the theme. At last, with joyful exactness, he scratched a line on his tablet and handed it to me. It read:

"'Rain—no game.'"—Philadelphia Inquirer.

Absinthe Plants Burned.

As the manufacture and sale of absinthe have been prohibited by law the little parish of Orly, just south of Paris, has lost its chief industry, the growing of absinthe plants for the trade. The new law allowed compensation for the crop already planted, so 15,000 worth of plants were handed over to the excise authorities. They were weighed and burned. The same operation is performed at all places where the plant was grown.

MOTHERS—WATCH IRRITABLE CHILDREN

That fever, paleness, grinding of teeth while asleep, and coated tongue are indications that your child has worms in its system. Kickapoo Worm Killer quickly gets rid of these pests. It is perfectly safe for even the most delicate children. It is pleasant to take but three effective medicinal qualities—acts as a laxative, expels the worms, and tones up the system. Begin treatment to-day and eliminate the cause of irritableness. 25c.

ENGLAND PLANS GREAT AIR FLEET

Reported Preparations For Vast Attack on Germany.

THE astounding development of the aeroplane both for scouting purposes and as an offensive weapon is one of the most striking features of the first year of the great war.

Military men as a result of the year's lessons consider an army not equipped with aeroplanes as absolutely at the mercy of a similar force using air scouts. It is a blind man fighting a man who can see.

At the beginning of the war all the principal combatants had big air fleets, those in France and Germany having been raised largely by popular subscription, because sufficient funds were not available in the usual way for this untried weapon. The British air fleet flew in a body to France to join the expeditionary army.

Join the air forces of a year ago were insignificant compared with those of today. No figures are, of course, given out. But it was officially stated several months ago that Great Britain had increased her aeroplane force, and there is talk in London of ranking Germany with a division of 10,000 flying machines.

Larger aeroplanes are coming into use. Great Britain is following the Russian Sikorsky idea in constructing giant machines capable of carrying twenty men, while Germany is said to be about to bring forth a triple decked machine armed with four machine guns and a revolving cannon.

The great rigid Zeppelin dirigibles, while proving of much utility, have been overshadowed to some extent by the cheap, quickly built biplane. The latter has proved superior to the monoplane because steadier, and the military air pilot cannot choose his breeze.

The English author, H. G. Wells, has been interesting an attack upon Germany with a huge fleet of a thousand aeroplanes. In an interview Mr. Wells said recently:

"The war has caused aviation to make enormous progress. Experience shows that any idea is possible if applied methodically with sufficient resources. Two classes of aeroplanes have been evolved—light and swift for reconnoitering and heavy and slow for bomb throwing.

"We ought to multiply 'flying batteries,' which combine the qualities of both. When this is done we are certain of mastery over earth batteries, which, in turn, will probably bring bloodshed.

"After months of extraordinary effort Great Britain has assembled the greatest fleet of aeroplanes in the world," says a correspondent of the New York sun. "An aerial conquest of unprecedented scale is, it is believed, about to be launched against Germany with her aeroplane fleet.

"Germany is that the supremacy of the air will be decided aloft, aeroplane against airship, for the war has conclusively proved that every form of air craft is almost immune from attack from below.

"Under Secretary of State For War Tennant in the British house of commons recently let in a little light on the situation when he said that Great Britain now had ten times as many aviators as she had at the outbreak of the war. As a year ago in August there were in the country about 750 airmen, it must follow that their number has since been increased to somewhere around 7,000.

"England is not building up with foreign help a mighty fleet of aeroplanes for the purpose of diplomacy. She is. I have been authoritatively informed, planning to carry the campaign into the enemy's country—or, perhaps, it would be more correct to say, enemy's skies. I have a relative in England who tells me that everybody is talking about the 'forthcoming raid on Germany.'

"My informant also tells me that he has received a war office contract to build 100 aeroplanes a week until further orders and that other firms in an unprecedented fashion his own have received similar orders. As these firms are in normal times engaged in erecting small suburban homes it may be seen that unusual efforts are being made in Great Britain to get together an air fleet of overwhelming proportions."

Has a Future.

The little girl who described a toad as "a big green bug with warts all over it, who's always sitting down behind and standing up in front," will probably become some day a famous novelist, or even a manicurist.

On the Job.

The New Wheeze.

"Out of a job?" asked Yorick Hamm. "Aside from the fact that the name is couched in unprofessional language," replied Hamlet Pitt with dignity, "your inquiry savors of rhapsody and is, moreover, unsound. An actor is never at liberty these days. If you don't see his name on a Broadway bill, he is getting more money from the movies."—Judge.

Or, Why Not Dramatize the Name?

"I dare," a trim matinee lady said from a smith, "to see the name of Inez Gomwell, the able Boston lightning editor, set to music. It would be immediately accepted up by all the cheap dramatic aggregations in the country, for use in playing the villain of the piece across the stage. Just divide it up into four syllables and repeat it slowly, and note the appropriateness."—Kansas City Star.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate Office, in the City of Charlevoix, in said County, on the 4th day of August, A. D. 1915.

Present, Hon. Charles A. Cornell, Judge of Probate.

In the matter of the estate of John Vincent, Deceased.

William J. Gallagher having filed in said court his petition praying for license to sell the interest of said deceased in certain real estate therein described,

It is ordered that the 13th day of September, A. D. 1915, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for hearing said petition, and that all persons interested in said estate appear before said court, at said time and place, to show cause why a license to sell the interest of said deceased in said real estate should not be granted.

And it is further ordered that said petitioner give notice to the persons interested in said hearing of the pendency of said petition, and the hearing thereof, by causing a copy of this order to be published in the Charlevoix County Sentinel, a newspaper printed and circulated in said County, three successive weeks previous to said time of hearing.

CHARLES A. CORNELL,
Judge of Probate.

STANLEY A. CORNELL, Judge of Probate.

(First publication June 24)

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Ira Nash of the City of Detroit, Wayne County, Michigan, to Charlotte Nash, of the City of Detroit, of the City of Charlevoix, Michigan, dated the 1st day of April, 1910, and recorded in the Register of Deeds office for Charlevoix County, Michigan, on May 11th, 1910, in Liber 87 of Mortgages, on page 314 and containing a power of sale on which mortgage there is claimed to be due at the date hereof the sum of Twenty-five hundred Dollars and Fifteen dollars and Seventy-five cents ($2,515.75) and no proceeding has been instituted to recover the said mortgage debt or any part thereof; and

Default has also been made in thereby given the power of sale contained therein has become operative;

Now, therefore, notice is hereby given that by virtue of said power of sale and in pursuance of the statute in such case made and provided on the 20th day of September, A. D. 1915, at 10 o'clock in the forenoon, at the undersigned, will sell at the Chamber of Commerce, in the City of Detroit, that being the place of holding the Circuit Court within said County of Wayne, in the State of Michigan and county aforesaid, the premises described in said mortgage, or so much thereof as may be necessary to pay the said amount claimed due on said mortgage and all taxes lawfully paid on said premises, and all legal costs, and also an attorney fee of one-half of the amount of said mortgage, which said premises are described as follows: Lots 1 and 2 in Block 1 of Charlevoix, Charlevoix County, Michigan, and the North one-half of the South one-half of the North one-half of the North one-half of the North

The INTERNED GERMAN SAILORS

OFFICERS OF THE LITTLE FRIEDRICH

PRINCE LITTLE FRIEDRICH AT NEWPORT NEWS

Gloucester, Hampton Roads, forced to submit to internement at Norfolk required to live aboard their ships. The officers are housed on board German converted cruisers Prinz Eitel Friedrich and Kronprinz Wilhelm have transformed their vessels into comfortable homes. On the ships prisoners have no one-line living conditions.

Their contentment is a tribute to the efficiency of German methods and to the courtesy with which they are treated by the United States navy department and naval officers. As few restrictions as possible have been placed upon the interned crews, and reasonable requests have been promptly granted.

From the moment the visitor steps upon the gangway of the Prinz Eitel Friedrich, which also leads to the Kronprinz Wilhelm, he sees evidences of preparations for a long stay and comfortable living. The cruisers, formerly transatlantic liners, with commodious cabins and expansive decks, have been cleared of all evidence which usually marks the warship. Awnings have been erected to protect from the rain or sun. Everything not needed by a ship out of commission is out of sight.

About two hundred men are daily granted shore leave. In the case of the enlisted men and noncommissioned officers the leaves of absence can be granted by the commanding officer of either cruiser. These leaves never exceed 48 hours. The majority are for six. In the case of the officers all leaves of absence must receive the sanction of the yard commandant or officer of the day—United States naval officials in other words.

All leaves specify that the men thus quitting the ships must not leave the jurisdiction of the Norfolk yard. This includes the ports of Norfolk, Portsmouth, Newport News and Hampton, as well as Old Point Comfort and the seaside resorts. Where leaves are desired to go beyond this yard jurisdiction, special permission, with the approval of the yard commandant, must be secured from the navy department. These must specify the places to be visited, the object of the visit, and the duration of absence. As yet they have been granted only to officers.

It is no uncommon sight to see German sailors on the streets of Norfolk. They are also often at the seaside resorts. They have received the nickname of "Blue," because of the peculiar caps they wear, with ribbon streamers falling almost to their waists. The caps are the same pattern in which the blouse is worn, with the protruding large white collar, a relic of sailors' days, and the numerous rows of gilt buttons adorning the uniform, make them easily recognizable. They are usually found in groups of from three to seven, seldom in larger numbers. They are remarkably orderly, and although frequent patrons of the bars and the beer and music gardens, are never seen intoxicated. It is the local belief that this is due to practice making perfect since they are well trained for "carrying a load."

When on shore leave the principal amusements of the German sailor are sight-seeing, social drinking, and as a wager would say, "cruising" with German-Americans, of whom there are a considerable number in Norfolk. In the beautiful residential sections of the city they are repeatedly observed on sight-seeing trips. They invariably walk, and show lively interest in the buildings and water front.

In the evening the German sailors are to be found at the ratheskellers of the various hotels or the beer saloons. Some of them are always there, enjoying themselves in a quiet manner. Usually they are accompanied by Germans in civilian clothes who know the town.

The well-known German nostalgia characterizes these sailors whether aboard ship or on shore leave. They pride themselves on personal cleanliness, neatness of appearance, and military bearing. They are surprisingly alwaysen dress parade—and yet it is not ostentatiousness. The majority are clean shaven, and appear to have just jumped from the barber's chair. A number wear the kaiser mustache, some have a patch of hair, a "bunny's tail," on their chins.

Some of the men authors make their headquarters at places of business kept by local Germans. One—the most popular because convenient in coming and going—is the business place of a jeweler's shop. Americans are welcomed by the sailors and treated courtesy. They talk freely of their life on shipboard, and of their hopes of German victory. However, under instructions from their commanding officers, they immediately become silent in the presence of newspaper men. They have been well drilled in this respect.

Two kinds of currency are used by the German sailors. On shipboard German coins are used exclusively. Men granted shore leave use American money. On each ship there is an officer whose duty it is to exchange American for German and German for American coin, as desired. The sailors have been instructed not to attempt to spend the German coin on shore. Visitors to the ships, desiring to purchase anything, must pay for it in German coin. The American money is promptly exchanged for the German by the exchange officer. Thousands of people in the Norfolk region now have German coin lock pieces for the pocket. Many persons visit the ships for the purpose of securing a German coin for this use.

Each of the interned ships is equipped with a commissary department. Practically everything wanted by a sailor is for sale. The Germans are urged to buy on the ships, as they secure what they want at cost. Practically everything wanted by a sailor is for sale. The Germans are urged to buy on the ships, as they secure what they want at cost.

Under the supervision of the commander of the navy yard received a request from the commander of the Prins Eitel Friedrich that the men be allowed to cultivate a small strip of land near the interned ships. It is a part of a tract acquired several years ago by the navy department for the enlargement of the navy yard, and on which a new mammoth drydock is to be built. The request was granted.

A couple of acres or more were turned over to the Germans. Among the crew are farmers, who understand intensively farming. The soil of the tract is of the richest variety. Using spades instead of plows and industriously wielding hoes, these men quickly worked a transformation. Cabbages, spinach, tomatoes, potatoes, beets and turnips were planted. In another thirty days it is declared that the crop of vegetables will be sufficient to provide for all of the wants of the Germans for the rest of the summer and far into next fall.

When the Kronprins Wilhelm interned there was an epidemic of best bert to check. More than seventy men had the disease. Today the epidemic is practically over.

Early after the internement, according to regulations from the navy department, the commander of the Prinz Eitel Friedrich, which also leads to the Kronprinz Wilhelm, he sees evidences of preparations for a long stay and comfortable living. The cruisers, formerly transatlantic liners, with commodious cabins and expansive decks, have been cleared of all evidence which usually marks the warship. Awnings have been erected to protect from the rain or sun. Everything not needed by a ship out of commission is out of sight.

SEEING LIFE with JOHN HENRY

by George V. Hobart

John Henry on Human Nature

SAY! Did you ever sit around in the Pullman car and study a few paragraphs from the world's most famous text book—human nature?

Go after it the first chance you get—you'll learn a lot.

For instance, during a trip recently on one of Mr. Pullman's sleep-wagons I soon learned that the brisk and breezy crew in the units around me were commercial travelers, and they were fanning each other with fairy tales about the goods they sold.

I learned that the one who looked like a bitten apple was affectionately known as Slim because he's so fat that every time he turns around he hears himself coming back.

And it wasn't hard to learn that the tall one with the sandy hair was Nick Dairymple, who goes after the orders for a hardware house in Columbus and knows everybody in the world—bar one family living in Yankeetown.

Then there was Tod Tulips, who sells tea for a coffee factory in New-ark, and has the life of a small party.

Tod's main hold is to creep into the "reading room" of a Rube hotel after the chores are done of an evening and throw salve at the comedians. Tod tells them that their town is the brightest spot on the map, and they warm up to him and want to buy him a sarsaprilla and root beer. Then when he gets them stuck on themselves he sells them matches.

Presently I learned that the party with the mauve forehead and the magenta mustache was Molt Dice—the most reckless spendthrift with his words and the smartest man in the English languages I ever listened to.

The Dream Builders' Association was in full session when Wedge Murray came over and wedged in with the party.

Wedge is a saucy little party, five feet four, with the foot shoulders. He thinks he strikes twelve on six occasions, but his timepiece is an hour slow.

I learned that Wedge sells canned shirt waists for the Shine Brothers, and if he's ever let into the firm it will be as a brother.

Wedge is one of those goose-headed chaps who scratch gravel and start in to make a killing every time they see a pretty girl.

Across the aisle sat two pet canaries from Plainfield, New Jersey, on their way to the annual convention of the Singing Society, and they were an item to Wedge. Wedge is a member of Birds Burlesque Company.

Their names were Millie and Tillie, and they were Easter Daisies to Wedge, and did a sister act that contained more vocal gymnastics than a Kate Claxton piccolo game.

Millie was fully aware that she could back Dusa off the map, and Tillie was ready to bet a week's salary that she could give Bernhardt feel like she was out in the storm when he had day before yesterday.

Tod called them the Roast-Beef Sisters, Hare and Wolcotone.

In a minute the eastern on Wedge's nerve began to turn.

Nick put the others wise with a wink, so they lit the fire and began to cook it on.

Wedge's heart was warming for the birds in the gilded cage.

"Nothing like 'em!" said Slim. "It's a plain case of Appomattox. The war is over and they are yours, Wedge!"

Wedge turned a few more volts into his twinkling eyes.

"Let your mainsail, Wedge, and drop alongside! You've made the first impression!"

Wedge began to feel his necktie and play patty-cake with the little bald spot on the top of his head.

"Stop the harmony and get out, you've got a chance!" said Tod.

The Sweet Dreams across the way were trying to Wedge the glorious eye roll, and he felt that dinner was ready.

"Hang up your hat, Wedge, and gather the myrtle with Mary!" Slim chipped in.

Then Wedge bounced over and began to show Millie and Tillie what a handsome brute he was at close quarters.

He sat on the arm of the seat and steamed up.

In less than a minute he crowded the information on them that he was a millionaire who had escaped from Los Angeles, California, and he was just going to put them both in grand opera, when Slim tobbled over to him and said: "Next stop Erie! Get your coat ready! Don't you need that telegram to your wife in Logansport."

Curtain.

Of course the fact that Wedge didn't have a wife in Logansport or elsewhere made no difference. He couldn't prove an alibi, so he faded out into the day coach and became an one who isn't.

The Roast-Beef Sisters seemed to be all carried up about something or other.

While these more or less grin-producing incidents were occurring there was ever present in my own noodle the grim reality that bedtime was approaching and I had drawn an upper berth.

Say! I'll be one of a party of six to go before Congress and tell all I know about an upper berth.

The upper berth is a sleeping car invention intended to comfort that a carpet tack is to a bare foot.

As a place to tie up a small bundle of sleep a boiler factory has it beat a whisper.

Strong men weep every time the ticket agent says, "Nothing left but an upper berth." Strong women have hysterics and begin to make faces at the general public when the colored porter points up in the air and says, "Madam, your auntie's next in ready fac up the mountainside."

While the porter was cooking up my attack of insomnia I went out in the smoking room to drown my sorrow. But I found such a bunch of cow killers out there ahead of me that I had to hold the comb and brush for my lap all so as to get the towel rack while I took a little smoke.

Did you ever notice on your travels that a hobo hand on the train who pays two dollars for a small bottle of rye displaces eight dollars' worth of space in the smoking car?

If he would bite the end of a piece of rope and light up occasionally he wouldn't be so bad, but nix on the smoke for him.

He simply sits there with a face like a fish and keeps On-Pa-Ne-Nicotine and all the real rag burners from enjoying a smoke.

If ever a statue is needed of the patron mistreated I would suggest a model in the person of the smokeless smoker who always travels in the smoking car.

Two busy parables were discussing the matter when I squeezed into the smoker on this particular occasion.

"Their Names Were Millie and Tillie."

gion of the equator, you will appreciate what it means to lie on your back with your knees drawn up to your shoes off.

Yd this goes double for the man who weighs more than 200 pounds.

Every time I reached for my feet to get my shoes off I bumped my head off, so I decided that in order to keep my head on I had better keep my shoes on also.

Then I tried to force my suspenders from my shoulders but just as I got the suspenders half way over my head I would bump my head on the rafters, and there I was, suspended between heaven and earth, but praying with all my heart for a bottle of relief.

Finally I decided to alone as nature made me, with all my clothes on, feeling my rubbers.

So I stretched out, but just then the train crashed through a bridge and I woke up in the air till the ceiling hit me, and then I bounced over on the floor of the precipice and hung there, trembling in fear.

Then it was all dark and gloomy, and only by the hoarse groans of the sources could I tell that the Pullman company was still making money.

Jack was with me when I came to, but then the train struck an in-shoot curve which pushed my shoes out of my grasp and knocked my head on the wall, that I fell asleep.

When I woke up a small package of daylight was peeping into the car. I decided to descend from my cupboard shelf at once.

I peeped out through the aluminum curtains, but there was no sign of the colored porter and the stepladder was invitation to the nearest eye.

The car was peaceful now, with the exception of a great to-do over No. 4, who had a strangle hold on a Bethlehem contata and was beating the Wagnerian out of it.

I made a short prayer and consulted with a fellow sufferer in regard of my feet related on something solid; so I put both feet on it and began to step.

Alas, however, the moment I put my weight on it my stepping-stone gave way and I fell overboard with a splash.

"How dare you put your feet on my head? yelled the man on the ground floor of my bedroom.

"Excuse me, I felt like something wooden," I whispered, and I dashed madly for the smoker.

"The Moment I Put My Weight on It my Stepping-Stone Gave Way."

HELP WAR BABIES' MOTHERS

Mrs. Lloyd-George Is Aiding in Care of English Unfortunates.

A scheme for the training in remunerative work of unmarried mothers was inaugurated recently at a meeting of Evangelical church women in Mr. Wells, England, Mrs. Lloyd-George presiding.

A house has been taken in a small country town, at the foot of the Wiltshire downs, where a young woman will be trained in work intended that each girl shall learn domestic duties, sewing, cooking, gardening, etc. The instruction will be given in the course of the only four weeks of the confinement, before and continuing after the child is born.

Doctor Doherty said that it was a sign of reverence that in England no woman should consider the claims of the unmarried mother, and she thought it was a crime to be about to be undertaken not only as religious but as hygienic in the highest sense of the word.

"In so far as we have a single young mother from the life of the stream, he said, "you are protecting the future generation from indescribable evils."

Mrs. Lloyd-George, who is deeply interested in the experiment of caring for unmarried mothers on constructive lines, was unable to attend the meeting, having been called into the country to see her little girl, who is ill. With many others interested in social welfare, she feels that more could be done to reclaim young mothers if a course of training could be given to them on broader and more interesting lines than those of the past.

The house, which is picturesquely called "The Retreat," will have these lines before it in all its various activities. London Chronicle.

POCKETED.

"Isn't this the third time I've seen you on this particular stretch of highway?"

"Yes," replied Plodding Pete. "I ain't got no place to travel. I'm a tramp. Leave me alone and I'll make ahead and another a mile back. Either one of 'em is sure to offer me work if I come near enough."

NONE TO LEAVE.

For some reason best known to the female of the species, the engagement was off.

"Leave me alone!" she sobbed in a young redhead with indignation.

"Why, my," stammered the young man in the parlor scene, "you never gave me any presents."

MICHIGAN TRANSPORTATION AND MARKETS

By AUGUSTUS C. CARTON
COMMISSIONER OF INVIGORATION

From "Michigan—The Land of Plenty."

To the farmer and the homemaker the question of markets for the products of his fields is of as much importance as it is to the manufacturer. In fact, the question of markets is of first importance. It is not enough that the soil is richly productive, but it is necessary that the crop can be sold in a good market and the market must be close at hand, for, with a large number of the best growing crops of freshness, through early delivery of the product to the consumer, is a matter of importance in determining the prices. Michigan is particularly well situated to meet the demands for the best markets, since she not only has a great house market in the favorably located, being very near the center of population for the entire country. It can be truthfully said that Michigan is, as it were, at the very door of a consuming population of about 30,000,000 people. The rapid increase of the urban population, devoted to the manufacturing interest, furnish a ready home market. Statistics show that of the total population of the state of nearly 2,000,000 people, nearly one-half live in the cities and towns, therefore the large cities and manufacturing towns hold a great portion of the people of the state, who are, therefore, consumers and must be fed from the products of Michigan's farms. But while the Michigan farmer has a splendid home market for his products, yet the great markets of the state are, it were, outside of the state. Michigan's farmers are, in every way, in a position to supply the great cities of Chicago, Milwaukee, Racine, Marinette, Green Bay, Manitowoc, Sheboygan, Duluth and other of our neighboring cities on the west and northwest, while the Minnesota railroads not only supply the great cities of Minneapolis, St. Paul, Kansas City, Omaha and Sioux City, and other large cities of the central West, but the south shore line of Indiana and Ohio are but a few hours distant. Indianapolis, Cleveland and Toledo only resort customers for Michigan fruit and vegetables, and Chicago and Detroit are, so far as Michigan is concerned, great distributing centers to the interior of Ohio and Canada. Buffalo too, is within easy reach and should be a good market for our farmers, but as a distributing center for all southwestern New York and even New York city is only a few hours distant.

FRUITLETS LEAVING SOO LOCKS

MOUTH OF A MICHIGAN MINE

CAR FERRIES MAKE THINGS GO LOAD "MICHIGAN" AN ATTRACTIVE TRANSPORTATION

Excellent Rail and Water Transportation Facilities.

The combination of industrial prosperous of a country is bound up with its transportation facilities. Just in proportion as the best means are afforded community increases its transportation facilities for the easy and convenient carriage of people and commodities from one section to another, will the material prosperity and happiness increase. It is the railroad, the steamboat, the trolley, upon which has smelted and is enabling some of the most prosperous people in the country to develop their latent possibilities.

It matters not how productive the farm or how great the market unless there is a means of connecting the two, transportation. It would, therefore, seem that in the consideration of the question of the productiveness of the soil, the markets and transportation facilities are as important to us as any other that they are almost inseparable and although much attention has been said in this publication with reference to Michigan's splendid transportation facilities, there is still more to be said.

Water Transportation.

Michigan has a shoreline of over 1,500 miles, which is washed by water way in the world and the number of tons of freight carried is more than fifty Michigan ports on this great inland sea, are served by numerous able steamship lines, that afford unequaled water communication, not alone between Michigan ports but with the ports of the surrounding states and Canada as well. That the extent of the Great Lakes traffic may be more readily appreciated, reference might be made to the annual tonnage passing through the Sault Ste. Marie, St. Mary's river, connecting Lake Superior with Lake Michigan, and Lake Huron. It is said that the annual tonnage is two and one-half times greater than that of the Suez canal, through the Suez canal and Panama canal, and yet this tonnage does not include the tonnage through the Soo locks, and that it is only but a few years since the tonnage passing through the Soo locks, and that in 1910 this amounted to 63,343,000 tons. A lake freighter, with a capacity of 13,000 tons, can use an one lock through these locks, can carry a load that would fill eight trains of 40 cars each, allowing 20 tons to the car. To carry 61,000,000 tons a year past the Soo would require 2,000,000 cars and it would take something over a month for such a train to pass a given point.

Compare the rates which the Michigan producer enjoys, in the proximity to the great markets, with the necessarily higher rates of the all-rail shipments of the West. The difference represents a good profit, to the Michigan farmer and the manufacturer. These advantages of both rail and water transportation will always be one of Michigan's most valuable assets.

Steam and Electric Railways.

In the matter of railroad transportation, Michigan also is well in the first ranks. The railroad facilities from Michigan to all the other state ranks sixth among all others in the total mileage of railroads, according to information furnished by the office of the Michigan railroad commission. There is now in the state of Michigan, a total mileage, on the single-track basis, of 9,000 miles, which represents twelve of those could be classified as trunk-line roads, connecting the large or consuming centers. Supplementing these are 24 smaller lines, each having a terminus in the state, connecting several small private lines which are not common carriers. Of the large trunk lines of the state one has a mileage of over 1,300 miles—the main line and spurs—one is of nearly 1,200 miles and another about 850; one of 700 miles, one of two of over 500 miles. The number of miles of trackage for electric lines in 1910 is given as 1,116.35 miles, of which 1,077.24 miles is the trackage of the 10 inter-urban lines, exclusive of all city trackage. There are several interurban lines now in course of construction. The electric interurban lines running through the fruit growing belts have, as they do, have been a boon to the farmer and a factor in the development of many farming communities. The state has 9,000 miles of the best of public highways, of which only brief mention can be made, and reference might also ways is covered in another chapter of the state highway commissioner.

Excellent Postal Conditions.

Modern invention and progress have done much to bring the rural communities into touch with the refining influences of our latter day civilization. The telephone and daily newspapers (the latter made possible by the rural free delivery service) have broken down the barriers of isolation which but a few years ago presented a seemingly insurmountable obstacle and have brought the Michigan farmer, no closer to his neighbor, to the big city, and to the great outside world in general. With a liberal not-work free delivery system of about 31,000 miles of telephone lines penetrating practically every inch of the state, to say nothing of over 7,500 miles of telephone lines, no comment on this matter need be without communication with the outside world.

The rural free delivery of mails is in operation in every one of the 83 counties comprising the state, and is kept seven, and as fast as new routes are deemed necessary they are established. Michigan ranks fifth in the post office department at Washington, D. C. (February, 1914) show that there are 2,943 individual rural routes in operation in the state, of a total length of over 80,000 miles. The records of the post office department do not show the length of routes by counties, but it is estimated that these routes serve about 225,000 families. Under these conditions it is not necessary for the Michigan farmer to journey miles and wait days to find out what his neighbors are doing; what the conditions of the market are; or what the general agricultural outlook is in the country at large, for through the rural mail service he has full daily access with the market quotations as soon as his city neighbors, and if necessary he can step to his telephone in the same as the business man of the city and get in touch with the buyers of his own community and also those who would be beyond his reach except for the telephone.

The automobile, too, has become a great factor in bringing the farmer closer in touch with his fellow man, with his own community and in the nearby cities. The number of Michigan's farmers now owning automobiles, as compared with a few years ago, is surprising. It is not at all uncommon to see a farmer or today making use of an auto truck for the transportation of his products, or with his family making a week-end automobile trip to rest and recreation. Therefore, with these and many other conveniences that it is now possible for the farmer to have, together with the educational and social advantages to be obtained through the various farmers' organizations, such as the Grange, the Gleaners, the Farmers' Club, etc., it can safely be said that in most instances the farmer of Michigan is to be envied by his city neighbors, because it is now possible for him to get a living, a comfortable one, and live in the city and at the same time he has the benefits of the environments of country life that cannot be obtained by any other class of people.

The country, the state, the country, or the community, can have no better citizenship than that which is well supplied with churches. Michigan is a christian state and its people are christian people in the broad sense, and while it is true that the various christian churches of practically all denominations. While most of the churches of this state are affiliated or representing many denominations, the fundamental principles underlying such too afford churches where the people can gather to worship God according to the dictates of their own conscientious, thus fostering and perpetuating the christian spirit and principles established by the American people since the first settlement.

Michigan Has No Race Problem.

Michigan has no race problem to solve, as the overwhelming majority of the state's population is of the white race. Of the whites of the rural districts, 50.5 per cent are native born whites, and of the urban, or city, population, 25.5 per cent are native-born whites of native parentage. The negroes of the state constitute only 5 per cent of the total population, while Indian population is 2 per cent, and the census of 1910 shows that the number of Chinese and Japanese is still less. The foreign born whites adjust themselves to American conditions speedily and satisfactorily, and the generation emanating from the northern European countries are well educated in American schools, have merged into a splendid type of citizens, characterized by their honesty, industry, and good citizenship. The foreign countries which have contributed the largest number of foreign-born citizens to the state of Michigan, as shown by the last United States census, are as follows: Canada, 18.5 per cent; Germany, 22.1 per cent; England, 7.1 per cent; Russia, 4.4 per cent; Holland, 4.4 per cent; Poland, 3.2 per cent; Austria, 3.2 per cent; Sweden, 4.2 per cent; Ireland, 4.1 per cent; Italy, 2.8 per cent; all other countries, 9 per cent.

WAS COUSIN OF WHITTIER'S

She Visits California Town That Had Been Named in Honor of Her Poet.

Among the visitors this week in attendance at the twenty-first annual session of California yearly meeting of the Friends church, is Miss Minerva P. Whittier of Newburyport, Mass., a cousin of the Quaker poet, John Greenleaf Whittier, for whom this city was named, writes a Whittier correspondent of the Los Angeles Times.

Miss Whittier has been passing some months in southern California at Long Beach, Pasadena and San Diego, and for the first time in her career has come to remain with those of her own faith in the Friends church at Whittier, the home of Whittier College and to see the monument erected to John Greenleaf Whittier and to visit the institution have been part of the pleasure enjoyed here by Miss Whittier.

She has had a long career as a teacher in public schools of the Middle states and in Indian schools in Hawaii and elsewhere.

Chinese Embroidery Threads.

"Women should not be given books in which to hide their embroidery, silk threads," said Chang Chih-Tung the old viceroy of China, some years ago, when asked to open a school for women in his province. Now there are 4,000 women students in elementary high, and normal schools in the province alone.

The KITCHEN CABINET

If I know that a word of mine
A word not kind and cross,
Might linger the whole day through,
I'd never speak harshly, would you?

If I knew that the light of a smile
Might linger the whole day through,
And brighten some heart with a lonely and pain,
I wouldn't withhold it, would you?

GOOD THINGS FOR DINNER.

For the busy housewife who has but one pair of hands to prepare all the meals it is necessary that she should eliminate all unnecessaries and save as much time and strength as possible. Better a tidy table attractively laid with bread and butter for the meal than an untidy, unattractive and overfatiguing one.

Dinner Rolls.—Mix a cake of compressed yeast with a fourth of a cupful of scalded and cooled milk, add one cupful of scalded, and cooled milk, a half teaspoonful of salt, a tablespoonful of sugar and one and a half cupful of bread flour; cover and let stand until it becomes light, then add a fourth of a cupful of shortening, and flour for a soft dough. Knead until smooth and elastic. Cover and let stand to become light, shape, and when light bake, twenty-five minutes. Brush over with a beaten egg white and return to the oven for a moment to glaze.

Creamed Onions With Parsley.—Cook even sized onions in boiling water, adding salt when they are to be cooked. Melt three tablespoonfuls of butter, add to same amount of flour for a half dozen onions, a half teaspoonful of salt and a little less of pepper, stir well, blended, then add a cupful of rich milk and half a cupful of the liquor that the onions have been cooked in, turn this over the onions after it is cooked smooth and sprinkle with chopped parsley.

Lamb Stew With Peas.—Buy a stew cut from the shoulder, cover with boiling water and cook until tender, thicken with flour stirred with some of the meat liquor, add a pint of green peas and cook until the peas are tender. Season well and serve the meat on a platter surrounded with the peas and thickened sauce.

SUMMER DISHES.

During the hot weather even a pig occasionally is appreciated. Berry and cream are most appealing when well made.

Blackberry Pie.—Line a deep pie with plain pastry, brush with white of egg, fill with blackberries. Put the crust on, cut a slash in the center, and pour in a tablespoonful of water or a little more of vinegar or a piece of lemon peel, or lemon juice. Cover with a rich crust, and bake. To keep the juice from overflowing, put a small tin funnel in the center of the crust, one serves as a chimney for the juice to boil up in, and this does not overflow.

Scoulled Squash.—Take a medium sized Hubbard squash, remove the seeds and stringy portion and pare. Place in a steamer and cover and let steam for thirty minutes. Mash and season with butter, salt and pepper, add a little cream, if the mashed squash, add gradually one cupful of cream, and a tablespoonful of yolks of two well beaten eggs and finally fold in the beaten whites. Place in a baking dish and bake in a moderate oven until firm. Serve at once.

French Pancakes.—Warm four tablespoonfuls of butter, then add one tablespoonfuls of water, two eggs, a half cupful of flour, a half tablespoonful of lemon extract and one cupful of milk. Mix well and bake on a hot griddle. Put together with butter and jam and serve cut in wedges like pie. Sprinkle with powdered sugar and serve hot.

Viennese Chicken.—Clean and cut a fowl in small pieces as for frying. Simmer gently with a bay leaf, parsley, lemon juice and seasoning. Let cool in the stock. Drain well, egg and crumb each piece, and fry in deep fat. Serve with sauce made from thickened stock, chopped mushrooms and parsley, season with kitchen bouquet and lemon juice.

Hint for Mothers.

Mix Dr. Bigelow's Antiseptic with water in the proportion of one to ten and use it for all wounds, bruises, burns, sprains, etc. It is a wonderful healer. Sold everywhere.—Adv.

Off His Guard.

A detective in a Y. M. C. A. lecture in Duluth on crime said: "Gentlemen:

"The criminal can't be always on his guard, of course. Well, when he's off his guard, then the gun's blowed away, like the bank clerk, you know.

"A bank clerk was having his fortune told at a church fair. The pretty fortune teller said: 'I see a young man's hand in hers, said:

"'Beware of a dark woman.'

"Right then the young man grabbed the bank clerk, and he turned pale as death."

DISTRESSING PIMPLES

Removed by Cuticura Soap and Ointment. Trial Free.

Smear them with the Ointment. Wash off in five minutes with Cuticura Soap and hot water and continue bathing for some minutes. Repeat on morning and retiring. These fragrant supercreamy emollients do much for the skin, and do it quickly.

Samples each free by mail with Book. Address, Cuticura Laboratories, Dept. XY, Boston. Sold everywhere.—Adv.

Sacrifice for Art.

One cold, wet and windy night he came upon a poor unfortunate in the doorway of an Atlanta store. Wondering what the poor fellow could get out of the cold, he went up and touched a place, the proprietor of the shop said:

"Him, what are you doing here?"

"Scuse me, boss," said the tramp. "I'm goin' to sing hoss tomorrow morning at auction, an' I am trying to lynch a cold."

Extravagance.

"Well, my dear," said the head of the family thoughtfully, "I managed the deal for the new house today. I had the little scandal and found it perfectly clear. I had to pay a thousand dollars for the search, bill—"

"Why, John, it's a perfect shame!" interrupted his better half. "All that money wasted for nothing."

Color Is Life.

"I want your opinion, your hair society leader, "to give me a plain opinion upon your hair society leader.

"Madam," said the gallant cavalier, bowing, "to speak in plain terms of that most important world be impossible."

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its Infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhœa. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS

Bears the Signature of Chas. H. Fletcher

The Kind You Have Always Bought
THE CENTAUR COMPANY, NEW YORK CITY.

Not Enough.

"It isn't a good plan to confide with a man, who is rising his bobby.

It's all right to save time, but some time it's lost in figuring how they can save a little.

Drink Denison's Coffee, For your health's sake.

After a man is married perhaps it may right that he shouldn't have a single idea.

Have a little patience. Even a corkscrew doesn't go straight to the point, but it gets there.

All things come to him who waits, but he is generally dead by the time they reach him.

The consequences are seldom pleasant when you sit on either fresh paint or fresh children.

All telephone operators in Egypt are required to be able to speak English, French, Italian, Greek and Arabic.

Waiters at one well-known London restaurant are required to speak the French language at the expense of their employers.

If you wish to interest an audience tell a story about a man who has been whipped by a male, studious and retiring young man.

The government of Hawaii has set aside thirty acres of forest reserves and will experiment with planting eucalyptus for fuel.

Thoroughly Lost.

Othello explained his jealousy.

"I thought she lost it waiting a Chautauqua assembly."

ONLY ONE CROP OF LAND

Good corn land is very scarce. See ad of Himmelberger-Harrison in another part of this paper. Write them today.—Adv.

Some Drink.

"What are you drinking?" demanded Marc Antony, as Cleopatra dropped a priceless pearl into her glass of wine.

"I'm inveigling a new summer drink, dearest," she replied. "Do you to call it a pearl cocktail."

A Difference.

Angelina—And do you love me with all your heart? Would you die for me?

Adelin—No, dear.

Angelina—You wouldn't die for me?

Adelin—No, mine is an undying affection.

He Hasn't Been There.

"Mr. Dubbyn said he would keep home while Mrs. Dubbyn was away."

"Yes."

"He wrote glowing letters to her about his experiments in the kitchen and the fun he was having washing dishes."

"Pshaw!"

"When Mrs. Dubbyn returned at the end of two weeks Mr. Dubbyn, of course, met her at the station and escorted her home."

"And the sequel?"

"The sequel he discovered that she took his latch key away with her the day she left."

Faded Sentiment.

That beautiful sentiment eventually dies a sad death would seem to be the conclusion of a story told by the other night by a southern congressman.

Parth, who lives in the suburbs, was about to board for the commuters' train some time since, when he was followed him to the door as usual by his little son. He kissed the little one and that he hadn't forgotten his uncle.

"Say, John," reflectively remarked the good woman as they reached the vestibule, do you know that this is the fifteenth anniversary of our wedding?"

"Why, so it is," returned John, delighted at the unusual manifestation, "I will bring you home a nice bunch of roses."

"Roses are very sweet," was the practical response of mother, "but you had better make it six oysters to fry for supper."

Hee a Hard Time.

Someone is quoted as having said that of all the letters in the alphabet "h" is the most unfortunate, because it is always out of cash, always in debt, never out of danger, and in hell all the time." It is also the most frequently used letter in the alphabet.

Where Rain Never Has Fallen.

The Greek poet in the world is that portion of Egypt between the two lower rails of the Nile which has never been known to fall there.

Edible Birds' Nests.

The edible birds' nests of the Chinese are worth their weight in gold silver. The finest variety selling as high as $50 a pound.

What a Man Eats Every Year.

It is estimated that the average man consumes a ton of solid and liquid food every year.

Common Sense.

A handful of common sense is worth a bushel of learning—thus runs an old Spanish saying.

Proof.

The lecturer raised his voice. "It is my belief, and I venture to assert it," he declared, "that there isn't a man in this audience who has ever done anything to prevent the destruction of our vast forests." A rather hard, hoarsely looking man quietly arose in the rear of the hall and said: "I've sent woodpeckers."—Exchange.

Danger in Too Much Method.

The methodical man is apt to become fussy if he lives long enough.

Sacrifice for Art.

NEW GAME LAWS TAKE EFFECT

Sweeping changes went into effect Tuesday for the protection of fish in the inland waters in Michigan and hereafter sportsmen will have much to remember when they go on fishing expeditions. The new law passed by the last legislature, is exceedingly comprehensive and far reaching in many respects and greater degree than any act rendered in recent years.

Provided you live in Michigan you will need no license papers to fish, but nonresidents of the state will have to secure permits at a cost of $3, which will permit them to take all kinds of fish, including brook trout, or a fee of $1 which will allow the catching of all kinds of fish except brook trout.

One of the most salient features of the new law is that which forbids the traffic in many varieties of common fish. It makes unlawful the purchase or sale of brook trout or any large or small mouthed black bass, calico bass, white bass, sturgeon, blackfin, sunfish, perch, rock bass, wall-eyed pike or crappies.

This means of course that the consumer, having an occasional taste for a certain variety of these fish, cannot at his pleasure step to a store or a market and buy a supply. Neither will it be lawful for resort proprietors to serve the speckled varieties of fish on his tables and demand a charge therefore. He will be permitted however to fry the fish for his guests, but no money must be accepted by him for such service. This does not prohibit him, however, from serving fish taken from the great lakes.

The minimum size, number in daily catch and quality which will be allowed in possession of one individual at one time are as follows: Trout and salmon, seven inches, thirty-five to catch, fifty in possession at one time; black bass, ten inches, ten in one catch and not more than ten in possession; wall-eyed pike, 10 inches, twenty-five in catch, twenty-five in possession, white bass, calico bass and rock bass, six inches, twenty-five in one day and twenty-five in possession, blue-gills, sunfish, perch and crappies, five inches, twenty-five in one day and twenty-five in possession.

It will be unlawful to use grab hooks, snag hooks, set lines and night lines. Ice lines may be used during December, January and February for all kinds of fish except the different kinds of trout and bass. It will be unlawful to have nets excepting dip nets and minnow seines. Suckers, mullets, redsides and grass pike may be taken from streams and rivers by spearing and dip netting during March and April. Minnow seines not more than twenty feet in length may be used for taking chubs, shiners, suckers, dace and stonerollers and minnows from any of the inland waters of the state, but the catches may be used for bait only.

The blanket effect of the new law renders it illegal to sell the perch and other varieties affected if the catches are made in inland waters, but well-cured pike and perch taken from the great lakes of proper weight may be bought and sold. The text of the act excepts Lakes Michigan, Superior, Huron, St. Clair, Erie and connecting waters and bays thereof, but the attorney general has ruled that the perch taken from any other waters than those mentioned, the great lakes, cannot be bought and sold.

Rusty-Nail Wound.
Wash the foot and wound with warm water and soap. Thoroughly cleanse the wound with peroxide then with alcohol, and paint with several coats of tincture of iodine.

When Success Is Sweetest.
Success is sweet, the sweeter if long delayed and attained through manifold struggles and defeats.—A. Bronson Alcott.

EVERY HOME NEEDS A FAITHFUL COUGH AND COLD REMEDY
When seasons change and colds appear—when you first detect a cold settler sitting next to one who has assessed, then it is that a tried and tested remedy should be faithfully used. "I never wrote a testimonial before, but, I know positively that for myself and family, Dr. King's New Discovery is the best cough remedy we ever used and we have tried them all," 50c and $1.00.

CHARLEVOIX CO. FAIR NOTES.

Exhibitors are now sending in their lists of entries and applications for member tickets.

A Farm Tractor exhibition of plowing is assured.

The prospects for races are better than ever before.

Governor Ferris writes that he will try to arrange his trip so as to arrive at fair ground at 10:30 a. m., Thursday, Sept. 9th.

Three bands have already been secured.

A high wheel wire fence will soon replace the old race track fence. Prospects are bright for a successful fair.

MASON'S GROCERY
TELEPHONE NO. 100
Masonic Block. - - Charlevoix, Michigan.

Northern Michigan

Reports from the territory in the vicinity of Cadillac indicate that the loss sustained as a result of the heavy frosts late last week was as heavy or heavier than first reported. Some farmers who planted their potatoes early will not suffer heavily, but the majority were late in getting their seed potatoes in the ground and will harvest only a small portion of the crop. Very few acres of corn in the entire section escaped.

Petoskey News: About thirty acres of the two hundred and fifty acres of cucumbers in Emmet county were not hit by the frost Thursday night. In Charlevoix county more than three hundred acres were cut by the frost. This has affected the contracting for acreage for next year and many of the men who had two and three acres out this year are contracting for seven and eight acres for next year in an effort to make next reason provide double profits.

At a meeting Thursday evening, Aug. 26, a large number of enthusiastic residents of Walloon Lake, discussed the proposition and plans for the incorporation of the village of Walloon Lake and also discussed good roads plans. Prominent men from the resort, Petoskey and Boyne City were on hand and many of them gave interesting talks. Attorney Miller, of Petoskey, talked along the line of incorporation and outlined the work. Others to talk were J. M. Harris, of East Jordan and Samuel Smith and Dr. Marshall, of Boyne City. A committee was appointed to continue the work, already begun along the line of incorporation and report at a future meeting.

Traverse City Record: Thursday night's frost hit the cucumber business a body blow and, while only scattering reports have been received at the saltpeter station, it looks as if there will hardly be half a crop. The frost worked in streaks, one farm being untouched while that next door took nearly everything cooked brown. If a warm rain sets in and cucumber growers cut away the frosted portions of the vines, much of the crop can still be saved. The station thus far has filled over 500 bushel with cukes of the first grade and has another well started. A vat of second grades is also well under way, but yesterday's receipts amounted to almost nothing and but little improvement is expected today.

Some one made a real blunder when he named Williamsburg, a village of a couple of hundred souls in Grand Traverse county. Why it was not Spring dale will ever be a mystery. Williamsburg, spread along some eighty rods of state road highway, has no less than thirty-three flowing wells. Practically every residence has its own bubbling stream of pure, ice cold water. In one man's back yard there are four of these natural water supplies, and on his next door neighbor's property there are three more—a total of seven within 100 feet. Water is reached at a depth of thirty to forty feet at any point in the vicinity of the village. The wells, once sunk, flow with varying volume. Dependent no doubt upon the hilly contour of the land. From a pipe sunk in one of these springs there spouts a two inch stream, with force sufficient to operate the plumbing systems of two residences. Other wells show corresponding activity, and the degree of energy diminishes from those real spouters to those which have barely force enough to bring the water to the surface.

Traverse City Record: From reports coming in today from different parts of the region the frost last night did considerable damage to crops in the fields that are back from the water. On the peninsula there was little damage done and but small damage is reported from the Leelanau section. J. L. Parker, on Lee Stacy, who drove in from Honor, report that the damage to the south was serious and that whole fields of potatoes, beans and corn were badly nipped by the frosts. Reports from as far south as Grand Rapids show that the frost was general throughout the northern part of the state. Around Petoskey the damage was heavy, and it is claimed that the bean, potato and other tender crops suffered a fifty percent damage. This is the earliest that frost has visited the region for many years and one peculiar fact connected with the incident is that it was exactly three months ago that the freeze occurred which ruined the fruit crop, as the frost came on May 27. In the city gardens suffered in many places, the cucumbers, tomatoes, corn and other vegetables suffered heavily. The cucumber crop throughout the region was hit the hardest of all the crops.

COMING BACK TO CHARLEVOIX, MICH.

UNITED DOCTORS SPECIALIST WILL AGAIN BE AT THE HOTEL CHARLEVOIX, MONDAY, SEPT. 6, (B'IS. ONE DAY ONLY.

Hours: 10 A. M. to 8 P. M.

Remarkable Success of These Talented Physicians in the Treatment of Chronic Diseases. Other Times Services Free of Charge

The United Doctors, licensed by the State of Michigan for the treatment of deformities and nervous and chronic diseases of men, women and children, offer to all who call on this trip, consultation, examination, advice free, making no charge whatever, except the actual cost of treatment. All that is asked in return for these valuable services is that every person treated will state the result obtained to their friends and thus prove to the sick and afflicted in every city and locality, that at last treatments have been discovered that are reasonably sure and certain in their effect.

These doctors are among America's leading stomach and nerve specialists and are experts in the treatment of chronic diseases and so great and wonderful have been their results that in many cases it has been hard to find the dividing line between skill and miracle.

Diseases of the stomach, intestines, liver, blood, skin, nerves, heart, spleen, kidneys or bladder, rheumatism, asthma, diabetes, bed-wetting, tape worm, eye ulcers, weak lungs and those afflicted with long-standing, deep seated, chronic diseases, that have baffled the skill of the family physicians, should not fail to call. Deafness often has been cured in sixty days.

According to their system no more operations for appendicitis, gall stones, tumors, goiter, piles, etc., as these diseases are treated without operation or hypodermic injection.

They were among the first in America to earn the name of "Bloodless Surgeons," by doing away with the knife with blood and with all pain in the successful treatment of these dangerous diseases.

If you have kidney or bladder trouble bring a two ounce bottle of your urine for chemical analysis and microscopic examination.

No matter what your ailment may be, no matter what others may have told you, no matter what experience you may have had with other physicians, it will be to your advantage to see them at once. Have it forever settled in your mind. If your case is incurable they will give you such advice as may relieve and stay the disease. Do not put off this duty you owe yourself or friends or relatives who are suffering because of your sickness, as a visit at this time may help you.

Wake out and run down men or women, no matter what your ailment, consult them. It costs you nothing.

Remember, this last free clinic of this visit only.

Married ladies come with their husbands and minors with their parents. adv.

BLACK - McGHAN

A very pretty wedding occurred at the home of Mr. and Mrs. Walter Black of Marion Center, at high noon, Wednesday, August 25th, when their daughter Lola and Mr. Albertus McGhan were united in marriage, Rev. Quinton Walker officiated, using the ring ceremony.

The bride was attended by her two friends, Florence Muggison and Kate McGhan and the groom by his brother Vern and Clarence Meggison. The house was prettily decorated with ferns and flowers. Only immediate relatives were present.

A bountious dinner was served, after which the young couple were accompanied as far as Petoskey by their bride's maids and groom's men. Both young people are residents of Marion Center and are well known in Charlevoix and vicinity. They have the best wishes of their many friends.

Mr. and Mrs. McGhan are at home to their friends on their farm in East Marion.

WOMAN WEARS GLOVES NOW

W. C. T. U. Mortgage Is Cleared and Mrs. Anderson of California Now Is Happy.

Pasadena, Cal.—For the first time in twenty-five years Mrs. H. P. Anderson of Burbank got on a few days ago a pair of kid gloves. Mrs. Anderson, who is a delegate to the convention of the Southern California Woman's Christian Temperance union, had received that she would wear no gloves until a mortgage on the Los Angeles W. C. T. U. temple was paid.

The debt, which originally amounted to $30,000, was cleared and the union left by Samuel Little.

A Recipient of Hard Knocks.
"Do you believe life is a game of give and take?"
"I certainly do."
"On what do you base your assumption?"
"The fact that I have to take so much more than I can give."

Berlin's Bouquet.
Paris was teaching the world when there was no capital in Germany. London has been a commercial center for a thousand years, and Oxford for a hundred years at least. Even the University of Prussia, the first in Germany, was founded by Charles IV in 1348. You may like or dislike these cities; but at any rate they have a bouquet; Berlin has none.

Aegean Sea.
The Aegean sea is a part of the Mediterranean sea. It lies between Greece on the west, Greece and Asiatic Turkey on the east, and Asia Minor on the east. It is connected by the Dardanelles with the Sea of Marmora, and by the Bosporus with the Black sea. It abounds in islands which give it beauty, but render navigation difficult.

Rason Comparatively Modern.
A early days a bandmaster boat ition with his foot. 1814 well 1826 was the boston first introduced.

EXPERTS EXPLAIN FARM MACHINERY AT STATE FAIR

Many new improvements have been made on farm machinery during the past year, a fact indicated by the large number of manufacturers who have made space reservations at the West Michigan State Fair, September 20 to 24 at Grand Rapids.

Expert demonstrators representing the leading manufacturers of tractors, gas engines, hay presses, harvesting machinery, etc., will be on hand to give first hand advice to the farmer who comes to the Fair as part of his yearly education in agriculture.

Some 5,000 new farm devices for farm uses have passed through the U. S. Patent Office this year, and these new improvements will be on the market by fair time.

More space has been added to the large Implement Field at the West Michigan Fair, and the displays include everything from moving pictures to actual plowing in the soil.

Early Display of Wooltex Styles, the Leaders of Fashion

In Wooltex tailored garments, correctness of style is combined with unexcelled quality. The pure wool outer materials are carefully shrunk before cutting. The linings are pure silk, fitted and adjusted separately from the outer materials.

Every garment is so carefully made that it will retain its fresh, new appearance for many months. This means much to the woman who wants always to appear well-dressed without having to buy a new garment more frequent than she can afford.

Wooltex tailored garments have all the stylish beauty of custom-made, yet cost no more than ordinary garments. See this early display of the new styles.

Coats $14.50 up --- Skirts $5.00 up

EARLY PIONEER CALLED HOME

Death of "Aunt Anna" Aldrich—The Passing of a Noble Soul to a Well Earned Reward

Mrs. Anna Elizabeth Aldrich, wife of Capt. Alanson G. Aldrich, died at her home on South State street at nine o'clock Wednesday morning, aged 76 years.

Deceased was born in Montreal, Quebec, Sept 17th 1839. In her girlhood days she came, with her family, to Beaver Island. In August, 1854 she was married to her surviving husband, where they resided until the spring of 1866, when they removed to this place, (then known as "Pine River.") Here they have made it their home almost continuously since.

In those early days they lived in a log house on the present site of the Weidner warehouse, with a fish-house on the corner where the lake steamers now wharf around the dock. In 1867 they built the house which still stands immediately in the rear of the Blanchard hardware store and owned by Fred Myers. In this home they continued to reside up to about fifteen years ago, when they built a home on the five-were lot where Mrs. Aldrich passed away.

Mrs. Aldrich was the mother of nine children, six of whom are living—H. E. Aldrich, of Cadillac; Miss Linda, of Charlevoix; Mrs. Lilla Ball, of Traverse City; Mrs. James Cummings, of Downgiac; Wm. A. and E. C. of this place.

The funeral was from the home on Friday afternoon, Rev. C. E. Taggart officiating, and the attendance of the entire community was attested by an attendance that filled the house and yard. The casket was buried in banks of floral tributes from loving friends.

It is with a sorrow sanctioned by memories of pioneer days that we record the passing of this good woman. In those days of stress and privation, when sickness or death came to any one of the few households of the little settlement, she was the good angel of the community. She was not only a physician but a comforter. No night was too dark or tempestuous to prevent her responding to a neighbor's call, and her very presence brought solace and good cheer in the midst of sorrow and suffering. Eminently practical, her heart was always animated by a desire to relieve distress, and her knowledge of medicine gave her benevolent desire full scope. She was indeed a benefactress. It is abundant cause for sorrow that this kind heart has ceased to beat. The home of the writer has many times been invaded without call by this good samaritan, and she never left without a blessing following her homeward footsteps. Even the Indians came within the scope of her merciful ministrations, and many was the shack or wigwam that her presence filled with comfort and hope. And with who or native her beneficent help was given as freely as heaven gave us the rain and sunshine.

The memory of such a character dwells like a benediction, tender and hallowing.

WHAT ABOUT THIS MEXICAN MATTER?

It would seem that there is a glaring disparity in the attitude of the United States government toward Germany and Mexico. We concede that there is no government in Mexico, but a condition of brigandage and outlawry prevails and practical invasion of American territory has occurred. Mounting soldiers and citizens have been killed and American property stolen or destroyed.

Is it not time for a short season of retaliation?

"HENPECKED HENRY"

So many attractions are offered the theatregoers nowadays that it is a problem to pick out the worthy ones. "Henpecked Henry" is one that any discriminating person can safely attend and feel sure of receiving good value in laughter, music, girls and song. The great musical comedy has made a deep impression upon press and public, being original in plot, exceedingly funny in tides and honestly produced. The Milwaukee Sentinel called it "the funniest show in the world." It will be presented at the Charlevoix Opera House, Saturday, Sept. 11th.

"WITHIN THE LAW"

"Within the Law" is an effective play. It shows the arrest of a young girl in a large dry goods house for a theft, committed by another, her conviction, on circumstantial evidence, and her fruitless appeal to her employer on her own behalf and that of her shop companions. The scene in which the heroine, while protesting her own innocence, passionately pleads the cause of underpaid saleswomen driven by their necessities into shoplifting or criminal courses, is founded—in part, at least—upon solid fact, and supplies a moving and impressive theatrical incident.

It will be seen at the Charlevoix Theatre on Tuesday Sept. 14.

LOST—A boy's blue serge coat, on the beach of Lake Michigan, finder please leave at Sentinel office.

PRIMARY MONEY COMES BACK

Small Counties of State Receive Great Help From the State School Money

Charlevoix county received for its apportionment of the primary school fund $11,491 more than it paid out in state taxes. The state tax paid amounted to $34,932 and the primary money received by the county, $46,373.

The 83 counties paid a total state tax of $9,507,090 and got back by way of the primary fund a total of $6,699,361, or $3,067,728 less than the state tax paid by them. Most of the similar counties more than received their state tax back but in the large ones the margin is the other way. Wayne county for instance paying over $1,000,000 more than was turned back by the primary fund. The biggest margin in favor of a county was in Bay county, which got back $59,901 more than it paid.

For the counties in the northwestern part of the lower peninsula the figures are as follows: Antrim paid $30,898 state tax, received $33,362 primary money; Benzie paid $17,056, received $26,905; Emmet paid $49,065, received $46,322; Grand Traverse paid $44,819, received $44,819; Kalkaska paid $14,056, received $17,788; Leelanau paid $20,711, received $25,886; Manistee paid $49,572, received $65,971; Missaukee paid $17,955, received $22,318; Wexford paid $48,900, received $57,814.

A DIPLOMATIC VICTORY

The editor of this paper is an American before he is a republican, and he heartily congratulates the president on his diplomatic achievement in the German submarine controversy.

The Kaiser very gracefully yields the point that the United States government is justified in protesting against the murder of American citizens on the high seas. It is a concession on the part of Germany that international law is not a scrap of paper where American lives are involved.

The writer does not deny that he is favorable to the cause of the allies, but he is, first of all, pro-American, and now that the main question with the Germans is apparently settled, we hope the president will just as forcibly remind Great Britain that the government of the United States regards as unfriendly the course of his majesty's government in its embargo on American exports to other countries.

What is sauce for the goose is sauce for the gander.

AMERICAN DAY AT WEST MICH. FAIR

"American Day," Wednesday, Sept. 22nd at the West Michigan State Fair will be one of the Grandest patriotic celebrations that Michigan people have ever witnessed.

The spectacular "Pageant of Peace" that will be a feature of the day, will include the State Militia, Boy Scouts, Camp Fire Girls, Daughters of the American Revolution, Civil and Spanish War veterans, school children from every township and civic section, in which many towns in Western Michigan will be represented.

The thrilling "Battle in the Clouds" with Americans, Germans, French and Italian air pilots from Chicago, will be given. An added feature the new "Made in America" daylight fireworks, will be presented for the first time in this country.

Governor Ferris has been invited, and it is expected that many prominent national importance will be on the program for "American Day."

It is now assured that over 100,000 people will attend the American Day celebration at the West Michigan Fair.

JEWISH HOLIDAYS

Thursday and Friday of this week are Jewish New Year holidays, and the Lanto and Levinson stores will be closed. Saturday of next week is the Day of Atonement, when business will also be suspended by those stores.

The Jewish New Year's festival is the oldest of all festivals celebrated in the civilized world. But it is unique for its significance as well as for its antiquity. The Jewish New Year (or January 1st) is a day of gratifications; men rejoice in what they have achieved, it is a day for mental introversion. The Jewish New Year's day, however, is a time for serious thought on the Meaning of Life; it evokes plain contemplation to the difficult and inevitable problem as to right and wrong and its appeal is not that we should get more out of practical life but value more genuinely, more intimately, more morally the life God has entrusted to us.

In some sections of the north forest fires are doing considerable damage. For several weeks there have been only light showers and as a result the woods are fast drying. Small fires are burning in townships in every northern Michigan county and those blazes may become dangerous unless they are extinguished. Persons starting fires in the forests are urged to put them out before leaving.

EASTERN STARS AT BATTLE CREEK

Grand Chapter, Order of Eastern Star to Meet in Battle Creek in October—Best Meeting Ever Held in the State

Battle Creek Special: This city has started its preparations for the entertainment of the Grand Chapter, Order of the Eastern Star, meeting in Battle Creek, October 5th and 6th. The Chamber of Commerce, the city officials and the Convention League, with the Merchants' Association are working together to make this the largest and best meeting of the Eastern Stars ever held in the state.

The Tabernacle, which will seat 3,000 people has been secured for the use of the Eastern Star delegates for their official sessions, while the reception and ball will be held in the new $50,000 Masonic Temple, which is considered one of the finest in the state.

Tom Postum Cereal Co., Ltd., will entertain all the delegates and their friends on Tuesday afternoon, at their great pure food plant. The private art collection of the late C. W. Post, consisting of over 1,000 paintings by old and water colors by some of the world's greatest artists, will be opened to the Eastern Star and guests. The Kellogg-Toasted Corn Flake Co. will entertain at their magnificent plant on Wednesday morning. The Battle Creek Sanitarium, the largest of its kind in the world, will keep "open house" during the day, and all delegates and visitors will have the privilege of going through this world famous institution. The Country Club will tender the use of their golf links and club house to the members of other golf clubs and during that week there will be added attractions at Goguac Lake which adjoins the city.

Preparations are being made to entertain 1,500 Eastern Star delegates and their friends during this meeting, and the city will be handsomely decorated for this occasion. The grand Eastern Star ball and reception will be on Tuesday, October 7th, tendered by the two local Chapters of the Eastern Star to the Worthy Grand Matron and Grand Chapter officers.

Announcement of the date of dedication of the Masonic Memorial Infirmary at Alma will be made soon. The structure which is being built at a cost of $60,000 on the ground just north of the Masonic home and included in the property decided to the Masons by Amos W. Wright. The infirmary is 114 feet in length, 38 feet in width, two stories and basement and as nearly fireproof as possible.

See.e in "Henpecked Henry" at the Charlevoix Theatre, Tuesday, Sept. 14th.

West Michigan Pike—Touring Along Michigan's Shores—Triumph of Good Reads Movement.

(From the Grand Rapids Press.)

Among the numerous marked highways in the United States the West Michigan pike, which parallels the shore of Lake Michigan, held prominence for having the trail sign posted completely and also for keeping the roads in first class condition. This route begins in Michigan at Mackinaw and goes south through Petoskey, Charlevoix, Traverse City, Manistee, Ludington, Muskegon, Grand Haven, Holland, South Haven and St. Joseph, where the trail deserges for Chicago and South Bend.

From South Bend the West Michigan pike will join the northern loop of the Dixie highway, which traverses south to Miami, Fla. It will serve as a trunk line route linking the Straits of Mackinaw with the Gulf of Mexico, covering a territory populated by 40,000,000 people, owning 800,000 automobiles.

When the conference of governors of the states interested in the Dixie highway, Gov. Ferris, on invitation of Gov. Ralston, of Indiana, sent two commissioners representing Michigan, and urged that the West Michigan pike be chosen to make a complete and direct highway from the straits to the gulf. Ions ahead of the world's Fair in 1920 the West Michigan Pike association has been active in the promotion of good roads. Now in its fourth year it has spent $1,000,000 in improvements. Its route traverses fourteen counties through a country with countless lakes and streams, swept by the cool breezes of Lake Michigan the summer through, making it the favorite spot of recreation in the middle west. From South Bend and Michigan City this route travels north for several hundred miles to the Straits of Mackinaw, linking resort to resort, and the railroads and boat lines touch all the important points along the highway. A delightful variety of scenery lures one from the prosperous cities, farms, and orchards of the "land of fruit" to the wilder scenes and virgin forests of the northland. There is never an hour passed without a lake or forest fringing the road, and many views of the blue lake of Michigan in the distance or miles of touring along its beach.

Lower Michigan's peculiar situation guarantees it immunity from the excesses of great heat and extreme cold. Humidity is almost—certainly so—from this great section, and so the sun's rays, even in midsummer, have no terrors for those fortunate to be there. The prevailing winds are from the west. In northern Michigan cool nights are not rare, when only a few hundred miles south thousands are sweltering in the great, crowded cities. Sleep and alcoine rest are the two gifts of this vast north country.

The route of the West Michigan pike is designated by legislative enactment of the State of Michigan and constructed under state supervision by the various counties through which it passes. The state pays a reward for every mile of the pike that meets its rigid specifications, and those stretches of the road are commonly known as "state reward" road. Last year every per cent of the highway is now completed as state reward road and about 15 per cent is under construction. The poorer sections are receiving special attention in order to make the trail a highway of the first caliber. Several counties have completed the improvement of the road in their boundaries, and the remaining counties are making every effort to finish the pike in order to receive the double reward.

The Pike association is a voluntary organization of those interested in the promotion of good roads. The laying out of the route, its construction and sign marking, and the promotion of the touring travel over the pike have been its chief work.

WILLIAM GRAHAM

William Graham died at his home in Marion township Monday night. Mr. Graham was born in Donegal, Ireland, ninety-six years ago.

He came to this immediate region about fifty years ago. He worked for A. Fox & Co. on the wood scows for two years, then entered a homestead claim on the land where he passed the closing years of his life. When the writer walked into "Pine River" the early spring of 1869 he passed a log house in a little hole in the woods three rods one half mile out of the settlement.

It was the home of William Graham and his wife.

William Graham was an industrious honest and kind hearted man

CHARLEVOIX COUNTY FAIR

The Charlevoix County fair opened Tuesday of this week with good prospects of a creditable exhibit, although it would not be strange if the August weather should somewhat affect the display of fall vegetables and fruit.

Today (Thursday) is "school day," and Gov. Ferris will deliver an address. He will be escorted to the fair ground by company I, 32d Infantry, Michigan National Guard.

The boats are running the usual excursions, and the automobile attendance is expected to be large.

Boyne City does not propose to be outdone by Cheboygan and will stage a big (heater rally in that city Wednesday, Sept. 22, at which there will be many new and interesting features. On the program which has just been issued appear the names of Lizzie Hardy, of Walloon Lake, who will give a recitation, and Carl Lindner, of Petoskey, who will also give a recitation.

THE SCHOOLS

Public Schools Enter Upon New Year Auspiciously—The Faculty

The public schools of the city of Charlevoix open next Monday morning with the following faculty of teachers:

HIGH SCHOOL
H. A. Craig, Superintendent.
W. S. Ewing, Principal.
Anna Lambert, Commercial.
Zana Horst, German.
W. A. Vogt, Science.
L. B. Ancilliu, Mathematics.
Grace Northrop, English.

CENTRAL SCHOOL
L. D. Pierce, principal, eighth grade.
Blanch Lamoreaux, seventh grade.
Beatrice Allen, sixth grade.
Madge Allen, fifth grade.
Mary Stines, fourth grade.
Audrey Cornell, first and second grades.
Genevieve Davis, third and first.

LINCOLN SCHOOL
Mary Finucan, second and third.
Lillian Flanders, third and first.

WASHINGTON SCHOOL
Sophia Moore, third and fourth.
Beryl Niles, chart, first and second.

MUSIC AND DRAWING
Mrs. A. L. Sherman.

COUNTY NORMAL
Jessie M. Hunes, principal.
Aida Whitney, critic.

EVERY HOME NEEDS A FAITHFUL COUGH AND COLD REMEDY
When seasons change and colds appear—when you first detect a cold settler sitting next to one who has assessed, then it is that a tried and tested remedy should be faithfully used. "I never wrote a testimonial before, but, I know positively that for myself and family, Dr. King's New Discovery is the best cough remedy we ever used and we have tried them all," 50c and $1.00.

FOR SALE CHEAP—Buick runabout. Apply at DANTO'S Store.

Ours is the only form of business in the world that does not ask you to spend money.
We ask you to keep it at the—
Charlevoix County Bank
of Nicholls, Buttars and Bridge
Bank Resources..... $285,000.
Private Resources of Owners 150,000.
Making a total of over $400,000. for the security of our depositors.
Everybody is earning money now; better put by a little and let it earn 4 percent.
Interest will be added twice a year
JOHN NICHOLLS, President.
A. F. BRIDGE, Cashier.

SEEING LIFE *with* JOHN HENRY

By George V. Hobart

John Henry and the Troupers

IF YOU'LL look real close you'll find a splendid little city in the middle West.

It's a railroad junction where eastern travelers change cars and wait for the other train, which is always late.

A week ago I happened to be one of them and I never was more surprised in Splashburg, and having a wicked hour or two to kill I strolled over to the Commercial House.

Rob Roughcut is the name of the head clerk at the Commercial House in Splashburg. Rob has been traveling high-class stuff for a long time and he knows how to burn the best cigars.

He played the Big Time once. Two years ago he was a bell-hop at the Arcade in Washington and after that he jumped to Chicago as night porter at the old Sinaloa. Rob knows what Hop Gaboon! knows about the big business and worth knowing about.

Rob gave me a brief outline of his life's history and then he just starting in to tell me about the battle of the Civil War in which his father was shot and who shot him when a fivefoot-six gray with Pershing's twinkle in the end of his chin squeezed up and begun to let a prep cut of him about the size of Sousa's band for the asking.

"Calm yourself," said smiling Rob, "and tell me where it bit you."

"And a pretty big grip Party with the tapestry chinpiece, "Nothing of the kind, sir! I want you to know my air has never heard of to eat, sir!"

"Then what," suggested Rob.

"Cut it out, sir! How can I cut it out when I've said it was air? It's air, savage, and I shall leave this hotel tomorrow," said Omar Khayyam.

"With the expense of $15.75 hitting me that will be about all from you," said Rob.

"I'll see the proprietor," said the Old Party, moving away with a fire on him like four dollars in hand money.

"We get it good and plenty every day, as a rule," said Rob, as he sank into a big easy chair, crossed his legs against the counter, crabbed the register and burned a stub pen in its paces.

After looking over the register I saw he filled the strangers's first name must be Sitting Bull, because I looked like one on the register.

"Talk!" said Sitting Bull.

"Only during a hot wave," said Stobe.

"Going to be with us long?" inquired Sitting Bull.

"Say, Bub, you're wearing medals and still a thousand miles from the Great White Way. Say, Mike, at the rate it'll take about 629 shows to get to Jersey City. Are you on your hoss?"

Mike laughed. "Ha! the old story, my boy! we're a real bunch of pioneers up this old farm of a world when we haven't a leftie marooned in the front pocket. I've got a new bit of recitation spiel I cooked up last night when I couldn't sleep. It's called 'Knock and the World Knocks With You,' and I'll put you jerry to it right now before it gets cold.

Knock, and the world knocks with you,
Hoist and you hoist alone
When you're down and out
You will find that the other
Has a lower down than your own!

Hoy, and the song is with you,
Sing, and the echoes all off
For the hot with the thirst
Will see you first
If you don't proceed to cough!

Yes, and the pain will praise you,
Ache, and it will ache alone
Have a sick spell and
Where you wake up
Where are those who say you love the price!

Be man and your friends are many,
Be broke and they'll say is, 'ta!
Be a sap and you'll scarcely know
You will get referee
Be dead and you will get the bid!

Be gay and the world will shower you
With the good things of life
Be sad and they will give your wealth an
airing
Give a sorful lamp
And you'll see them tramp
Give a dollar and they'll walk for yours!

There always a bunch to boost you
Till you at your money dry glance;
Then they'll kick you
Down the stairs
When the time comes on your pants

"You've got the same of life aired out to a fine point," said Rob, when Mike finished his recitation.

At this point Jabo, the Rough barrender, polished a freckled hand on

"Let a Peep Out of Him About the Pie He Had for Dinner."

Mike and butted in with: "Say, you be the fat cross that cut up with that stiffer in the Opy House last night, ain't you?"

"No, I'm the skeleton man with a circus." Mike answered, and the barrender roared with delight.

"Do you think he's a live one, you smart aleck," snickered Jabo.

"Well, I wouldn't bet on him, for the dinky barroom, because it looks like I could eat two of him and pull a few wheezes and I'd get a few puffs.

"The wonder for sure! Isn't this a bird of a place for a show to get stranded? Around the Low Comic as he gave the Rough Surrender the high stem, and the latter pushed forward two hands and a black knit.

"It wouldn't have been so bad if the show had gone to pieces in some busy town where there are pleasures in the daytime," the Juvenile growled. "But here, Mike, the man go to work in their palaces, and the town hasn't any street cars and the only doctor's bell sounds too much like an alarm clock, and it might wake the dead."

"I tell you, Mike," the Juvenile went on, "I'm sick of this place! I don't do take exercise. Oh, me for that exercise thing, good and strong!" sighed Mike.

"What kind of exercise do you take?" Jabo inquired.

"Well," Mike answered, "every morning I swing the clubs for fifteen minutes, then the dumbbells for six minutes, then I run about three miles and I jump up and down and eat my breakfast."

Jabo guffawed loudly over this bit of facetiousness.

"I was at the Op'ry House last night," Jabo informed them, "and I almost laughed myself sick in the stomach at this yera fat cass takin' off that Dutch policeman—ha, ha, ha." Jabo looked at the Juvenile. "You was saying good too," he admitted "takin' off that newspaper reporter and rescuin' the girl from the lorrds' apartyment but you didn't do funny fall and bust your galluses like this fat cass—ha, ha, ha, ha!"

"Get him to unhook the laugh; he's a good stuff fellow," whispered the Juvenile, and Mike started in.

"The town this," Mike began. "All the modern improvements of a big city, wear nickel-plated bells, streets paved with grass, and the river has running water."

"Ha, ha, ha!" Jabo roared.

"Outside me of a place we shoot out in Missouri last winter," Mike went on. "Same style of public architecture, especially the town pump. But the hotel there was the hit with us. It was called the Declaration of Independence because the proprietor had married an Englishwoman and wanted to be revenged. At supper time I ordered a steak, and they brought me a leather binder covered with gravy; so I got up to add an amendment to the Declaration of Independence. The heat waiter was an ex-pugilist, so he put the hacks to me and covered my amendment with bruises. Then he made me eat the leather binder, and for two weeks I felt like a garden patch and I used to slam every time the wind blew."

Jabo's laugh shook the building.

The proprietor of the hotel was no pathfinder, Mike continued, that he wouldn't number the rooms like an ordinary hotel. Every room was named in honor of a President of the United States. That evening there happened to be a rush while I was standing near the desk, and I heard the clerk say: 'First, show these rooms up to John Quincy Adams and put the porter to take that trunk out of the alcove in Thomas Jefferson. Press, go and put down that window in Rutherford B. Hayes, and, here, take this whisky up to Abraham Lincoln. Front, what's all that racket in James Buchanan? Here, take these cigars up U. S. Grant, and turn off the gas in Teddy Roosevelt.' But I nearly fainted when he said, 'Front, run a sofa into Zachary Taylor and take this lady up to George Washington.'

"Marcial Caesar! Ha, ha, ha, he!" roared Jabo. "Dagmar, if that isn't funny, you fa' cass."

"When I get, then to take my train Mike, had worn finger marks on the side of the black bottle and Jabo had stayed a verbal contract to go on the stress as the Juvenile's dresser.

"All of which goes to prove that Shakespeare isn't no bad, prophet you don't have to wait very long for a train out.

"Remember These Nice White Doorknobs We Ate for Breakfast Next Morning?"

for asking questions, now ain't you?" answered Rob. "You just push me into a stall and lock the gate. I'm tired."

"Front! Show this gentleman to 491!" said Stob, sidestepping to avoid a bullet.

Then Sweet William, the Boy Dreamer, dropped from the ring for the next round.

"Free dollies pickles for the fun he gets out of it.

"It is Willie's joy and delight to get a peanut on his nose and recite 'Lester Jo.'"

When trained down to 95 flat, Willie can get up and beat the clapper off "Turkey Hunt Not Ring Tonight."

"Any mail?" inquired Willie.

All the mail that Willie ever gets is a postal card from the pickle factory every two weeks asking him if the people along his route have all had their appetites.

"No literature for you," Stob answered.

"Strange," said Willie, "my lady friends are very remiss, aren't they?"

"Yes, it looks like they were out to drop you behind the piano," said Stob.

Willie tore off a short rabbit laugh and then inquired what time the next train left for New York.

The pickle factory expects Willie to make Pocomoke City, Susquehanna Junction and Nabesnelle before next Sunday, so he tossed the train gag out just to show Stob that he knows there's a place called New York.

"At 7.45 over the D. L. & O.," said Stob.

"What; next?" inquired Willie.

"At 8.10 over the P. B. & N.," Stob answered.

"Which gets there first?" Willie asked.

"The reindeer," signed Stob.

"Oh, you Evil Guy," said the pickle packer; "give me some toothpicks."

Then Sweet William went over to the big window, burrowed into a chair, stuck his feet up on the brass rail of toothpicks and thought he was in.

When I got back to Stob he was standing. I'm going to New York to-morrow," I said.

"Front! Show this gentleman to 491!" said Stob, sidestepping to avoid a bullet.

Then Sweet William, the Boy Dreamer, dropped from the ring for the next round.

"Free dollies pickles for the fun he gets out of it.

"It is Willie's joy and delight to get a peanut on his nose and recite 'Lester Jo.'"

When trained down to 95 flat, Willie can get up and beat the clapper off "Turkey Hunt Not Ring Tonight."

"Any mail?" inquired Willie.

All the mail that Willie ever gets is a postal card from the pickle factory every two weeks asking him if the people along his route have all had their appetites.

"No literature for you," Stob answered.

"Strange," said Willie, "my lady friends are very remiss, aren't they?"

"Yes, it looks like they were out to drop you behind the piano," said Stob.

Willie tore off a short rabbit laugh and then inquired what time the next train left for New York.

The pickle factory expects Willie to make Pocomoke City, Susquehanna Junction and Nabesnelle before next Sunday, so he tossed the train gag out just to show Stob that he knows there's a place called New York.

"At 7.45 over the D. L. & O.," said Stob.

"What; next?" inquired Willie.

"At 8.10 over the P. B. & N.," Stob answered.

"Which gets there first?" Willie asked.

"The reindeer," signed Stob.

"Oh, you Evil Guy," said the pickle packer; "give me some toothpicks."

Then Sweet William went over to the big window, burrowed into a chair, stuck his feet up on the brass rail of toothpicks and thought he was in.

When I got back to Stob he was standing. I'm going to New York to-morrow," I said.

"What with?" sneered Low Comedy.

"With a reporter I know on one of the papers," the Juvenile chuckled. "Say, what was the name she acted we played night before last?"

"Murphy's landing, wasn't it?" Mike answered.

"I guess that's right, because Murphy landed on my good eye hard," the Juvenile said. "Remember those nice white doorknobs we ate for breakfast next morning? The waiters said they were hot biscuits, but I had to get mine with a fan to cool them. I've got it in my pantry yet and every time I walk around the block turns, and I can hear a door open somewhere.

"Mike's double chin showed signs of agitation.

"Stranded here in this jay town!" the Juvenile grabbed the black bottle and upset it again. "Say, Mike, what we need is a guardian. And while we're at it let's kick out one with money so we can wire him for a little price to help us out on occasions like this. The next manager that wins me away from the footlights will have to wear a gold-plated overcoat and stand in the wings every night where he can throw ten-dollar bills at me when I make my exit. No more dick impersonations and Nabesnelle before next Sunday, so he tossed the train gag out just to show Stob that he knows there's a place called New York.

"At 7.45 over the D. L. & O.," said Stob.

"What; next?" inquired Willie.

"At 8.10 over the P. B. & N.," Stob answered.

"Which gets there first?" Willie asked.

"The reindeer," signed Stob.

"Oh, you Evil Guy," said the pickle packer; "give me some toothpicks."

Then Sweet William went over to the big window, burrowed into a chair, stuck his feet up on the brass rail of toothpicks and thought he was in.

When I got back to Stob he was standing. I'm going to New York to-morrow," I said.

"What with?" sneered Low Comedy.

"With a reporter I know on one of the papers," the Juvenile chuckled. "Say, what was the name she acted we played night before last?"

"Murphy's landing, wasn't it?" Mike answered.

"I guess that's right, because Murphy landed on my good eye hard," the Juvenile said. "Remember those nice white doorknobs we ate for breakfast next morning? The waiters said they were hot biscuits, but I had to get mine with a fan to cool them. I've got it in my pantry yet and every time I walk around the block turns, and I can hear a door open somewhere.

"Mike's double chin showed signs of agitation.

"Stranded here in this jay town!" the Juvenile grabbed the black bottle and upset it again. "Say, Mike, what we need is a guardian. And while we're at it let's kick out one with money so we can wire him for a little price to help us out on occasions like this. The next manager that wins me away from the footlights will have to wear a gold-plated overcoat and stand in the wings every night where he can throw ten-dollar bills at me when I make my exit. No more dick impersonations and Nabesnelle before next Sunday, so he tossed the train gag out just to show Stob that he knows there's a place called New York.

"At 7.45 over the D. L. & O.," said Stob.

"What; next?" inquired Willie.

"At 8.10 over the P. B. & N.," Stob answered.

"Which gets there first?" Willie asked.

"The reindeer," signed Stob.

"Oh, you Evil Guy," said the pickle packer; "give me some toothpicks."

Then Sweet William went over to the big window, burrowed into a chair, stuck his feet up on the brass rail of toothpicks and thought he was in.

When I got back to Stob he was

TIME FOR THE HEAVY MEAL

Frenchmen Asserts That It Is Early in the Morning, But Some Differ With Him Radically.

The undisturbed of not beside dispection which arises at the first check note of the wood thrush, and, after the due process of orderly kitchen events, site eager and anticipated before breakfast of fried bacon, a dish of fried potatoes, a stack of wheats, a bowl of oatmeal, a platter of fried eggs, etc., is worthy of note these days.

Our merry examination requires time for preparation to meet the daily rabbinical. It has to be well-cooked and, like a baseball pitcher, cooled on cold to the work. It requires an appetite that a bit of fruit, a soft-boiled egg and a cup of coffee will represent sufficiency and adjacent to the interior economy.

Therefore, when a French man of wisdom, with seeming logic, says that the noon-meal or quasi-noon will be thrown upon the tested digestive organs and that consequently the "heavy meal" of the day should be eaten early in the morning, we reply that his theory is plausible but is at fault. Digestive organs may be related to the morning, but they have to work, except in the case of the now rare and always heroic digestions before breakfast.

Moreover the French man of wisdom is another. Can any of course the cheering presence of one's fellow man at his side, is the spacing but on lower of the human race wants to see his brother at his elbow in the morning? It is contrary to the of humanity at six o'clock in the morning, and it is not the proper character ground, which only takes of humanity at 11 o'clock in the morn. But it cannot keep out of sight, at least it does not in our country.

Eating is as much social diversion as it is sustaining. An omelet is would become abhorrent and men would flee to thickets with four-and-twenty eggs were not also social. A dinner, properly conducted, is the gentle fourth or fifth act of the drama. Breakfast has been reached. The stress has been endured, the intimate relations tested, and the mind comes restfully to the serious work of the day.

If we are to have the "heavy meal" of the day set at five or six o'clock in the morning, it will be served in a generation when rise up all night.—Chicago Tribune.

For Farina Fall.

Many folks are in the low industry of pre farming in Alaska are recently by E. Lewis Burton, deputy commissioner of fisheries, in the report on his fifteen months' tour in Alaska for the department of commerce. He finds that the pioneers of big angels caused many to rush into the business, and small fortunes were sunk by men who had not understood the difficulties of the industry.

The rush to raise foxes, the commis. stoner says, was due to the exorbitant prices paid for live black and silver gray foxes raised in Canada. These prices he declares, did not indicate a healthy condition in the industry. Nevertheless there was a rush to raise foxes in Alaska in the hope of reaping big profits quickly. One of the chief reasons for the large number of failures, according to the commissioner, was the government's system of leasing certain islands to prospective fox farmers at a minimum of $200 a year for five years. The figure proved too high.

Choosing the Camp Site.

Certain rules should be followed in the selection of a site to be occupied for one month or more. Ease and immediance are undertable as the surface water stands on them after rains. A sandy slope drains the ground; the liability of storm water from higher ground must be taken into account. A light loamy or sandy soil is the one of preference. Avoid the low places and ground in which the water is very near the surface. The foot of a hill is liable to remain wet several days after a rain. The tendency is to get too near a stagnant river or lake on which a camp is usually pitched; unless the land there is well above the water, it is undesirable. Avoid a site that has just been vacated by a camp that has occupied it for the time. Pest kerosene on all stagnant waters. Mosquitoes are breeding of mosquitoes; if water is kept standing in fire buckets, it should be changed every a week or have a thin coating of oil.

Use of Air-Torp-dos.

The term "airtorpedoes" has been indiscriminately applied to various kinds of German projectiles used in trench warfare. There is the large bomb, or mine, containing anything up to 100 pounds of high explosive, which is fired at short range; and there is the aerial torpedo, properly so called, which is driven through the air in the same way as a marine torpedo through water—that is to say, by a motor, and not by the initial propulsion given by an explosive charge. The torpedo used by the German army is believed to be driven by compressed air. The contrasting of an airtorpedo is most destructive and demoralizing in its effect. At the fighting on the Yser in October, a whole section of a Belgian trench, with its occupants, was blown out of the bank of the Yser canal into the water by one of these projectiles.

German Eyesight.

Where the eyesight is defective British soldiers in future are to be provided with spectacles free of charge. This calls to mind the method adopted by the German military authorities.

The number of recruits with defective eyesight was so alarming that the matter was investigated, and in one case a young German soldier was provided with two pairs of spectacles, one pair to be worn and the other pair always to be carried in reserve.

Germany has more short-sighted people than any other country. Among amongst young people of twenty years of age, five and one-half per cent are afflicted with defective eyesight.

At Heidelberg university extensive experiments were carried out to discover the cause of this alarming defect, and the professors were satisfied that much complain' was to be lodged against harmful artificial light.

Novel Billiard Tables.

Billiard tables supported on solid rock are among the novel features of a house on one of the islands of the Inner Hebrides, off the west coast of Scotland. Each table rests on a massive concrete base which extends through an opening in the floor and has its footing on bedrock, and is therefore as secure and as free from vibration as if it were a part of the island itself.

Unexpected Reply.

"Father, do you know you have hair just like your mamma?"

"Oh, no, I haven't. I can't take mine off."

Heed the teachings of adversity if you would avoid a second lesson.

HIDDEN IMPURITY

"If American women knew how much of our Coffee lies on the ground for days, before the berries are finally swept up and harvested, greater care would be exercised in purchasing food products. For this Coffee is hygienic but its mobby color is lost in the roasting and the partial decay is concealed until it comes up harsh and bitter in the cup. This fact is not generally known to importers, for few of them have studied conditions existing prior to the arrival of their ships in port."

So writes F. C. Harwood, and Mr. Harwood knows. His long experience in the tropical coffee growing countries, his deep intimacy with plantation owners, his close study of land customs, their methods and the "Tricks of their Trade" has acquired for him a fund of knowledge which places him far in the leadership of coffee connoisseurs, both here and abroad.

Dunham's Coffees are selected by F. C. Harwood, personally, and it is because of his power in the coffee fields that Dunham's Coffees are recognized as the world's finest. His wisdom and critical discrimination is appreciated by Coffee Growers the world over, and their reason gives the world the benefit of the world's finest crops. Thus, only pure, hand-picked berries find their way into Dunham's Coffees. Care is your safeguard against impurity.

Try Dunham's and realize your ideal Coffee put up in Cans, Cartons or Packets. Ask your grocer for Dunham Coffee Co., Chicago, for the name of the nearest dealer.—Adv.

AUTO HORN JERICHO TRUMPET

Does Not Make Any Walls Fall But Signals Smashing of Speed Laws.

This lady has a Jericho horn on her auto."

Horatio Holmoth made this accusation to Recorder Gaskill against Mrs. R. B. Frost of Philadelphia, passing down Somerset street to Germantown avenue, Chelsea. Students of the Old Testament will remember that in the Joshua and his hosts blew the horn and the walls of Jericho fell flat.

Mrs. Frost denied indignantly that she broke any walls, even the Jericho walls she owned in her auto, although her mouth charged that to miles an hour in a lame horn. Mrs. Frost offered to "Five dollars fine," said Recorder Gaskill gravely. "A warning this time. Try to add to the city's quietude by substituting a Jericho horn for a bug of you, madam."—New York World.

Sea Birds for Coast Defense.

Sea birds are the latest craft to be considered by the navy department for coast defense work. The navy is experimenting with a number of these half-h.drosoroplane, which neither float over the water nor cute through it, but skim along in surface. A 16 foot boat of this type has made 35½ miles an hour at a to-wy test. It is hoped to obtain a boat that will carry a load of 55 or 60 miles an hour. A said 200 of such craft could be built at the cost of a single scout cruiser and would be much more effective.

What kind of roofing shall I buy?

The General says: Buy a cheap unguaranteed roofing and save a few dollars in first cost—or you can pay this slight difference and get a roofing guaranteed by the world's largest manufacturer of roofing and building papers. The *General* could sell cheaper and you'll find it cheaper in the long run to buy

Certain-teed

Roofing

This roofing is the highest quality possible to make and it is guaranteed 5, 10 or 15 years, for 1, 2 or 3 ply respectively. When once laid *Certain-teed* seal strips make it water tight for the period of the guarantee and the guarantee is a definite insurance against all roofing troubles.

Shingles

(Slate Surfaced)

These shingles are surfaced with genuine red slate, giving a most artistic and durable roof covering. Guaranteed 10 years.

For sale by dealers everywhere at reasonable prices

MORE USES FOR AEROPLANE

Slay be Made of Immense Value for the Purposes of Warfare.

The announcement that Sir Ernest Shackleton has taken an aeroplane to the Antarctic calls attention to the possibilities of the aeroplane for exploration purposes. The rapidity and ease with which an aeroplane can travel over large tracts of country make it a very useful machine for penetrating into strange country unrod by civilized people, and Sir Ernest Shackleton's decision is recognized this fact as did Capt. Amundsen, who a short time ago, completed his Arctic expedition with a flying boat. Apart from exploration work, however, the aeroplane is believed to have a great future as a discoverer of hidden or inaccessible mines in the regions of Central Guatemala a gold mine of immense richness is said to exist. The routes across this country are practically impassable on foot or on horseback, so forests of impenetrable growth, swarming with wild beasts, bar the way. A schooner is on foot, however, for an aviator to ascend from the numbers of Mexico and make a bold dash into the heart of this wild country in an endeavor to solve the legends concerning its mineral wealth.

For many years explorers have been endeavoring to locate the site of Manoa, a city rich with gold and silver mines, which is said to exist in Venezuela. Ancient charts state that the treasure is in the vicinity of the great lake Parima, but as at present it has not been traced. Here again the wild nature of the country is all against exploration on foot, but an aeroplane could surmount such difficulties, and a chart for the guidance of an aerial explorer is certainly now in preparation.

Over 50 years ago the Great Sinoy desert of Australia swallowed up the famous explorer Leichhardt. The mystery of his fate has never been solved, but an aviator could probably do so, if one could be found plucky enough to attempt a hazardous flight across the waste land which holds the secret of Leichardt's disappearance with his companions.

The scope for the aerial explorer is wide. There are thousands of miles in Arabia where no white foot has trod; the heart of the Sahara desert remains unravaded, and in Alaska and Israel there are large tracts of unexplored territory so well guarded by nature that only an aviator could invade them.

Our idea of a mean woman is one who refuses to pay the doctor after he has converted the late lamented insurance policy into ready money.

TRIBUTE TO THE CANDIDATE

Had Known Him All His Life But Didn't Know What He Looked Like.

One morning, when Tom Shipp was running for congress in Indianapolis, a man called him up on the telephone and requested an interview with him. Shipp consented to meet the man, and intimated that opportunities for interviews were scarce.

"Well, Tom," said the voice over the telephone, "you certainly ought to talk to me. I've known you ever since you were a little bit of a kid. You know me, don't you, Tom?"

"Yes," said Tom mendaciously. "I know you."

"And I've loved you as if you were my own son," continued the voice. "I've always been devoted to your interests. You know that, don't you, Tom?"

"Of course," agreed Shipp.

"Well, I've been carefully pursued the admirer. "I've watched your career with the greatest pride since that your rapid advancement. It has made me happier than I can say. You know that, don't you, Tom?"

"Certainly," replied Tom, whose arm was beginning to ache from holding the receiver.

"You say you're too busy to see me in your office?" asked the admirer in an incredulous tone.

"I've got an engagement somewhere else," explained the candidate.

"Where will you be about half an hour from now?"

Shipp considered for a moment.

"In the lobby of the Claypool hotel," he gave the information.

"What part of the lobby?"

"Say, why do you want to know that?" asked Shipp.

"Well, you see," confided the other, "I want to be sure of finding you, and I really don't know what you look like."—Popular Magazine.

Two Singles.

The Nervous Curate (trying to follow an introduction with genial conversation)—And—or—how is your wife in these trying times?

The Introduced—I regret to say, sir, that I am married.

The Nervous Curate—Ah, yes, of course; how exceedingly pleasant that is! I take it then, that your wife is single, too.—London Sketch.

Quite Easy.

"I hear Jim is going to organize an aeroplane enterprise."

"He ought to find it an easy matter to keep its stock soaring."

A perforated rubber fly swatter has been invented, having the advantage that it will not scratch furniture.

The Wrong Rushville

By Marion Warrington

"I am tired of it all, spoke Myra Cloyd, and she sighed and really looked weary and discouraged.

Mrs. Verner, her aunt, glanced at her quickly, shrewdly. She friend sense of worry in the fair girl, she had entertained through a busy social season.

"You need a rest, a change, dear," she remarked cheerfully.

"The change, perhaps, yes," admitted Myra. "Rest? Oh, just the reverse of that, dear aunty. I can never thank you for all the trouble you have had to give me, and for a peep into life, but there is so much hollowness that one should have a chance to have rest, that I am not only disappointed, but weary of it all!

"I am sorry, dear, sadly woman-an, Myra," spoke Mrs. Verner gravely, "for she spoke as if she had recommend your point of view. My thought has not been to merge you into the social whirl, but to give you the experience that will enable you to construct the varied lives of people had hoped, though, that the philanthropic work, the social duties of their brother's dispensary, nursed the convalescents, and Myra felt really happy and contented as they gave her some cloth to make bandages of, and some cotton to roll into balls for a stockade hospital.

"It is my first experience in actual work among the poor and sick," Myra told Dr. Willis one evening. "Tonight I blessed my lot."

She regarded him with genuine admiration. He was a handsome, manly and still had made him a model in her eyes.

"You are free to leave us tomorrow, he spoke, and his tones were regretful, "I will come for you tomorrow dinner." And she took a nice, fat chicken out of a box she had under her cape and put it on the table and then disappeared.

Myra thought she had gone upstairs to Martha, and he laughed to himself, for he was sure Martha was not up with her. After a while he became

"So Martha is a Nuisance to You," She Said.

anxious and called, but Martha did not answer. He went upstairs, but he could not find her. He was very troubled what the old lady said, that she came down the stairs. He was sure if she tried to take Martha up the chimney that Martha must be there and he dared not say anything to be loaded, but could not see anyone.

Let her go, he said at last, I will have all the chicken for myself, and I will make a pudding that I can eat.

He looked at the fire, but it had died out. He tried to build it, and put down on a bottle of water for the chicken. He did not know whether it was to be boiled or baked, and he did not know how to do either. He must wait until the chicken and brought out some flour, which he mixed with water, and without greasing the pan, put the mixture in it and set it in the oven.

Then he saw that he had no eggs and the chicken was just as it was when he put it in the basin. He was very hungry, and it was getting dark and he could not find a razor to light the lamp. He began to think of Martha, that perhaps he found too much fault and he came to the conclusion that he was better off with her than without her, but how was he to get her back?

He decided to go to the roof and look down the chimney, perhaps she was stuck at the top. He went up on the roof and climbed to the top of the chimney and looked down, when Bang! he lost his balance and down he went.

"My goodness!" said Martha, "you have dropped your pipe now you have to be more careful."

"Rushville," Sis Spoke.

"Rushville, eh!" Cloyd, "Rushville, would allow. She was tired and had a headache and longed only for a restful seat on the train, so she purchased a ticket for the big crowded Union depot.

"Rushville, she spoke, approaching one of the many ticket selling windows, received a ticket and passed on board and was soon past the iron guard gate and selecting a seat on the shady side of the train.

Myra let her head drift. Then she must look into the breeding of people and the car lamps were just being lighted when the train moved up and the conductor sang out.

"Rushville."

Myra caught up her satchel and stepped out upon the platform of a big depot. It was surrounded by freight trucks, there were no houses in sight, only a crippled fireman, who she approached. This train had gone on.

"I must have made a mistake," she spoke hesitantly. "My ticket was for Rushville and I was going home to Hillsdale, depot is 'Way 22."

"Yes'm," nodded the old man, "Rushville is a mile and a half west. They have no railroad there.

Myra looked dubiously across the level twilight stretch before her. There seemed to be no way of reaching the vehicle, so she set out to walk the distance. She hasten had her steps up the glow of night lamps to devote the dreary landscape. She had nothing to do but accept the information from the flagman that Rushville was west.

She was startled and affrighted at suddenly a vagon form loomed up in front of her. A schoon is on foot, but standstill as the figure confronted her. It was that of a beggary, attenuated man, whose eyes glanced furtively and who kept muttering incoherently. Almost involuntarily she breathed forth:

"Have I met my way. I wish to reach Rushville?"

Oh, easy, that!" cried the man with strange similitude. "Come on, ma'am, I'll help you. Oh, yes, indeed, I will!"

He laughed in a queer, terrifying way, but Myra was willing to trust to any guidance to reach her aunt. The man kept ahead of her. Abruptly their course was blocked by a big stockade. The man lined the. At the end was a great gate which stood barely open. He pushed Myra through the aperture. She shrank back, but he seized her arm and quite forced her into one of many small buildings. There a light burned. Myra gazed about her in consternation. It held half a dozen cots and as many rickthing chairs. Each was filled with an invalid—the bloodiest faces and languid poses told this tale.

Suddenly a sudden brisk voice, "you come back, and Myra noticed the speaker as a professional looking young man, who at once called somebody from outside. Two men appeared and bore her guide away against his will. The young man stared strangely at Myra.

"I cannot understand why you are here," he said, and the tones of pity filled Myra explained. The young man looked serious and troubled.

"There are two Rushvilles accessible from the city Union depot," he said, "on different railroad lines, and I fear you got a ticket to the wrong one. The Rushville just beyond here is a poor industrial town. Typhus has broken out and I am Doctor Willis in charge of the hospital here. I am very sorry, miss, but you have been exposed to the disease through the folly of that escaped patient, and will have to be quarantined.

It came upon Myra with a shock, but never was physician more gentle and considerate than Doctor Willis kindly got host. He explained to her that he had to place her in quarantine for five days. He assured her, however, that she should have a room in the house himself and his sisters occupied. "I shall give you preventive medicine," he explained, "and keep your general appearance I believe you will be immune.

Martha told him she did not know "If you could let it alone," he said "I should know where to find it."

"I found fault with the dinner; it was not what he wanted.

"It is all we have in the house," said Martha.

"That is just it," replied Hans. "If you have no vegetables you could know that, dumkopf."

"Did who would cook it?" asked Martha.

Hans told her he could cook well enough, and better than she did, for the pudding tney had for dinner was tough.

Just then he put his hand in his pocket, and there was his pipe. Martha him excited, but said nothing, and kept on with her work.

Hans saw an old woman standing beside him. She had on a long black cape and leaned on a cane. On her head she had a queer hat with a peak at the top.

"So Martha is a nuisance to you," she said. "Well, what can I do to help you? I'm not have you run my way if you will tell me what you want."

Hans removed his pipe from his mouth and looked at her. "How did you get here?" he asked, for he was sure she did not come in through the door.

"I came down the chimney," she answered.

"Well, you better go back," said Hans, for he did not like to have people bring him surprise.

"No," said the old lady, "not until I have satisfied you that I can be of service to you." Hans, feeling that he must defend himself in some way.

"Very well," said the old lady, "you can be alone. I will take Martha with me and have a nice time for your dinner." And she took a nice, fat chicken out of a box she had under her cape and put it on the table and then disappeared.

Hans thought she had gone upstairs to Martha, and he laughed to himself, for he was sure Martha was up with her. After a while he became anxious and called, but Martha did not answer. He went upstairs, but he could not find her. He was very troubled what the old lady said, that she came down the stairs. He was sure if she tried to take Martha up the chimney that Martha must be there and he dared not say anything to be loaded, but could not see anyone.

Let her go, he said at last, I will have all the chicken for myself, and I will make a pudding that I can eat.

He looked at the fire, but it had died out. He tried to build it, and put down on a bottle of water for the chicken. He did not know whether it was to be boiled or baked, and he did not know how to do either. He must wait until the chicken and brought out some flour, which he mixed with water, and without greasing the pan, put the mixture in it and set it in the oven.

Then he saw that he had no eggs and the chicken was just as it was when he put it in the basin. He was very hungry, and it was getting dark and he could not find a razor to light the lamp. He began to think of Martha, that perhaps he found too much fault and he came to the conclusion that he was better off with her than without her, but how was he to get her back?

He decided to go to the roof and look down the chimney, perhaps she was stuck at the top. He went up on the roof and climbed to the top of the chimney and looked down, when Bang! he lost his balance and down he went.

"My goodness!" said Martha, "you have dropped your pipe now you have to be more careful."

"Rushville," Sis Spoke.

"Rushville, eh!" Cloyd, "Rushville, would allow. She was tired and had a headache and longed only for a restful seat on the train, so she purchased a ticket for the big crowded Union depot.

"Rushville, she spoke, approaching one of the many ticket selling windows, received a ticket and passed on board and was soon past the iron guard gate and selecting a seat on the shady side of the train.

STIMULATED BY WAR

INVENTORS DO BESY WORK DURING CLASH OF ARMS.

Value of Anti-Typhoid Inoculation First Apparent During British-Boer Conflict—Water Wireless important Discovery.

War is at best a dismal, wasteful business. Yet there is one thing about it. It stimulates the brains of inventors, and chemists and scientists in all the countries involved are working at high pressure.

Some are busy about purely military inventions, some to evolve substitutes for materials of industry, of which the import has suddenly ceased, others again are working for the benefit of the sick and wounded.

It was the Boer war which taught us the value of antityphoid inoculation. Nowadays, not only soldiers, but travelers are explorers and all those who may have to risk drinking impure water are in for this inoculation, which in the long run will probably put an end to the ravages of one of mankind's worst enemies.

The present war has already seen at least three important new medical inventions, the most valuable of which is undoubtedly the new serum called Cosagulen.

Cosagulen is the invention of the great Swiss surgeon, Professor Kocher. It is in the form of a powder, which before use is mixed with water. Applied to a wound, it almost instantly coagulates the blood and stops the bleeding, whether external or internal. It shortens surgical operations and makes them less dangerous. The French medical headquarters speak most highly of cosagulen. It will, no doubt, come into general use in all surgical operations.

Professor Prasher, an Austrian doctor, has discovered a preventive against typhus. It is a mixture containing anisol, which almost instantly destroys the bitterly invulnerable insect which transmits the infection of spotted typhus.

The odd thing about the discovery is that it came by chance. The professor's assistant was told to use anise oil in the mixture which was being prepared. Instead he put in anisol.

A third invention which will be almost as useful in peace as in war is a method for taking almost instantaneous X-ray photographs. Hitherto an exposure of many minutes has been necessary for X-ray photos.

The searchlight has hardly been improved since 1885, when the first perfect parabolic mirror was produced. The chief disadvantage of the search light has been that it could not be used in a ship that had not an electric installation.

This has now been changed. A new searchlight has been evolved in which a mixture of acetylene and oxygen is burnt and the flame played on a small pellet of certa, which emits an amazingly powerful light. The outfit is quite light and portable and can be carried and used by two men. It will be most valuable both on sea and land.

Water wireless is another product of this tremendous struggle, which will probably in the future save thousands of human lives from collision at sea.

At present it is being used for the detection of submarines; in the future passenger vessels will find it invaluable in times of fog.

The French have a new air bomb which, when it bursts, produces coal-tar intense that the aviator who first used them in November last has placed it on record that he distinctly felt the chill at a height of 300 feet. It is suggested that a modification of these bombs will prove extremely useful in fire fighting and will enable firemen to get to close quarters with the intense flame produced by the burning of oil wells.

HOW FEAR TIRES THE BRAIN

Is Same Form of Exhaustion as Disease and Produces Same Effect, Scientist Avers.

Doctor Crile aroused the greatest interest among the many scientific men recently when he illustrated the effect of insomnia, physical exhaustion, fear and disease upon the brain cells of more than fifty rabbits with which he had experimented and declared that each form of exhaustion produced exactly the same effect, both in the lower forms of life and in human.

The brain, the liver and other organs of the body are connected in the kinetic chain or system, and change in one link of that chain modifies the entire system proportionately. Thus disease or exhaustion in one organ of the kinetic system will produce a harmful effect on the brain cells which comprise the great central battery which drives that system.

As many as twenty cells in the brain may be totally destroyed after prolonged insomnia, but, on the other hand, eight hours sleep will often restore the brain cells to a normal condition after a shorter period of exhaustion from insomnia or other causes. In this connection, it was pointed out that athletes who had attained fame in early life by their feats of physical endurance were rarely known to become prominent in other fields in later years.

A change in the system it was declared, may result in an immediate breakdown or acute shock, or the greatest modification of one or more of the kinetic organs may give rise to a number of diseases. This theory has already given the world the absolutless operation, and it opens a possibility of controlling certain chronic diseases which are the result of overstimulation of one or more of the organs in the kinetic chain.

One Thing Frenchwoman Excels In.

There is still one detail of the science of clothes, in which the French surpass us, in which their supremacy is unchallenged. That is the way in which they hat themselves. There has been improvement on our side of the water in this respect also; but there is room for a lot more. There are now fewer women who keep a veil tied around their hats, and on going out do everything at once, running in the pins and pulling down the veil with only a perfunctory glance at the mirror, or none at all.

If you are going to wear a veil at all you might as well put it on properly. There is a certain duty to society in looking as well as one can, and the moral result of making the best of yourself physically, is one whose effect, both upon yourself and upon those with whom you come in contact, is it difficult to overestimate.

Of late years there have been few veils worn in Paris; by the way, French artists have a way of making themselves heard in decisive matters and they object strenuously to veils. The women seem to know how to keep in perfect trim without them. It is almost a pity that they have been so generally discarded, as it is a charming study to watch a Parisian adjust one, she does it with the degree of an artist and the insight of a philosopher. The line across the face cause at the disappearance of the veil, there is a pattern it is arranged to the best advantage. She does not alter a spot or a flower in the design to obliterate the tip of her nose or change the mouth look lopsided or obscure her eyes.

His Sick Friend.

"Sitting up with your sick friend again, eh?"

"Exactly my dear."

"Now tell me the truth, is that friend really sick?"

"He's sick this time, all right. He had an ace fill against my four sixes."

VENTILATED, TRIPLE STITCHED, JUMBO SIZE

SHIRTS

Roomy and Comfortable. Will Outwear Any Three Ordinary Shirts—at—

LEMIEUR & COMPANY

Get Rich Slowly.

The American Magazine, association through its savings bank section, is circulating some facts that the Herald is very glad to pass along, because they emphasize and enforce the conservative and possibilities of personal thrift.

It is no "get-rich-quick" scheme the bankers offer. But if any experience in life is proved, it is that "get-rich-quick" schemes do not work. They work just often enough to prove the rule, which proves the companion rule that nothing is appreciated, nothing does any good, that is not worked for and earned. Riches gained quickly are lost quickly.

The plan proposed by the bankers is based on this proposition: That if a man earning $20 a week saves $1 a week he can double his income by the end of 20 years; and, of course, he will be increasing it all the time.—Duluth Herald.

The Gypsy Moth and Christmas Trees. Since November, 1912, the Federal horticultural board has refused to permit the shipment of Christmas trees and Christmas "greens" from territory infested by gypsy moth, for the reason that it was deemed practically impossible to examine thoroughly the large quantity of such material offered for shipment during the brief period at which it is marketable. The board has, however, now relented so far as to announce that most Christmas it will give a trial to the plan of inspecting and certifying these products and allowing their movement.—Scientific American.

Suggested Use for Aeroplane. A novel use for the aeroplane is under consideration by owners of sealing vessels as a result of the failure of the seal hunt this year. It is proposed that the aeroplane carry aviators to engaged to visit the coat coast and the "dens of the Lawson" respectively just before the opening of next season and find the herds. The information obtained would enable the fleet to sail directly for the seals of the hunt instead of spending much time searching for the animals.

Hub of Three Nations.

An Alpine point of considerable interest just now, as the meeting place of two hostile nations and an anxiously observant neutral, is the Dreileprachen spitze (3,23 feet) near the Stubris pass. As the name implies, this height is the spot where not only three nations—Switzerland, Italy and Austria—meet, but three languages—German, Italian and the Latin of eastern Switzerland. The similarly named peaks in the Alps have lost political significance since the Hapsburgs now own, in the one case, all three countries, in the other, two of the three—the Dreilepranspitze, junction of Tyrol, Salzburg and Styria, and the Dreilanderecksstein, junction of Tyrol, the Voralberg and Switzerland.—London Chronicle.

Progress From Napoleon.

Napoleon's famous saying was that "an army travels on its belly," which was to say that it had to depend on its food supply, and could not with safety move faster than its commissary department. The Galician campaign has demonstrated that in modern warfare an army advances on its ammunition supply. It may have food in plenty, too, in the shape of an enormous supply of shells and shrapnel and smaller ammunition it cannot make progress against a well-armed enemy.

Little Time to Waste.

Life is short, and we never have too much time for gladdening the hearts of those who are traveling the same journey with us. Life is swift to love, make haste to be kind!—Aulbi.

FOR SALE

I will sell at private sale the farm formerly occupied by me, situated on Lake Charlevoix, 1 mile south of Ironton and two miles to the Village of Ironton.

CHARLES J. ZETLER,
Administrator.

How About Your Furniture Needs?

WE are in a position to supply you with anything in the housefurnishing line at the very lowest prices. Our prices are as low as can be found anywhere, and lower than those of most mail order houses. Just come down and bring your catalogue and we will show you where we save you money.

Yours for honest goods and fair dealings.

OUR PUBLIC FORUM

V.—E. P. Ripley

On Relations of Railroads and People.

The industrial leaders of this nation are taking to the public face to face through the columns of this paper. The time was when if a corporation had anything to say to the people they sent a hired hand, whispered it through a lawyer or employed a lobbyist to explain it to the legislature, but the men who know and the men who do are now talking over the fence to the man who plows.

When the leading business men of this nation get "back to the soil" with their problems, strife and dissension will disappear, for when man looks into each other's faces and smile there is a better day coming.

Mr. E. P. Ripley, president of the Santa Fe Railroad, when asked to give his views in reference to relations existing between the railroad and the public said in part:

"Frequently we hear statements to the effect that these relations are improving, that the era of railroad baiting has passed and that public sentiment now favors treating the railroads fairly. As yet the change in public sentiment, if any such there be, is not effective in results.

It is true that in the legislatures of the southwestern states during the past winter there was less of unreasonable and oppressive legislation than usual, but a consideration of the hostile bills introduced shows that there is still reason for much disquiet even though they were defeated by more or less of a majority.

Moreover, the idea that the railroads have been harshly treated does not seem to prevail in the offices of the State Railroad Commissions which seem to cherish a notion that their business is not a matter of arbitration between the railroads and the people, but which proceed on the theory that the railroads are able to take care of themselves and that their duty is to act as attorney, for the people, even though in so doing they deny justice to the railroads. It requires no argument to demonstrate that the railroads are entitled to justice equally with other citizens and taxpayers. That they have not received it and are not receiving it is certainly matter of common knowledge. That they have practically no recourse in the courts has also been demonstrated.

The situation therefore is that the people, through their representatives, must elect whether the services of the railroads shall be abandoned or conducted on a basis that requires no fortune teller or soothsayer to predict that in the long run the service will take the class that is paid for and no better.

The natural competition between the railroads and the natural desire to perform first-class service has been stifled by the hostile legislation. The people are willing to pay for. Continuation of this will be impossible and no laws however drastic can long accomplish the impossible."

MOTHERS—WATCH IRRITABLE CHILDREN

That fever, paleness, grinding of teeth while asleep, and coated tongue are indications that your child has worms in the system. Kickapoo Worm Killer quickly gets rid of these parasites. It is perfectly safe for even the most delicate children. It is pleasant to take and these effective vermifuge qualities—acts as a laxative, expels the worms, and tones up the system. Begin treatment today and eliminate the cause of irritableness. 25c.

Trains Luxurious.

Showers baths have been provided for horses in certain of the larger cities through the kindness of the humane societies remarks an exchange. Arrangements have been made with the municipal fire departments by which the societies are allowed to tap the hydrants and attach hose and spray, so that teamsters and others may give their steeds a bath by merely halting for a moment and turning on the spray. Water for drinking purposes may also be drawn.

How About Your Furniture Needs?

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate Office in the City of Charlevoix, in said County, on the 10th day of August, A. D. 1914.

Present, Hon. Edward P. Cole, Judge of Probate.

In the matter of the estate of John Vlastnic, Deceased.

William J. Gallagher having filed in said court his petition praying that administration of said estate be granted to Frank Vlastnic or to some other suitable person.

It is ordered that the 14th day of September, A. D. 1914, at ten o'clock in the forenoon, at said probate office, be appointed for hearing said petition, and that all persons interested in said estate appear before said court at said time and place to show cause why the prayer of said petitioner should not be granted.

It is further ordered that copies of this order be published for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel, a newspaper printed and circulating in said county.

EDWARD P. COLE,
Judge of Probate.

(First Publication Aug. 12, 1914)

MORTGAGE SALE.

WHEREAS, William Rowe and Cebesta I. Rowe, of Charlevoix, Michigan, made and delivered their mortgage bearing date the 1st day of September, 1910, to the Charlevoix Lumber Company, which was recorded in the office of the Register of Deeds for the County of Charlevoix, on the 20th day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in Liber 50 of Mortgages, on page 500, which said mortgage and the notes secured thereby were duly assigned by said Charlevoix Lumber Company to the undersigned, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 501, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 502, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 503, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 504, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 505, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 506, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 507, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 508, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 509, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 510, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 511, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 512, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 513, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 514, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 515, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 516, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 517, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 518, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 519, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 520, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 521, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 522, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 523, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 524, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 525, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 526, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 527, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 528, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 529, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 530, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 531, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 532, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 533, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 534, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 535, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 536, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. D. 1913, at 10 o'clock in the forenoon, at said office, in said Liber 50 of Mortgages, on page 537, which said assignment and the notes secured thereby were duly recorded in said office, in said Liber 50 of Mortgages, on page 538, and the Thousand Dollars ($1,000 of principal and accrued interest thereon, which said mortgage was duly assigned by the undersigned to the Charlevoix County National Bank, by an assignment dated the 1st day of August, A. SYNOPSIS.

—?—

Hall Bonstelle, artist photographer, prepares for the day's work in his studio. Paula Fisher, his scientific friend, thinks it's pretty fine to give up the studio that Hall's uncle, Jim Bonstelle, left him for a million dollars. Hall's uncle, the idol and footing of the people, calls and informs Hall that his income is conditional that he marry within a month. Hall's fiancee, Rosamond Lane, calls and tells Hall that Royalton calls at the studio and Hall asks her to marry him at once. She gives the time, but finally agrees to give him an answer at the end of the month. Hall tells his fiancee's aunt, Mrs. Bonstelle, that she agrees to give him an answer at the end of the month. Hall's fiancee's aunt, Mrs. Bonstelle, tells Hall

Notice of Allowance.

JOHN EVANS, Of Jamieson, Michigan,

Alleges that he made application, Serial No. 0046 [illegible] No. [illegible] for [illegible] Sec. 33 and NW1/4 of NE1/4, Section 34, Township 36 N., Range 3 E., Michigan Meridian, Becomes this day allowed, subject to your further compliance with the law and regulations applicable thereto.

Witnesses: — James Mulcahy, Gustave Gale, Thomas Mulcahy, Jr., Frank Gale, all of St. James, Michigan.

Very respectfully,
THOMAS S. HOWARD, Register.
THOMAS H. DAWSON, Receiver.

A CLOGGED SYSTEM NEEDS ATTENTION

Are you bilious, dizzy and listless? Dr. King's New Life Pills take at once action upon constipation and starts the bowels moving naturally and easily. Moreover it acts without griping. Neglect of a clogged system often leads to great serious complications. If you wish to wake up to morrow morning happy in mind and entirely satisfied, start your treatment tonight. 25c a bottle.

.·. Local and Personal Notes .·. .·.

The Inn closed Tuesday.

M. J. McCann, of St. James, was in the city Friday.

Ray Faulkner, of Chicago, has been spending a week here with his parents.

Mr. and Mrs. Tybrook, of Charlotte, are visiting Rev. and Mrs. C.E. Taggart.

Rev. Quinton Walker is attending the Michigan Conference at Hastings.

Sue "Henpecked Henry" and his troubles at the opera house, Saturday, Sept. 11th.

Mrs. E. L. Carr (nee Winnie Barbholomew) is registered at the Hotel Michigan.

Lyman Bulthart, of Chicago, is here visiting his father, Alex Reinhart, on Dixon avenue.

At the Charlevoix opera house Tuesday evening, Sept. 14th, will be seen "Within the Law."

Mr. and Mrs. A. M. Burdick will leave soon for California, where they will remain during next winter.

Dr. Swinton, of the Argo Milling Co., is in Grand Rapids attending the annual convention of the State Millers' Association.

Bert Brown, of Milwaukee, Wis., accompanied by his wife and son, arrived Saturday for a visit with Mr. F. S. Brown on Mason street.

The passenger department of the G. R. & I. railroad reports a falling off of 40 per cent. in passenger fares this season compared with the usual earnings.

On next Sunday, September 12th, the steamer City of Boyne will give an excursion to Mackinac Island, leaving Wilbur's dock at 9:30 a. m. Istandard time.

Rev. Vinyard and about 50 boys left Wednesday morning on bicycles for East Jordan where they will camp up the Jordan River attending the fair on Friday.

Mr. Jacob Lund is entertaining his sister, Mrs. Gustave Gale, of Lorain, Lyons, Mich. The young ladies were given a beach party last Friday evening by a few of their Charlevoix friends.

At the Charlevoix roller rink Thursday, Friday and Saturday nights of this week Mrs. Allie Moore and Mrs. Jack Petch will skate one mile race. This will be the first women's skating race on record.

Mr. and Mrs. Eugene DeVincent and Mr. and Mrs. Harry Kitchen, accompanied by Mr. Kitchen's mother, of Rogers City, were in the city Saturday, visiting Gaylord friends. Mrs. Alison Smith and Pete McCafferty.

Capt. Alexander Dush, formerly of the 20th Mich. Infantry, accompanied by his wife, left Wednesday morning to attend the fifteen annual reunion of his regiment at Ypsilanti. They will then proceed to Steuben county, N. Y., the former home of Mrs. Dush, for an extended visit.

Efforts are now being made by Petoskey to purchase the water power sites on lower Bear river and if this is done these will be combined with two sites owned by the city and a large dam erected from which to secure power for the water and light plants and for commercial use.

Governor Ferris was in the city a short time Tuesday afternoon. He is the guest for a week of W. J. McManus, at Petoskey, and came down in Mac's car. The governor went on to the postmaster's residence and inspected the young mountain who recently arrived. Mr. Ferris was with him.

Although representatives of the Michigan Anti-Saloon league have been at work for several weeks gathering signatures to the petitions to initiate the constitutional amendment for a statewide prohibition to be voted upon at the general election next year Grand Hudson says that the campaign will be formally opened at a big rally of the temperance forces of the state to be held at Lansing Nov. 5.

In our opinion, from the standpoint of a newspaper degenerate, the highest type of a gentleman is that of a Christian gentleman. To such a gentleman, whether he be minister or lawyer, we take off our hat. A Christian gentleman carries no chip on his shoulder, is slow to anger, considerate of the feelings of others, tolerant, charitable, honorable. He is an exemplar of every manly virtue and a friend in whom you can safely confide.

The Western Michigan Development Bureau has just mailed out bulletins containing some interesting information and practical advice to residents of this section. This bulletin reads in part as follows: The secretary's report presented at a meeting of the executive committee held Thursday August 26, showed that during the first six months of this year 1853 new families have come into the twenty counties comprising the territory of the Western Michigan Development bureau. These new settlers brought with them 952 carloads of immigrant movables. There were four carloads to each family on the average and every family took up approximately thirty-six acres of land. Notwithstanding the abnormal time and season there never was a more propitious time to exploit the advantages of Western Michigan.

Born, to Mr. and Mrs. Vernon Fayton, at Traverse City, Sunday a son.

Dr. Mitchell has his dental outfit at St. James doing business for a week.

The "funniest show in the world" at the opera house Saturday, Sept. 11th.

"Within the Law" Tuesday, Sept. 14th, at the opera house. Don't miss seeing it.

Miss Clare Finucan left Monday for Detroit to resume her work as teacher in the public schools.

Dr. A. M. Wilkinson attended the annual convention of the State Medical Association in Grand Rapids last week.

The thirty-seventh annual reunion of the soldiers and sailors of Northeastern Michigan will be held in Grayling Sept. 14, 15 and 16, 1915.

Miss Erkinger and Mrs. Andrew D. Fairbart of Chicago returned with Mrs. Ray Church to Chicago where Miss Eckinger will meet a friend from Bay City.

All who have accommodations for normal students to board themselves or who want normal students to work for their board please send word to Miss Jessie M. Himes, 107 Park avenue.

Fifty years from now the oldest inhabitant will repeat the rising generation with tales of the year 1915 when there was no summer and how old King Winter sent himself coming back as he made his exit in the spring.

Married, Saturday night at the Baptist church, by Rev. I. C. Vinyard, Mr. C. W. Voorhees, of Hazelton, Mich. and Mrs. Edna Pearl Clingerman of Boyne City. Mr. and Mrs. Voorhees left Wednesday morning for their home in Boyne City.

A fire alarm Friday afternoon called out the department to quench an incipient blaze in the basement of the Belvedere Hotel. The fire was in a pile of rubbish, and did very little damage. The chemical engine and one line of hose quickly stopped the trouble.

Street commissioner Lusk has the Rose street improvement about completed, having some rolling, and it is a splendid job. The substratum is of coarse limestone with gravel surface, and good water shed. It is the intention of the street committee to experiment next spring on this street with oil.

There is no moving picture theatre in the state that puts up a finer class of films than the Majestic of this city. The pictures are of the highest grade, and have been patronized by the best class of our summer visitors. Manager Miles is entitled to much credit for giving the public first class entertainments.

According to reports from down state fruit men peaches, pears and other fruits from the fruit belt of the south part of the state should be quite reasonable in price in the Charlevoix market. This going back somewhere will be able to purchase the best of peaches and other fruits at the price asked for inferior quality fruit last year. Small fruit boats from Traverse City and other points in the nearby peach belt are making their appearance with loads of the most delicious fruit imaginable.

An early morning fire Monday called out the fire ladies. It was in "Alex's Cafe," between the Agent's building and the Hotel Charlevoix. The place was open all night, the proprietor leaving at five o'clock. The blaze originated in a box of waste paper under the counter, and a section of the counter was badly damaged. No water was necessary, the chemical doing the business quickly. An employe of the place was sleeping in a back room and was dragged out by the firemen. As the smoke was very dense he would soon have smothered.

There is talk of cancelling the name of Rose street and constituting it a continuance of Park avenue. We heartily endorse the proposition. It is to all intents and purposes now a part of Park avenue, and as it forms the southern boundary of the park, it is naturally associated with it. We hope the change will be made. We also heartily recommend the movement recently inaugurated by popular subscription to clean out the park. It is naturally a beautiful place, but it contains the decayed and decaying accumulation of ages, which, in case of fire is a menace to its growing forestration. The time will come when the residents of Charlevoix will rise up and bless the pioneers who secured this beautiful expanse of shore line as a pleasure ground for posterity.

Soo Special: Congressman Frank D. Scott, of Alpena, was the city's guest Wednesday. He was entertained by prominent politicians and also by members of the Sault Ste. Marie Civic and Commercial club. One of the matters which Congressman Scott is deeply interested in and came to the Soo for is the re-establishing of Fort Brady. He will use his utmost efforts at Washington to have the post again occupied. He informed the News that the government has recently taken up the idea of establishing regimental posts at various places throughout the country and he hopes to have Fort Brady established as one of these posts. If this were done there would be two companies of soldiers stationed here. Prior to the next session of congress Mr. Scott says that he is going over the entire Eleventh district and become familiar with the general conditions in what Dan Webster knew what is needed here and how to act at Washington.

The fall's schedule of the Northern Michigan Transportation company taking effect Sept. 7 gives sailings from Chicago each Tuesday, Thursday and Saturday at 7 p. m., arriving here Wednesday and Sunday at 8 p. m. and Saturday noon. The Wednesday and Sunday boats will run through to Mackinac Island and Cheboygan. South bound steamers will have here Thursday and Monday at 9 p. m. and Saturday noon the Monday and Saturday boats going via Traverse City. Steamers Missouri and Illinois will be in this service.

Traverse City Record: S. E. Wait, the weather man, has just given out some interesting statistics concerning the month of August in the Grand Traverse region. His observations cover a period of 36 years, and he states that the average temperature for August during that length of time is 68 degrees. The month just past is listed among the cold Augusts during the 36 year period, and the average temperature was 64. The warmest day only reached the 82 mark, while the coldest hours registered 38 on the thermometer, which was the lowest mark ever officially registered here for August. There were 17 fair days and 14 cloudy ones. A peculiar fact in regard to the rainfall for the month was that while the average for August was 3.18, it all came in the first week of the month.

Benefactor of Mankind.

It may fairly be said of Elihu Harrison, English inventor, that by the invention of his chronometer—the great absolutely and ever-faithful friend of the mariner—he conferred an incalculable benefit on science and navigation, and established his claim to be regarded as one of the greatest benefactors of mankind.

Handy Men of Iceland.

There are no trucks or goods in Iceland, every man being compelled to depend upon his own skill for conveying his goods to market. Men, women and children, whose, their own horses and manufacture their sealskin. A few artisans are found in the capital—for example, a bookbinder, a jeweler and others.

W. C. T. U.

The W. C. T. U. will meet at 2:30 Friday afternoon, Sept. 10, at the home of Mrs. John Burns. Topic, "The Franchise." The program is as follows:

Invocation.
Devotionals, Mrs. Richard Lewis.
Opening Song, Mrs. S. A. Carson.
Business, President Mrs. S. J. Alcox.
Vocal Solo, Mrs. Constance Gaskin.
Life of Lucy Stone, Mrs. F. D. Campbell.
Vocal solo, Mrs. Goetz.
Work of Jane Addams, Jessie Himes.
The Ballot and the W. C. T. U., Mrs. S. J. Alcox and others.
Vocal solo, Mrs. Alva Coulter.

A special invitation is extended to the Suffrage Association and to all others interested.

COMMON COUNCIL.

At the Tuesday night meeting a petition was received for a sewer from center of Garfield avenue north to Bridge street.

Voted to apply tarvia to Belvedere avenue and Clinton street this fall.

New Fire Peril.

Birds carrying matches to their nests under the eaves of a college building in New York were blamed for a fire starting. The new art of fire prevention would credentials place the blame on the human agency which left such dangerous little weapons as matches where the birds could find them to carry them to the eaves.

Diamond Retains Luster.

Only the aspect can tell an imitation diamond from a real stone when the imitation is new, but after the fake stone has been worn for a little time it soon loses its luster. It is this which makes a real diamond valuable. No matter how long it is worn it will keep its sparkle almost as well as ever.

Real Cause of Rejoicing.

The reason you laugh when you see your enemy sit down on a freshly painted bench is a sure is not because you don't love him, but because you rejoice in the circumstance that the justice of heaven has overtaken him.—Exchange.

ANNUAL REVIEW CHARLEVOIX Y.M.C.A. COUNTY COMMITTEE

Gratifying Results of Work in Charlevoix County Outlook Bright.

About a year ago now the county committee of the Charlevoix County Young Men's Christian Association met and after a lengthy consideration of matters pertaining to the work came to the conclusion that it would be necessary for them to discontinue the active work which they had been conducting during the previous two years. A short time elapsed following this when another meeting was called and the members decided that as they were only acting for the men and women of the county who had been contributing to the maintenance of the work it would be well to present the matter to them for their consideration and if they advised it then the work which had accomplished such satisfactory results up to that time would be continued.

The answer which the committee received was very encouraging for the men who were interviewed "4" only expressed a real interest in the work that the Association was doing among the boys in the towns and in the country but also made their pledges to assist the committee in financing the work. Four hundred and twenty-three individuals contributed $3333.00 making the average $7.86. Having practically completed the year's work for which these gifts were made the committee feels desirous of reporting its accomplishments to all friends of the work throughout the county. It is not a record of successive victories nor is it an account of continuous defeat. It is the record of a steady normal growth that the committee has desired.

Following the work of securing the necessary financial support for the work of the committee which lasted well into October the matter of Group Organization was taken up for this is considered, though there is nothing spectacular about it, the fundamental work of the Rural Y. M. C. A. However, before groups of boys can be organized the necessary leadership must be secured and this furnishes the largest problem for a county secretary for no community in any county boasts an over abundance of older boys and men who are both willing and qualified to assume responsibilities of this sort. During the fall eleven groups were organized with a membership of two hundred and eight. During the winter a total attendance of four thousand two hundred and an average attendance of one hundred and fifty four. The programs for these meetings were prepared by the county secretary in conference with the group leaders and provided for Bible study, educational talks, entertainment parties and social activities. All leaders must it a practice to begin and close meetings promptly in an effort to educate the members away from the common American practice of going late to a meeting and thus making it necessary to continue the meeting beyond the hour set for closing.

Very few, if any, of the delegates attending the Older Boys' Conference at Ann Arbor during the Thanksgiving recess had to travel as far as those coming from Charlevoix county. Considering the expense involved, therefore, it was nothing when compared to the good derived, eighteen delegates were more than a satisfactory number to attend from this county. This was the largest conference of its kind ever held in North America and was conducted under the direction of the State Y. M. C. A. committee to further interest Michigan boys in all phases of constructive living. Acting on resolutions made during this gathering several of the Charlevoix county delegation joined the church upon their return home. This year the conference will be held in Kalamazoo.

In February, as a result of previous arrangements made by the county committee, Charles M. Carson, Factory Manager for the Cadillac Motor Car Co., came to the county to tell in his straight forward, business way what the business world thinks about the use of cigarettes. Mr. Carson spoke before the boys and girls of all high schools and grammar schools of the county. At the time of this campaign every high school fellow was presented with a copy of Henry Ford's booklet, "The Case Against the Little White Slaver."

No one event touching the boy life of the county has been of any greater importance than the annual County Boys' Conference. Thirteen different communities of the county were represented by ninety-four delegates who were splendidly entertained in the East Jordan home during the conference. One hundred and ninty men and boys attended the conference banquet where Gerrit Diekema, of Big Rapids, delivered an helpful and inspiring address as was ever listened to by a Charlevoix county gathering. During the different sessions papers were read by delegates touching on topics of interest to the fellows and each paper was followed by a spirited discussion. At the closing session of the conference twenty delegates signified their desire to lead a Christian life. The county committee considers this feature of the work of sufficient importance to make it an annual. M. L. A. event.

This is the fourth year that the high schools of the county have been represented at the State High School Conference held at the close of each school year at the State Camp on Torch Lake. This season Leo Butler, of Charlevoix, was awarded one of the trophy cups given to the winners of the conference tennis match in doubles.

During the current year ten association fellows have worked with various churches of the county. One pastor has told the secretary that they make as satisfactory "working members" as he has in his church.

Last year very little was contributed by the schools to assist in carrying on the Township Play Festivals. This year they were practically self supporting. These events continue to meet with the approval of the parents and the school officers of the rural schools and provide the children with what they crave—organized play properly supervised. One grammar school Play Festival was conducted during the spring making it possible for the children below the high school to enjoy organized fun. As yet the desire to win looms up so large that it blinds the vision of those who should be the most deeply interested in the physical welfare of their children, regardless of how it effects the winning or loosing of the school a play which brings into active competition 75 to 80 percent. of the high school boys of the county should commend itself over any glorious or reporting its accomplishments to all friends of the work throughout the county. It is not a record of successive victories nor is it an account of continuous defeat. It is the record of a steady normal growth that the committee has desired.

Following the work of securing the necessary financial support for the work of the committee which lasted well into October the matter of Group Organization was taken up for this is considered, though there is nothing spectacular about it, the fundamental work of the Rural Y. CONTRACT LET

Hooker's Garage and Livery to be Augmented by Large Additions

Contracts have been let for the erection of additions to the Antrim street garage and livery establishment of M. E. Hooker & Son that will more than double the present floor space. The extension will be 50 feet toward State street, and will extend 100 feet to the south from the Antrim street front, this section to be of one full story.

Back of this extension will be another of two stories in height, with a frontage of 64 feet on State street and extending back 100 feet. The Antrim street frontage back 100 feet will be practically an enlargement of the garage, the rear extension to be devoted to livery usage, with forage storage above.

The entire structure will be built of concrete and iron, and will be as near fire proof as possible to make it. Mr. Hooker's living quarters will be in a number of well appointed rooms over the present garage building. These extensions have been made necessary by the steadily increasing business both in garage and livery.

The contract has been let to A. J. Gordon, of Evart, and work will be commenced this week.

DROWNED AT BOYNE CITY

Boyne Citizen: The fourth drowning within a little over one year occurred in Boyne City last Friday afternoon about four Saturday. John Clute, in company with his brother, Frank, rowed across from the former's home in North Boyne, to a favorite bass fishing spot just west of the ice house beyond the tannery. They had been fishing for a short time when one landed a big bass, and in the excitement of getting the fish into the landing net both men stepped too near the side of the boat which capsized.

Frank called to his brother to hang onto the boat which they both did. John said he could swim to the shore and struck out. He had gone but a short distance when he said he was giving out. He was told to come back to the boat and turned to do so. Nearing the boat he encountered the fishing tackle which proved just sufficient to hinder him and sap his remaining strength. He went down and never came up.

Help was summoned immediately and a boy ran all the way from the ice house to Lake Street where Chief Cadwell was superintending the laying of the sewer. C. Cheek immediately notified Geo. Houghton and secured the grapples made for the purpose in Houghton's car. It was fully forty-five minutes from the time Mr. Clute went down until the rescuers were on the scene. The body was easily located lying in about twelve feet of water on the sandy bottom. It was but about fifteen feet from where the body laid to where the water was sufficiently shallow to enable a man to walk on the bottom.

BOY STRUCK BY STRAY SHOT

Franklin Bartholomew, the nine year old son of Mr. and Mrs. F. L. Bartholomew, while playing with several companions at Mt. Meduna on Saturday, was struck by a stray bullet from a rifle. None of the party carried guns, clearly indicating that the gun was fired by a boy hunter.

An ear ray exposure disclosed the fact that the bullet struck near the groin, following the hip bone, in which it imbedded itself. Dr. Armstrong considered it unnecessary to remove the ball, performing to permit to encyst. No serious results are expected.

This accident affords us an opportunity to warn parents of the danger of permitting boys to handle firearms. Parents should discourage their boys in the habit.

AN EXCEPTIONAL ATTRACTION

A musical comedy attraction that promises to be the best that has yet been seen by local theatre goers will be presented at the Charlevoix Theatre, Friday, Sept. 17th, when "Don't Lie to Your Wife" appears for one performance.

The cast is said to be one of exceptional merit and the play itself one of the most genuinely humorous of any like character. Claim is made that the chorus is the best singing and dancing organization of its number in America. Eighteen of the very latest song hits are introduced and the voices of the principals, of a quality rarely heard in musical comedy.

Reports from other towns heard in strictly high class and an evening of really enjoyable entertainment may be looked for. It will prove the banner attraction of the season.

SPECIAL NOTICE

The Annual Thank-Offering Meeting of the Missionary Society of the Congregational Church will be held at the church next Friday afternoon at 2:00. The State President, Mrs. F. W. Slater, of Reed City, will be present. All the ladies of the congregation are invited.

GLEANER RALLY AT BOYNE CITY

A Gleaner rally will be held at the Skating Rink, Boyne City, Wednesday, September 22nd. It will be the biggest and most enthusiastic event ever held in Boyne City, starting at 10 o'clock in the forenoon with a federation session for Gleaners only.

Gleaners and their families and farmers are invited to bring well-filled baskets and take part in dinner to be served at noon and provision should be made for supper as well. After dinner an open session will be held to which the public is cordially invited. Mrs. Grant Slocum, of Detroit, will speak on "Country Life of Today." Every farmer should hear Mr. Slocum on this occasion.

The evening session will be for the Gleaners only. A program of degree work, drills, music and speaking will be rendered. Every Gleaner should see the New York put on the door at this record breaking rally.

Every farmer living within a radius of 25 miles of Boyne City ought to knock off a day so they may attend this meeting and listen to Grant Slocum discuss questions of vital importance to every American farmer. There are now issues arising daily and the Gleaners are meeting them. This rally is held for the purpose of getting the farmers of this part of the state a little closer together, that they may get a thorough view of Gleanerism, its principals and purposes.

SUDDEN DEATH OF PROMINENT RESORT LADY

This community was shocked Tuesday morning to learn of the death of Mrs. Samuel Bailey, at her cottage near the Belvedere Hotel. Her death was sudden, heart failure being the cause.

Mr. and Mrs. Bailey were among the most prominent and popular of the Charlevoix Summer Home people. They have always come early and remained late. They formerly made their home in Cincinnati, but for the two past years they have made Pasadena, Calif., their winter home.

FOR ANOTHER GOLF FIELD

A movement is on foot for greater golf facilities. It has been known for the past several seasons that the north side golf links were inadequate to meet the demands on them. Although it is a contended fact that these are the best links in the state and one of the best in the country, there is complaint that they are crowded to an extent that handicaps the patrons.

In view of this fact it is thought that another field for this great sport should be provided. The movement has reached a stage where options are being secured.

The territory contemplated is that in the vicinity of Bonnie cemetery, where all topographical conditions are particularly favorable.

COMMON COUNCIL.

At the common council meeting Monday night an ordinance was passed changing the name of Rose street to Park avenue. Park avenue now extends from Bridge street to the intersection of Antrim street at the park.

George Lusk was appointed a policeman.

Bids were opened for the construction of the State street sewer. R. G. Medill was found to be the lowest bidder, sewer to be constructed of vitrified pipe of double strength.

WANTED—Rent out. Team of horses for their keeping until April 1, 1916, or will sell one or both on time to responsible purchaser. Call phone 62, Charlevoix. 21-25-4t.

HORSE SHOW AT WEST MICH. FAIR

George King, one of the oldest and best known horsemen in West Michigan will have charge of the Horse Department of the West Michigan State Fair Sept. 20 to 24 at Grand Rapids. Three thousand dollars will be offered in premium money, and much to the satisfaction of the breeders all money prizes will be split four ways, which gives the individual exhibitor a better chance to share in the winnings.

In the Percheron open-to-all class on four year old stallions first money is $50; second, $30; third, $20; fourth, $5. Practically the same money is offered on one, two and three year old stallions and mares. For the best breeders herd of Percherons, $50 will be divided with $25 as first prize. Gold, silver and bronze medals are also offered by the Percheron Society of America which is rendered as special honor a much sought by breeders of this type of animal.

A new class in Percherons which is open to Michigan bred horses only will be a feature this year. The big money offered in this department will attract the best horses in the state and have not been able to compete with large stables from outside of the state.

As usual Shetland and Welsh Ponies, Light Harness, Roadster, Saddle Horses will come in for a share of the money. In the Equestria class, ladies may ride cross or sideways, and a special section for boys and girls is included.

Standard and non-standard breeds of horses have received special attention from Mr. King, who says that the West Michigan Fair for 1915 will have a horse show that will equal anything ever seen in the Middle West.

County Normal Notes

Miss Alida Whiting spent her vacation at her home in Montecello, Iowa, and also visited friends in Nebraska.

The garden made by the class of last year is pretty weedy just now, but a few hours work will put it in good condition.

Miss Jessie M. Himes, the principal of the County Normal, attended the University of Chicago, and the latter part of her vacation was spent in Charlevoix. Her mother and sister from Illinois spent several weeks with her in Charlevoix.

The graduates of last year's class, with the exception of four, are all teaching. The four are Fred Gregory, Ward Gamett, Ruby Hooker and Hazel Pearl. The boys will go to Kent College, Galesburg, Ill., and the girls are going to take a normal course at Ypsilanti.

The normal room has a brighter appearance this year. The walls have been decorated and the chalk trays have been made detachable so they can be cleaned. The bicycle shed has been rebuilt. A new railing has been made on the west side; also a step from the north door of the normal room to the bridge between the buildings.

There are ten enrolled in the normal class for this year. Minnie Jane Carroll, Mary Hoice, Ethel Barbour who are graduates of the Central Lake high school; Miss Ruth Chetle a graduate of the Ellsworth high school; Misses Catherine Lalonde and Florence Maddaugh from East Jordan, Miss Maddaugh is a graduate of the East Jordan high school; Miss Frances Price a graduate from the Bellaire high school; Miss Sadie Donlevy of St. James; Miss Hazel Richardson of Charlevoix; and Miss Sadie Blanchard, who is a graduate of the Gaylord high school.

TRADE EXTENSION TOUR

The annual Trade Extension Tour of Grand Rapids wholesalers will be in Charlevoix at five o'clock the afternoon of October 8th.

The merchants will make the tour in a special P. M. train, and a number of speakers of renown will accompany the expedition.

Ours is the only form of business in the world that does not ask you to spend money.

We ask you to keep it at the—

Charlevoix County Bank
of Nicholls, Buttars and Bridge

Bank Resources ..... $285,000.
Private Resources of Owners 150,000.

Making a total of over $400,000. for the security of our depositors.

Everybody is earning money now; better put by a little and let it earn 4 percent.

Interest will be added twice a year

JOHN NICHOLLS, President.

LOVE in a HURRY

by GELETT BURGESS

ILLUSTRATED by RAY WALTERS

COPYRIGHT BY GELETT BURGESS

SYNOPSIS.

Hall Bodetalle, artist-photographer, proposes to Flodie Flasher, his sweetheart, that a party be to give in the studio that night, and that the business be left for financial shape. Mr. Dentmar, attorney, has promised to advance Hall the money, but that he (Dentmar) will be left him $4,000.00 on condition that he marry before his twenty-fifth birthday, which begins at midnight that night. Miss Dora Dunn, Flodie's friend, is in love with Hall, but he has no time for anything but the immediate marriage. He, too, asks for answer until the evening. Flodie tries to show Hall a certain way out of his difficulties, but he is too excited to see it. Hall tells Flodie to marry on time, calls.

CHAPTER VI.—Continued.

Flodie stared at him fascinated, as a bird by a snake. Try another way! It was impossible to deny his accusation.

"Hold on a minute, now!" He shook his finger impatiently. "I'd give a good deal if I could. I'd rather I wouldn't be married before midnight."

Flodie could stand it no longer. It was cruelty, and it attempt to hide her feelings from this man. Her heart was bursting. "Oh, so nothing is bad enough for you! Do you think I care bad the money?" she cried, words fell out.

Jonas leaned back, with a smile of victory on his face. "Well, I guess I got to the bottom of it, all right," he alleged. "All women is just alike, when you come right down to it. One was among a thousand have I found, but a woman among all those have I not found—that is different. But that's neither here nor there. I suppose you was saved on Hall, your face give you dead away. Well, then, sis," he brought it out deliberately, "seems to me our interests ought to be identical."

"What d'you mean?" Something in Flodie's subconsciousness was awakening.

"You, bein' a woman, don't want him to marry anybody else. Wait, neither do I." He watched her closely, heartlessly.

"I see," said Flodie frigidly, "because you said 'as a fortune.'"

"Oh, it isn't the money, miss, don't you misinterpret my motives. I don't want a cent of it for myself. It's what I can do with it, I know anything he gets that money, he's bound to throw away on all sorts of foolishness. If he marries outright, some sheep-head, extravagant woman will have the spendin' of it. He watched the shaft strike Flodie, and went on. "Where as, if I this-what-I-call-it, I get my pins all laid out a-ready." He leaned forward earnestly. "Why, do you know, miss, they're heathen in the tropics what don't know what clothes be, let alone the shoes. They tell me they ain't a toothbrush nor a pair o' corsets in all Indyanola. And all of them silk-stockings I'm sendin' will last a lifetime. Then they'll see they hospitals I intend to endow, and tracts ought to be printed." Hall Flodie eyes were cast down. He saw that he had lost his audience, and also that his plan was doomed. "Think of Hall's wife throwin' that cash round on parties and low-necked dresses—to say nothin' of balls and concerts and theaters!"

"Will," Flodie said, with a pathetic lost in her face, "I don't see what we can do about it. He's made up his mind to marry tonight, and he's all ready proposed to three women."

Jonas hesitated long and low. "Looks like we got to get to work in a hurry, then," he suggested. He spoke slowly and emphatically. "You can do it. Why, women is born for intriguing. Is there anything Jeremiah says? A woman shall compass a man. That's right. Now, you'll find a way and depend on me to help all I can. What d'ye say?"

Flodie's mind had already jumped to the task. Why not try to save Hall? that was the excuse she gave her self. To be disloyal to him was unthinkable, but to prevent a lifelong unhappiness due to his marrying any one of the three women she had proposed on—ah, that was another thing. What if she could accomplish it, and get the best of this editorial hypocrite into the bargain? There was a wonderful chance for a woman's strategy! Suddenly the thought came, however, recalling the proposed engagement, "I know!" she cried.

"What? Got an idea a-ready?" Jonas grinned.

"Yes! I'll tell you. I'm going to get those three women together in this room—and then—I'll just let nature take its course! If something doesn't happen, then I don't know anything about women."

Jonas chuckled, delighted. "Well, that will be a pickle, won't it! By jimmy, I'd like to see the fun!"

"No," said Flodie, "you'll have to leave. I've got lots to do, if I'm to manage this thing, and I've got to do it alone. Now, let's see! Wait a minute—Hattie's giving a party tonight. Suppose I tell him that I invited you, and you come round at about eleven o'clock, then I'll tell you how matters are going."

"Eleven o'clock! Lord, I generally get to bed by ten."

"You won't tonight, then. Better drink some coffee if you're sleepy. And I guess it'll be worth sitting up for. Good afternoon, Mr. Hassing-bury!" Flodie did not offer to shake hands.

Jonas gazed at her in evergreen admiration. "Say, miss," he ventured, "it ain't often I get lonely over a woman. I don't trust 'em enough. But I've got considerable liking for you, somehow. You got a good head on your shoulders, you bet!"

Flodie evaded his hand. "Well, it's likely to stay there, I'm afraid. At any rate, it'll never be on you, Mr. Hessingbury."

With which Flodie went, without honouring him with another glance into the eagle-eye, leaving him to take his departure alone.

CHAPTER VII.

After Jonas Hessingbury had left, Flodie came to the telephone and called up a number.

"Hello, Hattie! Yes, this is Miss Flasher—at Mr. Bodetalle's, you know. Look here, Hattie, what would you do in this afternoon and eve some goods? Oh, you are? Well, I'm coming over at about o'clock, if you will. Good-by!"

Next she called up Miss Dunn, and said nearly the same thing; both ladies agreed to call. But how about Hall?

"It's Hard to Ketch You Alone, You Know—"

Rosamund? She wandered from studio to studio. Well, Flodie must risk that. Perhaps she could be found later. Meanwhile she had much to do. She went to work on the negatives. They must all be finished before the ladies arrived, that they might respect Hattie's dinkeys her finest. Suddenly she looked up. Who was in the office? Flodie went in and found Alfred the Pale, with a big bunch of evergreen festoons. He rolled off his hat and grinned.

"Will I do up the studio now?" he asked.

"Yes," said Flodie, "right away." She held up a proof of Carolyn Dallys and inspected it critically. Alfred, meanwhile, was regarding her.

"Well, why don't you go ahead about it?"

"Say, Miss Flasher," Alfred set down his bundle and approached her. "It's no business of mine, I know—"

"Then, I don't. We must have those decorations up in a hurry." Flodie, however, did see something in the poor jaundice's face which made her start nastily for the stockroom.

"Oh, I know it ain't my—Say, Miss Flasher, but it'll be a satisfaction even to be thrown down. I'll be something, anyway. I can't stand it any longer."

Flodie stared at the hopeless jaundice. Faint heart never won fair lady, but until this moment it was flattered. There was a mild balm in his devotion, as he fawned on her. It softened her heart. "Now, Alfred," she began, "don't you be silly."

"I just can't help it, Miss Flasher!" he exclaimed. "I got to be silly! I think of you every day, here—Oh, dear, ain't they any hope for me? Not never?"

He waited a moment, vistfully. Flodie watched him with a curious faraway interest, as an Wjiwd animal. Then she said gently, "It's not use, Alfred. You know I couldn't possibly. I don't want you to say another word about it." Flodie, as she spoke, reached a thin gold chain about her neck. Dangling, warm on her breast, was a tiny golden locket, one of Hall Bodetalle's few gifts, treasured jealously by Flodie, worn night and day.

Alfred Smallish had already given up all hope. "Oh, I know," he said bitterly. "Of course I'm nothin' but a janitor—and—but Miss Flasher, if I only had you I'd show you. And—say, don't go yet, please, Miss Flasher—wait till I get rid of it for once and for all—I'll do me good—you wouldn't ever have the likes of me, I know—that ain't all of it—it's only I want to do something for you, just to prove how I feel! If I could only help you some way!—don't you understand how it is, Miss Flasher? Won't you give me a try sometime? That's all I want, now!"

Flodie, leaning against the table, watched him with tears in her eyes. Ah, Flodie understood! How well she knew! She could no longer laugh at him. Kindly she stretched forth her hand; and the janitor who, in all his life had never known gallantry, reached for it, and kissed it as naturally as might a courtier. He touched Flodie's little hand as if it were a holy relic; and on it there fell a soft rain of tears.

Flodie bit her lip; she slowly shook her head. "I'm awfully sorry, Alfred, really, but I don't see what I can do." Alfred's lips quivered, and his hands writhed as he replied: "Why, all I want you to do is to promise, Miss Flasher—ask me to do something for you. Something hard to do. The very hardest thing you know. Way, I do anything, Miss Flasher, anything!"

Alfred meant literally what he said. She gave her soft hand in his. "I know what you mean, Alfred," she said softly. "You're so good! I'll call on you if ever I need you. I'll promise." She turned a little sadly back to her work.

"All right," Alfred's look fooled no one but his poor self. "I'm done. I'll really more than I ever deserved. Miss Flasher, what you just said! Thank—I'm done, almost with dignity.

Flodie turned to her work. From the distance to her painting she distributed, and from that to her accounts, necessitating the inspection of Alfred's pay-roll, and arrangements for the evening's refreshments. Meanwhile her busy mind was going over the problem of managing her trio of rivals. If she could only find Rosamund! Rosamund she had, from the first, disliked; she had always revealed her spleen to her. Now she fairly longed for her to open the door. She thought and thought of some possible way to reach her.

In a half hour, miraculously, as if summoned by Flodie's mental demand, who but Rosamund did open the door! —Rosamund Gale, more patronizing, more assured and nonchalant than ever.

"Hello," she said coolly; "Hall here?" She sauntered up to the mirror and poked at her golden ringlets. "Where's Mr. Bodetalle has just left," said Flodie, suspiciously cordial, stopping her writing. "But I'm expecting him any minute. Won't you wait?"

Rosamund craned her neck, trying to catch a glimpse of her barrette. "Those pictures of mine developed?"

"No, Miss Gale. Mr. Bodetalle had to work on some of his controllers' I'm sorry."

"Well, I should think he might get mine done first. I was in an awful hurry to see 'em."

"Well, he has to attend to business part of the time, you know, Miss Gale," said Flodie.

"Oh, indeed!" Rosamund gave her a large cruel smile. "I don't see why he bothers about his old business so much. He can afford to take it easy, I guess."

"Well, of course I wouldn't say anything about it to a customer, you know, but as long as you and Hall are such great friends, why—well, the fact is, I'm rather worried."

Flodie noted with glee that Rosamund was losing color.

"Do you mean to say that Hall Bodetalle has going as well as—well, he was as he says?" Rosamund demanded.

Flodie smiled with secret satisfaction. "Oh, I wouldn't exactly say that you know, but then—well, it costs a lot to run this place. Here, look at those bills! I don't think he'd mind, so long as it's you!" She handed Rosamund a neatly folded parcel. "I don't know how in the world we're ever going to pay them."

Rosamund turned them over curiously. Presently, she said to herself, through tightened lips, "Quite a bunch of 'em, isn't there? Why, I don't see how he can expect—" she gazed anxiously at Flodie.

Flodie, seeing her advantage, artfully recorded. "Oh, Mr. Bodetalle is optimistic, you know! He always thinks he's going to come out all right. Just a wee bit reckless, perhaps, but then—well, I guess it'll be all right."

Leaving this to sink into Rosamund's alarmed mind, Flodie walked into the stockroom and proceeded with her painting and washing.

"Say, Miss Flasher!" Rosamund called out, "how much salary do you get, anyway?"

(TO BE CONTINUED.)

Case of Forgetfulness.

Mrs. Sheridan Hopkins, who recently left society for the stage, smiled the other evening when the conversation at a social affair turned to forgetfulness. She said she was reminded of an incident along that line. Some days ago Brown was rambling along the boulevard when he met Green. Cordial handshake, a donation of cigars, and then some talk. "By the way, old man," wonderingly queried Green, "what have you been doing? I've got a vague idea that you got married around that finger for—by wife put it there," replied Green. "It was to remind me to mail a letter for her." "I see," laughingly returned Brown. "Did you mail it?" "No," was the startling response of Green, "she forgot to give it to me."—Philadelphia Telegraph.

As for the Evening Gown

The winter color card provides a series of beautiful metal tints for evening gowns, among the arabs but rich dark colors that are advanced for the heavier materials and day time wear. These dark colors include Atrium brown—which is a very deep shade—"bottle green," "crow blue" (darker than navy)—dark taupe, and "field mouse," which is a warm shade in mouse color. A dark blue with a purple cast is called "black berry," and a dark purple like that of the grape is called "Concord."

The pretty dress shown in the picture shows chiffon in a one-piece overdress worn over an underdress of net with lace flounces about the bottom. The lace reappears in the collar and sleeves. Chiffon roses weight the overskirt and three of them are tacked to the front and back near the bottom. A band of wide ribbon is set on the underskirt and the same soft ribbon appears in a folded girdle about the waist of the underdress. It is brought through a slash in the overdress and tied in a loop with long hanging end. This is finished with a bead tassel. Satin slippers and silk hose to match the gown in color, complete a simple and refined costume.

This silk might be used for the underdress, and any of the pretty light colors or pastel tints chosen, with good effect in this dress if selected with discretion.

Corsets were better managed during the past season than ever before—at least within the memory of women—and this is the probable cause for their continuation in favor despite the fashion and tints one can picture them in the evening gowns of the coming season. Inexhaustible variety is possible in designs when we consider them made up with laces or nets or plain surfaces in one of the colors of the striped fabrics.

Outfitting Younger People for Fall

September is upon us and the young people must be outfitted for the fast coming school days and for winter. It is good policy to make selections for them as early in the season as possible, because the choicest models in coats and dresses are apt to be those brought out by merchants for their opening display, a fact may be important later to duplicate a garment among the early showings, that just suits one.

An elegant and snappy coat for a little girl is shown with one of the new close-fitting fabric hats in the mature green here. The double board pattern, in the heavy woolen material is finished with collar, cuffs and belt and border at the bottom of plush. The edges of the collar and belt are bordered with a narrow fancy braid to match the trimmings.

Making a Rug "Antique"

How genuine antique rugs are manufactured and prepared for European and American markets is told by a writer who visited Bagdad.

The shopping street of each film takes on a new aspect. They are arched overhead with brite to keep out the heat; thus they run, like subways, up and down the bazaar quarter. Through those long, stifling, dimly lighted tunnels through the eternal crowd of men, mules and camels. Often you will see a fine rug lying flat in the filth of a narrow street, ground beneath the tramp of men and beasts; but there is method in this. Foreigners make Oriental rugs, brient and new, in Persia, and sell them through trade. Since an cold rug is worth more, wily brokers have hit on this ingenuity way to make a new rug look old.—National Geographic Magazine.

Color of Beards.

The color of beards grouses many bottles of remedies. The Chinese barbers carries show Calm and Judas lecariot with yellow or red beards, and Poles Dis Plinte in ancient art always was given a sort of sunburnt effect. Jesus, does not carry the significence that goes with red beard, for a large number of enlinot now with dark-brown hair have had rudich beards. Sometimes they have been black, but rudy. Bavonarola, who had almost black hair, with brownish red eyebrows and eyelashes. But, as a general rule he was a dark brown beard, when accompanied by one curling dark-brown hair is the most usual characteristic known in the iconographies of men whose names have been handed down to fame.

New Grecian Harbor.

One of the largest works now receiving the attention of the Hellenic government is the cutting of a large new navy yard and arsenal at Scaramanga, on the site of the ancient Eleusis, opposite the present yard, which lies opposite the island of Salamis. The construction is being carried out under the supervision and after the plans of a corps of British engineers. The estimated cost is in the neighborhood of $15,000,000. It will take several years before it can be completed. It will give to Greece a landlocked harbor for her fleet, with ample facilities for repair work.

Wanted Honest Opinion.

Richelieu, the painter, used to speak of an open, honest country gentleman who one day asked him to come to his house, adding: "I wish very much to see you, for I have just purchased a picture by Titian. It is a rare good one. Brown saw it, and says it is a copy. A copy! If you saw it, you would be as sure of it as I am! I'm living dates to say it is a copy! I will break every bone in his skin! Fray, call on me and give me your opinion."

Still Bore.

"If you are kind to people they will be kind to you."

"No doubt that is true in the main, but there are exceptions and I hope you won't dwell on the subject this morning."

"Why? What's the matter?"

"I've just been victimized by a fake promoter, and I was as kind to him as I could be."

Decline in Status.

"I heard Mabel say when she was engaged that she had married the very flower of her admirers. I wonder dear what particular one she likened him to?"

"Well, when they were first married, she called him the very pink of perfection, but now the baby has pulled some out of him, he's just a plain poppy."

Fitting the Crime.

Judge—It seems to me that I have seen you before.

Prisoner—Yes, have, your honor. It was I who taught your daughter to play the piano.

Judge—Thirty years! — Musical Amusement.

WHAT BRITISH CONSOLS ARE

Not Bonds, as We Use Term, but Perpetual Obligations of the British Nation.

The British government debt really dates back to 1692, when it bore 6 per cent interest, and even then the major wars of the world have been recorded with more or less excitement in the fluctuations of interest return to investors in British bonds. Incidentally, a very ancient and honorable British institution is now apparently in the way of being exhumed. In the middle of the eighteenth century—about the time young George Washington was stamping in the wilds of Virginia—England's government debt was consolidated into a uniform issue bearing 3 per cent interest; hence arose the universal name "consols," long boasted as the world's premier security.

War with the American colonies and with Napoleon sent consols down to 47 cents on the dollar, but by 1821 they were up to 86, and England settled back into a conviction that her government bonds, bearing not more than 3 per cent interest, were absolutely safe investments. Mr. Bonfield says the Saturday Evening Post. Nearly a generation ago Mr. Gladstone reduced the interest on consols to 2½ per cent, then to 2¼ per cent, and at the last war, 2 per cent, and they stood above par.

Consols are not really bonds, as we use the term, because the principal is not payable at all. They are the perpetual obligations of the British government, and the purchaser, instead of getting a bond, gets a paper, with coupons attached, gets merely an entry on the books of the bank showing signifying that interest is payable to him.

Recently parliament authorized a loan of $1,000,000,000 payable in 30 years and bearing 3½ per cent interest. Consols are convertible into the new loan at the rate of 66-2-3 cents on the dollar, and the government they may disappear. What other ancient and honorable institution of war may swallow up is problematical.

The Fire-Brat.

The common silverfish (Lepisma saccharina) is a well-known and truly tiresome household insect, but its near relative Thermobia domestica, known in England as the "fire-brat," is less familiar. In a recent department of agriculture bulletin on silverfish Mr. C. L. Marlatt calls attention to the curious habit which the fire-brat has developed of frequenting ovens and fireplaces, where it seemingly revels in an amount of heat that would be fatal to most other insects. The writer says: "It appears that the numbers about the openings of ranges and over the top of stoves are sometimes so great as to cause considerable annoyance from the effects of high temperature." It was first described in this country in 1873, and began to be noted commonly about 1910. Its habits are, in fact, the same size and general appearance as the silverfish, except for color. It is about

WOMEN WHO ARE ALWAYS TIRED

May Find Help in This Letter.

Swan Creek, Mich.—"I cannot speak too highly of your medicine. When I go through neglect or overwork I get run down and my appetite is poor and I have that weak, lazy feeling. I get a bottle of Lydia E. Pinkham's Vegetable Compound, and it builds me up, gives me strength, and enables me to perfect health again. It is truly a great blessing to women, and I cannot speak too highly of it. I take pleasure in recommending it to others."—Mrs. ANDRA CARRON, R.F.D., No. 1, Swan Creek, Michigan.

Another Sufferer Relieved.

Hebron, Me.—"Before taking your remedies I was all run down, discouraged and had female weaknesses. I took Lydia E. Pinkham's Vegetable Compound and used the Sanative Wash, and find today that I am an entirely new woman, ready and willing to do my housework now, where before taking your medicine it was a dread. I try to impress upon the minds of all sick women I meet the benefits they can derive from your medicine."—Mrs. ALBERT HOWE, Hebron, Maine.

If you want special advice write to Lydia E. Pinkham Medicine Co., (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

Fair Enough.

Rural Manager—My reason has been a failure, my folks are starving and I should die if I have to play Othello for a week.

Theatrical Manager—Well, I will give 50 per cent of the vegetables that are thrown at you.

Be Warned in Time

Do you have backache? Are you tired and worn out? Feel dizzy, nervous and depressed? Are the kidney secretions irregular? Highly colored, scanty or painful? Likely your kidneys are at fault. Such kidney give warning of distress. Heed this warning, don't delay—take a tested kidney remedy. None so well-recommended as Doan's Kidney Pills. None so universally successful.

An Illinois Case

Henry Ho... Henry St., Ro... Ill., says: "My kidneys were in bad shape and I suffered from kidney trouble and backache. I felt tired and drowsy and my back ached so I could hardly stand it. I was nervous and irregular in my habits. I read about Doan's Kidney Pills and got a box at Hollman's drug store. I felt better after using the first box and I kept on improving until I was cured. I have recommended Doan's Kidney Pills to many people."

Get Doan's at any Store, 50c a Box

DOAN'S KIDNEY PILLS

FOSTER-MILBURN CO., BUFFALO, N.Y.

Don't Persecute Your Bowels

Cut out cathartics and purgatives. They are cruel, unnecessary torture.

CARTER'S LITTLE LIVER PILLS

Regulate the liver and bowels, cure constipation, biliousness, sick headache, indigestion, dyspepsia. Small pill, small dose, small price.

CARTER'S LITTLE LIVER PILLS.

Genuine must bear Signature

Paxtine

A Soluble Antiseptic Powder to be dissolved in water as needed

For Douches

In the local treatment of women's ills, such as leucorrhoea and inflammation, not to mention douching for general cleanliness, which we all know is so important, doctors will fail to appreciate the clean and healthy condition Paxtine produces and the prompt relief from soreness and discomfort it gives when used as a douche. Paxtine possesses superior cleansing, disinfecting and healing properties. It is not an ordinary household antiseptic, but a powerful germicide, yet it is perfectly safe to use in the strength required for any purpose. Allegatt, a life-long private correspondence with women, which proves its great efficacy and utility. Women who have been relieved say it is worth "its weight in gold." At druggists, 50c a large package, or postpaid. Sample Free. The Paxton Toilet Co., Boston, Mass.

ABSORBINE

Trade Mark Reg. U.S. Pat. Off.

Reduces Varicose Veins, Varicosities, Varicose Ulcers, Lymphangitis, Poll Evil, Fistula, Boils, Swellings, Sore Lameness and allays pain. Heals Sores, Cuts, Bruises, Burns. Pleasant to use. It is an ANTISEPTIC AND GERMICIDE

Better Than a Legacy

By FLORENCE HENDERSON

(Copyright, 1918, by W. G. Chapman.)

I am glad of it!" said Harley Blake, and he looked as if in dead earnest and relieved.

He was seated before the cold and empty fireplace of his cheerless room. He made a faint show of hand and warmth; however, by striking a match and lighting the letter he had just received and read. He dropped it to the hearth and watched it curl up into fragile sheets of black and then set a breath go crumbling into tragmesie.

"The last bridge burned," he mused, trying to smile half-humorously, but the situation was too serious. "I have exhausted my friends and relatives. The former gave me profuse promises of influence and help and failed me. My father's own brother—critic me a bumbly on independence and thrift, and would not even lend me a dollar on a recommendation of capability and honesty. That letter is the last straw that breaks the camel's back. Good-by to the old life for good."

But there Harley hesitated mentally. He was poor in pocket, though and expectancy, but love is rich and he loved Helen Wendell. They had been more than lovers, they had been before she had gone away on a long trip to the Panama canal with her scientific father—before Harley had to make his way in life in a practical way, and had failed.

He had not heard from her since. When he had left Panama she had gone farther and their distractening grip upon him, he had not been perfectly from the social circle in which Miss Wendell moved. He had not even heard if she had returned.

Strikingly, however, he recalled a certain succession he had held with Helen. It had varied and love, but masked as friendship. She had voiced her sentiments that when one of the opposite sex were mutually drawn one to the other, it should be his to sit sacrifice or weal and woe, but they should be true. "I would cling to a man to the last who, entoiling, he offered me the humbles life, if love, respect and trust were by behind it all." Some day, when I have become an expert journeyman or a plodding miner, I may write to remind you of those words, 'Harley' and ask you to perform a symphonic of equal, "well, excellency, I am primed as hearing such melancholy with a tender light in her eyes he loves to remember.

"A good-by, that of mine!" many a time Harley had reflected, some what bitterly. "He insists on four years of a college agricultural course, and then sends me to some relative or some other respectable profession. Why didn't he give me a farm?"

But now, coming home from all the past life, no prospects of work, no money in his pocket, Harley packed his best clothes in a suitcase, laid his hastily good-by and descended to the street. There was a grim uncouth promising glitter in his eye as he proceeded to a second-hand clothing store. When he came out of it, Harley was attired in a coarse woolen working suit and had a few dollars in cash as a result of the sale of his fine belongings.

His next stop was at a laborers' employment bureau. Its proprietor started at this white-handed, refined-faced applicant who indifferently announced that track work, mining, farm work, in fact any line of manual employment would be acceptable.

Harley was required to pay a fee of two dollars and was then given a card. It read, "Superintendent of Construction, Pike's Peak." He handed a bit of pasteboard.

"That is a new to your destination," advised the agency. "When you arrive there apply for grading work—$1.75 a day and board."

"That sounds tangible!" nodded Harley gratefully, and took his departure. "It's work," he communed with himself. It will keep my mind coming a pauper and—it will make me forget."

His adverse fortune seemed to pursue the victim it had stricken. Harley was stopped for several weeks looking for the position he never found.

He arrived at Allegan to find work at a shingle mill and the railroad in the hands of a receiver. Some two hundred workmen had been discharged by the receiver, and the immediate vicinity was overcrowded with laborers. The farmers in the district were hilarious over this vast influx of labor, for they needed workers in the fields, and under the extension of the occasion were able to bargain at their own figures.

Harley was quite glad of the new prospect opened. He preferred farm work. Then came a new disappointment. The railroad laborers had two days' start of him. The labor market was glutted. Every place at plow and harrow was filled.

"Oh, well, I shall have to strike out for a new field, that is all," he told himself grimly, trying to fancy he was imbued with the optimism of an enthusiastic ambition.

Harley tramped it, brave as a Trojan, for two days. On the morning of the third he met his first bit of encouragement. He had come upon a desolate, starved-looking farm and waited the equally dismal owner watering lean, dispondent cattle. The man himself was grim-faced and dispirited in mien and talk.

"I might give you board and lodging for a week's work," he said ungracefully.

"I'll take that, if it's only to get my mind in," agreed Harley cheerfully. "But say, what's struck the place?"

"A sucker!" growled the man, whose name was Evans. "The sucker to me. I lost my wife and wanted a lonely. I've got it. Traded a nice wife for a lazy home for this—farm, they called it. Look at it!"

"It does look forlorn, for a fact," observed Harley, "but what's the main subject of your disappointment. Ah, I see 'the soil,' scooping up a handful of the loam, rubbing dirt, seemed to closely, tasting of it, smelling of it, and tossing it adrift with a thoughtful "Humph! Do you raise potatoes?"

"What if I have?" demanded the farmer, suddenly and with suspicion.

"Because, if you have, and will let me, at it, time and phosphates, I'll make a caution contract to do the rest that will make this place a garden. Then inside of two seasons or a basis of fifty and fifty."

"Well, I guess I can try it, after all!" many a time later Harry colloquized. He threw schooling, energy and soul into the first and grand chance at scientific farming. At the end of two years he had made the desolate place faster-I their distractening grip upon him, he had cut loose perforce from the lower counties have been making big profits from their pea crops. This year Jim Dunlap, a Tuft Neck farmer, grower, shipped 37 bumpers to Boston and received a check for 70 cents in settlement. Charles Tribbett of the same place, sent 57 bumpers which sold for $1.10 cents than the freight charges.—New York Journal of Commerce.

The KITCHEN CABINET

Unfaithfulness in the keeping of an appointment is an act of clear dishonesty; you may as well borrow a person's money as his time.—Horace Mann.

SOMETHING NEW IN SALADS.

There are a few suggestions that it is well to be reminded of in regard to the selection and care of salad materials. A good, resourceful cook will make an appetizing salad out of almost any sort of "left-over" material. Care should be taken in combining flavors, with highly seasoned dressings. Rich fish should not be served with a spicy mayonnaise. Lemon seems most appropriate to use in salad dressings when fruit is used.

Pepper Salad.—Select tender green peppers, wash and dry. Cut off the stem and remove the seeds and the white fiber. Shave into fine strips and add equal portions of sweet olives and celery. Cover with a rich mayonnaise and serve in cup cups or on curled parsley or lettuce.

Russian Eels.—Cut cold roast beef into cubes, mince fried bacon, and mix. All shredded hogs' head, half a capful of cold, cooked peas and lemon with mayonnaise.

Meat Salad.—Cold chicken, beef or veal may be used, discarding all fat or gristle. To each cupful of meat add one cupful of celery and one onion, both minced fine. Just before serving add enough dressing to hold together, not enough to make it wet.

Banana Salad.—This is such a well-liked combination that it is becoming Americanized. Slice bananas lengthwise, cut a little sugar, salt and pepper, and add a little lemon juice. Place on a bed of lettuce, with a tablespoonful of chopped onion, and cover with French dressing like the above.

Cabbage Salad.—Chop enough cabbage to make a pint. Add one cupful of walnuts, a half cupful or less, first soaked overnight in water and a half cupful of vinegar; let cool, heat a pint of milk with a half cupful of cream. Mix all together lightly and serve on the cabbage.

Potato Salad.—To a half cupful of raisins add one cupful of shredded cabbage, one cupful of cucumbers, a bit of onion juice or green pepper chopped, and serve with French dressing.

USE OF SALAD DRESSINGS.

There is nothing new under the sun, but each housewife may in blending the different dressings produce quite unusual effects. A salad dressing should be suited to the salad with which it is served. For instance, French dressing is most inappropriate to use on a fruit salad, while a heavy mayonnaise dressing on rich meat or fish would be out of place. A French dressing, may be the choice for one salad, while another may be used to give variety to a dressing. Mashed Roquefort cheese, mixed with French dressing, is a fine salad sauce for a lettuce salad, or a heavy mayonnaise for meat or fish. The old standby French dressing, made in a variety of different flavors seem quite the thing, however, for Roquefort cheese, added to French dressing, is served on lettuce is one that is almost unknown in this country.

Chopped green pepper, Spanish onion, chives, minutes, a piece or two of tomato in fact almost any vegetable, with a French dressing then used on lettuce is well liked.

To make a good French dressing it is necessary to have the oil perfect and all the ingredients ice cold. The vinegar counteracts the oil, and the cold keeps it from being too thick. Use a good vinegar, and if it is too strong, dilute it, to three parts of oil to one part of vinegar. Then add such seasonings as are desired, and beat well.

Chili sauces, catchups of various kinds, olives, pimentos and many other things may be used to give variety to a dressing.

Chili sauces, catchups of various kinds, olives, pimentos and many other things may be used to give variety to a dressing.

Tested, buttered baking powder biscuit, cut in thin slices before toasting, make a nice accompaniment to any salad.

Cucumber and Potato Salad.—Dice cold boiled potatoes and crisp cucumbers, mix lightly with mayonnaise dressing which has been seasoned with chopped parsley and onion.

Any potato salad is improved by the addition of a few cooked peas or a little sweet corn cut from the cob.

Gelatin jellies mixed with fruit and served molded in small cups or forms and placed on lettuce leaves, served with any desired dressing, make a most pleasing salad.

Nellie Maxwell

Cheap Farm Truck.

Potato growers all over South Jersey are complaining about the poor outlook for the season, and unless prices become higher, many farmers are likely to be heavy losers. The crop is about ready for digging, but the markets are so low that growers are deferring the work as long as possible, hoping for better prices. Even within a mile of Woodbury from which the cheapest rate is at this time more than $1 per barrel.

For the last five years farmers in

Find Roots in Chimneys.

Swallows, after a day spent in skimming air and and catching insects, will seek a roosting place at night. The chimney swift soars about until after sunset and then suddenly darts into some chimney. These birds have very sharp-pointed claws and cling on the sides of the sooty flues.

Many Seals Slaughtered.

Seals to the number of about 70 to 250,000 are killed each year off the coasts of Newfoundland.

Not to be Fooled Twice.

"We are now," said the passenger in the dripping aisles, "about to round Cape Horn. Don't you want to come out and see it?" "I should say not," answered the passenger with the novel. "You made me go and look at Bunker Hill, and it wasn't a book at all. You can't fool me a second time."—New York Sun.

THE SANDMAN STORY

By MRS. F. A. WALKER

SNOWBALL WINS NINA KITTEN.

Snowball, puff and Kit were dozing in the sun—that is, Kit and Snowball were dozing. Every one in a while Puff would open one eye and look at Kit and Snowball to see if they were asleep.

Up and he crept very carefully out of the barn and went down the road. Snowball opened his eyes just in time to see him go through the gate way.

"Where is Puff going?" he asked Kit. "I have noticed lately that he runs down the road very often and he does not ask either of us to go with him."

Kit raised his paws before he answered, and then he looked at Snowball. "With your knowledge of the world," he said, "should think you would know where he goes, and why he is in love. Have you not noticed how he sits around and dreams? He never does that with us, any more."

"Yes," said Snowball, "I have noticed that, but I thought it was because he was so tired—he ran so late at night running rats."

"Rats," said Kit, "he isn't hunting rats; he is out walking with Gray Tabby's daughter, Nina. They sit on the fence and talk and look at the moon all night. That is the reason he sleeps so much days."

"You do not tell me!" said Snowball. "I never knew that, and it is fair. Well, Nina is a very sleek-looking kitten," he said; "very sleek, indeed."

It was some time after Snowball learned of Puff's wish to marry Nina that was walking down the road one afternoon. He was in a hurry, for the dog was dancing around a tree and seemed to be barking at something in the tree. He hoped he would find Nina there, but he was hunted up and down the road and he was so in a hurry that he did not look at her.

Snowball reported to the tree, for he half suspected what had happened, and there sat Puff on a limb looking very much frightened. Snowball looked at the dog and drove him away, for all the dogs in the neighborhood stood in fear of him. Then he jumped to the fence beside Nina Kitten.

Miss Nina, he said, very sweetly, "come with me; I'll see you safely home."

Nina Kitten hung her head and looked very shy. Then she smiled and said: "Oh, thank you so much, Mr. Snowball! I was so frightened."

Snowball helped her to the ground and then he said: "It is such a lovely day, don't you think we should go back for catnip? I can assure you that no dog will molest you while I am here."

Nina Kitten said she should feel quite safe anywhere with Snowball and off they walked leaving poor Puff

"They Sit on the Fence and Talk."

caring after them from his perch in the tree.

After a while he came slowly down and walking in the road he met Kit. Kit just as he was going into the yard.

"You look as solemn as an owl! Kit said, "what is the matter?"

"Have you seen Snowball?" asked Puff.

"No," answered Kit. "Where is he?"

"He is out walking with Nina Kitten," said Puff.

"He is a rascal," replied Kit, "to take your girl out walking. How did it happen? and where were you?" he asked.

Puff did not reply to this question, for he was ashamed that he had

LOVE in a HURRY

by GELETT BURGESS

COPYRIGHT BY GELETT BURGESS

SYNOPSIS.

Hall Bonistelle artist photographer, prepares for the day's work in his studio, Floda Fisher, his assistant, reminds him of a party he is to give in the studio that night, and HM Bo Bonistelle accidentally discovers Mr. Jones, Floda and Alfred in the studio. Hall asks Floda to marry him. She agrees to give him an answer at the party that night. Alfred Bonistelle, Hall's brother, and Mr. Jones agree to give up the game for a year at the party. Rosamond clair, an heiress, calls at the studio and proposes an immediate marriage. She too, delays the party that evening. Floda tells Hall that she will be a certain way, if he will do as she asks. In the distance, Jonas Hassinger, a wealthy suitor of Floda's, is said to have left home to marry on time, calls.

CHAPTER VI.—Continued.

Floda started at him fascinated, as a bird by a snake. Try as she could, it was impossible to deny his accusation.

"Hold on a minute, now!" He shook his finger impressively. "I'd give a good deal if I was certain she would be married before midnight."

Floda could stand it no longer. It was useless to attempt to hide her feelings from this man. Her money was burning. "Suppose you would it if I had the money!" she cried, woebegone.

Jonas leaned back, with a smile of victory on his face. "Why, I guess I got to the woman of it at last," he gloated. "All women is just alike. When you come right down against it, a man among a thousand knows a lot more than a woman among all other men. I just found—that is, different. But that's neither here nor there. I am pocted you have sworn on Hall; your free give you dead away. Wall, then, miss," he brought it out deliberately, "seems to me our interests ought to be identical."

"What do you mean?" Something in Floda's subconsciousness was awakened.

"You, bein's a woman, don't want him to marry anybody else. Wall, what do I?" He watched her closely, heartlessly.

"I see," said Floda frigidly. "Because you'd lose a fortune."

"Oh, it ain't the money, miss, don't you misinterpret my motives. I don't want a cent of your money. And what I can do with it. See here; if Hall gets that money, he's bound to throw it away on all sorts of foolishness. If he marries tonight, some shop-girl or extravagant woman will have the spendin' of it." He watched the shaft strike Floda, and went on. "Whereas, if I inherit it—why, I got my plans all laid out a-ready." He leaned forward earnestly. "Why, do you know, miss, they's heathen in the tropics what don't know what clothes are, let alone the Bible. They tell me they ain't a toothbrush nor a pair of corsets in all Polynesia. And all of them misguide niggers got to be damned everlasting. Then they's hospitals I intend to endow, and tracts ought to be printed." Floda's eyes were cast down. He saw that he had lost his audience, and came back to his last argument. "Think of Hall's wife throwin' that cash round on parties, and low-necked dresses—to say nothin' o' balls and concerts and theaters!"

"Well, Floda, what do you think?" look in her face. "I don't see what we can do about it. He's made up his mind to marry tonight, and he's already proposed to three women."

Jonas whistled here a low tune. "Looks like we got to get to work in a hurry, don't it? See here, miss," he spoke slowly and emphatically, "I can do it. Wimmy women is born so—cross like this. What's that Jerusalem says? 'A woman shall compass a man.' That's right. You leave it to me. I'll get a way and depend on me to help all I can. What do you say?"

Floda's mind had already jumped to the task. Why not try to save Hall?—that was the question which confronted her. To be disloyal to him was unthinkable, but to prevent a lifelong unhappiness due to his marrying one of the three women he had proposed to—ah, that was another thing! What if the could accomplish it, and get the best of this scheming Jonas? Quite the bargain! There was a magnificent chance for a woman's strategy! Indeed, the thought was beautiful, considerate. She jumped up, excitedly. "I know!" she cried.

"What? Got an idea a-ready?" Jonas grinned.

"Yes! I'll tell you. I'm going to get those three women together in this room and then—I'll just let nature take its course! It something doesn't happen then I don't know anything about women."

Jonas chuckled, delighted. "Well, that will be a pretty scene, won't it? Jimmy, I'd like to see the fun."

"No," said Floda, "you'll have to leave. I've got lots to do, if I'm to manage this thing and I've got to do it alone. Now, let's see! Wait a minute—Hazel's giving a party tonight. Suppose I let him think I invited you, and you come round at about eleven o'clock. Then I'll tell you how matters are going."

"Eleven o'clock! Lord, I generally git to bed by ten."

"You won't tonight, then. Better drink some coffee. If you're sleepy. And I guess it'll be worth sitting up for. Good afternoon, Mr. Hassingbury!" Floda did not offer to shake hands.

Jonas passed at her in over-growing admiration. "Say, miss," he ventured, "it ain't often I get loony over a woman. I don't trust em enough. But you took considerable fancy to you, somehow. You got a good head on your shoulders, you bet!"

Floda ewafed his hand. "Well, it's likely to stay there. The afraid. At any rate, it'll never be on yours, Mr. Hassingbury."

With which Floda went, without honoring him with another glance, into the storeroom, leaving him to take his departure alone.

CHAPTER VII.

After Jonas Hassingbury had left Floda went to the telephone and rang up a number.

"Hello, Hazel! . . . Yes, this is Miss Fisher—at Mr. Bonistelle's, you know. Listen, I've got a plan. . . . Could you drop in this afternoon and use some goods? . . . About three-ish? I think so. . . . Good-by! . . . Now, she calls up Miss Hall, and said nearly the same thing; both ladies agreed to call. But how about Rosamond? She wandered from studio to studio. Well, Floda must risk it. Perhaps she could hold her in the office. Meanwhile she had much to do. She flew back to the printing room, and went to work on the negatives. They must all be finished before the ladies arrived. The three negatives were drying. Quickly her fingers flew. Bob! Bonistelle's eyes were looking up. Who was that in the office? Floda would be all found Alfred the Pale, with a big bunch of evergreen garlands. He pulled off his hat and grinned.

"Will I fix up the studio now?" he asked.

"Yes," said Floda, "right away." She held up a proof of Cathleen's face, and inspected it critically. Alfred, meanwhile, was regarding Floda.

"Say, Miss Fisher," Alfred set down his bundle and approached her. "It's hard to catch you alone, you do know—"

"No, I don't. We must have those decorations up in a hurry." Floda, however, did see something in the poor janitor's face which made her start hastily for the stockroom.

"Oh, I know it ain't on me, Miss Fisher, but it'll be a satisfaction even to be thrown down. I'll be something, anyway. I can't stand it any longer."

Floda stared at the hopeless janitor. Faint heart ne'er won fair lady, but still, his look was suffering. There was a mild balm in his devotion, as he fawned on her. It stirred her heart. "Now, Alfred," she began, "don't you be silly!—"

"I don't mean help it, Miss Fisher!" he exclaimed. "I got to be silly! It didn't see you every day, here—oh, I'm sick! Leave me alone! Good-by!"

Next she called up Miss Hall, and said nearly the same thing; both ladies agreed to call. But how about Rosamond? She wandered from studio to studio. Well, Floda must risk it. Perhaps she could hold her in the office. Meanwhile she had much to do. She flew back to the printing room, and went to work on the negatives. They must all be finished before the ladies arrived. The three negatives were drying. Quickly her fingers flew. Bob! Bonistelle's eyes looking up. Who was that in the office? Floda would be sick found Alfred the Pale, with a big bunch of evergreen garlands. He pulled off his hat and grinned.

"Will I fix up the studio now?" he asked.

"Yes," said Floda, "right away." She held up a proof of Cathleen's face, and inspected it critically. Alfred, meanwhile, was regarding Floda.

"Say, Miss Fisher," Alfred set down his bundle and approached her. "It's hard to catch you alone, you do know—"

"No, I don't. We must have those decorations up in a hurry." Floda, however, did see something in the poor janitor's face which made her start hastily for the stockroom.

"Oh, I know it ain't on me, Miss Fisher, but it'll be a satisfaction even to be thrown down. I'll be something, anyway. I can't stand it any longer."

Floda stared at the hopeless janitor. Faint heart ne'er won fair lady, but still, his look was suffering. There was a mild balm in his devotion, as he fawned on her. It stirred her heart. "Now, Alfred," she began, "don't you be silly!—"

"I don't mean help it, Miss Fisher!" he exclaimed. "I got to be silly! It didn't see you every day, here—oh, I'm sick! Leave me alone! Good-by! . . . Now, she calls up Miss Hall, and said nearly the same thing; both ladies agreed to call. But how about Rosamond? She wandered from studio to studio. Well, Floda must risk it. Perhaps she could be found later

AT 72 HE WHIPS SON-IN-LAW

Grandfather Makes Man of Thirty-Eight Cry "Enough"—Row Over Children.

New York.—Wesley C. Smith, seventy-two years old, and a grandfather, was in the Jamaica police court looking as little and chipper as if he had not a few hours before performed the feat of giving his thirty-eight-year-old son-in-law, Charles Gobel, a thrashing.

Smith lives at 121 Enfield street, Union Course, Queens. His daughter, Mrs. Alice Smith Gobel, and her six children have been living with him for some time. It was the desire of the children's father to take away two of the children, Alice, three, and Oscar, four, that caused the thrashing.

It was related in court that Gobel appeared late Friday afternoon while the children were playing in the street, and taking Oscar under one arm and Alice under the other started away. Mrs. Gobel and Benjamin Foster, counsel to centure her. The attempt was successful, and with O'Brien, it is rumored, the arrangement made a voyage to the Bay of Fundy. An English schooner and tramp steamer sent out to look for the Margaretto, and when O'Brien returned to Machias he found them awaiting him. The first naval battle of the United States was fought then and there, and O'Brien and his men added the schooner and tender to their prizes.

Silicon in Miners' Lungs.

It is well known that those engaged in occupations in which much silicious dust is produced—grinders, cement makers, etc.—suffer from a form of lung disease. Dr McCrae has studied the lungs of such cases occurring in the Witwatersrand mines in South Africa, and has published his results in the South African Institute for Medical Research.

He finds that from 2.8 and 9.6 grams of silicon may be present, compared with 0.35 gram in a normal lung. Microscopical examination of the silicious particles showed them to be angular, and the majority had a very small diameter.

Sense of Duoil.

"So, you want to marry my daughter!" said Mr. Comrox thoughtfully.

"Yes," replied the confident youth. "I shall devote my life to trying to make her happy."

"If that's your idea, I dunno's I want to take chances on such a thing sonnabue. Young man, I'm in oil and time taking Rhelinda to moving picture shows and tango parties."

Things Which Go With It.

Platbush.—"I see an English woman wants to be made a judge and go on the bench."

Pennsburnt.—"What fitness could she have for the Bench?"

"Well, she probably has the wig and a gown."

Prolific Ant.

One specimen of white ant produces 36,400 eggs a day.

Poor Father!

A Beatville (Pa.) man got the baby to sleep easily for the first time in four years and refused to shoot at a burglar for fear of awakening the child. Few men have been so hard put, and proper resolutions of indorsement will doubtless be passed by the Fathers club.—Buffalo News.

MAJESTY OF SEA REVEALED

Traveler in Airship Tells How He Was Impressed by His Passage Over the Ocean.

From an airship H. Warner Allen claims that for the first time he realized the full solitude of the sea.

"We right and left," he writes, "the sea, flecked here and there with foam and its blue expanse cut sometimes by the ash of a seagull's wing (the seagull itself far below was invisible, its wings flashed bright as they caught the sun), stretched out to a horizon line which was a perfect section of a circle.

"Behind us, and ahead where the land lay, a screen of light mist interposed and cut short our view in a straight line.

"The sensation was one of perfect content mingled with a solemn reverence for the vastness of the sea; not a sill in sight and nothing to divert attention from our swift arrow-like flight.

"The shadow of the bag moved lightly across the waves. There were no varying air currents, and the ship kept smoothly on with no side motion.

"The sea beneath gave an added sense of security, as though, if need were, it would break our fall.

"Even the mechanics, men hardened to every form of danger, seemed touched by a feeling of awe and were silent; they had nothing to do but gaze across the sea, as the even roar of the motors told that all was well."

MEANING OF "HORSE POWER"

Simple Manner by Which the Now Familiar Term Was First Brought Into Use.

The use of the "horse-power" as a measure of an engine's work came naturally from the fact that the first engines were built to do work which had formerly been performed by horses. John Smeaton, who built atmospheric engines before Watton and Boulton and Watt completed machine on the market, had valued the work done by a strong horse as equal to lifting a weight of 22,000 pounds one foot high a minute. When Bolton and Watt began to bid for public favor, they agreed to place their engines for the value of one-third part of the coals which are saved in its use. They also increased the value of the horse-power to 33,000 foot-pounds, so that their engines were half again as powerful for their rated power as those of their competitors. In this way they established the value of the horse-power. The following are the various values of a horse-power: Thirty-three thousand foot-pounds a minute, 550 foot-pounds a second, 2,545 thermal units an hour, 42.75 thermal units a minute. The horse-power of a boiler depends on its capacity for evaporation. The evaporation of 30 pounds of water from 100 degrees Fahrenheit into steam at seven pounds gauge pressure equals 34½ pounds, and at 212 degrees Fahrenheit is equivalent to a horse-power.

Our First Naval Hero.

The first naval hero of the United States—now almost forgotten—was Jeremiah O'Brien, a Maine man, whose naval deeds are still commemorated by his name. He commanded an American vessel in the first naval battle of the revolution, which was fought near Machias, Me., June 12, 1775. Some little time before an English schooner, the Margaretto, was at Machias, and a number of the people of the town, led by Jeremiah O'Brien and Benjamin Foster, conspired to capture her. The attempt was successful, and with O'Brien, in command, the Englishmen made a voyage to the Bay of Fundy. An English schooner and tramp steamer sent out to look for the Margaretto, and when O'Brien returned to Machias he found them awaiting him. The first naval battle of the United States was fought then and there, and O'Brien and his men added the schooner and tender to their prizes.

DIPLOMAT LEARNING WAR

The photograph shows Nelson O'Shaughnessy, formerly United States chargé d'affaires at Mexico City, in his war costume at the business men's training camp at Plattsburg, N. Y. He is only one of many prominent men who are training to become soldiers at this place.

IS WED UNDER WRONG NAME

Not Only That, but This Indianian "Stood Off" License Clerk and Minister.

Terre Haute, Ind.—Harry Wilson is being sought by the sheriff's force for making a false affidavit to the county clerk to obtain a license to marry Mary Davis of North Fourth street. He swore he was a son of Ransom Phillips, county road supervisor, and on the strength of this "stood off" the county clerk for the license fee and the minister for the wedding fee.

He is to be prosecuted for perjury and an effort will be made to compel him to marry the girl again under his correct name. The first news of the deception was gained when friends of Phillips congratulated him on the marriage of his son, and it became known that he has no son of marriageable age.

Graft Skin on Buffalo.

Topeka, Kan.—Skin grafting on a stuffed buffalo is the latest operation to be attempted in Kansas. The old bison in the state historical collection is badly moth and mice eaten. O. W. Brunson will graft skin from another buffalo hide onto the specimen where it is worn.

MOTHERS—WATCH IRRITABLE CHILDREN

That fever, paleness, grinding of teeth while asleep, and coated tongue are indications that your child has worms in its system. Kickapoo Worm Killer quickly gets rid of these pests. It is perfectly safe; even the delicate children. It is pleasant to take has three effective medicinal qualities—acts as a laxative, expels the worms, and tones up the system. Begin treatment to-day and eliminate the cause of irritableness. 25c.

BABY IS WITNESS IN COURT

Infant Injured by Snowball Which Crashes Through Glass—Features Are Marred.

Detroit.—A baby of fourteen months was carried into the courtroom of Justice Marschner last week and lifted by its father into the judge's bench. It was a lively, healthy youngster and it cooed with delight as the justice took it.

The baby was little Edward Kafka. It was to show the justice how the child's features had been marred for life by the blow of a snowball that the pet took it to court. Bernard Lade, a man, twenty-one years old, also was there.

Bernard threw a snowball at a company hot Potsmy and it crashed through a window in the Kafka house. Baby Edward was lying in a cradle, playing with the window curtains, when the crash occurred. A shower of glass blown over him and one jagged piece pierced his eye.

CARRIES NITRO IN MOTOR

Oklahoma Man Makes Longest Overland Trip With Load of Nitroglycerin.

Bartlesville, Okla.—L. O. Cosper of Tulsa is said to have made the longest known overland haul of nitroglycerin when he reached De Bois, Colo., several days ago, with 40 quarts of this explosive aboard a motor car. The nitroglycerin is to be used in shooting an oil well.

Cosper broke down two cars in making the trip. At Grand Canyon it was allowed best to send a pilot car ahead through the canyon. Running half a mile in advance, this car warned all traffic to be careful in passing the nitroglycerin car.

Children Had Long Ride.

Evansville, Ind.—Elmore Bennett, aged eight, and his sister, Florence, aged five, grandchildren of Robert Bennett, who lives here, have just completed a journey from Denver to Evansville without a companion. The children were tagged. They will remain with their grandfather here for several months.

Codes Used by Government.

In handling its communications, one department, in its several branches and departments, uses all the leading commercial codes. These it supplements by private codes held confidential in the service, and prepared by such men as Bonaparte and experts. The State department employs a code bearing its name, copies of which are in the office of the Secretary of State, and in the hands of our diplomatic and consular agents everywhere.

Thinking of Dirt Color.

Bill—"This paper says one quart of a liquid soap invented by a Dutch chemist, it is claimed, will wash a man's hands 2,500 times."

Jill—"Not without changing the color of it, I'll bet."

Tommie's Idea.

"Among the prizes awarded at Yarmouth elementary school, England," said the mother, "was one for the boy who had the cleanest shoes and hands and the tidiest hair during the year."

"Blimkin!" exclaimed Tommie; "he wasn't no boy, he was a mollycoddle!"

An Essential.

A good, strong, able-bodied loafer is quite essential to a well-ordered government. This is now well appreciated by the young lady in the East who broke out a window and landed in a hospital instead of the arms of a husband.—Pittsburgh Dispatch.

FOR SALE

I will sell at private sale the farm known as the John Kace Farm, in Eveline township, 1-mile south of Ironton. Also two lots in the Village of Ironton.

CHARLES J. ZEITLER, Administrator.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, sites in Lake Grove close to city. Apply to H. S. Harsha.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or telephone, H. S. HARSHA.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate Office in the City of Charlevoix, in said County, on the 7th day of August, A. D. 1915.

Present, Hon. Ira M. Smith, Judge of Probate.

In the matter of the estate of John Vincent, Deceased.

William J. Gallagher having filed in said court his petition praying for the license to sell the interest of said deceased in certain real estate therein described,

It is ordered, that the 27th day of September, A. D. 1915, at ten o'clock in the forenoon, at said place of office, be and is hereby appointed for the hearing of said petition, at which time and place the persons interested in said estate are required to appear before said court, at a session thereof, to be holden in the City of Charlevoix, and show cause why the prayer of said petitioner should not be granted.

And it is further ordered, that said petitioner give notice to the persons interested in said estate of the pendency of said petition, and the hearing thereof, by causing a copy of this order to be published in the Charlevoix Sentinel, a newspaper printed and circulated in said County, for three successive weeks previous to said time of hearing.

IRA M. SMITH, Judge of Probate.

BUILDING THAT IS HISTORIC

Italian Villa Designed by Celebrated Architect and Occupied by Celebrated People.

At the foot of Monte Morello, two miles beyond Careggi, near Fiesole, stood a country house closely connected with a younger branch of the Medici. This was the beautiful villa of Castello, built, says Vasari, "with rare skill by Cosimo's nephew, Pier Francesco."

In front of the house was a wide lawn with tanks of water divided by clipped hedges and long avenues of mulberry trees leading down to the Arno, while behind the gardens were laid out in terraces, adorned with statues and fountains, against the steep hillside.

Castello was the scene of many brilliant festivities in the days of Pier Francesco's son Lorenzo, the intimate friend of Politiano and patron of Botticelli.

For him Sandro painted those great pictures of "Primavera" and the "Birth of Venus," in which the humanists' love of old myths and delight in the joyous life time alike find expression, and which in Vasari's time still hung on the villa walls.

It was to Castello that Caterina Sforza, the heroic madonna of Forli, came to end her days after her cruel captivity in Rome, while her little son, afterward the great captain, Giovanni delle Bande Nere, was kept in hiding and brought up in girls clothes by the good nuns of Annalena.

QUEER OLD-TIME PENALTIES

Judges Seem to Have Had Mixed Humor With the Severity of the Punishment Inflicted.

When New York, or as it was then called, New Amsterdam, was under Dutch rule, some curious penalties were enacted. In 1642 a defendant in an action for slander was sentenced by the court "to stand in the box for the poor." In 1644 Thomas Cornell, a soldier, was tried for desertion and sentenced "to be conveyed to the place of execution, and there fastened to a post, and a ball bred over his nose, as an example to other evil doers." In 1647 Jonas Bronck, a soldier, for robbing hen roosts and killing a pig, was ordered "to ride a wooden horse three days, from 3 p. m. to the conclusion of the parade, with a fifty-pound weight tied to each foot. In 1648 an Englishman found guilty of a grave offense was pardoned on condition that he saw firewood for the use of the Dutch East India company. In the time of the commonwealth, in England, drunkards at Gloucester were ordered to carry about a tub, with holes in the sides for the arms to pass through. In 1754, in Scotland, David Lepes, for striking his father, was committed to appear before the congregation at church, "barefoot and bareleg, in a white sheet above his head inscribed with large letters, 'Behold the unnatural son, punished for putting hand on his father, and dishonoring God in him.'"

In the Early Days of Coal.

The use of coal is now general throughout the world and is such an indispensable commodity, that naturally the mind carries back to the having been in existence from time immemorial, yet one of the oldest records of its use as fuel is when Marco Polo, the Venetian traveler, in 1298, wrote as follows: "It is a fact that all over the country of Cathay there is a kind of black stone existing in beds in the mountains, which they dig out and burn like firewood. It is true they have plenty of wood also, but they do not burn it, because these stones burn better and at less cost." His countrymen refused to believe his statement. The first shipment of coal to London was made shortly after this period and the first successful effort made to smelt ore with coal in a blast furnace was by one Simon Sturtevant, an Englishman, in 1612.

To Clean Copper Easily.

Have you any copper utensils in your household that are very hard to clean? Why should it be done when is an easy way? Place a little oxalic acid in a cup and moisten with water enough to make a paste. Rub this paste on the article to be cleaned, using a soft cloth. Let them dry. Now rub briskly with a dry flannel cloth, and as a result you will have a remarkable brightness

Having the article to be cleaned very hot will make the operation even easier. Let the copper stand with boiling water in it for a while before cleaning it.

Try this method and see how easily the percolator, chafing dish, tea pot, serving tray and many other things are made bright and new.

KEEPING CUT FLOWERS FRESH

Must Be Properly Taken Care of, and Here Are Some Suggestions of Moment.

The only drawback to cut flowers is that they wither so quickly, and in keeping them fresh some seem to have more luck than others.

For instance, in the matter of violets, it is possible to wear them several times without enfeebling the overpowering stale odor which proclaims them beyond redemption.

Of course many people find that they cannot wear cut flowers even for one afternoon, because in some cases the body heat seems to wilt them, but if this can be avoided it is quite possible to find a bunch almost as fresh the second day as on the first if they were properly guarded overnight.

Keep the box that they came in and when you take them off pold the stems under running water for a few minutes, taking care not to wet the violets themselves.

Then wrap them up in the oiled paper and put them back in the covered box outside the window if it is cool, if not in the refrigerator, but in either case keep them wrapped.

This treatment seems to restore the flowers and hold in the delicious odor which so soon becomes rank if they are kept unwrapped in a close room.

Some people think a pinch of salt in the water will keep cut flowers fresh longer, and so it does in some cases. In others it seems to change the color of a rose. With roses it is successful, but not so much so with violets.

A piece of gum camphor is said to be an excellent preservative in the water, and others advocate a small lump of charcoal, but in any case the water should be changed daily and the flowers put in a cool place overnight.

TAKE LESSONS FROM PLANTS

Humanity Can Learn Much by a Study of the Causes of Their Ailments.

Science believes that much valuable information about the prevention and cure of diseases in human beings can be gained from a study of the ailments of plants. It has long been known that it, matters of health and disease all living things are intimately related and it is now discovered that this relationship between plants and mankind may be much closer than we have ever realized.

The alternation of hosts for certain diseases is also true of plants and of human beings. Men get tapeworms from eating the flesh of certain animals. In similar fashion fruit trees get the rust disease from juniper trees, the latter being the host for alternate stages of the fungus that produces rust.

Certain diseases of the intestines, which are due to a low growth of plant life can be benefited just as fungus diseases of trees are by an abundance of water. A dry diet favors the processes of decay in the intestines, while abundant liquids improve their mechanical action and hinder the growth of germs.

Rabies Not Limited to Any Season.

According to Dr. O. Heinemann, "Dog Days" do not influence the occurrence of rabies. The important point, however, is that anyone bitten by a dog suspected of being rabid, regardless of the season of the year, should receive proper attention.

The suspected dog should be kept under observation for at least two weeks. If it remains well, rabies is excluded. If it becomes sick or dies, the head should be examined by the Pasteur Department of the State Board of Health, and the individuals bitten should report at the department for treatment.

Rabies is usually fatal to dogs but from three to five days after the first symptoms are observed. Individuals bitten by rabid dogs, unless under treatment, become sick in from five to nine weeks. The popular belief that individuals may develop symptoms several months or years later is as false as the belief that Dog Days cause mad dogs.

Where the Dog is Shy.

"A person's dog, eh, is one thing and a man's another. I have found out," stated old Brother Hawkes, who was a great hand to philosophize. "The man he 'doices wid yo', in sickness he suffers, too; when yo's in jail he's waitin' right outside do do' for you, and when dey turns yo' loose he shouts yo' a full o' welcome. His yo' guide and companion and friend; but, dat blamed lim, yo' kain't horry a dollar off him, no matter if yo' does sackfly gotter have it!"—Kansas City Star.

Quick Work.

Bill—"I saw an electrician claims to have invented apparatus by which he can measure the ten-millionth part of a second of time."

Jill—"Well, even such an apparatus couldn't measure the length of time a girl takes to make up her mind to say yes when a man proposes marriage to her."

"Why couldn't it?"

"Because she's already made up her mind to say yes, you know."

To Remove Scorching.

When a garment is scorched with too hot an iron, all traces of it may be quickly removed by dampening the scorched place with peroxide of hydrogen, then press and place where the sun can shine on it. This method does not injure the fiber of either silk, linen or cotton, and doesn't fade delicate colors.

Secrecy in Dispatches.

The war department telegraph code, devised and distributed from the office of the chief signal officer of the army, is kept under lock and key in the department, in the office of every post commander, in the headquarters of every armed force in the field and is issued individually to every officer of the United States Signal corps. The navy likewise has a code of its own, and each of the three departments maintains a system, necessary, the codes of the other two.

HOW GREAT INDUSTRY BEGAN

Chemist May Be Said to Have Stumbled Over a Discovery of immense Importance.

An experimenting chemist, endeavoring to produce artificial quinine, using a base known as aniline, not only obtained coloring matter called mauve, but laid the foundation for the coal tar color industry, which has developed until today almost every color and shade of color is derived from aniline. Aniline had been obtained previously from the indigo plant "anil." The discovery of mauve created a large demand for the artificial aniline base, and gave unexpected value to benzine. It yielded aniline by being treated with nitric acid and with the horings of coal from powdered introduct. Having done its work in the aniline still, the dust was used by the gas maker to cleanse his coal gas from sulphur, and then it passed into the manufacturing chemist, who burned the sulphur out of it and produced a sulphuric acid—a cycle of operations whose beginning and end was the coal dust waste. This method of producing color was responsible for the Franco Prussian war of 1870 and France and Holland and for the loss to the Hindus of their immemorial indigo culture. Anthracene, one of the heavier oils of coal tar, was at the time of its discovery a waste product and the full of the coal tar industry. The madder produced violets, reds, browns, purples and dark browns. Anthracene was sold very cheaply for lubricating purposes until certain chemists hunted it with zinc filings and produced alizarin, and then the secret of the madder dyes was discovered. In this way chemistry displaced agriculture, one period of alizarin having the coloring power of ninety pounds of madder, and the hundredths of odd at a little as waste became a valuable coloring matter.

HAD ORIGIN IN DIPLOMACY

Famous Phrase Which Is Often Used Was Invented by the Bishop of Milan.

"When you are in Rome do as Rome does," is one of the proverbs that are so old that their origin is lost in the mists of antiquity.

It is generally asserted, however, that it arose from the following incident, related in one of St. Augustine's epistles: Augustine was in the habit of fasting on Saturday as upon Sunday, but being puzzled with the different practices then prevailing (for he had begun to fast at Rome on Saturday) he consulted St. Ambrose, the bishop of Milan, on the subject. The answer of the Milan saint was this: "When I am here I do not fast on Saturday, but when at Rome I do fast on Saturday."

"Byron, in his "Anatomy of Melancholy," speaks of those persons who "are always awkward in mind and action by their surroundings. "When they are at Rome," he says, "they do there as they see done."

MRS. RICHARD HOOD COLE

Mrs. Richard Hood Cole, wife of the man who is in Washington as a personal representative of Genaro Carranza, is of eastern birth, but owes a member fame to the social circles of the Pacific coast, and, as a matter of outdoor life, however, and is a horsewoman as expert, fearless rider and a good shot. With her youth, beauty and many attainments, she is said to prove a valuable asset in the international life of Mexico and the United States. Her home is in Pasadena, Cal. The Cole coins from Pasadena, Cal., and her home there is one of the show places of that beautiful city.

WANTS A SINGER FOR WIFE

Banished Must Have Blonde Hair if She Would Be Bride of R. B. Fortune.

Atlanta, Ga.—At blonde ladies who sing, step forward, please. Step for ward and smile pretty sweetness, and let R. B. Fortune, twenty-five years old, look you over. For he wants to marry one of you.

R. B. lives at No. 43 Hewell street, and his business is that of a collector. Now he's trying to collect a wife.

"She must be a singer," he said. "I am a singer. I sing baritone and bass and tenor. When I go home after a hard day's work I want a little wife to sing with me.

"She must have blonde hair—R. B.'s hair is black and his eyes are gray—she must have blonde hair and she must not be less than five feet six inches tall. However, if she is more suitable, six feet won't be too tall. So long as I won't have to look up to her.

"R. B. is six feet two inches and weighs 175 pounds.

First Aid to the Backward.

Ingenuity of college students in writing badly after they have "passed off" the required freshman or sophomore course in composition is extraordinary. Perhaps it is a reversion of native instinct, perhaps it is sheer carelessness. But the remedy to be enacted at Harvard, after a careful study of the problem, is a partial one. A standing faculty committee is to be appointed and "instructors in all courses will be urged to send to the examiners any excessively bad theme, or other piece of work which has demonstrated the writer's inability to express his thought." The committee will thereupon prescribe additional work in English for the delinquent students. The very warning should end many slovenliness, and those whose fault lies deeper should be grateful for the discipline.—New York Evening Post.

Activities of Patent Office.

Owing to the great activities of the patent office during the last year, the regular appropriation of $410,000 for printing specifications in the Official Gazette and supplemental appropriations of $123,000 have been exhausted, and the issues of the Gazette for June 15, 22 and 29 were not issued on those dates, but these issues will be issued as early as the publication thereof can be brought about, and owing to the resulting congestion there probably will be some delay in the issue of subsequent issues, but it is hoped to get in the order of the public prior to some normal date. There will, however, be no delay in the issue of patents, designs and trademarks.

A Simple Compass.

A watch may be used to determine the points of the compass by pointing the hour hand at the sun any time of the day and then placing a small piece of straight wire crosswise between the hour hand and the figure 12, getting exactly half way. The point of the wire which comes between the 12 and the hour hand always points due south.

Using up the Forests.

It is estimated that there are taken from our forests yearly, including waste in logging and in manufacture, 20,000,000,000 cubic feet of wood, valued at about $1,750,000,000. There are used in a single year 90,000,000 cords of firewood, nearly 400,000,000,000 board feet of lumber, over 11,250,000 tons of wood pulp, 125,000,000 lineal feet of railroad ties, 1,650,000,000 staves, over 126,000,000 sets of heading, over 353,000,000 hoops, over 3,500,000,000 cords of mine timber, nearly 1,750,000 cords of wood for distillation, over 110,000 cords for excelsior and nearly 3,500,000 telegraph and telephone poles.

Strain on Patriotism.

"It takes half a day to sing China's national hymn.

Norwegian Wedding Presents.

Every guest at a Norwegian wedding used to bring the bride a present. In many parts a keg of bitter beer was used, and, if the guest did not bring a present in the winter, salted or dried meat was offered.

Sunshine Cures Rickets.

Rickets, a disease of infancy, is a deformity of the bones, causing bow legs, knock knees, and other deformities. It is due to a lack of sunshine. Cod liver oil is a specific for rickets, because it contains the sunshine vitamine.

Dyes Made from Coal Tar.

Dyes made from coal tar are used to bring the bride a present. In many parts a keg of bitter beer was used, and, if the guest did not bring a present in the winter, salted or dried meat was offered.

PROTECTORATE TO GOVERN HAITIANS

American Forces to Remain on Duty in Negro Republic.

ORDER MUST BE OBTAINED.

Finances to Be Governed by United States Supervision—Haitian Congress Gives Time to Discussion of New Treaty, Which Will Guarantee a Sane Government For Island.

The American marine and naval expeditionary force will be maintained in Haiti for an indefinite period, pending the establishment of a United States protectorate over the finances of the republic. The terms of this forearming other are set forth in a treaty which has been negotiated between the United States government and that of Haiti at Port Au Prince, and which is now under consideration by the Haitian congress. It will also have to be submitted to the United States senate in the form of a treaty for ratification.

The convention provides for the following:

First—The establishment of a fiscal receivership of customs under American control.

Second—The establishment of a force of gendarmerie under American officers.

Third—The establishment of American control over the finances of Haiti, to the extent necessary to prevent speculation and safeguard the interests of the American people.

Fourth—The convention is to run for a period of ten years.

In explanation of the design of the United States in thus extending a financial protectorate over Haiti, Secretary of State Lansing authorized this statement, in which he referred to the Haitian treaty as a "protectorate."

Secretary Lansing's Statement.

We have only one purpose—that is, to help the Haitian people and prevent them from being exploited by irresponsible revolutionists. These are not property interests; they are unorganized disorders which invade the territory of neighbors, and they are ruining the country. While they are in progress revolutionists hang in the streets of Port au Prince because they invade the property of people who are absent in the country. Things have been going from bad to worse, and something must be done.

The United States government has no purpose of aggression and is strongly disinclined to promoting the protectorate. We have not even asked for Monroe doctrine. The arrangements we have made have to be approved by the United States senate for approval.

It was stated that no ultimatum had been delivered to the Haitian government setting a time within which it must accept the treaty. When the plan of the Haitian concession to Allowes was communicated to the Washington government a desire was expressed that the congress would adjourn without action on the treaty. After this the Haitian president called congress into extraordinary session.

The congress must intimate whether it would proceed with the consideration of the treaty with a view to ratification. The American government has been insisting on prompt action and no delay, but it was denied positively that anything like an ultimatum had been offered. Sufficient time, it was asserted, would be accorded the Haitian congress to consider the treaty in deliberation.

Our Eye on Other Republics.

The consideration of this treaty marks the first step in the intention of the government to "clean up" affairs in Latin-American countries involving European interests, which precipitate might lead to trouble between the United States and European nations after the conclusion of the European war. It is felt in certain administration quarters that when the war is over an effort may be made by one or more of the powers now engaged in hostilities to insist that the long overdue debts of certain republics of the western hemisphere shall at last be paid, shall be liquidated without delay, and that such means be adopted that future payments might be insured to insist by force, with international complication, if necessary, obedience to the demands made.

TOKEN OF GRATITUDE.

Soldiers of France Express Appreciation of American Sympathy.

Soldiers of the French army have arranged for the establishment in Paris of a free scholarship for Americans, to be endowed and perpetuated as a monument of gratitude for the sympathy which Americans have shown to France during the war and as an evidence of their appreciation of the work of the Lafayette fund.

Captain de Fouloy wrote that all branches of the army are supporting the plan. The scholarship are in music, art and sculpture and will be known as the Lafayette fund scholarship of the war.

The captain wrote that 80,000 soldiers had been relieved and comforted by the kits forwarded to them by the Lafayette fund.

$500,000,000 to Men's Families.

In sentiments a soldier for fried in connection with monetary allowances. Magazine de William Tweed of London remarked that he understood the nation was now paying something like $500,000,000 a year in these allowances to families of soldiers absent at the front.

FACTS FOR SUFFERERS

Pain results from injury or congestion. He it neuralgia, rheumatism, lumbago, sciatica, backache, sprain, bruise, sore stiff muscles or whatever pain, will have pain to Sloan's Liniment. Stop pain. Stop it. Sloan's Liniment penetrates immediately to the spot and relieves the suffering. Just a bottle of Sloan's Liniment. Buy it. It means instant relief. Price 25c and 50c. $1.00 bottle has three times as much as the 25c size.

EUROPEAN CAVES and EARLY MAN

By N. C. NELSON

FROM THE AMERICAN MUSEUM JOURNAL

INDENTATION IN LIMESTONE CLIFF TO SHELTER EARLY MAN

THERE are recorded at the present time for the southern two-thirds of Europe, including Mediterranean Asia and Africa, no less than four hundred prehistoric stations, that is, places where remains of one kind or another have been left behind by early man. This man was primarily a hunter and his chief center of activity appears to have been what is now southwestern France and northern Spain, although Germany, Austria, Italy, Holland, England, and to a lesser degree other countries, share within his range. This apparent distribution may be deceptive, however. Many of the stations are on the open, on the banks of the Thames and the Somme; but the majority of the sites, especially those of later times, are sheltered, in some way. The shelter may consist merely of an overhanging cliff, or may be a grotto yawning on the mountain side and it may be the far interior of a certain site. The latter type of site is relatively easy to find by making a deliberate search, while the location of an ancient camp or workshop in the open country is a fresh spot of chance. It is conceivable of course that these roaming, migratory hunters returned seasonally to the natural shelters, but on the other hand, it is possible that many of them built huts—some of the economic cave paintings suggest that they did—and unless these huts stood in very close proximity to some sheltering cliff, all traces of them have long since vanished. If, on the other hand, we may properly take for granted that hundreds of huts once stood where they now are discovered, in consequence of which our notion of the actual extent of the population of the given place during these early millenniums of human existence must continue imperfect, if not inadequate.

As need hardly be stated the presence of natural shelters, in some instances, in a high relief or a more or less mountainous topography, caves are not confined to Europe, regions as in the western United States, or in limestone areas such as Kentucky and adjacent states, exhibit the same characteristic features of steep walled valleys or box canyons and our own cliff dweller remains afford the best analogy to those and their utilization. In Europe the most famous of caves, those located in the Vezere and Dordogne and their tributaries in southern France and in Spain, while the equally famous shelter remains include stations of the Vezere and Homme valleys at Les Eyzies, in the French department of Dordogne, are well worth visiting, being picturesque and impressive, and barring some alterations in the flow of the rivers and perhaps much the general appearance since the arrival of paleolithic man. These caves and shelters are in the limestone formations and are the result chiefly of mechanical erosion. Some of the caves, especially those of the Dordogne, show still a process of making, while others, well up on the mountain sides, are very probably the result of the flow of the rivers at a time that entered them.

Roughly speaking, the shelters proper, that is, the overhanging cliffs and the open stations were the homes of paleolithic man and the occupants left behind us with important data concerning his physical make-up, his practical ability, and the general nature of his everyday life. The caves, on the other hand, served him mainly as galleries for a remarkable series of paintings, engravings and carvings, which in a manner reveal to us the mental attitude toward life. The caves, at least as understood, were essentially dark and damp, ordinarily unfit for habitation, except possibly as temporary retreat during the hard winters, and contrary to the earlier wails, having been exposed for thousands of years to the weather conditions, they could not have preserved their either paintings or delicate engravings that may have been made upon them. There are several somewhat qualifying exceptions to this sweeping statements however. For instance, the Gargas cavern, near Montespan, France, and likewise the Altamira cave, near Santander, Spain, appear to have been completely closed and protected, although in both cases only very close to the entrance. On the other hand, some of the shelters such as Cap Blanc, near Les Eyzies, France, have preserved, mainly through accident, a fine series of bas relief carvings. These, as a general thing the cave-dwellers in large halfcopes shelters usually facing the sun, while the entrances to the painted caves face in any direction, and for the most part are very small and inconspicuous. At Castillo only there is the perfect combination—a large sunny grotto, which was occupied periodically throughout the period of paleolithic times and which proved besides as the vestibule to a considerable cave famous for its mural art.

An examination of the various Dordogne shelters, coupled with a study of the changing types of tools in them, is most instructive. Nearly all of the stations here are at the base of the high cliffs that the rivers have cut through the valleys on one or both sides, but in a few instances the relic-bearing debris lies on an outer bend of the river, up the face of the protecting wall. Almost within sanshot of Les Eyzies are a series of stations which taken together furnish data on human life very practically from Acheulian times to the present day. These stations begin with the old deserted shelter of La Micoque, include the partially ruined shelters of Upper and Lower Laugerie, another independent that served old-time brigands as a rendezvous and also as a fortress to defy the English in 1410, still another lodge marked by ruins of what looks like some old baronial chateau, and end up finally with the more or less well-kept houses of the modern peasant. These houses often stand on several stories of ancient rock-shelters and seem to cling in an infinite sort of way to the overhanging cliff as if they were the outcome of some distance on the Vezere, at the Roc of St. Christopher, where we had seen have been, in the rock, more over four meters of debris dating from neolithic to present time, and the adjacent cliff is honeycombed with a series of earlier holes, cut for the insertion of ceiling beams, apparently as far back as the Aurignacian period. Some of these holes are high up the cliff, but others are quite near the surface of the present ground, which is itself below the high-water mark of the river. With all this evidence before us it is not to be wondered at that some students profess to see among the local inhabitants a number of individuals that resemble the physical type of paleolithic man.

A visit to the caves of Les Eyzies is an experience of a lifetime; but while it is an adventure bound to excite more enthusiasm than the examination of the shelters, the caves are perhaps not quite as fine, and they have not the same interest, for they are not so much concerned with the primitive life of paleolithic man. These caves and shelters are in a limestone formation and are the result chiefly of mechanical erosion. Some of the caves, especially those of the Dordogne, show still a process of making, while others, well up on the mountain sides, are very probably the result of the flow of the rivers at a time that entered them.

SPIRIT DESTROYS HIS HAPPY HOME

Wife Never Had Best of Temper, But Spiritualism Sends Her Amuck.

LEFT HIM 22 TIMES

Muttered at the Sink Because Water Didn't Run Fast Enough to Suit Her, Says Exasperated Husband.

Detroit, Mich.—Twenty two times in the last fifteen years Mrs. Helen Ward has packed her clothes, the family pictures and china and quit her job as the wife of John P. Ward, a middle-aged druggist and violin maker.

Twenty-one times John Ward laid aside his pestle and mortar or put by his fiddle, and unpacked the case might have been, and sought out his wife to plead until she returned and put back into their places the china and family portraits.

A few days ago, in a dingy back room of his drug store, with a partly finished violin across his knee, he told the story of how his home, his business and seven years of his life had been wrecked. "It was seven years ago," he said slowly, "that a woman entered my home with this spiritualism toofoolery.

"Mother took it up and wouldn't drop it.

"She never had the best of a temper, but we got along fairly well until she was medium-stricken. After that her temper is a weak word after all.

Spirits Bad-Tempered.

"The deeper mother got into spiritualism the sorier she became. She couldn't seem to get an amiable spirit. It wouldn't have been so bad if she had. I think it was either 'Black Hawk' or 'Red Eagle' departed Indian, whose spirit possessed mother. I've seen her, when she had 'em, mutter at the sink because the water didn't run fast enough to suit her.

"When I protested she would fly into a rage, pack the china and family pictures and out. Often it took two weeks to find her. When I did, sometimes she was sorry and ready to return. At other times she was urly and I had to coax her.

"When I thought she was nearly cured. A daughter by my first wife attended a seance. The next day she

Ransacked the Curio Room.

made a living dressing dolls in martial array. They reposed in little boxes against a background of white cotton. And I often observed them through a microscope. Their martial spirit had long since fled, but I hope they found to life and take vengeance on the thieves."

When no one was at home two men were seen to enter Mr. Randall's house at noon and leave an hour later. They carefully piled up a quantity of silver, but, left in ignorance of its value, spurned a gold and pearl necklace and numerous gold pins. They made their selection almost entirely from antiquities and curios, of which Mr. Randall has a large collection. Too only modern article they took was a few suit of clothes.

One of the most valuable objects missing is an antique Roman gold watch, which was presented to Mr. Randall in Venice by an Italian count, who, it is alleged, secreted and left behind a topaz stone which was set in the watch. Many rare Scottish, a cameo pin, bought in Scotland, a unique diamond and ruby ring and a Roman sword are the other articles of value within reach of the hand. In other words, the caves have undergone practically the same the artist did his work. Not a few of the valuables, and especially the finer carvings, were so fresh and so perfect in the Perigord caves is the representation of a fish incised on the wall and the visitor who examines it closely would swear that he could make a line exactly like it with a bad pen-knife and some bad ink. Nothing, and how did paleolithic man manage to do it and so quickly? It is unsafe to move ten steps in them without a light. It is true that a very few small basins have been found that may have served purposes similar to the Italian lamps, but while it is an adventure bound to excite more enthusiasm than the examination of the shelters, the caves are perhaps not quite as fine, and they have not the same interest, for they are not so much concerned with the primitive life of paleolithic man. These caves and shelters are in a limestone formation and are the result chiefly of mechanical erosion. Some of the caves, especially those of the Dordogne, show still a process of making, while others, well up on the mountain sides, are very probably the result of the flow of the rivers at a time that entered them.

Roughly speaking, the shelters proper, that is, the overhanging cliffs and the open stations were the homes of paleolithic man and the occupants left behind us with important data concerning his physical make-up, his practical ability, and the general nature of his everyday life. The caves, on the other hand, served him mainly as galleries for a remarkable series of paintings, engravings and carvings, which in a manner reveal to us the mental attitude toward life. The caves, at least as understood, were essentially dark and damp, ordinarily unfit for habitation, except possibly as temporary retreat during the hard winters, and contrary to the earlier wails, having been exposed for thousands of years to the weather conditions, they could not have preserved their either paintings or delicate engravings that may have been made upon them. There are several somewhat qualifying exceptions to this sweeping statements however. For instance, the Gargas cavern, near Montespan, France, and likewise the Altamira cave, near Santander, Spain, appear to have been completely closed and protected, although in both cases only very close to the entrance. On the other hand, some of the shelters such as Cap Blanc, near Les Eyzies, France, have preserved, mainly through accident, a fine series of bas relief carvings. These, as a general thing the cave-dwellers in large half-copes shelters usually facing the sun, while the entrances to the painted caves face in any direction, and for the most part are very small and inconspicuous. At Castillo only there is the perfect combination—a large sunny grotto, which was occupied periodically throughout the period of paleolithic times and which proved besides as the vestibule to a considerable cave famous for its mural art.

An examination of the various Dordogne shelters, coupled with a study of the changing types of tools in them, is most instructive. Nearly all of the stations here are at the base of the high cliffs that the rivers have cut through the valleys on one or both sides, but in a few instances the relic-bearing debris lies on an outer bend of the river, up the face of the protecting wall. Almost within

THIEVES ABDUCT RED-GARBED FLEAS

Bible Also Included in Plunder Taken From Home With Martial Insects.

Hartford, Conn.—If two curious and unusual burglars who ransacked the curio room in Herbert Randall's home bring forth fruits meet for repentance he thinks they will return an old Bible they took, whatever disposition they may make of two red-robed fleas they included in their booty. The Bible was printed in Greek, and was more than a century old. The fleas were considerably younger—and dead.

"The fleas were dressed in red uniforms," said Mr. Randall. "I bought them from an old lady in Seattle who made a living dressing fleas in martial array. They reposed in little boxes against a background of white cotton, and I often observed them through a microscope. Their martial spirit had long since fled, but I hope they found to life and take vengeance on the thieves."

When no one was at home two men were seen to enter Mr. Randall's house at noon and leave an hour later. They carefully piled up a quantity of silver, but, left in ignorance of its value, spurned a gold and pearl necklace and numerous gold pins. They made their selection almost entirely from antiquities and curios, of which Mr. Randall has a large collection. The only modern article they took was a few suit of clothes.

One of the most valuable objects missing is an antique Roman gold watch, which was presented to Mr. Randall in Venice by an Italian count, who, it is alleged, secreted and left behind a topaz stone which was set in the watch. Many rare Scottish, a cameo pin, bought in Scotland, a unique diamond and ruby ring and a Roman sword are the other articles of value within reach of the hand. In other words, the caves have undergone practically the same the artist did his work. Not a few of the valuables, and especially the finer carvings, were so fresh and so perfect in the Perigord caves is the representation of a fish incised on the wall and the visitor who examines it closely would swear that he could make a line exactly like it with a bad pen-knife and some bad ink. Nothing, and how did paleolithic man manage to do it and so quickly? It is unsafe to move ten steps in them without a light. It is true that a very few small basins have been found that may have served purposes similar to the Italian lamps, but while it is an adventure bound to excite more enthusiasm than the examination of the shelters, the caves are perhaps not quite as fine, and they have not the same interest, for they are not so much concerned with the primitive life of paleolithic man. These caves and shelters are in a limestone formation and are the result chiefly of mechanical erosion. Some of the caves, especially those of the Dordogne, show still a process of making, while others, well up on the mountain sides, are very probably the result of the flow of the rivers at a time that entered them.

FIGHTING THE WHITE PLAGUE

Discovery of Tuberculosis Germ by Doctor Koch Years Ago Inaugurated a Campaign.

The germ of tuberculosis was discovered 22 years ago by Dr. Robert Koch of Germany, who spent two years in laboratory work in search of it. The discovery changed the whole world's attitude toward tuberculosis.

Since the days of the ancient Assyrians the destroying germ has ravaged humanity, and in all the successive generations at least every sixth human being was at some time affected by its presence in the blood. Less than half a century ago the disease was regarded as fatal and hopeless. Some people looked on it as a divine affliction of the human race, and as indication of mankind's degeneration. Thirty years ago Europe was reported 1,000,000 deaths every year from tuberculosis and the United States was reporting at the rate of 450 every day.

Today the civilized nations of the world are conducting a general war against the tubercle bacillus. In the United States more than $10,000,000 is being expended annually for this purpose. The death rate in 30 years has fallen from a ratio of 345.4 to 100 to the 100,000.

Physicians have long known that the bacill lurk in everyone's system waiting for the vitality to sink to a low ebb when they can begin their fearful scourge. Consequently, the universal exercises to make every one strong enough to resist the destroyers. The world has thrown open its windows to let in sunlight and fresh air, knowing that these are fatal to the bacill. The old fear of "night air" has given way to the practice of living, sleeping and working out of doors where the bacilli cannot follow and live.

England's First Scientist.

The first great English scientist was Roger Bacon, who died 621 years ago. The exact date of his birth is unknown, but it is believed that this year marks the 700th anniversary. He was persecuted and condemned somewhat of his work destroyed, so that the extent of his discoveries cannot be definitely known. It is certain that he was centuries ahead of his time, and credulous times in chemistry, mathematics and mechanics, branded as a magician, he was thrown into prison. From 1277 until a short time before his death Bacon was immured in a filthy cell. He is said to have invented the camera obscura, the air pump and the diving bell, and he was acquainted with the uses of potash, known to the native of gunpowder, although the projectile power of the explosive appears not to have been discovered until the following century. It is said that during a war Bacon fire to the chief buildings in a town by using burning lenses.

The Revival of Shipbuilding.

Prosperity for the American shipbuilding industry is assured during a period of years, according to one, whatever may be the future of the merchant marine under the Administration. A group of 1ills reach a height of about 1,100 feet above the level of the sea, and in nearly all cases either extinct or almost from the region. Yet almost all the mineral ranges in the lands are within reach of the hand. In other words, the caves have undergone practically the same the artist did his work. Not a few of the valuables, and especially the finer carvings, were so fresh and so perfect in the Perigord caves is the representation of a fish incised on the wall and the visitor who examines it closely would swear that he could make a line exactly like it with a bad pen-knife and some bad ink. Nothing, and how did paleolithic man manage to do it and so quickly? It is unsafe to move ten steps in them without a light. It is true that a very few small basins have been found that may have served purposes similar to the Italian lamps, but while it is an adventure bound to excite more enthusiasm than the examination of the shelters, the caves are perhaps not quite as fine, and they have not the same interest, for they are not so much concerned with the primitive life of paleolithic man. These caves and shelters are in a limestone formation and are the result chiefly of mechanical erosion. Some of the caves, especially those of the Dordogne, show still a process of making, while others, well up on the mountain sides, are very probably the result of the flow of the rivers at a time that entered them.

Roughly speaking, the shelters proper, that is, the overhanging cliffs and the open stations were the homes of paleolithic man and the occupants left behind us with important data concerning his physical make-up, his practical ability, and the general nature of his everyday life. The Smashed Vases Valued at $150, While the Officer Looked On.

was possessed of the spirit of her departed mother. Her mother seemed to have had a little bit and the powers she summoned, could not, above mere rap, rap, spirit retreat over the dividing.

"Two or three years ago, when the light skirt had its fading, mother made one. After she put it on she came downstairs twisted herself before the mirror and said, 'How do you like it, Ma?'

"It's all right, mother," I answered, "but put your foot on the table." She did, and then I said, 'You will make a display, mother, when you get on a good car.'

"That tight when I went upstairs after closing the store, mother, her clothes, the pictures and the china were gone. I found out where she was, but the wouldn't return. She had placed the china and several hand painted vases at a friend's and got a sort of replevin to get them back.

"When the officer went to serve the writ mother was there. What could he do with the spirit of Black Hawk or Red Eagle? I guess not much.

"In addition to breaking up our home it has taken mother's time, mother traveling with the spirits of Indians and Chinamen for a hundred years ago.

"Mother has had to tip Caesar, Hiram and Sam and other fellows who are conductors on the transcelestial trains, or maybe they're in the subway, I've forgotten, though mother told me once. I've paid the fares, I know, now, but—no, I don't believe that mother had a good time out of it.

Record Order for Sheepnut.

Philadelphia.—An order for 50,000,000 sorts of sheepnut for the allies is the largest ever placed in the United States by the warring countries at one time, or with any company—has just been entered by the Baldwin Locomotive works of Philadelphia.

Inventor Has "Invisible Submarine."

Denver, Colo.—Patrick Keenan of Philadelphia has applied for a patent on what he characterizes as an "invisible submarine." Keenan's idea is to divide the portions of the craft above water with canvas so that they will reflect the color of the water.

MOST BEAUTIFUL WORD

CHOICES MADE BY STUDENTS OF DIFFERENT AGES.

Some of Them Are Interesting, Pathetic, and Some Amusing — College Professor Gives Result of His Investigations.

What is the most beautiful word in the English language? A college professor, who has been teaching for a number of years, has collected some interesting facts concerning the preferences that schoolgirls and schoolboys entertain for certain words. He has made the experiment with some 20 classes, all the way from an ungraded class in a country school to the senior class in college.

At the conclusion of a recitation the teacher has had little slips of blank paper distributed. He has then requested each pupil to write down—without consulting his neighbor—what he thought the most beautiful word in the English language, giving consideration both to sound and to sense.

Of the 600 pupils that he has had, 495 wrote the name "mother;" 82 wrote "home;" 40 "father;" 16 "God;" 14, "vacation;" 11, "baseball;" 9, "football;" 7, "love;" 5, "sister;" 3, "mother and 2, "grandmother." The following words received one vote each: "grandma," "vesper," "moonlight," "hope," "rose," "hyacinth," "angel," "music" and "swimmer hole." Of the remaining 14, one, a response from a very bright boy, puzzled the professor. That boy wrote "door." When asked about it, he professed to "certain disk," and explained, "Oh, it just sounds pretty."

The other 13 ballots, all for the same word, amused and perplexed the professor. They were all handed in at the same time, from a class of 22 healthy, growing, hard-working country boys. There was the teacher in the state, no opportunity for collusion. The ballot was taken silently. Each ballot was then folded and dropped into a hat that the teacher asked one of the boys to pass around.

Those 13 citizens-to-be deliberately wrote down the ugly-sounding, grunting, hissing, thoroughly unattractive word "virtuals." What could have been more suggestive of that teacher's opportunity than the fact that nearly half of a class of 22 immortal souls thought "virtuals" the most beautiful word in the English language?

And what higher compliment could be paid to motherhood and the Ancient Home than the fact that 527 of these 600 boys and girls, young men and young women, independently, and at various times and places selected words that suggested family relationship as the sweetest words in their language?—Youth's Companion.

Not Very Comforting.

Mark Twain at a dinner at the Authors' club said: "Speaking of fresh eggs, I am reminded of an incident in my early lecturing days. I went to Squash to lecture to Temperance hall, arriving in the afternoon. The town seemed very hourly. I thought I'd find out if the people knew anything at all about what was in store for them. So I went into a general store. 'Good afternoon, friend,' I said to the general storekeeper. 'Any intimation there will be anybody to hear a stranger while away his evening?' The general storekeeper, who was sorting mackerel, straightened up, wiped his fishy hands on his apron and said: 'I expect there's goin' to be a lecture. I been selin' eggs all day.'"

Something New in Knives.

Every device which helps to make housework easier should be welcomed, and one of the best things that have been invented in this connection is the new stainless knife. Knives made of it have not to be cleaned in the old way, they merely have to be wiped and could soon be in universal use. Here is a paragraph from a trade paper:

"Sheffield appears to have made up its mind that stainless cutlery is to come to stay, in spite of the fact that it is apparently dearer than ordinary cutlery.

This stainless cutlery is sold in sets, three times as expensive as usual, but as yet it has not been placed generally on the market.

"Spinster."

The word spinster is a form or variation of spinner, one who spins, meaning an unmarried woman who was supposed to occupy herself with spinning. In its primitive sense and meaning the word is of early Anglo-Saxon origin, when no young woman was thought to be a wife till she had spun for herself an outfit of personal table and bed linen, hence spinner or spinster. The fine and sacred word wife (Saxon wif) has a different similar origin in the Saxon verb weave, or weaven to weave, the weaver being the natural successor of the spinner. There was nothing derisive in the term spinster and it is still used in formal documents to designate an unmarried woman.

His Third Set.

From the state of Indiana comes a story about a civil war veteran who is getting his third set of teeth. He is seventy-five years old, and declares that he never had a dentist removed any of his teeth, but that he really allowed them to wear out. When his teeth began to loosen a few months back he supposed he had a case of neuralgia due to dampness, but finally the teeth came out of the socket, leaving the gums sore. Thereafter he could not eat anything but soup, and he was in a very weakened condition. Then he bethought himself that he had worn out his first set of teeth, and that he had worn out his second set, and he concluded that he had worn out his third set, and that it was time for him to get a new set. He ordered them, and they came, and he put them in his mouth, and they fitted, and he ate a good dinner, and he is now in good health.

MICHIGAN'S SOILS AND MINERAL RESOURCES

By R. C. ALLEN, STATE GEOLOGIST

From "Michigan—the Land of Plenty" the state of Michigan comprises two great peninsulas, separating the waters of Lakes Superior, Michigan and Erie, and about 200 islands, including Isle Royale near the north coast of Lake Superior and the historic and beautiful island of Mackinac in the straits of Mackinac. It has a total land area of about 59,000 square miles. Situated in the heart of the continent, holding within its borders 5,000 sparkling inland lakes, surrounded by the waters of the Great Lakes which are the greatest inland waterways in the world, with a coast line of more than 1,800 miles indented with bays and harbors and fringed with islands, Michigan enjoys remarkable commercial and climatic advantages. The commercial advantage arises from the fringe of important manufacturing and shipping centers along the lake shores, and the climatic advantages by the variety and specialized character of its agricultural pursuits, as well as by its hundreds of thousands of summer residents and visitors who are welcomed from the long and enjoyable summer climates of other states and conditions.

The surface of Michigan presents a great variety of formations, some of which have their origin in geological processes which were attendant on the advance and retreat of the glaciers, which have their origin in geological processes which were attendant on the advance and retreat of the glaciers, covered the central continent as far south as the Ohio river. To continental glaciation we are indebted for Great Lakes themselves, and hence our insular climate, but also for the character and diversity of our land forms, the configuration of the coast, our inland lakes, and our many and varied types of soil. The flat lands or plains which extend from the southeast corner of the state northward in a fringe half around the "Thumb," occupying all of the famous Saginaw valley, are part of the ancient bottoms of the ancestral Great Lakes. With the exception of these flat lands, and other similar but smaller tracts, the surface of the southern peninsula is mostly rolling or undulating plains alternating with hills and irregular tracts of hills. The elevation of the surface rises farther eastward from the lake shores, and the interior are divided by a remarkable broad valley, extending from Saginaw bay via Grand river to Lake Michigan into a northern highland and a southern highland. The northern highland is an extended tract of country reaching from Otsego, Montmorency and Alcona counties southward to Lake Newaygo and Mecosta counties. The elevation of this tract ranges from 1,000 to 1,600 feet above the level of Lake Michigan. The highest point in Lower Michigan is a few miles northwest of Cadillac in northern Wexford county, where a group of 1ills reach a height of about 1,100 feet above the level of the sea, and in nearly all cases either extinct or almost from the region. Yet almost all the mineral ranges in the lands are within reach of the hand. In other words, the caves have undergone practically the same the artist did his work. Not a few of the valuables, and especially the finer carvings, were so fresh and so perfect in the Perigord caves is the representation of a fish incised on the wall and the visitor who examines it closely would swear that he could make a line exactly like it with a bad pen-knife and some bad ink. Nothing, and how did paleolithic man manage to do it and so quickly? It is unsafe to move ten steps in them without a light. It is true that a very few small basins have been found that may have served purposes similar to the Italian lamps, but while it is an adventure bound to excite more enthusiasm than the examination of the shelters, the caves are perhaps not quite as fine, and they have not the same interest, for they are not so much concerned with the primitive life of paleolithic man. These caves and shelters are in a limestone formation and are the result chiefly of mechanical erosion. Some of the caves, especially those of the Dordogne, show still a process of making, while others, well up on the mountain sides, are very probably the result of the flow of the rivers at a time that entered them.

Roughly speaking, the shelters proper, that is, the overhanging cliffs and the open stations were the homes of paleolithic man and the occupants left behind us with important data concerning his physical make-up, his practical ability, and the general nature of his everyday life. The caves, on the other hand, served him mainly as galleries for a remarkable series of paintings, engravings and carvings, which in a manner reveal to us the mental attitude toward life. The caves, at least as understood, were essentially dark and damp, ordinarily unfit for habitation, except possibly as temporary retreat during the hard winters, and contrary to the earlier wails, having been exposed for thousands of years to the weather conditions, they could not have preserved their either paintings or delicate engravings that may have been made upon them. There are several somewhat qualifying exceptions to this sweeping statements however. For instance, the Gargas cavern, near Montespan, France, and likewise the Altamira cave, near Santander, Spain, appear to have been completely closed and protected, although in both cases only very close to the entrance. On the other hand, some of the shelters such as Cap Blanc, near Les Eyzies, France, have preserved, mainly through accident, a fine series of bas relief carvings. These, as a general thing the cave-dwellers in large half-copes shelters usually facing the sun, while the entrances to the painted caves face in any direction, and for the most part are very small and inconspicuous. At Castillo only there is the perfect combination—a large sunny grotto, which was occupied periodically throughout the period of paleolithic times and which proved besides as the vestibule to a considerable cave famous for its mural art.

An examination of the various Dordogne shelters, coupled with a study of the changing types of tools in them, is most instructive. Nearly all of the stations here are at the base of the high cliffs that the rivers have cut through the valleys on one or both sides, but in a few instances the relic-bearing debris lies on an outer bend of the river, up the face of the protecting wall. Almost within

to that of the soil itself. Vast areas of good agricultural land, mainly in the southern part of the state, await settlement and development. The energetic purchasers of land and prospective settlers should be guided mainly by accurate information regarding local conditions and personal or other trustworthy knowledge. The popular description of land of which purchase is considered, and it should be emphasized that no matter and no amount of printed matter can take the place of a personal visit to the ground.

The assistant of Michigan lays claim to a distinctive position in each of the leading industries of the nation, viz., agricultural, manufacturing, mining and lumbering. Michigan has been known as a great farming state about fifty years ago from shallow borings for salt, which, of course, is a product of the sea. Many of the farmers in the southeastern part of the state and some places elsewhere obtain gas from shallow borings for domestic purposes. It is the belief of many people that Michigan will rank first in the near future in percentage of oil and gas.

Copper.

The copper industry in Michigan began as early as 1845. The mines are located on Keweenaw point and southwestward in Dickinson county. Michigan has the distinction of being, all years considered, the largest contributor in metallic copper, of exhibiting the largest copper mining operations, of attaining the lowest cost per ton of ore handled, and of producing the ore of lower grade than are mined elsewhere and of paying larger total dividends than any other mine. The distinction of being the largest producer of refined copper is valued at from $24,000,000 to $30,000,000 annually, and the price of the metal.

Copper occurs in native form, mainly in combination with sulphur, in the Keweenaw point and Iscia copper lode is three miles long and twelve to fifteen feet thick, and the depth of the mines, etc., the question with the mining companies relates not so much to expansion of the operations as to the margin of profit that the deposits may be found to yield on exploitation.

Iron.

Iron was discovered in the Lake Superior region in 1844 near Marquette by William A. Burt, surveyor and the employ of Dr. Douglass Houghton, the first state geologist of Michigan. For nearly half a century, prior to 1901, Michigan held first place in the production of iron ore. Since that time the production of Minnesota has been much greater than that of Michigan. The main centers of iron mining are located on Menominee, Gogebic, Marquette ranges, Norway, Iron Mountain, Crystal Falls and Iron River on the Menominee range, and Ishpeming, Negaunee, Marquette and the Gogebic range.

As old mines are abandoned new mines are started on new discoveries of ore, and although Michigan has been mining iron ore for nearly half a century there still remains in the ground ready for mining almost, if not quite, as much iron ore as has been produced in all the preceding years. In other words, more ore is developed and discovered each year on the iron ranges than is mined that year, and at the present time the outlook is exceedingly encouraging for an indefinite long and prosperous period of iron mining.

Copper.

Copper is found in Michigan as early as 1845. The mines are located on Keweenaw point and southwestward in Dickinson county. Michigan has the distinction of being, all years considered, the largest contributor in metallic copper, of exhibiting the largest copper mining operations, of attaining the lowest cost per

Board of Education

Charlevoix, Sept. 7, 1915

Regular meeting of the Board was called to to order by President Hampton. Trustees present, Hampton, Bridge, Glassford and Biller. Absent, Nordrum.

The treasurer's report shows a balance of $4028.96.

The following bills were presented and read.

General Fund Orders

417 Alonzo Ferguson, plowing	$ 3.00
418 Chas. Hagerman, plowing	3.00
419 John Cook, Treasurer, wire	.35
420 John Cook, Treasurer, wire	.35
421 Wm. Hankins, teaming	2.00
422 Wm. Hankins, teaming	2.00
423 Jos. Nelles Estate, cleaning	2.00
424 Herbert Gibson, teaming	2.00
425 Lumber Company, supplies	2.00
426 Cook Paint & Oil Co.	10.00
427 H. H. Hinkley, supplies	100.00
428 Chas. Hagerman, plowing	3.00
429 A. F. Bridge, clerk hire	5.00
430 A. F. Bridge, clerk hire	5.00
431 Chas. Hagerman, plowing	3.00
432 Chas. Smith, supplies	2.00
433 Chas. Smith, supplies	2.00
434 Chas. Smith, supplies	2.00
435 Chas. Smith, supplies	2.00
436 A. G. Hallsey, labor	2.00
Total	$ [illegible]

Moved and supported that the bills as read be allowed and the secretary be instructed to draw orders on the various funds for the amount of each respective bill. Motion carried.

These minutes were read and approved and on motion the Board adjourned.

E. J. HILLER, Secretary.

REALIZATION OF ARTISTS' DREAMS

In the feature covering a journey through the Panama Canal to the California Expositions to be presented by Lyman H. Howe at the Majestic on October 4th there are many architectural gems that are the realization of artists' dreams, such as the tower of Jewels, and the triumphal arches and beautiful statuary that adorn the courts at the San Francisco Exposition. To see Howe's reproduction of the other Exposition at San Diego is as though the wave of a magic wand you left behind the hum and rush and roar of the twentieth century and found yourself back in a city of ancient or mediaeval Spain. The Spanish "atmosphere" has been carried out to the finest detail. Howe's films of both expositions are the most complete, striking and interesting ever obtained within the confines of any Exposition. They show conclusively that, for instance, the San Francisco Exposition in scope and beauty is indeed the "fifty million dollar show" that it set out to be. For sheer beauty, the wonders inside the magic gates of both expositions eclipse all that men have looked upon, and it seems almost unnecessary to add that Howe's camera men have transcribed them in perfect detail to their films.

Beaver Island News

Mr. W. Ripley and daughter, of Charlevoix spent a few days here last week.

Mrs. Let Shay and two daughters of Harbor Springs arrived here Tuesday with their car to spend a few days visiting friends.

Mrs. Gooseman and Miss Jessie returned home Saturday after spending a month on the main land visiting friends.

Supervisor John W. Green returned home Tuesday after spending several days in Charlevoix on business.

Albert Gibson, of Petoskey, is here visiting his aunt, Mrs. James Gibson.

Nels Jensen and Peter Nelson went to East Jordan last week on business.

Capt. Charles Roe, of Harbor Springs, was here Tuesday.

Mr. Northcutt, of Garden Island, returned home Monday after spending a week in Petoskey and Charlevoix on business.

Miss Rachel Donlevy went to East Jordan last week to visit friends.

Dan D. Doyle went to East Jordan on business.

John S. Stevens went to Carp Lake on business last week.

Harry Hardwig returned home after spending ten days at Escanaba on business.

James E. Gallagher and M. J. McCann attended the county fair last week.

Mrs. Peter McCafferty and family, of Charlevoix, were over visiting Mr. McCafferty's mother.

Mrs. Karnes, of Chicago, returned home last week after spending the summer on her farm.

Mike McCafferty arrived home on the Monday boat for a week's visit with his parents.

EVERY HOME NEEDS A FAITHFUL COUGH AND COLD REMEDY

When seasons change and colds appear—when you feel tired & cold after sitting next to one who has sneezed, then it is that a tried and trusted remedy should be faithfully used. "I never write a testimonial before, but, I know positively that for myself and family, Dr. King's New Discovery is the best cough remedy we ever used and we have tried them all." 50c and $1.00.

Local and Personal Notes

R. W. Kane went to Lansing Monday evening.

Judge Mayne is holding court at Alpena this week.

Have you guessed on the electric stove at Wood Bros?

Miss Dorris Kane left for a short stay in Chicago, Monday.

Art VanAllsburg left here Friday for Buffalo with a carload of cattle.

Count the porcelain knobs in Wood Brother's window and win a $5.00 electric stove

Mrs. Chas. Novak and children left Saturday for a week's visit with relatives in Saginaw.

The steamer Columbia made the Beaver Island run Tuesday, while the City of Boyne cleaned boilers.

The last attraction of the summer season at the Opera House, Friday, Sept. 17, "Don't Lie to Your Wife."

Capt. Wm. Finucan, having laid up the steamship Manitou at Manistee, arrived home Saturday on the Illinois.

A. L. Durgan, a former resident of Charlevoix, now living at Columbiaville, Mich., is here for a week's visit with friends.

Geo. Coon, of this city, was adjudged an insane person in probate court, Tuesday, and sent to the Traverse City State hospital.

W. T. Driggett, Wm. Wallace, Ben Brown and James Rogers, with their families, in three automobiles, made a Cheboygan trip Sunday.

The steamer Fannie Roen, of the Boyne City route, has laid up. The Roen gasoline boat Harry L. takes her place the remainder of the season.

Dell Prevost, Allen Shapton and Harry Gebo left Monday for Decatur, Ind., to work in the sugar factory this fall and probably most of the winter.

Phil. Beaudoin left Saturday for Gloucester, Mass., where he will spend the fall and winter in salt water fishing. Mrs. Beaudoin spent the summer in Gloucester.

"The Spendthrift," at the Majestic on Friday night of this week is said to be a most perfect portrayal of the scenes of that wonderful play. It is staged by some of the most eminent "Movie" artists, and great things are said of it.

One of the greatest moving picture films now on circuit is "The Spendthrift," booked for the Majestic for Friday night of this week. This is in line with the many splendid attractions which manager Miles has given the public this season.

"Bob" Bridge has followed the straight and narrow path that has led him into the front rank of northern Michigan theatre managers. His management of the Charlevoix Theatre the season just closing has amply proven his ability. His attractions have all been good, and we may expect no boneafide profit in the handling of high class entertainment, by Bob's experience.

Now, the publisher of this paper is not starving, and is in no danger of starving, as long as the poor house at East Jordan is in commission; but he is compelled to pay taxes, insurance, and buy coal, to say nothing of the ordinary expenses of running a good country newspaper. Just trot in with the amount you owe on subscription. It will come easier than it will about one year right now in the trouble of making a more urgent request. Come on now.

Street commissioner Link has the Bridge street hill pavement job well along. It is to be surfaced with trap rock and tarvia. When this job is completed Belvedere avenue to Alice street will be oiled, and at least a portion of Clinton street similarly treated. The re-surfacing of the Bridge street Bituliti pavement with gravel and tarvia will probably be done in October. The contemplated work on Antrim street has not yet been fully decided upon.

The West Michigan Fair Association is about to begin setting the most novel sign posts ever seen in this state. They are made of cement and are seven inches square, set three feet in the ground and rising six feet high. They are of a reddish concrete, and will withstand any rough usage. The posts will be marked "West Michigan Fair." The letters are recessed and painted jet black. They will be set up one to a mile, with two at road intersections. Many of the posts will be set up this fall.

The potato crop throughout the central counties of Michigan has been damaged by frost and excessive rains to such an extent during the past few weeks that big losses will be suffered by potato growers, according to Geo. H. Gage, who a few days ago was sent out from M. A. C. to investigate the potato situation. The damage, it is said, will in a great many cases run as high as 25 to 50 per cent of the entire crop, and in some instances will reveal this. In many counties not dig again, but in Clinton, Ionia, Livingston, Ingham and Newton counties, the so-called brown blight caused the heaviest losses. The excessively wet weather of the past few weeks is reported to have been exceedingly favorable to the growth of disease-producing bacteria in the tubers.

Northern Michigan

Petoskey News: According to information just received in Petoskey, Congressman Frank Scott, of Alpena, has just appointed Frank Hinkley, son of Mrs. Homer W. Hinkley, of 711 Mitchigan street, a cadet at West Point military academy. Mr. Hinkley is a nephew of Representative H. H. Hinkley, of this city, and has been attending the New York Military academy at Cornwell-on-Hudson, New York.

Emmet county supervisors are planning to raise three mills next year instead of a mill and a half for good road purposes, and will spend $50,000 on trunk line highways, making the Dixie trail complete clear across the county from north to south. A complete circuit of the outside boundaries of the county will be made with the highways and it will have concrete highways leading into Petoskey and stone highways leading into Harbor Springs.

Petoskey News: The following letter to John L. A. Calcier bringing complete erable speculation as to whether the Michigan fish commission will decide next spring to establish another fish hatchery here in Petoskey. Years ago there was a hatchery here but it became too small and was removed to Big Rapids or Paris where it is now being successfully operated. Mr. Calcier Representative D. H. Hinkley, backed by the proposed Petoskey Rod and Gun club, will make every effort to bring the state hatchery back to this city and the city and northern points last Saturday.

Mrs. Auerbacher, of Louisville, Ky., a well known resort lady of advanced age, was stricken with paralysis in the Belvedere dining room last Thursday. She was carried to her room, where she died soon after.

DEATH OF A. R. STRUTHERS

Andrew R. Struthers died at his farm home in Hayes township on Tuesday morning, aged 74 years. Although he had been a sufferer from diabetes for several years, the immediate cause of his death was blood poisoning, caused by cutting his hand with a rusty knife.

Mr. Struthers was one of the earliest settlers of this section, having located on a homestead in South Arm township in 1869, and for several years he was supervisor from that township.

In 1880 he was employed by A. Fox & Co. and the following year and for several years thereafter he was engineer of the big Minnie Warren, owned by Hodgington, Nelson & Co., predecessors of the present Charlevoix Lumber Co.

About twenty-five years ago he became a resident of Hayes township, where he has since lived. He is survived by his wife and seven children, Andrew and Mrs. Henry Howe, of Hayes and Robert, Charles, Mrs. Henry Hagerty and Mrs. Peterson all of Oregon.

COUNTY FINANCES

As reported by County Treasurer George W. Weaver, for the month of August.

Lepers Allowed to Mate.

The Russian Medical council has given permission for lepers to marry with each other, but not with healthy mates. The Lancet remarks that as the birth-rate among lepers is very low, the percentage of infant leprosy is only about five per cent. But it adds, "it is imperative that arrangements be made in advance, and the reasons carefully explained beforehand to the leprous parents, to remove at once any newly born infant from the custody of its mother to a distant home provided by the authorities where the child may grow up without danger of acquiring the infection from its maternal parent."

For leprosy is not believed to be hereditary, but the intimate contact between a mother and a nursing baby is the surest means of conveying the infection.

Hard on the Salesgirl.

A lady was shopping and incidentally got into conversation with the salesgirls, boasting particularly about the cleverness of her little daughter at home. "You must to be proud of her," said the girl, at the same time taking up a picture book. "Don't you want to take this home as a present for her?" "Thank you, I think not," said the woman, taking the book and dropping it into her shopping bag. "Bills will be sent round when I tell her you sent it." To the girl's dismay the manager marched over with the book and the girl had to pay for it.

Working Wrought Iron.

In a paper read before the Society of Chemical Industry the statement was made that the strength of cast iron was affected by the addition of wrought iron in the following proportions: With 100 parts of cast iron, 10 parts of wrought iron increases the strength 3 per cent; 20 parts of wrought iron increases the strength 12 per cent; 30 parts of wrought iron increases the strength 6 per cent; 40 parts of wrought iron increases the strength only 23 per cent. The maximum strength is reached by a product with 30 per cent wrought scrap.

A Martyr to Thrift.

"You must bring home some tomatoes tomorrow."

"But you don't like tomatoes, my dear."

"Never mind. I have half a bottle of mayonnaise dressing that positively must be used up."—Louisville Courier-Journal.

Guard Against Contagious Disease.

Cars contaminated by germs for disinfecting the clothing and baggage of persons who have been exposed to contagious diseases have been put into service by an Italian railroad.

If Dollars Count With You---
$ You will surely have a Wooltex suit or coat. $
WOMEN who are economical buyers, as well as lovers of good style, are among the greatest admirers of the Wooltex tailored garments.
They know by experience that Wooltex garments give more distinctive and stylish garments, made in the ordinary way.
They can tell you how much this label means to every buyer of a tailored suit or coat.
Wooltex
It will be found inside the collars and waistbands of garments designed by America's most skillful style artists.
It is a mark of stylish correctness. Garments that have this label are always right, yet they possess a stylish elegance so much desired by the well-dressed woman.
And then, Wooltex suits and coats are so carefully made that they will retain their handsome trimmings, their smart individuality and their freshness much longer than garments less skillfully tailored.
Judge them by your own strict standards for permanent satisfaction, yet they possess a stylish elegance so much desired by the well-dressed woman.
Wooltex garments are ideal for women who want to be well dressed at moderate cost.
We recommend particularly for your consideration the Wooltex Coats at
$15.00
We Close at 6:00 P. M. Except Saturday Eve.

Strength — Organization Service
These three essentials are conspicuous in The Charlevoix State Savings Bank: (1)—Strength of resources and management which guarantees security. (2)—A strong, efficient and vigorous organization which assures the ability to serve clients well, and (3) that spirit of service which seeks to give clients the most manner that the law permits, consistent.
You can avail yourself of this united strength, organization and service by carrying your account with this bank.
We pay 4 per cent interest on Savings accounts. Open an account today. Telephone No. 199 or call at our bank and any officer will answer your questions.

WHO IS A REPUBLICAN?

Former President Taft is quoted as saying that the Progressives of 1912 may come back into the Republican party in 1916, but they cannot bring their principles along with them.

Mr. Taft's admirable personal qualities have served to give him an affectionate place in the minds of many of his fellow citizens, but we are not aware that these qualities or the fact that he was once our President permit Mr. Taft to pose as the sole judge of individual qualification for classification as a republican. Further, we do not believe that any body of men now possess such power. The Republican party is not a social club. It has no committee on membership to whom intending Republicans must submit themselves. There are no black-balls in our party paraphernalia.

Men join the Republican party, or act with it from time to time, from conviction; because Republican doctrine is contained in the Republican platform appeals to their reason; or because of qualifications or the attractive personality of Republican candidates. These are the only limitations upon membership in the Republican party; and they permit the widest latitude for individual opinion because there are many matters which may be of commanding importance to a State or to a group of States and which never find expression in national issues.

Moreover, platforms change with the times. There are certain cardinal Republican doctrines which are unalterable—such as a government by law rather than by man, a tariff for protection, a vigorous foreign policy, an efficient currency. But a party of growth and of advance like ours adapts itself to the needs of the occasion. For example, the plank in the platform of 1908 relating to labor and injunctions—a plank, by the way, for which Mr. Taft contended earnestly—could have found no place in the platform of 1860 because no occasion existed for it at the earlier date.

Therefore, who can tell what will be in the platform of 1916? A Government by law rather than by men? Most assuredly. A protective tariff? Yes. Efficient currency law? Certainly. A sterling expression of foreign relations? Without doubt. A just indictment of the present administration? Emphatically yes.

Those will form the basis of Republican doctrine. Whoever subscribes to them will be a republican. He may hold whatever other views he may choose. He may try to win others to views into the platform. If they are sound views, he will succeed. But if he fails and he still acts with the Republican party, he may hold to what, over opinions he pleases as to some justice, the initiative, the referendum, the recall, or any other fundamentals of government. So long as he votes the republican ticket he will be a good enough republican for us and will not be with Mr. Taft, or with any other ex-President, or with any individual anywhere to say differently.

The Republican party is the party of liberty—and that is why Mr. Taft can say that he joined and why any other Republican may say what he pleases, so long as he acts in harmony with the major doctrines of the Republican party.

County Normal Notes

SADIE DONLEVY

Miss Florence Milner was enrolled in the normal class Wednesday morning.

Mrs. Coulter gave the first lessons in music and drawing to the normal class Friday morning.

Miss Ethel Sanford, graduate of the class of 1915, is teaching at Goodhart. She has an enrollment of fifteen pupils.

The normal class analyzed several kinds of weeds Friday afternoon in connection with the work in elementary agriculture.

The normal class was also visited by Ward Gossett and Fred Gregory, both of whom gave a short talk to the class with regard to their college work.

Word has been received that Marie Lamiman, a member of the class of 1915, is teaching at Antrim City. She has an enrollment of ten pupils.

Miss May L. Stewart, County School Commissioner, visited the normal Tuesday afternoon. Miss Stewart gave an interesting talk to the students on the value of normal training to teachers.

Value of Various Stones.

The wearer of an emerald will be able to discern false friends and be insured of success in love. The garnet's coloring, unlike the rest of the ruby, assures constancy and fidelity. Wear a moonstone for good luck.

Serious Affliction.

"Sigrius is always reading up on germs and worrying about his health." "Yes. There's not much hope for him. Germs are bad enough if you get them in your system, but they're worse if you get 'em on your mind."

Father Flaky.

"What made you distrust that flat tire referee? I thought he told a straight story." "It sounded so, but when I questioned him as to his home and occupation he said he was a street cleaner in Venice."—Baltimore American.

BOUND OVER TO CIRCUIT COURT

Prominent Boyne City Man Held to Circuit Court on Charge of Aiding and Abetting Witness to Leave County

I. B. McLean, the Boyne City real estate man, was arraigned in Justice Cooper's court Monday on the charge of "obstructing the due course of justice" by inducing and aiding the complaining witness in a local option violation case to leave the county.

The details of the charge are as follows: Harvey E. McLean, a brother of the defendant, was under bonds to appear at the August term of the circuit court on a charge of violating the local option law. The complaint against him in this case was Francis LaMart, who failed to appear in court.

It is charged that I. B. McLean financially assisted and induced LaMart to disappear. The result of the examination of McLean before Justice Cooper in the people's case. McLean was bound over to the December term of the circuit court in the sum of two thousand dollars, with C. I. Bellamy and Frank Thompson as sureties. Prosecutor Lewis has charge of the case for the people, and J. M. Harris is counsel for defendant.

LYMAN HOWE'S TRAVEL FESTIVAL AND THE CALIFORNIA EXPOSITIONS

If you miss seeing the California Expositions this year by missing the transcontinental journey, or the splendid equivalent of viewing them via Lyman Howe's Travel Festival at the Majestic Theatre on October 5th you will miss what is indeed the opportunity of a lifetime. To travel to these expositions while remaining at home may seem contradictory. Yet that is exactly the privilege that local amusement patrons may enjoy via Lyman H. Howe's Travel Festival. Recognizing that a comparatively small percentage of the nation's citizens could find the opportunity to make the long journey to the Pacific Coast Expositions, Mr. Howe is bringing them here, so that everyone will have the pleasure of viewing them at infinitesimal expense, and in the perfect ease of a comfortable theatre chair without the exhaustion and fatigue brought on by tramping all day and day after day. Visions of new and supreme beauty and wonderment are unfolded by Mr. Howe's films that are beyond the means of the most vivid imagination. For these Expositions are truly on a scale of magnificence befitting the tremendous achievement they celebrate.

The vast courtyards around which colonnades sweep to the right and left, triumphal arches of heroic size and crowned by great symbolic groups and the vast domes and pinnacles of the Panama-Pacific Exposition at San Francisco are portrayed scenery in a feature that was filmed by his own camera men exclusively for this exhibition. But the feature as presented by Howe comprises much more than the entrancing beauty of the San Francisco Exposition for it also includes comprehensive scenes of the Exposition in San Diego with its wealth of architecture, as well as a trip through the Panama Canal from ocean to ocean. The San Diego Exposition is a grouping of buildings of the purest Spanish colonial architecture—including both the magnificence of the Cathedrals of Spain and the quaintest of the old missions.

Besides "A trip through the Panama Canal to the California Expositions," the current Lyman H. Howe program will have many other features, including several wonderful new cartoon comics.

THE GOLF LINKS

Reputation of Charlevoix as a Golf Center is Causing an Epidemic of Spasms

It makes a Charlevoix golfer laugh to read the following:

"The Grand Hotel at Mackinac Island now has a crew of men at work erecting their golf lockers and shower baths and another crew of men erecting their nine-hole golf course just in front and to one side of the hotel. The manager of this hotel has come to realize that he must have a golf course for his guests which movie men have been forced to drive to the far side of the Island in order to play."

The Mackinac Island "golf links," according to the above, will be about as extensive as the Charlevoix bean ball field. The Charlevoix links, which, by the way, are said to be the best in the State, extend a mile and a half into the country, and embrace level farm lands representing a value of over $50,000. They have a pipe line that covers every foot of the field, for watering, and two rest homes for members of the club. This field is so crowded that a movement is on foot for another. Following is from the Petoskey News:

"Petoskey is surely going to have that golf grounds for there are already twenty-six members in the proposed club and fully that many more are only waiting for the paper to be brought to them to sign for membership of what will be called "The Petoskey Country Club."

The renown of Charlevoix as a golf resort has made some of these hill-side, "pant up Utica," places sit up and take notice.

BUSINESS ENLARGEMENT

Blanchard Hardware Co. Reorganized as Stock Company With Increased Capital—Large New Store to Be Erected at Once

The pioneer hardware concern, conducted for several years, since the death of L. D. Barthelemew, under the name and style of The Blanchard Hardware Co., of which the late F. S. Blanchard was sole owner and manager, and which, since the death of Mr. Blanchard has been conducted by his heirs, the Barthelemew family, has, during past week been reorganized under the same name, as a stock company, and in which the aforesaid heirs are the chief stockholders.

The change involves not only a large increase of invested capital, but embraces the erection of a fine new block on Bridge street in the space owned by the Blanchard heirs, between the Odd Fellows' building and the postoffice. The building is to be of solid brick, two stories high, with basement. The entire house across the alley in the rear is to be enlarged to double its present capacity. The new store building will be 35x84, and will be modern in every particular, accommodating all the auxiliary attachments usually embraced in an institution of this kind, including an electric elevator. The names of the officers of the company are not given out, but it is definitely given out that Mr. Coulter will remain in sole responsible capacity.

Work has already been begun in clearing out the space to be occupied by the new buildings, and the intention is to have the store and warehouse ready for occupancy by January first next. The present bridge street building—the Bishop and the Frazier store store, will be demolished, but Mr. Frazier, who is compelled to vacate his present premises, will continue business at some other location, but just where has not yet been determined. Mr. F. Barthelemew, himself an architect of ability, is now in Chicago making plans and specifications for the new building.

LECTURE COURSE

Superintendent Craig Has Superior Entertainment Course Mapped Out For Fall and Winter

Superintendent Craig, of the Charlevoix public schools, had no sooner arrived in town from his summer vacation than he took off his coat and jumped into the lecture course proposition. He has made a contract with the Ohio Lyceum Bureau, of Ashland, Ohio, for a season of superior entertainments. The program is as follows:

Byron W. King, lecture, October 21.
Ricardo Iadestic, November 15.
The City Beautiful, November 22.
Columbian Quartet, December 14.
Harry Bowser, lecture, January 4.
Jubilee Singers, March 8th.

Adult Season Lecture Course Ticket, $1.50. Student's Season Lecture Course Ticket, $1.00. Reserved seats ten cents extra per number.

The preliminary announcement, issued in folder form, reads as follows:

"The lecture course is run for the people of the best little city anywhere. Show us by your patronage that you want a lecture course. This is your program; read it and talk to your neighbors about it. Buy a ticket early and don't let the committee have nervous prostration over the finances of the course."

DUAL CITIZENSHIP

In one of its usual able and comprehensive editorials on Teutonic claim of imperial jurisdiction over American naturalized citizens of Teutonic birth, the Christian Science Monitor voices our sentiments, as follows:

"Such teaching it is hardly necessary to say, is wholly mischievous; it needs to be counteracted by all the more force loyal citizenship can bring to bear upon it. No compromise should be given by right thinking men, whether they be native or foreign born, to so pernicious and dangerous a view as that the American workman, of whatever race, country, creed or color, owes his first allegiance to any other nation.

"The United States cannot afford to tolerate the existence of two brands of citizenship. Loyalty is neither conditional nor provisional. The only variation from it is disloyalty. The final expression of disloyalty is secret or open treason, and treason should be rooted out, in theory as in practice.

"The claim is merely another specimen of autocratic audacity, a philosophy that is entirely at variance with American ideals of the freedom of chosen citizenship. Hyphenated citizenship is disloyal to propriety in the United States and it is a source of satisfaction that a large proportion of Teutonic-born Americans are outspoken in their loyalty to the country of their adoption.

A CLOGGED SYSTEM NEEDS ATTENTION

Are you bilious, dizzy and dyspeptic? Dr. King's New Life Pills taken at once seizes upon constipation and starts the bowels moving naturally and easily. Moreover it sets without griping. Neglect of a clogged system often leads to most serious complications. If you wish to wake up tomorrow morning happy in mind and entirely satisfied, start your treatment to-night. 25c a bottle.

GOOD MAN GONE HENCE

Death of Alexander Cameron — Resident of Charlevoix Thirty-Four Years—A Model Citizen

Alexander Cameron, after a long and distress illness, passed peacefully away at his home on Mason street at five o'clock Tuesday afternoon.

Deceased was born near St. Mary's, Ontario, December 19th, 1862. As a young man he adopted the calling of a carpenter and builder, and being well equipped and proficient in this line of work he came, a single man, to Charlevoix in 1881. After establishing himself here, he returned to Canada the same year, where he was married to Miss Mary Rogers, the young couple coming at once to Charlevoix, where a home was established in which happiness and Christian peacefulness has ever since abided.

"Sandy" Cameron, as he was familiarly called by his friends and neighbors, could always be characterized, without offensiveness or flattery, a model citizen. His nature was always kindly, tolerant, and in it charity and sympathy always abounded. His daily walk was above circumspect, and his Christian character above reproach. His friendship was a thing to be cherished, for it was firm and unwavering. When "Sandy" Cameron's word was given it was the obligation as sacred as a written contract. It may truthfully be said of him that in all the qualities of good citizenship he never lapsed below the manly standard of the traditional Dutch courage, and of the obligations imposed by his Christian affiliations. The life of such a man is a blessing to a community.

The day following his death was the 34th anniversary of his marriage. For more than thirty years he had been a member of the Methodist church in this city. Besides his wife, he leaves one son, Arca Cameron, of Minneapolis, who was at his bedside in the last hour. The funeral will be from the residence at two o'clock today, (Thursday.) Rev. Quinton Walker officiating.

KNIGHT TEMPLAR FIELD DAY

Sir Knights A. Butterworth, M. J. Stockman and S. M. Dow, of this city, members of Ipanhoe Commandery No. 35, K. T., of Petoskey, joined the community in Tuesday's pilgrimage to Traverse City fair gathering.

In the parade there were 140 swords in line, and we'll be very elegant affair, as representing Northern Michigan knighthood. Ivanhoe Commandery took home to Petoskey the prize cup for the largest percentage of attendance based on membership.

There are seven Knights Templar in Charlevoix.

TO CLEAN UP THE PARK

To-day, (Thursday,) is the day of the big "bee" to clean up the city park. Considerable money and labor is promised, and additional volunteer labor is called for to make the work complete.

The plan is to clean up all rubbish and eliminate all dead trees and stumps. This work not only involves cleanliness but a preventive of fire, which might devastate the living growth of shade. It is hoped that there will be a good turnout for this very commendable work.

PAVEMENT WORK

The pavement of the Bridge street hill is ready for the tarvia surfacing material, which is expected to go on this week. When this work is completed street commissioner Link proposes to proceed at once with the re-surfacing of the Bridge street bituliithic. He has already a force of men at work digging out and re-filling bad depressions.

The Bridge street hill is an excellent piece of work.

THE METHODIST MINISTERS

Following are the Appointments for Grand Traverse District

W. F. Kendrick, superintendent; Alanson, to be appointed; Alba, E. F. Vane; Alden, S. O. C. Permeter; Arcadia, S. A. F. Jones; Bear Lake, A. J. Preston; Bellaire, C. W. Plews; Bendon, S. Novak; Boyne City, M. W. Dolby; Boyne Falls and Horton's Bay, William Shepard; Central Lake, S. J. W. Bond; Charlevoix, Quinton Walker; Clarion, S. Loch Shepard; Copemish, C. E. Thiss; East Jordan, W. C. Craviser; East Jordan Circuit, S. William Hankins; Elk Rapids, T. E. Sprague; Empire, S. E. H. Oviatt; Fife and Boardman, S. A. F. Keeker; Frankfort, W. A. Eley; Freesoil, S. W. E. Smith; Gruwe, S. G. L. Thompson; Harbor Springs, H. B. Walker; Harbor Springs circuit, H. G. H. Gerry; Irons, to be supplied; Jennings, C. N. Hancock; Kalkaska, J. H. Hoyt; Kewadin, S. Thomas Young; Lake City, M. A. Hoyt; Lewering, C. S. Jenkins; Mackinaw, W. W. Lambert; Manistee, A. T. Cartland; Manton, H. E. Wyle; Mesick, C. S. Burchfield; Mesick circuit, H. W. E. Bond; Onaway, J. W. Stanton; Norwood, D

LOVE in a HURRY

by GELETT BURGESS

ILLUSTRATED by RAY WALTERS

COPYRIGHT BY GELETT BURGESS

SYNOPSIS.

Hall Bonisette, young businessman, prepares for the day's work in the middle-priced home he has recently built for a bride. Now, the bride, Rosamund, is gone, and Hall is lonesome in the house. He calls his friend, Bill Dallys, who comes to his rescue by telling him of a pretty widow, Mrs. Royalton, who is looking for a husband. Hall is interested and Dallys promises to introduce him at the next opportunity. Hall goes to the office of the firm that made his home, and there he meets Miss Fisher, who he knows will be the ideal secretary. Hall is interested in her, but he is embarrassed when she tells him that she knows his name, but he is unknown to him. Hall is called to the office of the firm, and there he meets Mr. Royalton, who is looking for a man to block Hall's marriage to any of his three daughters. Hall promises to help Royalton to save Flodie, the youngest daughter, from the clutches of Dallys, who is a charmer.

CHAPTER VII—Continued.

Flodie reappeared at the doorway, she didn't appear to resent the question in the least. "Be sure I will a week—Rosamund's look had virtual 'Hi'ed.' Her dark eyes of clear brown beauty, I see one place where he could reduce expenses pretty easily."

"Well, I'm willing. Oh, I've had plenty of offers," said Flodie, "I don't know why I don't marry, I ought to because he wants me so much, and I don't see how he could ever get along without me."

"Well," Rosamund turned away accordingly, "I think he'll get along all right. The next offer you get, I advise you to take it. Hall may change his plans pretty soon, and you might be in the way."

Rosamund had led trumps, so Flodie followed suit. She took her time, however, biting the end of her penholder thoughtfully. "I don't know but you're right, Miss Gale," she said finally, "perhaps I had better leave. You see, Mr. Bonisette is trying to get married my time, you never can tell with a man like him—and I would be in the way, as you say." Rosamund's chin had risen an inch. Flodie watched it, as she added, "It would be a good thing for Mr. Bonisette, too. You see, his wife could keep the books and stay in the office, here, and he's save by it, of course he wouldn't have to pay her any salary."

Rosamund's chin dropped. "Why, heavens! he wouldn't think of having his wife—"

"Oh, you don't know him." Flodie did the airy fairy mood. "Besides, he couldn't afford to marry any other way."

"Why, I thought by the way he talked that he was doing a pretty good business."

"Well," Flodie replied, with a fine frankness, "It's this way. You see, Mr. Bonisette thinks he's doing a lot of business, I mean, but he takes so many excuses for nothing, it's worse than if he were idle."

"For nothing! How?"

"Why, the same as he did years, exactly. And women do run after him so, you know, he believes he can resist. They're in here all the time.

Rosamund, by this time, didn't quite know where she was. Being herself a woman with a pliable conscience, she didn't altogether believe Flodie, but she was not nearly so confident and determined as when she had entered. She had come in with the intention of accepting Hall Bonisette; these hints of Flodie's disturbed her mightily. She sat down and began to look over a pile of photographs.

Flodie stood indecisive, and he that her cousin book, delineated in it. She had, however, little time to watch, before the door opened and Carolyn Dallys, tall and dramatic, sauntered into the room.

Now there was a chin that was lifted, naturally, with none of Rosamund Gale's affectation of superiority. Carolyn Dallys was sure of herself. It was much easier to feel with her than to feel her. Her eyelashes were arched whimsically over her high-bred qualities one; her eyes always held a humorous spark.

"Oh, how d'you do. Thank you for telephoning me, Miss Fisher. I was so anxious to see those proofs. I ran right over," she drawled amiably to Flodie, and smiled in remembrance of their foreseen encounter. She could hardly take anything seriously enough to bear resentment. Flodie gave Rosamund a careless glance, modified only by that quality of interest in her which she felt in every live blonde-haired sister, and bowed slightly. Rosamund frankly stared.

"Mr. Bonisette is?" Carolyn inquired carelessly.

Flodie said that he was away on important business, but that most of Miss Dallys' proofs were ready. Would she wait till the last two had been taken? It was point of fact that had been done a half-hour ago, but for Flodie's plan, Carolyn and Rosamund must be left alone together. It was her opening experiment in psychology.

Yes, Carolyn would wait, and began to roam about the office idly, hands in coat pockets, chin up, whistling softly. Rosamund, from the determined way in which she was going through the pile of photographs, intuded to wait also. She would see what some of these women were like, who came to see Hall Bonisette! He had already upraided Carolyn—not pretty, consciously not dangerous, still it would do no harm to watch her. So Flodie left them, but saw to it that the stockroom door was not quite closed.

The situation was tense; it held potential conflict. Flodie, listening from the stockroom, waited eagerly for the first shot. There was, however, a little preliminary skirmishing necessary, neither of the two foes had yet recognized the presence of a rival.

Rosamund, with beauty's contempt for mere brains, had returned to her inspection of the photographs, when a certain picture sent some dimples to the prints slipping, sliding, falling to the floor. With an expression of amusement she stooped to pick them up. Carolyn watched her. When two or three handfuls had been restored to the table, and Rosamund listless and restless, had taken a new page, one picture remained at her feet. Carolyn, good naturedly, waited and stood, as it happened, at it, smiling. Rosamund became intrigued at once.

"Oh, look what it is. It's a boy!"

"Mrs. Royalton. A friend of Mr. Bonisette." Carolyn's lip had the slightest curl, in her eyes was a subtle gleam.

"Oh!" Rosamund gave it another look and added petulantly, "Mr. Bonisette seems to have a good many friends."

Carolyn was frankly amused; enough to say, "Oh, yes; in fact, I'm one, myself." She gave a very womanly woman glance at Rosamund.

"Indeed!" Rosamund's little smile was frigid. She dare herself to say, "Then, when it comes down to it, so am I!" The two women's eyes fencied like crossed rapiers.

"We certainly ought to be friends, then," said Carolyn, shrugging her shoulders. There was but the faintest trace of mirth in her voice. It was for Rosamund to register; but the boyish, underneath Rosamund's little shell, was held. Was she afraid of him, then, when it come down to it, so sure of her? The two women's eyes fencied like crossed rapiers.

"Then, I never! Why, I don't know what this claim," she said finally, "perhaps I had better leave. You see, Mr. Bonisette is trying to get married my time, you never can tell with a man like him—and I would be in the way, as you say." Rosamund's chin had risen an inch. Flodie watched it, as she added, "It would be a good thing for Mr. Bonisette, too. You see, his wife could keep the books and stay in the office, here, and he's save by it, of course he wouldn't have to pay her any salary."

Rosamund's chin dropped. "Why, heavens! he wouldn't think of having his wife—"

"Oh, you don't know him." Flodie did the airy fairy mood. "Besides, he couldn't afford to marry any other way."

"Why, I thought by the way he talked that he was doing a pretty good business."

"Well," Flodie replied, with a fine frankness, "It's this way. You see, Mr. Bonisette thinks he's doing a lot of business, I mean, but he takes so many excuses for nothing, it's worse than if he were idle."

"For nothing! How?"

"Why, the same as he did years, exactly. And women do run after him so, you know, he believes he can resist. They're in here all the time."

Rosamund, by this time, didn't quite know where she was. Being herself a woman with a pliable conscience, she didn't altogether believe Flodie, but she was not nearly so confident and determined as when she had entered. She had come in with the intention of accepting Hall Bonisette; these hints of Flodie's disturbed her mightily. She sat down and began to look over a pile of photographs.

Flodie stood indecisive, and he that her cousin book, delineated in it. She had, however, little time to watch, before the door opened and Carolyn Dallys, tall and dramatic, sauntered into the room.

Now there was a chin that was lifted, naturally, with none of Rosamund Gale's affectation of superiority. Carolyn Dallys was sure of herself. It was much easier to feel with her than to feel her. Her eyelashes were arched whimsically over her high-bred qualities one; her eyes always held a humorous spark.

"Oh, how d'you do. Thank you for telephoning me, Miss Fisher. I was so anxious to see those proofs. I ran right over," she drawled amiably to Flodie, and smiled in remembrance of their foreseen encounter. She could hardly take anything seriously enough to bear resentment. Flodie gave Rosamund a careless glance, modified only by that quality of interest in her which she felt in every live blonde-haired sister, and bowed slightly. Rosamund frankly stared.

"Mr. Bonisette is?" Carolyn inquired carelessly.

Flodie said that he was away on important business, but that most of Miss Dallys' proofs were ready. Would she wait till the last two had been taken? It was point of fact that had been done a half-hour ago, but for Flodie's plan, Carolyn and Rosamund must be left alone together. It was her opening experiment in psychology.

Yes, Carolyn would wait, and began to roam about the office idly, hands in coat pockets, chin up, whistling softly. Rosamund, from the determined way in which she was going

Began to Look Over a Pile of Photographs.

hastened to protest. "Oh, no, indeed! Why should you think that?"

Carolyn laughed; she was now thoroughly master herself. "Well, then, I'm Carolyn Dallys," she volunteered. "I think you must be Miss Gale, too, you? I've seen Hall's pictures of you, you know." Something suggested to Rosamund's face impelled her to add mischievously, "And he's often spoken to me about you."

Rosamund showed her irritation at the patronizing air of familiarity early by the slightest flush. "Indeed," she said, "It's queer he hasn't told me about you."

"Oh, there's very little to tell." That was what Carolyn's lips said, but her whole face told a different story. In the woman's language of smiles she was an adept and Carolyn's smile was cruel.

It was now evident that, unless Rosamund could distinguish herself from the herds of Hall Bonisette's female friends, she would expire of shame. Flodie, without knowing exactly what caused the girl to suffer, was relenting in her lack of care. She watched Rosamund grope for an effectual reply. At the same time she watched Rosamund grope for an effectual reply. At the same time she watched Rosamund grope for an effectual reply. At the same time she

POSSIBILITIES OF DEVELOPMENT OF AGRICULTURAL INDUSTRY IN ALASKA

Bureau of Soils of the United States Department of Agriculture Makes Reconnoissance Survey of the Vast Area—Climate, Soils, Crops and Other Conditions Bearing Upon Agriculture Are Described—Pioneer Conditions Prevail.

Washington, D. C.—A reconnoissance soil survey of a vast area in Alaska to investigate the agricultural possibilities of that territory has recently been made, and the results of this work will shortly be published in a report by the Bureau of Soils of the United States department of agriculture. The report comprises 264 pages and contains 26 map plates and four maps. It describes the climate, soils, crops, and other conditions bearing upon the possibilities of agricultural development in Alaska, and in outline discusses such incidental subjects as settlement, natural resources, physiography, drainage, means of communication, and a comparison of Alaska with parts of Siberia and Finland.

The report says in part:

"The existence of a vast mountainous area along the southern coast of Alaska, with numerous lofty, snow-covered peaks and huge glaciers, necessarily unfit for human habitation, is apt to give one unfamiliar with the complexities of the topography and climate of the country as a whole the impression that Alaska is a region of impassable mountains, glaciers, and snow, without forming possibilities. In a measure this is true, for there are in the territory immense areas of rugged mountains, including the loftiest peaks upon the North American continent, and great wastes of snow-clad and precipitous land, wide stretches of bleak tundra and mountain skirting the Arctic ocean, innumerable bodies of waterwashed islands, and many glaciers of almost incredible magnitude. Nevertheless there are millions of acres of relatively low, smooth land and gentle slopes in various parts of the country which are topographically and climatically suited to farming. That this is true is not a matter of conjecture, for many valuable food products both for man and animal are now being successfully grown. Farming in a region so far north may seem astonishing until one is acquainted with the equable summer climate, the long hours of summer daylight, and the good quality of the soil."

Pioneer Conditions Prevail.

It is pointed out, however, that while the development of a successful agriculture throughout an enormous area in Alaska is possible, it must be remembered that "as yet strictly pioneer conditions obtain, that settlement is largely confined to communities in the vicinity of mining camps, that much of the country is inaccessible owing to the absence of roads and railroads.

"Every indication that agricultural development must be gradual, must grow with the construction of highways and railways, with the development of mining industries and accompanying increase of population. If large numbers, without sufficient capital, should 'stampede' to these lands with the idea of immediately establishing profitable farms for themselves, it is believed that there would be only disappointment for many. A careful study of the conditions before undertaking farming operations here is therefore urgently advised. The prospects of success for farming depend, so far as sale of surplus products is concerned, upon finding a local market among a population attracted by mining resources and fisheries. In other words, these regions of Alaska will probably not for some time export agricultural products, at least not on an important scale. Exportation of such products must await the building of a system of railways and highways and probably, also, the establishment of cheaper transportation."

The report deals with three general areas; the Cook Inlet-Susitna region, the Yukon-Tanana region, and the Copper river regions.

Cook Inlet-Susitna Region.

The most important is the Cook Inlet-Susitna region, the agricultural lands of which are comprised, says the report "in the plainlike country and adjacent bench lands bordering Cook Inlet from Kachemak bay northward and extending up the Susitna and Matanuska valleys. The unfavorable climate and topography of the surrounding mountainous country restricts the farming possibilities to this low country, the approximate area of which is 6,000 square miles. At least one-third of this area, amounting to a little more than a million and a quarter acres (1,276,000 acres, the lowest estimate), consists of arable land possessing topographic and drainage characteristics and chemical and physical properties quite favorable to farming. About one-half of the good land occurs in the Susitna and Matanuska valleys.

"The climate and soil make possible the establishment of an important agriculture in the Cook Inlet-Susitna region. Development will follow along pioneer lines at first, leading eventually to the establishment of many comfortable homes, supported largely by the products of the farm. The possibilities of raising stock and dairying point to the furtherance of agriculture, eventually, to a position of importance considerably beyond a self-supporting stage. The building of a railroad through the Susitna and Matanuska valleys will make accessible a large area of good farming land, and, unquestionably, settlement will follow, probably at a rapid rate. Already 150 homesteads have been registered along Knik Arm and others have been taken up. A number of prospectors, miners, most of whom previously had not been identified with agriculture, are now supporting themselves in the neighborhood of Knik largely with the products of their farms, assisted by the earnings of a few days' outside work during the summer."

Yukon-Tanana Region.

"The Yukon-Tanana region comprises (1) the lowland of the lower Tanana river, from the vicinity of McCarty to the Yukon river, known as the Tanana Flats; (2) the lowland of the Yukon river, chiefly comprised in the Yukon Flats; and (3) the area of highlands or hill country between the Tanana and Yukon lowlands, the Yukon-Tanana uplands. In discussing the area so defined above, it is not meant that this includes all of the agricultural land of interior Alaska. This is simply the area to which the investigations were specifically directed. Farming lands are reported to exist in considerable areas along the upper Tanana river, and good grazing land is available along the head waters of White river, in the Mentasta pass section and in other places outside the limits of the area described.

"On the soils of the Yukon bottoms good crops of vegetables and grain-hay are produced. Immense quantities of hay and good grazing can be derived from the native grasses which thrive on these soils. In addition, large quantities of grain, hay, and root-crop forage can be easily grown.

"In the hills north of the Tanana bottoms is found the best soil seen in Alaska. This is a deep, mellow silt loam (Fairbanks silt loam), having good drainage and moisture-holding capacity. It occurs on the lower slopes, and is largely susceptible of easy cultivation. There are approximately a half million acres of this valuable soil. This type of soil is the same as that at the Fairbanks experiment station, where such good results have been had with potatoes and oats. On the southward-facing slopes it yields over 100 bushels of potatoes per acre, without fertilization. Early varieties of oats and barley mature in normal years. Wheat and rye also have matured at the Rampart and Fairbanks stations, and varieties of grain give good yields of hay on this soil, even in years of early frost. Turnips, cabbage, beets, carrots, lettuce, celery, and several other vegetables are grown with cinnamon success, both as regards quality and yield. Native redtop grass springs up quickly, following the removal of timber.

"There are also large areas of other excellent soils on the slopes of the hill country. These are not so deep as the Fairbanks silt loam, but they produce good crops of excellent potatoes, cereal vegetables, tame grasses. Probably 1,500,000 acres of such land exists in the region between the Tanana and Yukon rivers.

Copper River Regions.

"The Copper river region are the Copper river basin and the copper river delta.

"The Copper river Delta occurs where "Copper river enters the Pacific ocean a short distance north-east of Controller bay, through a labyrinth of channels, shallows and islands, uniting to form an intermingle network of passages, though, with all most constant interchanging islands and bars. The low, has some lagoons which these numerous channels enclose, is somewhat triangular in shape, with its apex about thirty miles inland, between the fronts of Childs and Miles glaciers. There is a large extent of country in the upper Copper river basin, northward from the vicinity of Copper center, which has a quite favorable topography for agricultural operations. The principal soil here, however, is not so favorable, being predominantly of a clayey character and so cold and probably cold-natured that it would be difficult to till, and crops would likely be slow to reach maturity on it. Hardy grains and tools would be required to work such land. Furthermore, the climate of the region appears to be not so favorable as that of either the Cook Inlet-Susitna or the Yukon-Tanana regions. Vegetables and grain-hay, however, are being successfully grown on the bottom-land soils, and the more loamy types of the uplands. Some cattle have been raised at various places in the region since the Valdez-Eureka road stock raising and dairying would likely be found the most remunerative types of farming.

"Practically the entire delta is unsuited to agriculture, owing to the poor drainage, the liability to disastrous floods, and the inferior character of the soil. Near the glacier fronts the glacial plains covered with freshly-discharged glacial debris, are mostly bare of vegetation, but farther away there is more silt and scrub willow and a variety of waterloving grasses."

MOTHERS—WATCH IRRITABLE CHILDREN

That fever, paleness, grinding of teeth while asleep, and coated tongue are indications that your child has worms in its system. Kickapoo Worm Killer quickly gets rid of these pests. It is perfectly safe for even the most delicate children. It is pleasant to take has three effective medicinal qualities—acts as a laxative, expels the worms, and tones up the system. Begin treatment today and eliminate the cause of irritableness. 25c.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate office, in the City of Charlevoix, in said county, on the 18th day of September, A. D. 1915.

Present, Hon. Frank E. Cornell, Judge of Probate.

In the matter of the estate of John Hamilton Ferguson, deceased.

It appearing to the court, by the petition of Mary Ferguson, praying that the last will and testament of said deceased, filed in this court, be admitted to probate, and that the administration of said estate be granted to the petitioner, or to some other person, and that the heirs at law of said deceased be ascertained by the court.

It is ordered that the 11th day of October, A. D. 1915, at ten o'clock in the forenoon, at said probate office, be appointed for hearing said petition.

And it is further ordered that public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said time of hearing, in the Charlevoix County Sentinel, a newspaper printed and circulated in said county of Charlevoix.

FRANK E. CORNELL, Judge of Probate.

(First Publication Aug. 12, 1915)

MORTGAGE SALE.

WHEREAS, William Brown and Celestia L. Brown, of the Village of Boyne City, Michigan, made and executed a certain mortgage bearing date the 1st day of April, A. D. 1907, to Ira Jackson, of the Village of Boyne City, Michigan, which said mortgage was recorded in the Register of Deeds of Charlevoix County, Michigan, on the 2nd day of April, A. D. 1907, in Liber 3 of Mortgages on Page 22, and which said mortgage was given to secure the payment of the sum of Twenty-Five Hundred Dollars, ($2500) and the interest thereon at the rate of five per cent per annum, payable annually on the 1st day of April, in the years 1908, 1909, 1910, 1911, 1912 and 1913, and the payment of taxes and insurance premiums, as provided in said mortgage and by statute, and no suit or law or proceeding has been instituted to recover said mortgage debt, or any part thereof, and the mortgagee has been unable to find any property of said mortgagors, subject to said mortgage, whereon to make the statutory fees, and the said mortgagors are now residing in the State of Illinois, and the said mortgagee is now a resident of said State of Illinois, and the said mortgagee is now the owner and holder of said mortgage and the indebtedness thereby secured, and there is now due and payable on said mortgage the sum of Twenty-Five Hundred Dollars, ($2500) and the interest thereon at the rate of five per cent per annum, payable annually on the 1st day of April, in the years 1908, 1909, 1910, 1911, 1912 and 1913, and the payment of taxes and insurance premiums, as provided in said mortgage and by statute, and no suit or law or proceeding has been instituted to recover said mortgage debt, or any part thereof, and the mortgagee has been unable to find any property of said mortgagors, subject to said mortgage, whereon to make the statutory fees, and the said mortgagors are now residing in the State of Illinois, and the said mortgagee is now a resident of said State of Illinois, and the said mortgagee is now the owner and holder of said mortgage and the indebtedness thereby secured, and there is now due and payable on said mortgage the sum of Twenty-Five Hundred Dollars, ($

TOOLS, THE TEAM, AND THE MAN DETERMINE GOOD OR BAD PLOWING

By S. M. CLINTON

ALTHOUGH the plow is the first implement used by man in field farming, real progress in its development has come only within the last fifty years. First mention of the plow in the Old Testament is by Job where he says: "Oxen plowing and the asses feeding beside them." In Job's time the plow was probably a crooked stick drawn by oxen, with a straight stick bound to their horns to which a grain rope was attached.

This kind of implement was in use for thousands of years afterward, and even now in Old Mexico, within a hundred miles of the borderland of America, the crooked stick is still used.

About a hundred and fifty years ago a plow with a wooden mold board was devised; and this held sway for fifty years, when some genius of a blacksmith put an iron edge on it, and it was then thought that the perfection of plow making had been reached. Then came the plow with the iron mold board and wooden frame. This was followed by the all-steel plow, which now reigns supreme.

The aristocratic offspring of the all-steel plow is the disk, and this implement, in connection with the plow itself, is doing such good work that it does not seem possible that we shall see any decided improvement in this instrument for some time.

Good plowing depends as much upon the kind of plow used as upon the man who directs it. A great many farmers have yet to learn that one plow will not do satisfactory work in all kinds of soil and under all conditions.

Perhaps the best plow to use is the one with the chilled share and point. I think it is a mistake to use a plow point that has to be constantly renewed, for every time a blacksmith tinkers with it he turns out a different kind of plow, and this is one reason why there is so much poor plowing done in this country. When a man gets a plow which does the work to his entire satisfaction he should stick to it, and never permit its shape to be changed, if possible. With a soft point that has to be constantly renewed this is not possible, and that is why I prefer the chilled point.

Daniel Webster once answered to a plowmaker: After years of deep thinking and experimenting, he turned out a most wonderful implement. It was over twelve feet long, built of wood, with an iron point, and required four yokes of oxen to pull it. It turned a furrow eighteen inches wide, twelve inches deep, which remained in the furrow just as it left the mold board, and was never "red out" on the land side.

To do good work the plow must scour well, and the patience of the plowman. The more abrupt the curvature of the mold board the more pulverizing the action upon the furrow slice. The use of a roller reduces the draft materially, particularly on tough soils, clover sod and the like.

Some farmers claim that the only first-class plowing that can be done is with the walking plow, but I have seen some of the best plowing done with a sulky plow. There is not much difference in the draft. A sulky plow carrying a man will be about as easy on a team as walking, because the friction of the mold board of the walking plow is eliminated to some extent.

The draft of the walking plow depends largely upon the way in which it is set. If properly adjusted with a steady roll so that the heel or wing does not press too heavily against the soil, the plow will run easily, smoothly, and with very little attention from the plowman. I have seen the men follow the plow round after round without even touching the handle, except at the turning point.

Another important thing in plowing is to have the width of the furrow just right. If the plow is set to take a large land than it can turn over properly, it will leave much vegetation uncovered, and the field will be ridgy. The plow should be set to exactly cut and cover all that it enters and no more. When a plow runs properly it should set exactly level.

No man is a good farmer unless he is fret of all a good plowman. Upon the skill with which he plows his fields depends to a considerable extent the facility with which he can cultivate his crop, and, in fact, its yield.

The question of deep or shallow plowing is one which must be studied by every man, and adapted to the needs of his soil and his crop.

Deeply plowed soil contains moisture longer, affords better home for fertilizer and all kinds of plant food, is more easily cultivated, and is always to be desired.

A Baby Shetland.

has no bad luck, and himself in possession of a plenty of good luck. He is on the highway to success.

It is always best to buy registered animals for breeding, but if crosses are used with a registered stallion one can in time breed up to a very high standard. Shetlands are very easily fed; they require little grain, and will do very well on rocky hillsides where there is fair pasturage.

They need shelter in bad weather, of course, but an open shed, windproof on three sides, facing the south side open, will be all that is necessary.

A good wire fence is required to keep them in bounds, as Shetlands are extremely curious and somewhat restless, and will manage to get over, under, or through the average farm fence.

If handled from birth they are very tame, and, if treated kindly, they will be ready to ride or drive. Purebred Shetlands find ready sale at prices ranging from $125 to $200, and exceptionally fine specimens bring even bigger prices.

FRENCH BOY DISPLAYS PLUCK

Cute Pranks for Floor for Trench While Within Thirty-six Yards of Enemy—Enemy Astonished.

A patient in the American ambulance hospital at Neuilly-sur-Seine tells the following story of one of his comrades:

"We had been living in the trenches for days with the water above our ankles. At that time our trenches were only thirty-six yards away from the German trenches, so that we could hear the enemy talking and whistling, and, indeed, we often called across to them.

"One day, young P., who was a hottempered chap about twenty-one years of age, threw down his shovel and said that he wouldn't work in such a nasty hole another moment, and that he had rather die once from a German bullet than live another day in such misery. Some of us tried to get him to stop some work, but he would not, and he threw down his tools and swore that he would be shot if they wished.

"Meanwhile P. calmly crawled out of the trench, walked to a wooden fence in full sight of the Germans, and began carefully to pluck from the wood. He worked a whole hour, for the German officers had soon noticed his audacity, and so delighted with his pluck that they made no attempt to stop him.

"When he had finished the needed pile of boards P. calmly carried them into the trench, and the men made a good floor of them."—Youth's Companion.

RIGHT BOOKS FOR CHILDREN

List Prepared by Literature Committee of Mothers' Congress—Bibles in Placed Second.

(By MARION V. HIGGINS, Colorado Ag.

"Some books are free free and to end." Emerson.

If you agree with "Bobbie" Burns you may want to consult the circular published by the United States bureau of education on "1,000 good books for children."

This list was prepared by the literature committee of the Mothers' congress and is claimed for use in connection with the work of the local children's librarian, or to supplement the work of a children's librarian.

The table of contents gives, below, about the number and kind of the circular:

1. Picture books and stories for the youngest reader.
2. Bible.
3. Education and life.
4. Natural history, science and arts.
5. Stories of foreign lands.
6. Our own country.
7. History: myths and legends.
8. Biography.
9. Stories.
10. Poetry.
11. Books for recreation and amusement.
12. Key to publishers.

Value of Memorizing Scripture

By REV. HOWARD W. POPE
Superintendent Moody Bible Institute of Chicago

One of the best habits one can acquire is that of committing to memory entire verses of Scripture. Some people commit entire books of the Bible, but I regard that as unreasonable taxing upon the memory. Of course one could easily learn the first psalm, and the twenty-third and the one hundredth and the one hundred and twenty-first. Also the commandments and the beatitudes. Beyond that I should advise the parts of the Bible to be memorized. Suppose a farmer were to set out a dozen choice fruit trees each year. In a few years his farm would be well stocked with a great variety of fruit, and each tree would bear fruit as long as he lived. Each tree has its own individuality and values and in course of time each one would come to mean like an old friend. Some yield sweet apples and others sour. Some are early and others late. Then there are pears and peaches and plums and apricots and nectarines and berries.

Suppose a person should commit to memory one verse of Scripture each week. That would not be a very hard task, but how great would be the result as the years would go on. Each verse is like a fruit tree which bears some kind of choice fruit to enrich his mind and ennoble his character and increase his usefulness. And these yield fruit not simply once a year, or even once a month, like the trees in Celestial City (Rev. 22:2), but every day in the year, and all the years of his life.

Take such a verse as John 14:27, "Peace I leave with you, my peace I give unto you. Let not your heart be troubled, neither let it be afraid." How many times, think you, would a Christian feel his soul on that verse in a lifetime? The same is true of Matt. 11:28 and Romans 8:28 and 1 John 3:1 and Jude 24.

If one continued the habit a few years he mind would become a magnificent orchard, yielding fruit in such abundance and variety as to supply not only the owner himself, but all his neighbors and friends. If a man had no other assets than a mind well stored with Scripture, he would be a rich man. But he would have other assets, because it is declared of those who fear the Lord and think on the Lord that they shall be "like a tree planted by the rivers of water, that brings forth his fruit in his season. His leaf also shall not wither, and whatsoever he doeth shall prosper" (Psalm 1:3).

Consider also the effect of this habit in creating a relish for that which is pure and wholesome in literature, and a distaste for that which is vulgar. No one whose mind is filled with the sublime sentiments of the Bible will have for long any sensational or exciting reading.

Not only will it affect his mind but his character. He will naturally love righteousness and hate iniquity. He will be like David, who said he is familiar with such men as Enoch and Daniel and Abraham. In time of temptation the Holy Spirit will recall to his mind some suitable verse, as he did to Christ, and put to flight the adversary. When persecuted as to his duty under such circumstances he will flash upon him and make the path of duty as clear as daylight.

Besides, if he is on the alert, he will find many opportunities to help others. He can constantly be suggestions, answer excuses and objections, and often lead sinners to begin the Christian life. I know of a case where a wife committed two verses at an afternoon tea, and when she came to the supper table she used them on her husband. He was so affected that he knelt right down and accepted Christ without waiting to finish his supper.

In some families the custom prevails of each member repeating a verse of Scripture at family worship. In one family each child has a promise for each day, and Sunday mornings they repeat all the promises they have learned during the week. A verse from each member of the family at the breakfast table, with the Lord's prayer in concert makes a very good form of family worship where some have to hurry away to business immediately after breakfast.

As a help to those who wish to know God's Word better the writer has arranged a booklet containing one hundred choice verses, selected from the whole Bible. They cover a wide range of topics and are particularly rich in verses adapted to the use of personal workers. They are arranged in the order in which they occur in the Bible, with chapter and verse given. Plain, wide rules are not given, but only enough to recall it when once been learned. Anyone who masters these hundred verses will be well equipped for any emergency which may arise. A verse a day for three months would accomplish the task.

This method is not new, but he will gladly give a copy to any who will send him his address on a stamped envelope.

God and His Workers.

God takes away his workers, but he still carries on his work. The church owes St. Paul to the death of St. Stephen, or as St. Augustine says, "God made a persecutor, that He might make a preacher." Selected.

The MICHIGAN CLIMATIC CONDITIONS

By C. F. SCHNEIDER, DIRECTOR MICH. SECTION U.S. WEATHER BUREAU

PLATE SHOWING AVERAGE ANNUAL PRECIPITATION

From "Michigan—the Land of Plenty."

THE climate of Michigan is peculiar in a marked degree on account of the influence of the great lakes.

The determining factors of climate for any locality are chiefly latitude and the relative distribution of land and water. Other important factors are the topography of its land surface and the situation of the area in question with relation to the general movement of storm centers.

All of Michigan is situated in a latitude that is conducive to some kind of agriculture, and its comparatively long days and short nights during the crop season are not only conducive to crop growth, but they reduce to a minimum late frosts in spring and early frosts in autumn.

In lower Michigan the longest day of the year in summer is nearly 15½ hours, while at the north it is the longest day of the year is a little more than 15 hours in length. In upper Michigan the longest day of the year is nearly 16 hours. The daylight promotes all vegetable growth, while the short nights reduce the probability of frosts and also conduce to the comfort of diurnal coolness.

The large bodies of water which make up the Great Lakes have a decided effect in modifying any temperature changes sweeping from west to east. It is very apparent in all parts of the state, that the average summer temperatures have frequently continued from ten to twenty degrees lower during each in time proved to be a very high standard. Shetlands are very easily fed; they require little grain, and will do very well on rocky hillsides where there is fair pasturage.

They need shelter in bad weather, of course, but an open shed, windproof on three sides, facing the south side open, will be all that is necessary.

A good wire fence is required to keep them in bounds, as Shetlands are extremely curious and somewhat restless, and will manage to get over, under, or through the average farm fence.

If handled from birth they are very tame, and, if treated kindly, they will be ready to ride or drive. Purebred Shetlands find ready sale at prices ranging from $125 to $200, and exceptionally fine specimens bring even bigger prices.

PLATE SHOWING ANNUAL MEAN TEMPERATURE

mous annual temperature is 46 degrees, ranging from 44 degrees in the extreme southern portion to about 39 degrees in the extreme northwest portion, the average maximum or day temperature ranges from about 40 degrees in summer to 25 degrees in winter. The average minimum or night temperature is approximately 55 degrees in summer, and from 5 to 12 degrees in winter. Extreme temperatures of 100 degrees or more are not of frequent occurrence, although they have been recorded at some places on one or two days during the majority of summers in the past 25 years.

Zero temperatures are an invariable rule during the most months in the winter in the Upper Peninsula and northern half of the Lower Peninsula, in the southern half of the Lower Peninsula, zero temperatures usually occur, although they have been some winters when there has been an entire absence of zero weather.

Frost.

As a rule destructive frosts do not occur after May 15 in the spring nor at the very earliest before September 20, or 25 at the latest. Over a large part of the southern peninsula frosts do not occur after the second week in September. This gives an average of 145 days, or nearly five months, when in a large portion of the state under average conditions there will be no destructive frosts.

Precipitation.

The precipitation, by which is meant rain, dew, hail, snow, sleet, etc., is distributed throughout the year. In all parts of the state the precipitation is usually the greatest of any month in the year, and very well suited to the spring plowing, spring germination and the forwarding of growth of winter wheat, winter rye, meadows and pastures.

Normally the precipitation is ample and sufficient for all crop needs during the remainder of the growing season, and, taken as a whole, it is perfect expression of rainfall conditions.

Snow.

Snow has never been known to occur in July and August, and rarely in June or September, except in isolated instances in the higher parts of the Peninsula. The first snow usually occurs in October, and there has in the amount to the end of January, after which there is a decrease in amount which practically ends in April. Light falls are quite usual during May. Nearly eight inches of snow falls annually in all counties of the Lower Peninsula and southwestern seventy inches in the Upper Peninsula.

Drought.

Short and irregular periods of drought over limited portions of the state have occurred, but long periods of deficient precipitation are rare. An exact statement of the conditions which actually constitute a severe drought are hard to make because much depends not only on the length of time that there is an absence of rain, but on the condition of the soil when deficient periods of rainfall begin, the time of year when the deficiency occurs; and from an agricultural standpoint the texture of the soil and other physical conditions also have a bearing.

Professor Henry, in his "Climatology of the United States," notes that the greatest drought this country has ever experienced in the last hundred years, both as to intensity and extent of territory covered, extended over the middle Mississippi and Missouri valleys, the lake region and Atlantic coast districts from early summer of 1894 until about the first of August, 1895, the precipitation deficiency being about ten inches. Since then there has been no real serious drought in Michigan.

Sunshine.

The sunshine annually will average somewhat over 50 per cent of the possible amount, the percentage being much higher during the period extending from May until the middle of October than during the winter months. During December, January and February it sometimes falls as low as 20 per cent of the possible amount, while about nine miles per hour in August and September. The wind is mostly from the west and southwest during the first three months of the year and from June to December, quite a large period, not less than a majority of the time during April and May the surface movement of the air is from the east and northeast.

Maximum velocities of short duration ranging from 25 to 40 miles per hour occur during most months of the year, and velocities of 60 miles and over are of comparatively rare occurrence. Winds are more variable during the cooler half of the year. At all seasons the southerly winds are usually moist and warm, the northerly winds cold and dry. The southerly winds usually herald unsettled weather and the westerly winds presage fair weather conditions.

Owing to the fact that the prevailing summer winds are southwesterly the shore of Lake Michigan from the southern limits of the state northward, is much sought for relief during the hot months by people of other states. Water breezes are refreshing especially at night.

Conclusion.

Of all of the northern states Michigan has perhaps the most even of equable climates on account of the dominating influence of the great water bodies which almost surround it. To the farmer, the fruit grower and the gardener the comparatively even temperatures during spring and fall are of untold value. The moisture-laden atmosphere induced by the Great Lakes is beneficent in vegetation and stands as a mighty bulwark against the early, hot, forcing warm waves of early spring, and the late cold waves of almost every early summer; the Great Lakes and their moisture produce comparatively even temperatures during the warmest summer months and in the fall retard the advance of early cold.

The average or normal amount of precipitation falls at seasons of the year throughout the year is ideal for field and orchard operations, as long and hot days are conducive to the plant growth and the ample sunshine of summer is a valuable aid to the many favorable items of climate with which nature has endowed the potential state.

CHATS WITH THE AMBITIOUS FOLK

By ORISON SWETT MARDEN.

NEVER TOO LATE FOR SELF-IMPROVEMENT.

A New York millionaire—a prince among merchants—died one of our big palatial residences on Fifth avenue every room, every which was a triumph of the architect's, of the decorator's, and of the upholsterer's art. I was told that the decorations of a single sleeping room had cost $10,000. On the walls were paintings which cost thousands of dollars, and about the rooms were pieces of marvelous beauty of nature and draperies representing a small fortune, and covering the floors were carpets in which the feet sank at most scarifices to tread. He had expended a fortune for pictures, statuary, etc., curios, bronzes and bibelots, and there was scarcely a book in the house.

It was pitiful to think of the physical agony and mental anguish of the children of such a home as that. He told me that he came to the city a poor boy, with all his worldly possessions done up in a little red bandana. "I was a millionaire, he said, "but I want to tell you that I would give half I have today for a decent education."

One of the sad things about the neglected opportunities for self-improvement is that they put people of great natural ability at a disadvantage among those who are their mental inferiors.

I know a pitiable case of a born satirist, whose education was so neglected in youth that later, when he came to know more about natural history than almost any man of his day, he could not write a grammatical sentence, and would never make his ideas live in words, perpetuate them in books, because of his ignorance of even the rudiments of an education.

Think of the suffering of this splendid man, who was conscious of possessing colossal scientific knowledge, and yet was absolutely unable to express himself grammatically! It is difficult to conceive of a greater misfortune than always to be embarrassed and handicapped just because of the neglect of early years.

Many a girl of good natural ability spends her most productive years as a cheap clerk or in a mediocre position because she never thought it worth while to develop her mental faculties or to take advantage of opportunities within reach to fit herself for a superior position. Thousands of girls unexpectedly thrown on their own resources have been held down all their lives because of neglected tasks in youth, which at the time were dismissed with a careless "I don't think it worth while." They did not think it would pay them to dig down to the bottom of any study at school, to learn to keep accounts accurately, or to thoroughly do anything in such a way as to be able to make a living by it. They expected to marry, and never prepared for being dependent on themselves—a contingency against which marriage, in many instances, is no safeguard.

The number of perpetual clerks is constantly being recruited by those who did not think it worth while for boys to learn to write a good hand or to spell correctly. Misspelling or illegible handwriting represents a business career. The insurance companies employ men and women, mostly women in factories, stores and offices, every year, who think they have had opportunity where youth should be over, and the patience of the plowman. The more abrupt the curvature of the mold board the more pulverizing the action upon the furrow slice. The use of a roller reduces the draft materially, particularly on tough soils, clover sod and the like.

Some farmers claim that the only first-class plowing that can be done is with the walking plow, but I have seen some of the best plowing done with a sulky plow. There is not much difference in the draft. A sulky plow carrying a man will be about as easy on a team as walking, because the friction of the mold board of the walking plow is eliminated to some extent.

The draft of the walking plow depends largely upon the way in which it is set. If properly adjusted with a steady roll so that the heel or wing does not press too heavily against the soil, the plow will run easily, smoothly, and with very little attention from the plowman. I have seen the men follow the plow round after round without even touching the handle, except at the turning point.

Another important thing in plowing is to have the width of the furrow just right. If the plow is set to take a larger land than it can turn over properly, it will leave much vegetation uncovered, and the field will be ridgy. The plow should be set to exactly cut and cover all that it enters and no more. When a plow runs properly it should set exactly level.

No man is a good farmer unless he is fret of all a good plowman. Upon the skill with which he plows his fields depends to a considerable extent the facility with which he can cultivate his crop, and, in fact, its yield.

The question of deep or shallow plowing is one which must be studied by every man, and adapted to the needs of his soil and his crop.

Deeply plowed soil contains moisture longer, affords better home for fertilizer and all kinds of plant food, is more easily cultivated, and is always to be desired.

U. S. BATTLESHIP READY FOR SEA

EXPLANATION OF THE CROWD

Few Members of Big Gathering Act and Think as They Would Do as Individuals.

The most striking peculiarity pointed by a psychological report according to Gustave Le Bon, is the following: Whoever be his individuals that compose it, however like or unlike be their mode of life, their occupations, their character or their intelligence, the fact that they have been transformed into a crowd puts them in possession of a sort of collective mind which makes them feel, think and act in a manner quite different from that in which each individual of them would feel, think and act were he in a state of isolation.

There are certain ideas and feelings which do not come into being or become transformed (transmuted into) except in the case of individuals forming a crowd.

The psychological crowd is a provisional being formed of heterogeneous elements which for a moment are combined exactly as the cells which constitute a living body form by their reunion a new being which displays characteristics very different from those possessed by each of the cells single.

What really takes place is a combination following by the creation of new characteristics, just as in chemistry certain elements, when brought into contact—bases and acids, for example—combine to form a new body possessing properties quite different from those of the bodies that have served to form it.

GOT OUT OF HIS DILEMMA

Truly Iceman, as He Remarked to Himself, Had Profited by Night School.

Fritz, the iceman, was in a perspiration (for it was the hottest four o'clock in the morning in 11 years) and a dilemma (he he only had one small block of ice left, and there were still ten customers left unserved, each of whom took a ten-cent piece).

"I know!" Fritz cried to himself. "I know a way out. I didn't go to night school for nothing."

And he cut the block into ten thin pieces and put one piece to front of each of the ten gates.

Then climbing over one of the fences, and filling a bucket full of water, he poured water over each of the tiny ten, so that each was to the middle of a puddle.

Clever Fritz!

"What you don't? Well, let him explain it himself, then:

"Haw, haw!" chuckled Fritz. "Now when they find the pieces they'll think the ice went and melted on 'em."

Shortly afterwards ten good housewives opened their gates and got a start at the tiny ice.

You know the rest if you never had it happen to you.—Detroit Free Press.

Some Refreshment.

Rear Admiral Fletcher during the maneuvers of Newport told a story at a garden party.

"The navy is as abstemious from ethical reasons," he began, "as old Stinger was from scientific ones."

"Old Stinger was entertaining a boyhood friend one evening at his shore cottage. After a couple of hours of talk the old friend rose and gratefully—a "Would you like some refreshment—a cooling draft, say—Stinger?"

"Why, yes, I don't care if I do, said Stinger, and he passed his hand across his smooth and sunburned up wonderfully.

"Good!" said old Stinger. "I'll just open up this window. There's a fine sea breeze blowing."—Detroit Free Press.

NO MORE GRAY HAIRS
Restore Youthful Color. No One Will Know You're Using Anything.
If you want a dark, handsome, perfectly natural color, that will not rub off, or cause any inconvenience or annoyance, simply send a lock of your hair, specifying whether it will be for a man or a woman, and we will return you a bottle of our Vigorine, which will produce the desired result. Vigorine is not a dye, but a vegetable preparation, and does not stain the skin or anything else. It is guaranteed to restore the color to any shade, from light to dark, in a few days, and to stay there until you want it changed. Vigorine is also a wonderful hair tonic, and will stop the hair from falling out within 24 hours. Price, $1 per bottle, postpaid. Address Vigorine Co., Newark, N. J. Agt.

Painful Truth.

Miss Simpwell had been a member of the choral society ever since it had been in existence, and it was undoubtedly true that her first youth had waned, but the chairmanship was astounded recently by the news that she had resigned her membership.

"Resigned?" he gasped. "Has it come to that?"

"Well, I don't know exactly," said the secretary, "but it strikes me that it may have something to do with the song we picked for her at the next performance."

"What?" "What is it?"

"Don't you remember? It begins, 'I once was young, but now am old.'"

He Still Had Hope.

After a hurried rush through the night the doctor found his patient in a very bad way.

"My dear sir," he said slowly, "I have been attending you for nine weeks and have done my best, but I'm afraid that your end is near. Have you any last wish to express?"

The patient drew a long breath.

"Yes," he replied, in a faint voice. "I wish I had had another doctor."

True to His Word.

The Interviewer—Why did you assassinate all your wives as soon as the honeymoon was over?

Bluebeard—You see, I'd promised to love each one as long as she lived.

Women with Taste.

Some women have a sense of humor, while others have tact and laugh at their husband's jokes.

No such thing as "rubber roofing"

A lot of manufacturers call their Roofings "Rubber-like," "Rubberoid," "Rubberized." Rubber-like and rubberoid are used in all out of proportion to the slight rubber content of these roofings. Rubber is the most expensive ingredient of any roofing. There is no rubber in

Certain-teed Roofing

It is made of the very best Roofing Felt thoroughly saturated with Genuine Trinidad Lake Asphalt and coated by a special grade of asphalt which keeps the soft saturation from oozing out. It is ready to lay in rolls of 108 square feet.

Sold in lots of 1 roll or 15 years, according to weight, guaranteed 5, 10 or 15 years, according to weight. Ask your dealer for it. If he can't supply you, we will ship direct, prepaid, on receipt of price, freight paid to your station, if you live east of the Rockies, west thereof, add 10 cents per roll. Write for Free Sample and Booklet, mentioning this paper, and name of your dealer.

You Owe the Folks A Rayo Lamp

Write us today—we'd like to send our illustrated catalog and a Rayo lamp on approval. Compare the Rayo with any other lamp you know of. Note its simplicity, its ease of lighting, its clear, steady light. Then if you think it the best lamp you ever saw, keep it and pay the dealer our price, $1.50 if in the Rocky Mountains or west thereof, $1.75 if not. If you do not think it the best lamp you ever saw, return it to us at our expense and we will refund your money. Ask your dealer to show you a Rayo. If he can't, we will send one on our approval. Write us today for our catalog.

WILL REFLOAT AND EXHIBIT THE EMDEN

Australians Get Permission to Salve German Raider.

GOVERNMENT TO OWN HER.

Work Will Require Long Time and Big Expenditure—Gaping Holes in Hull Made by the Sydney's Shells—Dead Man Recovers Hearing at Movie Show—Other War Briefs.

A specially organized syndicate of Sydney (Australian) capitalists which has received permission to salve the wreck of the German cruiser Emden has been its work. The wreckage was entirely in the hands of Kerr's agents, in the Cocos group, in the Indian ocean, where she was beached after the Australian cruiser Sydney had driven her last November in a hot running fight. The company which has undertaken the task of preserving the Emden intends to use her for show purposes, but the defense department has stipulated that after she must be sold to the Japanese government at a price to be fixed by it.

A novel feature of raising the cruiser will be the use of re-inforced concrete in stopping the gaping holes in the hull made by the Sydney's terrible broadsides. When the Emden has been floated and patched up she will be towed six miles to Java to be made seaworthy. In her use as an exhibition of modern naval warfare great care will be taken to preserve the wound in the starboard side of the Emden she was in when she was driven ashore by her captain.

Archduke Joseph Ferdinand, commander of one of the Austrian armies operating against Russia, is quoted as saying that of all the Russian troops the Siberian regiments alone are men. Contrasted with them, he is reported to have told a Hungarian newspaper, "which would be that in every effort to advance we have to cope with almost superhuman difficulties. Please let people know at home that these successes cost us endless sacrifice and great bloodshed."

An Austrian officer, whose letter to his mother has just been made public, wrote that he was prevented from training his place against a certain spot because what his Belgiannes regarded as a sacred waters, was guarded by a priest armed with a long shaking cross. Later when the Italians abandoned the spot the Austrian discovered that the priest was nothing but a black cassock on a large tree, and that on three wooden stacks, and the cross was made out of the lid of a meat cans.

Corporal Robert Beck, formerly a motorcycle policeman of Chicago, serving with a company of Chicago, several weeks ago was shot through the head while disaster riding in Flanders, and as a consequence he became dumb and stone deaf. Later the corporal visited a moving picture show at Lyons, where a comic film entitled "The Awful Noise" was shown to amuse the twilight. When Corporal Beck stepped laughing he said, "Gee, that's funny!" He found his speech completely restored. And then he laughed again.

Pauillan, the famous French aviator, who was sent to help the Serbians some months ago, has been made a captain in the Serbian army for his gallantry in bringing an Austrian aeroplane to earth. It is interesting to note that Pauillan as the outcome of the war was not doing sensational aerial stunts, but proving flowers on the Riviera for the London market. He promptly abandoned this work and volunteered for service in the air.

Six more generals have been transferred from the active to the reserve list of the French army by General Joffre, following the policy inaugurated by him early in the war of having only active and competitively young men in command. As a result of this the average age of French generals has dropped since last year from sixty-one to fifty-one years.

Petrograd estimates that the Russians are now taking 35 to 40 per cent of the total forces of Germany and 70 per cent of those of Austria-Hungary. It is said that the German infantry pitted against the czar's armies has increased 400 per cent and the cavalry 500 per cent recently.

The steamship Dacia, famous as the cause of one of the serious diplomatic controversies of the early part of the war and condemned by a French prize court because of her transfer from German to American registry, is now a French ship and has been renamed the Tyser.

William J. Bryan's son-in-law, Captain R. E. Owen of the British royal engineers, has been mentioned in orders for conspicuous gallantry in the Dardanelles fighting by Sir Ian Hamilton, commander of the British forces operating against the Turks.

Larger bread rations will be issued shortly in Germany. It is expected, on account of the large stocks of grain on hand.

IMPREGNABLE KIEL GREAT WAR HARBOR

Premier Naval Station of the German Empire.

BUILT up around the deep pocket of the Kaiser Fredrich, a narrow arm of the Baltic sea that cuts its way back into the province of Holstein, the city of Kiel lies well shielded from all hostile attacks, and is centrally placed for the use of the fleet, either upon the open ocean or upon the inland sea, says a bulletin prepared by the National Geographic society. This ancient port city is headquarters for German sea strength the first naval station of the empire.

The great war harbor of Kiel is one of the finest and most powerfully protected harbors in the world. The sea arm, whose base is inclosed by the port, has a narrow entrance and a long, irregular surface. The entrance and the strategic points along the land are heavily fortified. Fort Falkenstein and Fort Stosch guard the narrows about three and one-half miles above the town. Flanking the northern termination of the new Kiel suburbs, the Kaiser Wilhelm canal, a triumph of science and engineering, cuts its way into the shuttered bay. By means of this canal Kiel is close communication with the North sea, and units of the kaiser's navy can be transferred rapidly and safely from the war theater of the open ocean to that of the Baltic.

The Kaiser Wilhelm canal, or the Baltic ship canal, is the product of an idea which riveted through centuries of opposition and discussion. Sailors and North seas by a water route through the northern peninsula which should avoid the dangerous voyage around Jutland were considered spasmodical by from 1300 on, but it remained for the modern generation of a great people to bring about the realization of this adventurous waterway for trade. Any number of doubtful beginnings of the projected way were made before the construction of the present canal was undertaken by the first German emperor, Kaiser Wilhelm I. laid the foundation stone of the canal in 1887 and the cooly avenue was formally declared open by the present emperor in 1895. The original canal has been extensively improved.

The canal crosses the peninsula from Holtenau just beyond the northern suburbs of Kiel to Brunsbuettel at the mouth of the Elbe, at sea level. The locks at either end merely serving to neutralize the tides. It is sixty miles long, with a depth of more than thirty feet, and a width sufficient to pass the largest men-of-war. A steamer moves between each and one bound to pass through the canal, thus bringing the advance German naval base at Heligoland within easy reach of the Kiel headquarters. The whole way at night is lighted by electricity. The first cost of the Baltic ship canal was $35,000,000. Other millions have been expended in its improvement.

Great imperial docks, arsenals and navy yards are located at Kiel. Its arsenal is also naval headquarters and the imperial navy academy. Formerly there were the affiliated in the docks and yards. Many thousands of visitors regularly attended Kiel week (Kiel week, the great German regatta held each year during the latter part of June. This regatta was an event of first importance in the world of international sport, and yachts from all nations interested in water sports were annually entered in it. Famous races The yacht Hohenzollern, bearing the emperor and the imperial family, sailed each year the central point of the gay, rich, cosmopolitan throng of sportsmen.

Kiel is one of the oldest towns in Holstein. The older parts of the town are fairly built, but behind them, spread out, indifferently paved streets and behind these, the new, fine, well-built buildings. The new town, however, is filled with handsome structures and is well planned. The city has grown in every way, industrially, commercially, artistically, and it is now a fine naval headquarters for the empire, and of the greatest sport event upon the German sport calendar.

Different Times.

"The girls used to keep me waiting when I drove up in a buggy. I notice they never do it when waiting long when you drive up in a motor car." "Why is that?" "The girls know how quick by a model gets out of date as well as we do."

Up to Date Gypsies.

An up-to-date gypsy band which stopped in Pierre S. D. traded their wagon and not by a dingy wagon train. They do some trading, but the women still followed their traditional business of fortune telling.

KING OF ITALY BUSY

King Victor Emmanuel of Italy is seen (man wearing military cap) in conference with two of the most prominent citizens and the priest of the hamlet of Aquileia, an ancient Roman town about three miles outside Monfalcone, which was recently wrested from the Austrians by the Italians.

Teetotaler 28 Years.

Hillsdale, Mich.—Probably there is not a team of horses in the state which has quite the record of the span of mules owned and driven by E. B. Joys of No. 125 Union street, for three animals have been in continuous road service for twenty-eight years and they will be thirty-one years old their next birthday. They recently celebrated the anniversary of their twenty-eight years of service. They have never been driven by any one except their owner.

THUMB OFF, WALKS 7 MILES

Minnesota Man Permits Doctor to Scrape Wound and Sew on Severed Member.

Orth, Minn.—While Torger Nesset, a homesteader, three miles west of here was cutting out some new highway for this county the ax slipped and the thumb of his left hand was cut off.

Picking up the dismembered part he wrapped it in a piece of paper and walked to the nearest doctor at Northome seven miles away.

Without the use of anesthetics he permitted the doctor to scrape the wound and sew on the severed thumb.

Optimistic Thought.

Nothing dries sooner than a tear.

WANTED—Rent out. Team of horses for their keeping until April 1, 1916, or will sell one or both on time to responsible purchaser. Call phone 63, Charlevoix. 21-25-4t.

EVERY HOME NEEDS A FAITHFUL COUGH AND COLD REMEDY

When seasons change and colds appear—when you first detect a cold after sitting cold to the one who has sneezed, then it is that a tried and tested remedy should be faithfully used. "I never wrote a testimonial before, but I know positively that for myself and family, Dr. King's New Discovery is the best cough remedy we ever used and we have tried them all," etc. 50c and $1.00.

LOCAL NEWS.

The Belvedere closed Tuesday evening after a satisfactory season.

The Majestic Theatre has installed a new and improved moving picture machine.

Capt. P. D. Campbell has been in Milwaukee the past few days receiving treatment for his eyes.

"The Hoosier Schoolmaster" at the Majestic Theatre Sept. 24th—Friday of this week. Take it in.

Contractor Madill began work on his State street sewer Monday at the intersection of Park avenue.

Rev. H. A. Putnam of Ludington, is in the city for a few days visiting some of his former parishioners.

Douglas Nattleton returned from Lansing Saturday and has entered the employ of the Central Drug Store.

William Harsha, of Traverse City, arrived Saturday to visit his brother, and attend the wedding of his niece.

Mr. and Mrs. W. H. Thompson, of Sidney, Ohio, spent Sunday with Mr. and Mrs. A. E. Thompson on State street.

Mrs. Art VanAlsburg has bought the Mrs. Frank Cullings home on Antrim street, and the family will occupy it at once.

Mrs. H. O. Smith and children, who have been spending the summer here left for their home in Toledo Tuesday afternoon.

Lee Gilbert, son-in-law of Mr. and Mrs. Art Alcock, died Tuesday morning at his home in this city of leakage of the heart.

Louis Mercier is installing a marine railway on the lot adjoining the skating rink. Its maximum capacity will be boats the size of the Hum.

Mr. and Mrs. A. J. Hamilton and Mr. and Mrs. Albon Smith made an auto trip to Rogers, Saturday, and spent Sunday with friends there.

Mat Simonson, the veteran fisherman, off yesterday for Hinine, Wash.; where he will put in the winter at crab fishing. He expects to return here in the spring.

The U. S. dredge, Gen. Meade, has been here since last Thursday deepening both channels. She left Tuesday for Cleveland and Toledo for extensive work.

Mrs. J. W. Brown and daughter Lottie, of Grand Rapids, are visiting Mr. and Mrs. Kellner on Michigan avenue. Mrs. Brown is a sister of Mr. Kellner.

A man named Briggs, working in Burgess & Cooper's shingle mill, in Hayes, had the first two fingers of his right hand severed by a saw Tuesday morning.

Charlevoix Encampment No. 19, I. O. O. F. had a reunion of members and their families at their hall Saturday evening which is pronounced a very enjoyable event.

The Majestic Theatre has "The Hoosier Schoolmaster" billed for Sept. 24th. This is Edward Eggleston's famous story transferred to the movies, with an all star cast.

Ed Stover, formerly of this place, but now owner of a cash and door factory at Port Orange, Fla., has been here visiting his parents for two weeks. He leaves again soon for the south.

On Tuesday Chas. E. Sos and wife left for the Pacific coast to be gone all winter. They will first go to Seattle, working down the coast to Portland, Oregon, thence to San Francisco and the big exposition.

We have lately seen small boys climbing the water tower. One on Friday was half way to the top. It should be necessary to remind the authorities and the parents that one mis-step would bring sorrow to some household. It should be stopped.

Married, Tuesday morning, at the home of the bride, by Rev. H. A. Putnam and Rev. C. E. Taggart, Mr. Earl A. Young to Miss Irene Harsha, daughter of Mr. and Mrs. H. S. Harsha. Mr. and Mrs. Young left at once in their car for Detroit, where they will remain for two weeks.

The following merchants of Charlevoix will close their places of business as follows on and after Monday, Sept. 27th, at six p. m. except Saturday evening—J. L. Crane, A. E. Mason, A. Bergeon. At seven p. m. Sept. 27th and every evening—Ben Brown, M. A. Levinson & Co., Sarah Emery.

The wind-up of the resort season is now on, about every train leaves a crop of tourists. Nevertheless, there are a number of people who have decided to remain for a taste of our beautiful October weather, including Bay Settlers, who testify that Charlevoix is the only bay fewer resort that really claimes the season habit.

Rev C. E. Taggart, of this city, who attended the Cheboygan Congregational Association at Mackinaw last week, was elected a delegate to the National Congregational Council, which meets in New Haven, Conn., next month. I lay delegates to Mackinaw were Mrs. A. F. Bridge, Robert Bridge, Mrs. C. E. Taggart and James Wilkinson.

FOR SALE or RENT—A good business place centrally located. Enquire of
MRS. C. WALSH,
East Jordan, Mich.

Northern Michigan

Petoskey News: Arthur C. Anderson, who with his wife and family resided on a small farm near Bay Shore and who for several months has been ill in this city died here Tuesday morning. He is survived by his wife and six children, also two brothers and three sisters.

Petoskey News: The first meeting of the committee of ten business men appointed to organize a Petoskey Country club for the purpose of connecting a golf grounds here in Petoskey, was held Thursday evening at the city hall and considerable valuable work was accomplished looking toward the securing of a golf grounds and a country club here.

Petoskey News: Lee Smith, of Horton's bay, who fell over the cliff at the lime kiln at Bay Shore the other night, with no doubt recover. He was terribly shaken up and many bones were crushed and broken but his physician says he has a fine constitution and his chances for recovery are good. It will be a long time before he will be able to walk or use his hands and arms again as they were terribly injured.

Petoskey News: Out at Bay Shore, the home of the band which furnished music at the fair Wednesday, the county line runs through the middle of the main street of the place. Wednesday was Charlevoix and Emmet county day at the fair and as half of the boys playing in this band live in Emmet county and half in Charlevoix county, the fair directors decided it would be the right band for Wednesday at the fair.

Petoskey News: The white deer from the Petoskey City park and the three handsome specimen of elk shipped from the park Wednesday were the first specimen of these animals to be placed in the new game preserve enclosure at Grayling, according to Will Pearson, a deputy game warden and also a forestry and fire warden, who was in Petoskey Tuesday and Wednesday aiding in the work of crating the animals and getting them loaded on a freight car.

W. M. Burnham, who has been visiting the East Jordan fair, says the only stretch of country in this region which escaped the hard frost of a few weeks ago that strip between the South Arm of Pine Lake and Lake Michigan. In that section the frost did very little harm and even the buckwheat was not much injured. Fields of buckwheat that are white with blossoms where in other sections the crop was totally destroyed.—Petoskey Independent.

The soldiers and sailors of the G. A. R. of northwestern Michigan opened their thirty-eighth annual reunion in Traverse City Tuesday. About one hundred and fifty registered at the G. A. R. hall. Twenty years ago Traverse City entertained this organization at which time there were more than five hundred Civil war veterans in attendance. Then they pitched a regular military camp and lived in camp style. This year they are quartered in the homes of the citizens.

At the Second Annual Picnic of the Odd Fellows of Charlevoix county a Home Association was formed for the purpose of securing a permanent site for the annual event. No decision has been reached as yet as to where the site will be located but it will be on the shores of Pine Lake somewhere. The plan is to erect suitable buildings and make the grounds open for all Odd Fellows children especially, as a lodge or an association. The committee in charge has evolved a plan whereby the workers of each a fund may be raised and information regarding it will soon be given out. By a little effort on the part of each individual member the entire plan may be easily carried out.

Petoskey News: James Williams, Jr., son of Mr. and Mrs. A. M. Williams, of this city, walked from Central Lake to Petoskey Wednesday, a distance of forty miles, in just ten hours. He left the home of his grandparents, Mr. and Mrs. James Williams, Sr., there at six o'clock Wednesday morning and arrived at the home of his parents, 416 East Mitchell street, at five o'clock in the afternoon, quite tired but not tired enough to keep him from taking in the show Wednesday evening. The lad is fourteen years of age and is as hard as a nail. His physical condition is as fine as that of any lad of his age in Michigan as he has been spending the summer at the home of his grandparents at Central Lake and has been in constant training.

Never Thought of That.

Robinson had no reason to get cheaty because he was the wheat man. Who would have been if he had had a thousand wives to advise him?—Florida Times-Union.

First publication Sept. 23

STATE OF MICHIGAN

The Circuit Court for the County of Charlevoix. In Chancery.

Mary Hesselgrave Pratt, Complainant,

vs.

Mary Hesselgrave Pratt, Defendant.

Suit pending in the Circuit Court for the County of Charlevoix, in chancery, at the City of Charlevoix, on the 7th day of September, A. D. 1915.

On this issue it appearing that defendant, Mary Hesselgrave Pratt, is a resident of Ann Arbor, Michigan, and that the ordinary process of law cannot be served upon her within this State; It is ordered that defendant enter her appearance in said cause on or before three months of the date of this order, that within twenty days the complainant cause this order to be published in the Charlevoix Sentinel, a newspaper printed and circulated in said county of Charlevoix, once in each week for six weeks in succession.

Ambitious Youths.

Recruiter—"What's your age?" Bluffer (determined to do the patriotic thing and get to the front)—"Twenty-two." Recruiter—"I said your age—not your chest measure next."—London Sketch.

Agreed With Him.

Dry Goods Clerk—"We are selling these goods, madam, at ridiculous prices." Customer—"I should say so! I can buy them cheaper in half a dozen places."—Puck.

Milk for Choice Lass.

It is well when wooing a piece of choice pastry directly over the lass before ironing. Always place a piece of cheese upon the pastry over the lass so the warm iron will not touch the fabric.

Go On, Rub It In.

Probably the dire profanity, said to be common to us all, has no more striking illustration than in the case of the candidate before and after his election.—Ohio State Journal.

Welsh Language.

Welsh is taught in the public schools of Wales, is universally spoken there, and is extensively spoken in this country. The language is not closely related to the Irish and Highland Gaelic, but is of the same branch as the ancient Cornish and Breton languages.

In the British pharmacopoia a "drop" is defined as coming from a tube of which the external diameter is exactly three millimeters, 20 drops drops of water at 15 degrees Centigrade being equivalent to one milliliter or cubic centimeter.

Optimistic Thought.

The whole of life is but a moment of time.

Lancets for Scorpion Stings.

Sir Lauder Brunton suggested that "snake lancets," containing permanganate of potash and used for opening a wound caused by snake bite, would be useful for the stings of scorpions, which are not only intensely painful but often deadly.

Ordinary Advice.

"One reason," said Uncle Eben, "why marriage advice doesn't get took is dat de man dat gives it doesn't seem so anxious to help us he is to get hold over us to teach us how to do dat."

Barred.

"Love your enemy and embrace him," advises a Louisville pastor. It must be remembered, however, that in embracing an enemy you lose the strength hold in barred.—Boston Post.

For Faded Carpets.

To restore the colors of a faded rug or carpet apply, after a thorough sweeping, a weak solution of alum.

BIG BOAT STRANDED

Big Freight Liner Bound Down Runs On Gull Island Reef West of Big Beaver Island

The Dalton Transit Co. liner Lackawanna, bound in the north passage, coming down from Chicago, ran on Gull Island reef in fog Thursday night last, and is there yet. The wrecking tug Favorite is alongside pumping out the corn, and a big fleet of small craft is taking away tons of the corn, all wet. The boat's stern is under water, and she is in danger of going to pieces with a northerly blow.

Gull Island reef is four miles west of to the south half of Beaver Island, and eight miles about due west of the head of Beaver Island.

The Lackawanna is a steel boat of 2,000 tons displacement.

County Normal Notes

(CATHERINE LA LONDE)

Mrs. F. J. Chelle of Ellsworth visited the Normal room on Friday.

Dr. A. M. Wilkinson made a short visit in the Normal room last week.

The class in methods will do work in Manual Training under Miss Whiting.

Miss Dunlevey substituted last Thursday for Miss Allen in the fifth grade room.

Miss Richardson was chosen housekeeper and Miss Chelle to oversee the ventilation of the class room for this week.

The class organized permanently on Monday morning with the following officers: Florence Maddough, president; Florence Maher, vice president; Catherine La Londe, secretary; and Sadie Blanchard, treasurer.

One day last week the class was fortunate enough to be permitted on board the government dredge "Gen. Meade." As the students boarded the boat, it was nearly ready to empty its load of sand and stones which it had accumulated from the channels and along the shore. The class had the opportunity of seeing it unload. It took about five minutes to unload and about two and one-half hours to load. The capacity of the boat is about 900 cubic yards. The officers of the boat were very kind to the students, showing them all the parts and thoroughly explaining the workings.

(HAZEL RICHARDSON)

The Misses Lulu and Countess Mason are attending the state normal school at Mt. Pleasant.

Marcia Goss entered our class last Thursday. She attended Normal two years from a post graduate in the high school.

Miss Grace Papineau, a former normal graduate, is teaching the sixth and seventh grades in the Hudsonville school.

Miss Cora Driggett president of last year's class, is teaching at Barnard Lipper Lower Association it could not be more pregnant with sophistry, to use a mild term, and the arguments are from being far removed from the realm of truth.

It needs no argument to prove that labor's worst enemy is the saloon. The saloon has always been, and always will be a disturber of industrial peace, and prosperity—a dark, ghostly spectre at labor's hearthstone. How can any sane mind deny otherwise?

The liquor wholesalers never won a greater victory in Michigan than when, through the agency of the barrenter's union, they secured the adoption of the Traverse City resolution, and organized labor in Michigan never made a greater mistake than when it yielded to the underground influence of the saloon.

It is a contest of booze vs. bread.

BOOZE VS. BREAD

As will be seen by reference to an article in another column of this issue, Northern Michigan was honored last week by the assembling at Traverse City of the representatives of the Michigan Federation of Labor, embracing all union organizations.

A most astonishing feature of the proceedings of the convention was its endorsement of the saloon. If the resolution were written by the Wholesale Liquor Dealers' Association it could not be more pregnant with sophistry, to use a mild term, and the arguments are from being far removed from the realm of truth.

It needs no argument to prove that labor's worst enemy is the saloon. The saloon has always been, and always will be a disturber of industrial peace, and prosperity—a dark, ghostly spectre at labor's hearthstone. How can any sane mind deny otherwise?

The liquor wholesalers never won a greater victory in Michigan than when, through the agency of the barrenter's union, they secured the adoption of the Traverse City resolution, and organized labor in Michigan never made a greater mistake than when it yielded to the underground influence of the saloon.

It is a contest of booze vs. bread.

A BOOK TO BE READ

We have received a copy of "Johnny" Wright's new book, "Stories of the Crooked Tree." To people who appreciate tales of Indian lore—and of such there are many—the book is a gem. Probably no man in Michigan knows more of Ojibwa legend and history than John C. Wright. Born and raised in sight of a wigwam, the trend of his thought and labor has been for many years directed toward literary work that embraced every phase of Indian life.

And when we consider that the author possesses literary ability of more than average quality, we cannot fail to turn to this new book with interest. "Johnny" Wright lives in Harbor Springs but he belongs to Northern Michigan, and his reputation cannot long be confined to those boundaries.

Capt. H. L. Winters, of Company L has appointed the following team to appear and take part in the state militia shooting meet at the Detroit rifle range: Lieut. Balch, Sergt. Vandermeer, Corporal Grillis and privates Palmiter, Johnson and Sedgman. The above members have all qualified as expert riflemen.

WANTED—Rent out. Team of horses for their keeping until April 1, 1916, or will sell one or both on time to responsible purchaser. Call phone 63, Charlevoix. 21-25-4t.

THE CITY PARK

Three Days of Efficient Work Done on the City's Play Ground—Good Interest Shown—Greater Work Planned

Last Thursday was the day set apart for volunteer park work, but work for that day was cancelled, notwithstanding that a large number of men were engaged by commissioner Lusk as paid laborers, under the provisions of the money subscription list, as well as many citizens who volunteered to wield an axe, including Capt. Billy Pinucan, and the interesting fact that the ladies had provided a beautiful dinner.

But Friday came with sunshine, and about twenty-five men put in the day, a fine dinner was served and a luncheon at four. A transformation was certainly worked. The upper terrace of the park was thoroughly cleaned up, all dead timber removed, and useless underbrush cut and carried to the beach, where it will be burned later.

Saturday morning the work was resumed along the lower valley, and a most excellent showing made in cutting the dense underbrush. That day closed the work for this fall, but another raid will be made on this section in the spring.

Many citizens have visited the park during the progress of the work, and the unanimous opinion is expressed that the park should be taken care of. Walter Cox expresses the opinion that a competent landscape expert should be engaged to make plans for all future improvements, in the way of gravel paths, etc.

It is evident that the people of Charlevoix are waking up to the fact that we have the finest park of any town in Northern Michigan, practically in the heart of the city, possessing every natural element required. It has an area of about 19 acres, with a splendid Lake Michigan beach the entire length of it, with a most magnificent forest growth, with a young growth of desirable saplings that, with proper care, will, as the years pass, enhance in beauty and value this valuable public possession.

Commissioner Lusk has exhibited good judgment in eliminating what is bad and saving what is capable of being made good.

The ladies are entitled to great credit for their very important part of the work. The big circular table at the west end of the park was well loaded for several meals.

Now that we have made such a good start we suggest that there be designated an annual "park day" given official status by the mayor's proclamation. Such work as we have done this year spread over years would make the park the finest pleasure ground in the region.

'PAT" IS VERY KIND, BUT---

H. R. Pattengill in a recent interview on the political outlook says that he believes most of the progressives of 1912 will vote the republican ticket next year provided the republicans nominate a progressive and make a progressive platform.

Mr. Pattengill is another of the opinionated sort who will not be consulted when the National republican convention meets.

But one man is a republican or he can remain out as a swellheaded ass. The conceited authority of H. R. Pattengill is proverbial.

WHOLESALERS' EXCURSION

Friday, October 8th is the day set for the visit here of the Grand Rapids Wholesale Merchants' Association. The expedition will arrive in Charlevoix by special train about four o'clock.

The expedition will include the Furniture City band—one of the best musical organizations in the State, augmented by well known singers. Several speakers of State reputation will also accompany the merchants.

At five o'clock the band will give a concert down town, and at eight o'clock Sir Lancelot will meet the local merchants and the general public at the Charlevoix Theatre, where a splendid entertainment is promised.

If time permits the wholesalers will be given an automobile whirl about the town.

Petoskey News: Fire which was discovered at 8:45 o'clock Monday evening during a fierce gale from the northwest, badly damaged what is known as the Odd Fellows temple block on East Mitchell street, doing thousands of dollars of damage before the firemen checked the blaze. The fire evidently started in the wood room of the second floor office and quickly set fire to the partitions between the halls and offices and between the steel room of the Hemp & McCabe store which occupy the rear half of the second floor. The blaze made quick work of these dry wooden constructions and also burned its way up through the partitions into the third story occupied by the Odd Fellows.

TODAY IS MEMORY DAY

Governor Urges All Residents to Strew Flowers on Neglected Graves

In accordance with an act passed at the last session of the legislature Governor Ferris has designated Thursday, September 30 as Memory Day.

The governor's proclamation follows: "Does upon a time a Michigan school teacher traveled 267 miles to hear Adeline Patti sing 'Home Sweet Home.' The dear old song brought to the consciousness of 4,000 or 5,000 listeners the precious memories of childhood's days. In large measure human personality is the aggregate of one's memory. At the grave of father, mother, wife, husband, son, daughter, baby, neighbor or friend the joys and sorrows of the past, through memory, are revived and retouched with the benediction of love.

"Our cemeteries are cities of the dead, made beautiful through the magic touch of loving hands. It is hoped that on Memory Day every cemetery in Michigan will command the special attention of every citizen. If by chance a neglected grave is found put it in order and place upon it a handful of flowers. If there is a corner in the Potter's field clear away the weeds and rubbish. Here strew the plant flowers. The condition of this particular spot is the test of community love and loyalty. In remembering the dead we serve the living.

"I, Woodbridge N. Ferris, governor of Michigan, invite her people to convene in the cemeteries at 2 o'clock on the forenoon of Memory Day, and scatter flowers and hold appropriate exercises in memory of the dead."

THE GETTING TOGETHER

What is it that separates the Progressive from the party to which he formerly gave his allegiance? The policy of National preparedness so vigorously and earnestly advocated by Col. Roosevelt finds a ready response in the heart of a very large majority of the "regular." On the other hand, the progressive and the regular agree on the tariff question and every vital party issue. Why, then, should there be a single fundamental doctrine enunciated in the republican platform of 1912 that even Col. Roosevelt does not approve. What is it then that separates the two elements of the republican party?

It is merely the operation of certain rules of party procedure—divergent views of certain time-honored rules of party government, which are entirely foreign from any principle affecting the National welfare. We express the belief that the commanding personality of Col. Roosevelt is the chief obstacle in the way of reconciliation. The former president is a strong and magnetic leader, a leader from whose dictum no appeal is permitted. He grants no semblance, and knows not the color of a flag of truce. Standing upon the parapet with a regiment behind him he demands the unconditional surrender of an army.

As stated in these columns last week, no one man in either wing of the party is commissioned to assume this authoritative attitude. "I am the State" is not written in the guide book of American political procedure. Col. Roosevelt is a great and good man—too generous to waive, and the writer, for one, can loyally and consistently follow his leadership. If in the existence of these non-essentials, so greatly magnified by the colonel, that stands in the way of reconciliation. In all chief essentials we believe he is right.

East Jordan Enterprise: Company L came off very well in the rifle practice at Detroit this week. In shoot for the trophy cup their team was fifth from the lead with about forty in the contest. Lieut Balch and Fred Palmiter qualified as "expert riflemen," and the other four members as "sharpshooters" and "marksmen."

LYMAN H. HOWE'S TRAVEL FESTIVAL

"The picture of a baby—a quite delightful little youngster—was flashed upon the screen. He was a September Morn baby—almost—and he got hold of father's pipe, ate flowers, wallowed around making mud pies and finally distinguished—or rather extinguished—himself with jam from head to foot. The audience smiled, it chuckled and laughed. It rocked around until the whole theatre was in convulsions except that little one-year-old baby. It evidently didn't care a bit about the camera. It was just the human interest—that "one touch of human nature which makes all the world akin"—the artistry and simplicity of it all that completely captivated everybody"—all this and much more praise was voiced by the Hinghamton Republican-Herald and scores of other newspapers concerning that inimitable film entitled, "Our Baby," as shown in Lyman H. Howe's Travel Festival a year or so ago. That same baby scored a pitpable hit in each of 600 cities where he appeared.

No comedian of any age could score a more sweeping triumph. So, in deference to innumerable and insistent requests, Mr. Howe has arranged for that same baby to play a return engagement here at the Majestic Theatre on October 8th. True, everything else on the program will be entirely new from the sublimely beautiful scenes of both California Expositions and a trip through the Panama Canal to quaint Bruges, in Belgium, picturesque Holland, a ride on a submarine, etc., but of all else it is a foregone conclusion that "Our Baby," robed in all the simplicity of almost birthday clothes or the same busy little baby will conquer the audience more than ever. In spite of all the progress embraced, this gurgling bit of humanity will be perpetuated in a way that will be as joyous as ever.

ALLIES!

The dispatches say that the Turks have slaughtered 150,000 Christian Armenians within the past month, regardless of age or sex.

Incidentally we beg leave to remark that Germany and Turkey are allies.

And the Kaiser preaches!

"Get out Usa."!

Board of Education

Charlevoix, Sept. 21, 1915.

Regular meeting of the Board was called to order by President Hampton. Trustees present, Hampton, Nordrum and Bilder. Absent, Glassford and Bridge.

The following bills were presented and read:

LOVE in a HURRY

By GELETT BURGESS

ILLUSTRATED by RAY WALTERS

COPYRIGHT BY GELETT BURGESS

SYNOPSIS.

Hall Bonteille, artist, photographer, meets Carolyn Carle when he photographs Pindle Plaster's constant admirer, Mrs. Royalton. Carolyn's mother, Mrs. Carle, and her sister Rosamund, are in Europe. Hall thinks Uncle Jack, Carolyn's guardian, is a miser. Carolyn thinks that he married Rosamund for her money. Hall and Carolyn elope, but Carolyn's conscience hurts her. Hall's friend, Tom Fisher, is engaged at the poetry trust, which Uncle Jack controls. Carolyn's friend, Rena, is engaged to Jack. She opposes the match, and offers to help Carolyn. Carolyn's mother, Mrs. Carle, is coming home. Mrs. Royalton, who wants to show Hall a certain "girl," offers to take Carolyn out. Hall, who thinks Carolyn is a boy, fails to notice her. Mrs. Royalton introduces Hall to Carolyn as her nephew. Hall, who has been "hard up," decides to borrow from Carolyn. Rosamund comes to find out what happened.

CHAPTER VII.—Continued.

Rosamund flushed, but recovered to sneer. "Well, then, what answer did you give him, I'd like to know?"

"Why, I was for a moment, surprised. Oh, she replied, finally, I don't know that I should say I was hard, you know. I said I'd let him know later, so that I could break it to him gently."

"Exactly. So did I!" Rosamund triumphed, mimicking her sister's lifeless tone. "But I don't intend to break it to him—not for a long time, I hope."

"No!" Carolyn reflected gravely. "We ought to make it just a little hard for him, don't we? I don't think it might even torture him a bit—if possible? The question is how to do it. Why contemplated Rosamund, musing on revenge.

"I don't understand it at all!" Rosamund complained. "Why in the world should a man act like that?"

"My dear Miss Gale, I don't know. But I do know that it's just like men. You never can tell what they'll do. You think you know them—you think you're perfectly safe—they go by and they seem perfectly human and rational—and then—pff! They explode. No woman yet has ever solved the mystery."

Rosamund's scarlet was perfect as she looked Carolyn over pragmatically. "Hunny you tell Hall Bonteille I'm so far with you, wasn't it! Say, he must have shocked you awfully!"

"Now, see here!" said Carolyn firmly, putting her hand on Rosamund's arm. "There's no use in our bickering like this. Don't you realize that we're in the same boat? Now, you know you don't want to marry Hall. I like to be sure, though, before I go any further."

"Oh, you needn't worry," cried Rosamund. "You can have him, so far as I'm concerned!"

Carolyn couldn't keep from smiling now. Rosamund was too much for her. "Oh, thank you very much; but I have other plans for him. And we ought to try to get out of this world hand in hand up to."

"Do you suppose it could possibly be a joke?" Rosamund asked suddenly.

"It looks to me," said Carolyn, reflecting, "as if somebody had slipped a powder or something into his coffee. Or, it may be a disease. Incipient insanity, perhaps. No doubt he's going about proposing to everyone today, and—"

Carolyn paused. The door was opening. Mrs. Royalton entered.

CHAPTER VIII.

Mrs. Royalton, in an instant, had the vivid shade of purple, was, in contrast, to the pale faces of the girls. Behind her, there, calm, cool and confident, Tilney were going very well with Rena Royalton. She had a letter in her pocket. Rena was settling on Thirty. Five hundred a year, she knew, if they were going to be married again, why not, now? Hall was a good looking handsome? Wasn't he well born and bred? Rena had thought him over, and drawing a mental line, he had stood, therefore, in a most becomingly amiable state of mind, kitty and some what detached.

To Carolyn she gave a smiling but searching glance. "Why, hello, Carolyn! You here?" and to Rosamund the quiet, conventional friend due the natural blonde. Her eyes returned to Carolyn, a little troubled. "I didn't expect to see you so soon, my dear!" she said.

Rosamund, meanwhile, was staring at the prototype of the portrait which had started the disaster, and then at intimacies. Carolyn, noticing, introduced her. Rosamund, however, did not interest Rena. Philippine so much as did Carolyn herself.

"Oh, he's out—as usual," said Carolyn. "I expect Miss Fisher will attend to you, though."

Mrs. Royalton shrugged her shoulders. "Miss Fisher will hardly do for me. I want Hall himself. I'm afraid I'll have to see Mr. Bonteille himself."

"Hello! . . . Yes . . . Why, What's the Matter?"

Carolyn. I wears thought you were a lady!" and she walked swiftly toward the door.

"Oh, don't go yet!" Carolyn called out. "You've got a lunch coming to you, too. Rena. You haven't heard our news, yet!"

Mrs. Royalton trembled on the threshold. "Your news? What d'you mean?"

"Listen here," said Rosamund, walking over to her coolly. "Hall Bonteille proposed to Miss Daisy at ten thirty this morning and he proposed to me at a quarter to eleven. Now, what time did he propose to you?"

Mrs. Royalton put out a hand trembling with appeal. "Carolyn!" she implored.

Carolyn nodded unsympathetically.

Mrs. Royalton dropped into a chair, speechless, and burst into tears. Carolyn walked up to her and laid a hand on the heaving purple shoulder. "There, up!" she said. "It won't hurt a minute! See here, Rena, were you carried off your feet by his wild wooing, or did you take notice of the time?"

"Why—here this morning, Carolyn," Mrs. Royalton sobbed. "I left just before you came. It was—it was before that." Her tears poured forth afresh.

Carolyn nodded to Rosamund. "Make it fifteen, then. I expect he proposes every quarter of an hour, rain or shine."

"But I don't see," said Rosamund, "if he accepted him, why he ever proposed to us!"

(TO BE CONTINUED)

Red Sea Colored by Weeds.

The dwelling of Pharoah and his host in the Red Sea had nothing to do with the matter, it takes this from a peculiar reddish color (smarter) at certain seasons of the year in parts of this sea, due to marine plants, or reddish animalcules, called by sailors "whale food," which float on it like scum or in the reefs of red coral which abound in many parts of it; or, possibly, to the fact that the upper course, was one of the bound aries of Edom, "the red." No Biblical scholar of any repute has ever asserted that the sea took its name from the overthrow of Pharoah.

Prominent Style Features in Gowns

The most attractive of the new gowns already displayed for the coming winter are characterized by the long straight lines that belong to the semfitting princess, and by the introduction of the Russian blouse. The bluntness of two materials in the same gown are worked out in one-piece frocks made of cloth and silk, or cloth and velvet. Buttons and braids and sashes of the same fabrics as the gown appear with such frequency that they are assumed a place in the coming season's fashions.

In suits there are rumors of severely plain and perfectly tailored designs, this could constituting with the skirt portion showing a ripple or full flare. Dark cloths are chosen for these. The skirts, while amply full, are not decidedly flaring, but they are decidedly short.

The Russian idea is developed with fine success in the various pile fabrics used for dressier suits. Many novelties in the light weight plushes and for cloths, as well as plain velvet, promise much for the popularity of this style.

One of the handsomest of these suits is shown in the picture. The skirt is full and plaited and reaches to the shoe tops. It is made of a plain light weight, silky plush with an overdrapery of a striped plush of the same color. The stripe is made by a difference in the direction of the pile and not by a difference in color.

The coat is the regulation Russian model buttoning to the side. It is worn with a belt of patent leather.

In the management of the collar and cuffs the designer has introduced an individual touch. A narrow "V" shaped collar is attached to the blouse apparently by high buttons. It supports a wide turnover about the sides and back.

The turned-back cuffs slope outward and the edges are curved forward. A row of buttons fastens each of them.

The long sash ends of self fabric which appear on many of the new gowns merit much consideration. Besides their pleasing novelty they are effective decoration which adds much to the finish of a frock or suit.

Two of the New High Boots for Street Wear

Two out of many beautiful specimens in footwear for fall are pictured here. They are combinations of cloth and leather in high boots for street wear, and are among the most conservative of the new designs. They are trim, snappy and neat, with everything in style and finish to recommend them.

The new footwear shows a marked tendency toward more styles in which the boot-tops meet the short dressing of the feet imperative. New footwear embodies many styles in which the boot-tops meet the short dressing of the feet imperative. New footwear embodies many styles in which the boots are made of cloth and the remainder of the shoe is of leather, or vice versa, and vice versa. The dark colors which are correct for tailored gowns are used in the uppers for shoes to match. Or for mid-winter wear spats like the tailored gown are to be worn with black shoes.

Among the fancier shoes are those without seams made of light tan, black or bronze leathers, that lace on the inside. The leather uppers seem to be one piece stretched to fit the foot. Their suggest a close fitting boot like those worn by men in days gone by.

Even more darkingly masculine are the short Cossack boots with their ornamental turnover band at the top. Other are fascinating achievements in footwear and are steadily gaining headway, appearing with more frequency on the promenade than at any time since their introduction.

Very light shades in tan are liked for the outdoor street boots, to be worn with suits in any dark color. The tan shoes are seen with greater frequency as the season advances and Russian calf seems auspicious, come more and more into vogue.

JULIA BOTTOMLEY.

Borax for Colored Linens.

The delicate shades of the now fashionable colored linens may be kept from fading by using plenty of pure pulverized borax in the wash in which they are washed and rinsed.

AID IN IRRIGATION

Effective Work That Is Done by the Beaver.

Forest Rangers Have Orders to Protect Our Little Animals Are of Great Value in Conserving Water Supply.

The beaver is solving one of the problems which has proved most vexing to engineers since irrigation became prominent in the West, declares a writer in the Technical World Magazine. That is the problem of water supply, for while engineers can construct dams and ditches, they usually must rely upon nature to furnish the water for the project. And that is where the beaver helps—he sees to it that the supply of water is assured.

The beaver does not intend, perhaps, to do all this; he is simply interested in securing a lake in which to live. But while he serves his own ends up in the mountains, he also impounds enough water to insure a constant supply for irrigation projects, and that is why he has won government favor. Officers of the forest service who are doing all in their power to protect the beavers, and sentries of the geological survey, who have studied the work of the animals say there is no doubt but that the beaver lakes will be of great practical value.

A typical case is that of the Rio San Antonio on the Carson National forest in New Mexico. This river flows through a wide fertile valley, which has been but partly taken up by homesteaders. At least it was so as the site had been chosen by a trained engineer, but the beaver colony has built its dams and impounded the water to irrigate several hundred sand acres.

Ithicon de Laughlin's corner of the forest is known as the "Beaver" of this report, which is unique in several ways. It is a odd glacial cirque, with the top of the range as though with a great curved spade, leaving a wall of white cliff tipped with spruce forest. Within this natural amphitheater, containing perhaps a section of land, are numerous rounded, grassy knolls of glacial drift, with scattered clumps of spruce and aspen among them. A dozen rills, headwaters of the Rio San Antonio, rise here.

It is an ideal stronghold for the beavers. None of the streams is more than a foot wide, but the beavers seem to prefer these rills to the larger streams lower down. The groves supply abundant food and building material. The aspen bark is one of the beavers' staple grocery, while all of his building is done with aspen timber from which the last shred of bark has been removed. Nothing is wasted, for bark is a point in his favor when his work is compared with that of humans.

Three years ago there were half a dozen ponds, the largest perhaps twenty feet long. This spring and summer the change was almost incredible.

A chain of lakes had been created in this land of little water. The largest was about two hundred yards in length and half as wide, while there were twenty another ponds, ranging in size or more down the mountain side in a series of clever terraces, gleaming in the sun.

These ponds are the home of several hundred beavers, and the whole region bears striking evidence of their industry and engineering ability. The dams which created the lakes are from ten to fifty yards long, often six or eight feet high, perfectly uniform in form, with a spillway in the exact middle of each. Near the dams are trees, sometimes half an acre in extent, from which all the timber has been used in building purposes. Trees 18 inches in diameter, which is maximum size for the beaver, are the favorite timber.

How logs of this size are moved by the beaver is a mystery, for some of them which fall in awkward positions are never used, but the proportion of "duds" is small. It is certain the beavers seldom cut spruce or other trees of timber value in their lumbering operations.

In each pond is at least one lodge made of peeled aspen timber cemented with mud, with submerged entrances. Besides the lodges, all of the ponds are equipped with "emergency exits," in the form of holes in the bank, into a broad lake, a canal several feet long often leads to the extraordinary door of one of these holes, which the beavers seem to use for refuge when unable to reach a lodge. Some of the dams and lodges are built entirely of rough fore from timber, and in such cases the beavers have made smooth paths, or sailways, over which they evidently dragged their material from the woods to the water.

The beaver apparently never rests. Like a good mechanic, he is always tinkering, though yellow chips are scattered about all of the ponds, and the water is almost always muddy from his work.

SAFETY IN USE OF ASBESTOS

Material Chiefly Valuable for Protection Against Fire, But Has Many Other Good Qualities.

Asbestos is a potential lifesaver. We do not all realize, perhaps, that the fireproof theater curtain is made of asbestos which is not metallic, but nevertheless almost as soft and pliable as cotton or woolen fabric.

Asbestos is valuable for many other uses. Its incombustibility and its porous structure make it one of the most useful minerals for many and various commercial purposes.

It is used in making lumber, roofing, plaster and stucco.

Asbestos has not quite largely of asbestos afford their occupants not only smart, modern comfort, but because it is a "nonconductor," but assure them also the comfort of freedom from extreme heat and cold.

The asbestos producing industry of Canada is in no doubt but that many years we have been the greatest manufacturers of asbestos, the proper, drawing our raw material from Canada, but we are now getting some assistance from our own country.

NEW VERSION OF OLD JOKE

Mr. Bones Gives His Opinion as to Why a Chicken Crosses the Road.

"Mistu' Interlocutor," began the end man, "I wants to ax you a conundrum.

"Very well, Mr. Bones. What is your question?"

"Why does a chicken cross de road?"

"That is a very old one, Mr. Bones. She crosses the road because she wants to get on the other side, of course.

"Yessah, dat's right, Mistu' Interlocutor. An' now, sinc you is so smart, maybe you kin tell me why she wants to git on de oder side."

"Oh, Mr. Bones, I'm afraid I can't tell you that. Why does the chicken want to get on the other side of the road?"

"Cause dey's a young gosman over dere what's got de price of a ice cream soda in his pocket."—Exchange.

His Cruel Treatment.

Some time since a pretty young wife brought suit against her husband for divorce on the ground of cruelty. In the course of the trial the petitioner was put on the witness stand.

"You say on your petition, madam," interrupted the judge at one interval, "that your husband treated you with great cruelty?"

"Yes, sir," was the soft and meek response of the witness. "He was cruel to me very often."

"In what particular way?" asked the judge. "I want to hear some specific cases."

"I many ways," answered the petitioner. "One of the worst things he used to do was to say things to me on the telephone, and then bang up the receiver before I could answer back."

Wasting Time.

"Fiction always takes time. An object rolling down a smooth hill goes much faster than when it bumps along over stones and cobbles. A nervous remark will carry you quicker to the bargain than querulous bickering over price which the salesman knows he can control. When you allow the salesman to bring out dozens of the goods you undoubtedly know you will not buy a cent over $25 and are wasting your time and his. When you chat with an acquaintance at the glass counter and forget to "do you mean right or twelve button?" you are wasting time again and depriving the girl of another customer.

Philadelphia has more diseases in proportion to population than any other city in the East.

Every time some people bury the hatchet they dig up a hammer.

Health First!

The first essential to proper care of the body is nourishment that goes directly to the upbuilding and maintenance of muscle, brain and nerve cells.

Grape-Nuts

and Cream

is a powerful, self-sufficient ration. It contains all the rich nutritive elements of whole wheat and malted barley, including the mineral salts so essential to thorough nourishment, but so lacking in white bread and other common foods.

It is partly pre-digested in its making and agrees with child and adult alike—a delicious, healthful dish for any meal.

A 10 days' trial shows

"There's a Reason" for Grape-Nuts

Sold by Grocers everywhere

IMPROVING THE CAMP MEAL

Various Condiments That Should Never Be Forgotten When Party Goes on an Outing.

A well-filled box of spices will be thankfully remembered at every camp meal. If somebody is thoughtful enough to pack it and see that it reaches its destination, for even the laziest food may be neglected sometimes by judicious seasoning, and the most appetizing dainties of camp fare can be improved by spices that bring out their flavor.

Of course, you will remember to take along salt and pepper, but if you want the best flavored tea you ever had, of cayenne. A box of paprika, too, will give at laziness moments a snappy and filip, while lemon and garlic will be worth their weight in gold at all times. Remember the following things as well: onion juice, herb bouquet, and a flask of whisky or brandy. A tablespoonful of the last may be put in canned meat, soups instead of sherry, which is more bulky to carry.

Possibilities always liven up a canned soup, and so also a shaving of garlic and a squeeze of lemon juice. When using the sauce remember that it must be cooked with the soup. A raw egg beaten into the soup after it has been taken from the fire, or milk cooked with it, is a spiritual restiver.

Shooting.

"Speaking of describing modern dances, have you seen the indecision well?—Cornell Widow.

Effective Beads.

Yellow beads on a black cord, or beads combining green, gold and blue tones on a dull blue cord are very effective, as are amber and jet beads on a yellow cord. Pretty combinations can be made, and as they are not at all expensive red rich be made at home may not possess a number of them. Some are finished with a silk tassel while others are made from small balls of silk or cord, ending at the top with a large bead. Quite now are the long braided chains made of fat silk cord, using two contrasting colors to each strand and braiding as flat as possible. Finish each end with a tassel made by fringing the braid.

Languid Carry Look.

Gentleman—"What would you do with a nickel if I gave you one?" Tramp (languidly)—"Oh a nice flat, mister, an' some supper an' a night's lodgin. Breakfast, an' dinner tomorrow." Gentleman—"... get fellow, take this quarter and support yourself for the rest of your life."

PRESENT and FUTURE AGRICULTURE OF MICHIGAN

By R. A. SHAW DEAN OF AGRICULTURE, M.A.C.

PLOWING ON A BIG SCALE

A PROSPEROUS FARMING SECTION IN THE UPPER PENINSULA

HARVESTING SCENE

THE following data has been prepared with the view of furnishing information in concise form relating to the agriculture of Michigan, which is but one of the great industries in the state.

The data presented, except where otherwise indicated, has been procured from the report of the thirteenth census of the United States for the years 1909 and 1910. Comparatively few people have access to the census reports, which contain a mass of detailed data, that their common use for reference by individual classes is not possible. The facts hereafter presented are for the purpose of stimulating a more general and complete appreciation of the resources of our great agricultural industry and the wonderful opportunities open for its development.

Agriculture.

The agriculture of Michigan is notable because of its enormous annual production and the unsurpassed variety of its products. This territory might well be divided into two groups, viz., agriculture and horticulture, because of the prominence of the latter. The following ratings in agricultural production for the year 1909 have been computed from the thirteenth census report, viz:

First place in the number of animals on farms Michigan occupied the following rating, viz: Horses, mules and cattle, fifteenth, dairy cows tenth, swine nineteenth, sheep eighth, poultry eleventh, and for colonies of bees thirteenth. In making this comparison it should not be forgotten that the state is jilted against many, the chief business of which is the dairy, stock production, and that as later figures show, the relative prominence the rating is raised when expressed in terms of production and values rather than in numbers of animals.

The following list includes Michigan's cereals and other field crops, including the rating of the state among all other from the standpoint of crop valuations for 1909, viz: Corn fifteenth, wheat twelfth, oats ninth, barley eleventh, rye fourteenth, hay and other tame hay fifteenth, potatoes fifteenth, beans fifteenth, sugar beets fifteenth, sweet potatoes, yams and yautias, sweet potatoes, and sugar and forage sorghum, potatoes fourth (second in yield), sugar cane, sorghum for molasses, dry beans, dry fruit, and mint first. This long list included a wide range of products of high utilitarian value, presenting in general a high rating.

Agricultural Lands.

In addition to the very favorable climate Michigan occupies fortunate industries and agricultural products, there are still great opportunities for development, for as yet only 51.5 per cent of the total land area of Michigan is included in farms, with enormous areas of good land remaining to be reclaimed.

Michigan ranks twenty-first in land area covering 58,915 square miles, and twenty-ninth in population, with 2,810,173 inhabitants. This means that the state is only slightly above the average size for the entire number, and is only about twenty-ninth in land area, but ranks fifteenth in population, Illinois, Wisconsin or Florida; fifty-three times larger than Rhode Island, and less than one-fourth the size of Texas.

The gross area of the state of Michigan is about 57,980 square miles, including 5,065 miles of inland water surface. In comparison with this, the combined land areas of Belgium and Wales is 58,575 square miles, with a population of 7,500,000, these figures forming the basis of comparison with a European country.

The approximate land area of Michigan is 36,782,000 acres, and of this amount 19,240,614 acres are now included in farms, while 12,832,075 acres are classified as improved lands. Excluding the area of forest reserves, there remain great possibilities for agricultural development in the state, in addition to the improvement of those portions long are reclaimed. It would be easily possible for citizens of other states, and perhaps some of our own, to secure a comfortable homestead in great at an early date in the state, than all the good land had already been occupied, and that the portion now under cultivation is of little or no use for agricultural purposes. Nevertheless there are no better opportunities of secure anywhere today for investments in farm lands than in the state of Michigan, where prices at present are lower than the lowest figures at which other similar soils and conditions exist. The 48.5 per cent of the state land not in farms is not all sandy or rocky or swampy by any means; there are large areas of good land not yet under cultivation.

Conditions Unfavorable for Early Development.

Among the many conditions which arise upon perusal of the foregoing facts probably the most general one is, that the rapid development of portions of Michigan not been developed into a prosperous condition, as is the case with the settlement of the country west. As Michigan was originally a timbered area, the development of agriculture has been slow, which is the usual case in such conditions. Suitable conditions for agriculture, which did not exist, had to be produced slowly and laboriously, at the sacrifice of an enormous amount of muscular energy. The methodical soil fertility was already looked by the tenacious grip of the roots of the oak, maple, beech, basswood, elm and pine—in fact, by a great variety of both deciduous and coniferous trees. These obstacles had to be removed before the work of stock production could begin. On the other hand, however, with the extension of numerous great railroad systems into the practically virgin to the westward, vast areas were made available to the plow. The simple overturning of agriculture in these favorable conditions for the production of corn, wheat and other staples, which, combined with the great wealth of natural grasses, established conditions for the cheap production of enormous quantities of cereals, meat, wool and other products of the agricultural factory and which have for years been the principal source of the keenest of competition, forcing a curtailment of agricultural development. This competition has almost become a thing of the past, for the best of the western agricultural lands have been put under cultivation, while the extraordinary expansion of farm products are no longer to be feared owing to the rapidity with which consumption is overtaking production, notwithstanding the bounds of our own country.

Michigan Farms and Farm Property.

The following data, procured from the last United States census report, gives the values of Michigan farms and farm property in 1910, viz:

		Per Cent.
Farm property	$1,525,000,000	100.0
Farm buildings and machinery	185,976,211	12.2
Farm implements and machinery	48,000,000	3.1
Farm animals, poultry, bees	193,000,000	12.7
Total	$1,952,976,211	128.0

Of the sum of $1,525,000,000, including the total agricultural valuation of the state, 56.5 per cent represents land values, 22.2 per cent buildings, 12.7 per cent domestic animals, poultry and bees, and 8.6 per cent implements.

These enormous valuations, when compared with those of an almost purely agricultural state, such as Iowa, are a trifle under one-third less. We must not, however, lose sight of the fact that only 51.5 per cent of Michigan land is now in farms, and that the state has four distinctive industries besides agriculture, the products of our manufactories alone being two and sixteenths times greater than those of farms for 1910.

The increase in total value of Michigan farm property during the past decade of the present century amounted to 57.7 per cent, a much greater increase than has occurred any decade since 1870. The increase in the value of farm farms are changing hands at the rate of 10 to 20 per cent annually, and for similar lands in neighboring states to south and west. The average value per acre of Michigan farm land in 1910 is given as $32.48, eighteen times the average for the entire country.

Number of Farms.

In 1910 there were 203,000 farms in Michigan, ranking in size from 3 acres to 1,000 acres and over. From this list the number of farms increased at the rate of 3,107 per year, while from this time on to 1900, the increase dropped to 2,083 per year. During the ten years preceding 1910 the annual increase amounted to 270 farms only. The total number of farms has not proved has risen but slightly since 1900.

Average Acreage per Farm.

The average acreage of farms increased from 128 acres in 1850 to 151.3 acres in 1860, increasing by 1910 to 95.8 acres. The average sizes of Michigan farms are distributed as follows: 3 acres, one, 5 acres and under, 2.1 per cent; 20 to 50 acres inclusive 42.6 per cent, 60 to 80 acres, about 35 per cent, and 100 to 174 acres, 25 per cent. Forty, 80 and 160 acres are the precise divisions of the farms of the state. The average value for all farms in the United States in 1910 was 125.1 acres.

Status of Land Not in Farms.

The 48.5 per cent of Michigan land not in farms exists largely under the following conditions, viz: (1) As land covered with standing timber, (2) Cutover timber lands; (3) sand areas, and (4) lands as yet unreclaimed by drainage.

The lands of group (1) are held in varying acreages by private parties, corporations, manufacturing and mining lands in some instances by how ever, the Federal government, in many instances these large organizations are interested primarily in timber or mineral resources or both, and are interested in agricultural development only to the extent to which portions of the land is concerned. The removal of the timber in the commercial forests of the lumber is rapidly placing on the market lands with good agricultural possibilities. These lands can be reclaimed more economically and satisfactorily if the reclamation begins soon after the timber is first removed. Experience has proven that cutover work more and more difficult as the years go by.

Group (2) includes large areas of cutoff cutover lands in the state, comprising areas of two distinct types, viz., those on which hardwoods grew and those producing pines and other conifers. Stump lands upon which hardwood timber grew, if promptly cleared and seeded to a mixture of grasses and legumes, and then pastured for a few years until the stumps decay, may be rapidly and cheaply reclaimed for grazing and crop growing.

A larger portion of the lands in the state, comprising group (2) will undoubtedly be utilized than is at present anticipated. For the purpose fruit growing is being resorted to where the conditions are peculiarly suitable. Those very light lands, instead of being farmed intensively in small areas, will some day undoubtedly be cleared off in large tracts and utilized for grazing purposes, when the proper methods of handling, seeding and improvement are evolved, which they surely will be. The sand areas, underlaid with a clay subsoil near the surface, give promise of usefulness for horticultural and crop production, as well as for grazing purposes. Where the sand exists as much as about a clay subsoil, as horticulture referred to, the problem of agricultural production is still an unsolved one. It is a great disappointment to those who have put their pure sand lands have been sold by unscrupulous speculators to city citizens, who not been aware that their savings of years and left without experience or a soil with which to recoup their lost savings. Experienced farmers could not make a living on these types of soils; operating small areas only, and could not be induced to buy them in this way. It is unfortunate that people, particularly those without experience, will persist in buying lands without even seeing them or making inquiry of responsible people.

It may be said of group (4) that the possibilities of increasing agricultural production in Michigan by drainage are practically equal to the possibilities of increased crop production in the average arid state of the West. The reclamation, tillage, sweep and overflow acreage in Michigan, according to recent estimates of the bureau of drainage, amounts to 4,400,000 acres, in respect to the swamp land area, Michigan ranks sixth among the states. In this connection it should be stated that the state's drainage system is very complete, resulting in large increase in crop production in the state. Cooperative effort has already greatly increased the productive acres and value of cropping farm lands in this well to the depth of 6,775 feet, as recently determined with great accuracy by the Geological Survey.

At Derrick City, McKean county, Pa., near Bradford, there is a well 4,350 feet deep, which is probably the second deepest well in the United States.

Another deep well is on Slaughter's farm, Washington county, Va., 4,000 feet deep. It penetrates a well stone at 1,800 to 3,000 feet, and from this depth to the bottom a distance of 41 feet, the well was bored through solid rock.

TITLE MUCH MISUSED

TERM "REVEREND" SUBJECT TO SOME ABUSE.

Fact to Be Remembered Is That It Is Never a Family Name But Is Always Applied to the Individual.

At some time in the middle ages the custom grew up of applying to clergymen the term "reverendus." This word was a part of a speech known in Latin as a gerund, and meant "one who ought to be revered."

Gerunds could be compared life adjectives, and it seemed natural to the people of those days that, if all clergymen were reverend, a bishop should be designated by the comparative degree, "reverendior," more reverend, or right reverend, while the superative degree, reverendissimus, most reverend, was reserved for archbishops.

As these terms referred to individuals, they were never used in connection with the family name alone, but with the Christian name, which indicated the individual.

A great many people in our day are committing the unfortunate blunder of using the term "reverend" in connection with a family name. Mr. Smith is a clergyman. He is frequently spoken of as "Reverend Smith." This is wrong, Smith is a family name and does not refer to an individual. The only proper way of speaking of him is as Rev. Mr. Smith, or Rev. John Smith, or plain Mr. Smith, but never Rev. Smith.

Never Rev. and Mrs. Smith, but Rev. and Mrs. John Smith. Strictly speaking, the only possible way of speaking to him is "Mr. Smith," for calling him a "Your Reverence," has died out.

One does not speak of or to a judge as Honorable Jones, but one speaks of or writes of him as the Hon. Henry T. Jones, and addresses him as "Your Honor."

A concerns the use of the word "reverend," no one applies it to himself, or signs his name with it. It is always used by others.

Scholars urge us to try to preserve the use of the English language, and would help us. Dr. Lydia E. Pinkham's Vegetable Compound and I became friends at the time of the outbreak of the hostilities I ask that my body may be laid provisionally in the family vault, and that shall eventually be removed to the field where the final decisive victory is gained. I also leave the whole of my fortune to the town which shall bear the name of this victory."

Different Tastes.

"The attraction to me in this quaint roadside inn is its old English."

"What I prefer about it is its hot Scotch."—Baltimore American.

Powder on a Slipper Sole.

The best method of applying face powder is to spank it on with a lady's worn-lined sole such as is used in worsted bedroom slippers.

Fine Point.

"Chugstorth seems to be at home in any sort of company."

"That's true. I've seen him park his automobile with a lot of $700 cars and not show a trace of embarrassment."

Handicap.

"Fishing is great sport, but it's a hard way to make a living."

"Yes. If you try to make a living by it you drive out the truth about what you catch."

5 Women Avoid Operations

For years we have been stating in the newspapers of the country that a great many women have escaped serious operations by taking Lydia E. Pinkham's Vegetable Compound, and it is true.

We are permitted to publish in this announcement extracts from the letters of five women. All have been recently received unsolicited. Could any evidence be more convincing?

1. I could scarcely straighten up at times. My back ached and I was so nervous I could not sleep, and I thought I never would be any better until I commenced using Lydia E. Pinkham's Vegetable Compound and soon felt like a new woman."—Mrs. Hayward Newing, Hodgdon, Me.

2. Spurgeonville, Ky.—"I suffered from a severe female trouble. I must be in bed three days in every month. My husband learned this he got a bottle of Lydia E. Pinkham's Vegetable Compound for me, and after taking it a few days I got better and continued to improve until I am now well."—Mrs. Mollie Smith, R.F.D., Shelbyville, Ky.

3. Hanover, Pa.—"The doctor advised a severe operation, but my husband persuaded me to try Lydia E. Pinkham's Compound and I entirely got rid of my troubles. Now I feel like a new person and do a hard day's work and feel like dancing."—Mrs. Asa Wisler, 263 Walnut St., Hanover, Pa.

4. Dayton, Ohio.—"I was sick in bed and three of the best physicians gave me up. I took Lydia E. Pinkham's Vegetable Compound and it worked a miracle in my case, and I will do anything I can to help others."—Mrs. Laura A. Griswold, 2437 Lark William Street, Decatur, Ill.

5. Cleveland, Ohio.—"I was very irregular and for several years suffered from pains in my back and was very nervous. Doctors said they knew of nothing that would help me. I took Lydia E. Pinkham's Vegetable Compound and I became regular and free from pain. I am thankful for such a good medicine and will always give it the highest praise."—Mrs. C. H. Griffith, 1866 Constance St., Cleveland, O.

For 30 years LYDIA E. PINKHAM'S MEDICINE CO. (CONFIDENTIAL) LYNN, MASS., for advice. Your letter will be opened, read and answered by a woman and held in strict confidence.

Lydia E. Pinkham

YARB DOCTAH WAS TO BLAME

Second Mistake That Medical Adviser of Negress Had on Record Against Him.

Guy Hoerner, South Philadelphia apothecary, was urbanely dispensing a postal card to a "Rapper" who an Amazonian negress in a calico wrapper of morning dress pattern entered and walked briskly toward the counter.

"I wants a 'description' filled rich half-a-dozen five-ounce quinine pills" she announced.

"Why, woman, that pill would parlyze you!" "What's the matter with your?" asked the astonished chemist.

"Well, I'm a mother, sho' enough, the problem of finding work and wages for the large number of soldiers who at the end of the war on returning home may not be able to resume their former occupations. The matter is really one of some national urgency. As the chancellor of the exchequer has made clear the dangerous extent to which Scotland has hitherto been dependent upon foreign timber, for since the outbreak of hostilities every article in which wood is used has gone up considerably in price.

Wireless Station for Antarctic.

One of the objects of Sir E. Shackleton's present South polar expedition is to establish a wireless station in the Antarctic the start to be relieved once a year. The main purpose of the station would be to keep the civilized world acquainted with the meteorological conditions around the pole. Theoretically the power of such a station need not be very great for long-distance transmission, but during Captain Scott's Antarctic investigations it was discovered that the Barrier, sixty miles (the South pole equivalent of the aurora borealis in high northern latitudes), by "damping" the ether waves, somewhat counterbalanced the lessened interference of sunshine.

Poet as Lawmaker.

Signor d'Annunzio, Italy's poet-idol and political leader, comes nearest of all men to justifying the dictum of Fletcher of Saltoun regarding the power of the poet as a lawmaker. For d'Annunzio has "sung" Italy into war by his own bellicose lyrics. Fletcher may not suffer from the unpopularity of his dictum, for he never may be here set down. They are taken from an "Imaginary Conversation." I know," he says, "a worthy man so much of Sir Christopher's sentiment that he believed if it laws were permitted to make all the ballads he need not care who should make the laws of a nation."—London Chronicle.

Patriotic to the End.

A remarkable will was made by a French lady, who died recently in Marseilles. The will contains the following curious clause: "If I die before the end of the hostilities I ask that my body may be laid provisionally in the family vault, and that shall eventually be removed to the field where the final decisive victory is gained. I also leave the whole of my fortune to the town which shall bear the name of this victory."

Cold Douche.

President Wilson tells of a famous Princeton professor who supplied the pulpit one Sunday in the hamlet of Penn's Neck.

He preached his finest sermon and thrilled the congregation in the little country church as it had never been thrilled before. At the close of the service he was feeling particularly well satisfied with himself when the leading elder approached and asked him.

"Well, doctor, what's the damage?"

His Mild Request.

"My dear?" he began mildly.

"Well?" she said.

"I don't mind your borrowing my Panama hat to go fishing, return it in place remove the veil and the hatband, and don't stick the pin through my dominant again."—Louisville Courier-Journal.

The traffic over the four East River bridges in New York approximates 231,000 tons every day.

OH! MY BACK.

A stubborn backache to cause to stay put, to disappear for good, to be cured and relieved and evicted, stopping brings a sharp twinge in the small of the back, a twinge that takes your breath away. Soon there may be other twinges, dizziness, a feeling of frequent urination, headaches, dizziness, nervousness, and "the blues." These troubles to become serious—and perhaps to become chronic—if you find no better treatment.

Illinois Case

Mrs. Phillip Ruff, 1000 Ridge Ave., Pittsfield, Ill., says: "Doan's Kidney Pills have given me a wide and remarkable relief. I was in a bad condition and could not even stoop. I didn't get up without pain. I was so lame I could not turn in bed without pain. Doan's Kidney Pills, the first medicine I took, relieved my rheumatism. I can't be too grateful for Doan's Kidney Pills."

TERM OF MUCH SIGNIFICANCE

Phrase "South of Panama" Means Much More Than Merely a Geographical Location.

"South of Panama" is a phrase which has a mighty significance. It means not merely geographical location. It signifies vast virgin areas of lowland and upland contracted with fallow valleys and lofty plateaus populated and cultivated through cold cities.

It means barren and burned mountains and dreary deserts mingled with forested and watered slopes, grassy llanos and pampas and flowering savannas.

It means the mixing of almost forgotten aboriginal races and surviving Indian types with the intellectual and refined descendants of early Spaniards and Portuguese and the later spring-ling of adventuresome Germans, Italians, English and Americans.

It means an ancient civilization, fascinating Incan ruins, old-fashioned Moorish and Spanish architecture in the sleeping cities and towns with strange peoples and conditions harking back to far centuries, hard by a new civilization, modern skyscrapers and boulevards in growing commercial entropots and ambitious capitals with progressive peoples and conditions which rival the best that the old East and the new West of North America can show.

Food by Proxy.

Most of us know some particular food or drink, the desire for which is stimulated in us by reading about it. But the writing must be skillful, or it not skillful, artlessly good. The crude method of the stage-performer has some effect; all smokers have experienced the almost overwhelming desire to smoke which comes upon them when someone lights a cigarette on the stage; these strange and rapid restaurant meals of the Bubblewabe theater when a party sits down at a table and is whirled through six courses in about five minutes, surrounded by champagne bottles in ice buckets and trays of liquors, have an absurdly exciting effect.

Unable to Appreciate Silence.

Some people never learn to appreciate the beauty of silence. Perhaps it is an appreciation that cannot be acquired. Perhaps it comes by nature. Such people seem to believe that all apparently human relations must express themselves in speech. They keep up an incessant chatter and they try to make others chatter in return. They are among the most fatiguing influences in the world. Often they are tormented with personal curiosity. They ask searching questions, and if they do not receive spontaneous and full replies they become suspicious or hurt.

Cheerful Man Wins.

In a recent contest of woman's opinions this type brought first money. He is described as follows:

I vote for a cheerful grin, and for the man who always has it ready at the right time. He can be depended upon as a judge of human nature, a humorist, an optimist, a tactician, an altruist and a friend. If he's a doctor, I want him when I'm sick. If he's a preacher, I'll go to his church, regardless of denomination. If he's in business, I'd like to work for him. If he wants me to, I'll marry him.

Two Types of Mind.

Much of the pharisaism and priggishness on the subject of education arises from the fact that the world is divided into two camps as regards knowledge; those who believe that the astronomer alone knows the stars, and those who believe that he knows them best who sleeps in the open beneath them. In reality, neither type of mind is complete without the other.

KNOW WHERE TO FIND THEM

War Authorities Keep Effective Track of All the Soldiers Under Their Control.

It is doubtful whether any foreign war office follows with an accuracy greater than that displayed by the United States war department the movements of its officers. The following is an interesting case in point.

A young army officer who had seen service in this country and in the East was once with a small scouting party in Arizona. After two weeks in the desert his squad came to the railway near a small station. Within ten minutes a telegram from Washington was brought to him by the station agent. It asked if the officer wished to be transferred to one of the new artillery regiments then forming.

He answered by telegraph that he would be glad to enter either of them. Then with his squad he set off again across the desert.

It was six days later when they again struck the railway, this time miles from the point at which they had previously crossed it, but the officer's copy from the war department was awaiting him. It had been telegraphed to every station within two hundred miles.

A more striking instance of secrecy occurred after the same officer's transfer to the East. He was traveling home on leave and, as the regulations require, had notified the department of the day, hour and probable route of his journey. After he had been on the train for eight hours at a small station the conductor entered with a telegram, asking if anyone of his name was on board. On opening the telegram the officer found that it ordered him to described duty.

Exactness of detail could not be carried much further. The war department knew the whereabouts of a second lieutenant even when he was traveling on leave of absence.

ONE ON THE FLOORWALKER

Presumably He Knew Duties of His Position, But He Was Not Proficient in Spelling.

The worst thing about the following is that it is true, and what's more, that it happened to one of Pittsburgh's stores.

The girl, stylishly attired, stepped up to the still more stylishly attired floorwalker and inquired where she would find the chifon. The floorwalker consulted a notebook. Her surprise came when he gravely told her that they did not keep chifon.

"Why!" she gasped, "you cannot possibly mean that."

In her eagerness she stepped closer to the stylishly-attired man Klaw-nor-Gale says a stylishly-attired woman should, and looked over his shoulder at the notebook.

"Oh! I see," she said, flatly, as she moved off to ask the girl at the glove counter about the chiffons. The man had been looking under the s's.—Baltimore Star.

Removing Adhesive Tape Painlessly.

The usual pain which accompanies removing adhesive tape from eyes or bruises can be avoided if a few drops of benzine are applied to the edges. —World's Advance.

WORDS CHANGE IN MEANING

Sometimes Through the Centuries They Became Contradictory—Two Great Examples.

It is a curious habit that history reveals, that of stripping a word of its original meaning and clothing it with a meaning radically different. We were told in our high school days that slav meant originally, "master," and that when the slaves were captured in great numbers by the more civilized nations of Europe and impressed into involuntary servitude, they gave their once proud name to be used forever to designate the condition of slavery. Modern etymologists are inclined to scout the idea that the word Slav came from the old Bulgarian "slava," which signified "glory," but in the case of another perverted word there is no dispute. That word is "Mamelukes."

In Turkey a mameluke was a slave boy, usually a Circassian, who did menial work in the household of the master. About the year 1200 a great body of these slaves were sold by Genghis Kiun to the ruler of Egypt. In 50 years they had seized the government, assassinated the monarch and elected one of their number to the throne. Their government lasted until 1517, when they were overthrown by Selim I, sultan of Turkey, but they continued to be a power in the army until the beginning of the nineteenth century, when Mehmet Ali had them massacred, because no ruler could ever feel secure on his throne as long as the cavalry wing of his army was composed of mamelukes. Tacit Very name had come to signify the masterful qualities that belong not to the slave, but to the conqueror.

Reptiles Had Chins Like Humans.

Oddly enough, and for some reason quite unexplained, the nearest resemblance to the human chin is found in some of the most ancient reptiles yet discovered—strange and primitive creatures whose remains have been unearthed on the shores of the northern Dvina. It is not to be imagined that they could talk, for they had no brains to speak of. Their chins, which are strikingly humanlike, must have been meant by nature for some entirely different purpose.

DON'T FAIL TO ATTEND OUR GREAT SACRIFICE SALE

We are offering our entire stock of House-furnishings at prices that will make you open your eyes with wonder.

Our store display is the most complete to be found in this city, consisting of Ranges, soft and hard coal heaters and wood stoves.

STATE OF MICHIGAN

The Circuit Court for the County of Charlevoix. In Chancery.

Mary Maskwey Pearl, Complainant,

vs.

Mary Maskwey Pearl, Defendant.

Suit pending in the Circuit Court for the County of Charlevoix, in chancery at the City of Charlevoix, Michigan, on the sixth day of October, A. D. 1915.

In this cause it appearing that defendant, Mary Maskwey Pearl, is a resident of this state, but her whereabouts are unknown, and that it cannot after diligent inquiry be found, notice is hereby given that said defendant enter her appearance in said cause on or before three months of the date of this order, that within twenty days the complainant cause this order to be published in the Charlevoix Sentinel, and publication be continued once in each week for six weeks in succession.

FREDERICK W. SAYNE, Circuit Judge.

LISLE SHANAHAN, Solicitor for Complainant.

Business Address: Charlevoix, Michigan. 65

First publication, Sept. 22

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate office, in the City of Charlevoix, in said County, on the 20th day of September, A. D. 1915.

Present: Hon. Severino A. Correll, Judge of Probate.

In the matter of the estate of John Hanson, deceased.

Catherine Herrington having filed in said court her petition praying that the administration on said estate be granted to Peter Hanson or to some other suitable person, and that the heirs of said deceased and entitled to inherit the real estate of which said deceased died seized.

It is ordered that the 1st day of October A. D. 1915 at ten o'clock in the forenoon at said probate office, be and is hereby appointed for hearing said petition.

It is further ordered that public notice thereof be given by publication of a copy of this order for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel, a newspaper printed and circulating in said county.

SEVERINO A. CORRELL, Judge of Probate.

A true copy.

SEVERINO A. CORRELL, Judge of Probate.

(First Publication Aug. 12, 1915)

MORTGAGE SALE.

WHEREAS, William Meaks and Odietta I. Meaks, his wife, of the Village of Boyne Falls, Charlevoix County, Michigan, made and delivered a mortgage to Mary Ann Meaks, dated 26th day of July, A. D. 1905, to Kelsa Farmer, of Mackinaw Michigan, which was recorded in the office of the Register of Deeds for the County of Charlevoix, on the 5th day of August, A. D. 1905, at nine o'clock in the Forenoon, in Liber 17 Mortgages on Page 66.

And whereas the amount claimed to be due on said mortgage at the date of this notice, including said mortgage, is the sum of Six Thousand Dollars ($6,000) of principal, and attorney fees in the sum of Twenty-five Dollars ($25.00) and the taxes (Insurance premiums, Abstract and Thirty-seven Cents ($37.00) of insurance, Abstract Fee, provided for in said Mortgage, Attorney Fee, provided for in said Mortgage, and Twenty-five Dollars ($25.00) Attorney Fee, provided for in said Mortgage, and no suit or proceeding having been instituted to recover any portion thereof.

And whereas default has been made in the payments of the money secured to be paid, and the mortgagee has elected to declare the whole unpaid principal and interest immediately due.

Now, therefore, notice is hereby given that, by virtue of the power of sale in said mortgage contained and the statute in such case made and provided, the said Mortgagee shall be foreclosed by a sale of the premises described in said mortgage, or so much thereof as may be necessary to satisfy the amount due on said mortgage, at public vendue to the highest bidder at the building known as the Court House, in said County of Charlevoix, Michigan, the place where the last circuit court for said county was held, on the 20th day of November, A. D. 1915, at two o'clock in the afternoon, the description of which said premises is as follows, to wit:

Situated in the Township of South Arbor, in the County of Charlevoix, State of Michigan, viz: The east one-half of the northeast quarter of Section Two, And the North one-half of the northwest quarter of Section Eleven, Township Thirty-four North of Range Eight West, Other than the South Boundary line and consisting twenty acres more or less, the above described lands being in Township Thirty-four North of Range Eight West.

Dated, Boyne City, Michigan, July 21, 1915.

KELSA FARMER, Mortgagee.

William H. Koch, Attorney for Mortgagee, Business Address: Boyne City, Mich.

Advancement.

"Have you made any progress toward the betterment of municipal affairs?" "We've made some progress with reference to stationary. All the wooden benches have disappeared from in front of the cigar stores."

Allowance for Your Child.

A child may be given a small regular allowance for his own use. Through this he may learn the joy of immediate indulgence of trifling whims; or he may learn to expend his resources with discrimination; or he may learn the advantages of deferring expenditures for more favorable purchasing, says a writer in the Pittsburgh Dispatch. The child's claim to such an allowance can be justified to his mind on exactly the same ground as his claim to food and clothing and other material and immaterial wealth shared in the home. He gets these things not as a reward of merit, but through his status as a dependent member of a household.

Traffic on the Duna.

It is estimated that more than 2,000,000 tons of freight are transported over the Duna each year. Among its tributaries, the Mesha, Vasyat, Kasplya, Ulla, Dissa and Holdepsa are too navigable. The Beresina canal connects the Duna with the Dniepper, thus giving a fresh route by water from the Baltic sea, across Europe, to the Black sea. As is the general case with Russian rivers, the Duna abounds in fish, a very delicate species of salmon being caught in the rivers.

"Hohenzollern Luck."

"The Hohenzollern Luck" is a plain guess name, with a black stone, in the possession of the kaiser. Frederick the Great received it from his father with a note, declaring that so long as it remained in the family the race would prosper.

Fresh Water Above Salt.

Selar is a curious lake near the seacoast of Alaska. It is as fine and fill in the lake by reason of an underground connection with the sea. At the bottom the water is quite salt, but at the top is a layer of perfectly fresh water.

PEARL HAS FAMOUS HISTORY

Among Other Things, It Is the Oldest Object Used for Adornment of the Person.

The pearl is the only gem needing not the hand of man to bring to perfection, and history affords ample evidence of the intense fascination it has exercised upon the people of every age. The pearl is the oldest object of personal adornment.

Indian mythology often speaks of the pearl, attributing its discovery to the god Vishnu, who is said to have caused it to be drawn from the ocean for his daughter Pandaia. The records of the Babylonians, Egyptians, Persians and Romans also contain many references to the gem. The wife of Emperor Caligula, for an ordinary betrothal feast, is said to have decked herself with pearls to the value of $1,000,000, and Julius Caesar presented Servilia, the mother of Brutus, with a specimen valued at $250,000.

Philip II of Spain paid $200,000 for a single pearl known as "Peregrina." It was found in Panama, was pear shaped and weighed 134 carats. Another king of Spain—Philip IV—purchased a pearl of Indian origin weighing 116 carats.

The largest pearl known is that which was once the property of Henry Philip Hope. Cylindrical in form, it is two inches long, four and a half inches in circumference at one end, and three and a half inches at the other. It weighs 1,800 grains and is valued at $200,000.

It is known that the beauty of the natural pearl sometimes proves evanescent. To retain its shimmering splendor it needs air and light. Acids can affect pearls, and emanations from the human skin can, if is contended, destroy the nacreous luster which, once gone, cannot be recovered. Sometimes, too, owing to this comparative softness, pearls become scratched and thus a source of anxiety to their owners.

EFFECT THAT WAS LASTING

Dumas Had Ready Explanation of the Presence of Sleepy Ones in Audience.

The elder Dumas was celebrated for his entertaining repartee in everyday conversation. In illustration there may be cited the following:

One evening he attended a theater in Paris with a literary colleague, criticising a play written by the latter. The author of "Monte Cristo" noticed the presence of the audience in the parquet had gone to sleep during the performance. He nudged his friend, pointing to the sleeper, and whispered, "Is that the effect your plays have upon some people?"

Soon after the same couple went to the same theater on an occasion when a play by Dumas was being produced. Again there was a man asleep in the parquet. "Look," said Dumas friend, "at the result of your dramatic works."

"Why, my dear fellow," was the reply, "that's the same man we saw asleep here the other night. He is not asleep."

REMOVAL SALE AT BLANCHARD'S

-AT- COST 50-STOVES-50 -AT- COST

A NEW STORE BUILDING and a NEW STOCK is what we wish to show the City of Charlevoix next season. The new building is practically assured, but to open with a new stock will require some outside assistance. We mean by this that the stock we now have will have to be disposed of and we are going to start right in and clean house. THE FIRST OFFERING WILL BE STOVES AT COST AND LESS: some much less than cost.

You may wonder why we do this and ask, "What is wrong with those 50 HEATING STOVES you talk so much about?"

We answer, "Nothing wrong with them, all good stoves but too many different makes and our policy in the future will be to confine ourselves to two or three good makes instead of 25, hence this slaughter of prices."

It is not likely you will have the opportunity to buy stoves at these low prices again soon and we wish to impress you with the honesty of this sale. Invoices will be shown to anyone doubting our sincerity.

Comfort and Economy, or Expense and Misery—Which?

THE poorly heated home does not necessarily have the lowest coal bill. *Combustion* is the big thing. The ILINOY HEATER burns *all* the *carbon* and *volatile gases* and throws off every unit of heat in the *room*—none escapes up chimney. Perfect draft system, super-heated air fed to the fire-box—constant circulation of warm air in room. This heater saves coal and doctor bills. It means winter comfort at *less cost.* You haven't solved your heating riddles till you have bought the ILINOY—and the time to talk it over is *now—TODAY!*

We show in this advertisement a cut and description of the ILLINOY HEATER.

This stove is without a doubt one of the very best heaters made.

It is thoroughly guaranteed and the stock left on hand of these heaters will be included in our sale.

After we wake you up on this stove sale other good things will be offered.

Following is a partial list of heating stoves at cost and less:

$36.50 MISSION MONOGRAM—Sale No. 44	$28.00
$30.00 SUPREME PENINSULAR—Sale No. 56	$22.00

SEVEN and one-half acres, close in, will sell at a bargain. Well located. Call on or telephone, H. S. Harsha.

When Father Is Recalled.

Mr. Benedict—"My daughter is the inventive and my wife is the referendum." Mr. Singleton—"And where do you come in?" Mr. Benedict—"On the recall. They recall my existence whenever the bills come in!"—Judge.

Americans and Dante.

Except the Bible, no work has had so much written about it as has the "Divina Commedia," and no work has been translated into so many languages; among those in our own four are the work of American translators. Moreover, Americans are to the fore in Dantesque comment. During the nineteenth century some five hundred publications dealing with the poet were written by Americans and printed in this country.

Skim Milk.

In distributing the milk of human kindness the givers too often keep the cream.

Pinches in England.

A long time ago someone said that an Englishman eats a peach as if he were performing a religious ceremony. No wonder! In the London market a sale of a dozen peaches ranks as a wholesale transaction. And the prices! The London Telegraph recently printed an article on "Cheap Fruit" in which the statement occurs that "small samples" were worth two or three shillings a dozen, but that the best fruit could be bought at 12 shillings a dozen. Think of paying a quarter for a single peach! But there were some about that eat the price, and that would sell you a peach for three pence—six cents.—Youth's Companion.

Weight of Building Materials.

Granite or limestone masonry, well dressed, weighs 165 pounds per cubic foot; coarse rubble, weigh 154 pounds; dry rubble 128 pounds and well-dressed sandstone masonry 144 pounds.

FACTS FOR SUFFERERS

Pain results from injury or congestion. For it neuralgia, rheumatism, lumbago, sciatica, toothache, sprains, bruises, sore stiff muscles or whatever pain you have yields to Sloan's Liniment brings new fresh blood, dissolves the congestion, relieves the injury, the circulation is free and your pain vanishes. If you suffer the nature of its quantities penetrate immediately to the sore spot. Don't keep on suffering, get a bottle of Sloan's Liniment. Use it. It means instant relief. Price 25c and 50c. $1.00 bottles contain six times as much as the 25c size.

TERM OF MUCH SIGNIFICANCE

Phrase "South of Panama" Means Much More Than Merely a Geographical Location.

"South of Panama" is a phrase which has a mighty significance. It means not merely geographical location. It signifies vast virgin areas of lowland and upland contrasted with fallow valleys and lofty plateaus populated and cultivated through centuries.

It means barren and burned mountains and dreary deserts mingled with forested and watered slopes, grassy llanos and jungles and flowering savannas.

It means the mixing of almost forgotten aboriginal races and surviving Indian types with the intellectual and refined descendants of early Spaniards and Portuguese and the later spirited kin of adventuresome Germans, Italians, English and Americans.

It means an ancient civilization, fascinating Incan ruins, old-fashioned Moorish and Spanish architecture it the sleeping cities and towns with strange peoples and conditions harking back to far centuries, hard by a new civilization, modern skyscrapers and boulevards to growing commercial entrepots and ambitious capitals with progressive peoples and conditions which rival the best that the old East and the new West of North America can show.

Food by Proxy.

Most of us know some particular food or drink the desire for which is stimulated in us by reading about it. But the writing must be skillful, or it not skillful, artlessly good. The credit belongs to the stage producers that effect; all smokers have experienced the almost overwhelming desire to smoke which comes upon them when some actor lights a cigarette on the stage; these strange and rapid restaurant meals of the fashionable theater, when a party sits down at a table and is whirled through six courses in about five minutes, surrounded by champagne bottles in ice buckets and trays of liquors, have an absurdly exciting effect.

Unable to Appreciate Silence.

Some people never learn to appreciate the beauty of silence. Perhaps it is an appreciation that cannot be acquired. Perhaps it comes by nature. Such people seem to believe that all apparently human relations must express themselves in speech. They keep up an incessant chatter and they try to make others chatter in return. They are among the most fatiguing influences in the world. Often they are tormented with personal curiosity. They ask searching questions, and if they do not receive spontaneous and full replies they become suspicious or hurt.

Cheerful Man Wins.

In a recent contest of woman's opinions this type brought first money. He is described as follows:

I vote for a cheerful grin, and for the man who always has it ready at the right time. He can be depended upon as a judge of human nature, a humorist, an optimist, a tactician, an altruist and a friend. If he's a doctor, I want him when I'm sick. If he's a preacher, I'll go to his church, regardless of denomination. If he's in business, I'd like to work for him. If he wants me to, I'll marry him.

Two Types of Mind.

Much of the pharisaism and priggishness on the subject of education arises from the fact that the world is divided into two camps as regards knowledge: those who believe that the astronomer alone knows the stars, and those who believe that he knows them best who sleeps in the open beneath them. In reality, neither type of mind is complete without the other.

KNOW WHERE TO FIND THEM

War Authorities Keep Effective Track of All the Soldiers Under Their Control.

It is doubtful whether any foreign war office follows with an accuracy greater than that displayed by the United States war department the movements of its officers. The following is an interesting case in point:

A young army officer who had seen service in this country and in the East was once with a small scouting party in Arizona. After two weeks in the desert his squad came to the railway near a small station. Within ten minutes a telegram from Washington was brought to him by the station agent. It asked if the officer wished to be transferred to one of the new artillery regiments then forming.

He answered by telegraph that he would be glad to enter either of them. Then with his squad he set off again across the desert.

It was six days later when they again struck the railway, this time 80 miles from the point at which they had previously crossed it, but the officer's reply from the war department was awaiting him. It had been telegraphed to every station within two hundred miles.

A more striking instance of accuracy occurred after the same officer's transfer to the East. He was traveling home on leave and, as the regulations require, had notified the department of the day, hour and probable route of his journey. After he had been on the train for eight hours at a small station the conductor entered with a telegram, asking if anyone of his name was on board. On opening the telegram the officer found that it ordered him to detached duty.

Exactness of detail could not be carried much further. The war department knew the whereabouts of a second lieutenant even when he was traveling on leave of absence.

ONE ON THE FLOORWALKER

Presumably He Knew Duties of His Position, But He Was Not Proficient in Selling.

The worst thing about the following is that it is true, and what's more, that it happened in one of Pittsburgh's stores.

The girl, stylishly attired, stepped up to the still more stylishly-attired floorwalker and inquired where she would find the chiffon. The floorwalker consulted a notebook. Her surprise came when he gravely told her that they did not keep chiffon.

"Why!" she gasped, "you cannot possibly mean that!"

In her eagerness she stepped closer to the stylishly-attired man than dignity or Gale says a stylishly-attired woman should, and looked over his shoulder at the notebook.

"Oh! I see," she said, flatly, as she moved off to ask the girl at the glove counter about the chiffons. The man had been looking under the "x"—Baltimore Star.

Removing Adhesive Tape Painlessly.

The usual pain which accompanies removing adhesive tape from cuts or bruises can be avoided if a few drops of benzine are applied to the edges.—World's Advance.

MOTHERS—WATCH IRRITABLE CHILDREN

That fever, paleness, grinding of teeth while asleep, and could tongue are indications that your child has worms in its system. Kickapoo Worm Killer quickly gets rid of these parasites. It is perfectly safe for even the most delicate children. It is pleasant to take but three effective medicinal qualities—acts as a laxative, expels the worms, and tones up the system. Begin treatment to-day and eliminate the cause of irritableness. 25c.

WORDS CHANGE IN MEANING

Sometimes Through the Centuries They Become Contradictory—Two Great Examples.

It is a curious habit that history reveals, that of stripping a word of its original meaning and clothing it with a meaning ordinarily different. We were told in our high school days that Slav meant originally, "master," and that when the Slavs were captured in great numbers by the more civilized nations of Europe and impressed into involuntary servitude, they gave their once proud name to be used forever to designate the condition of slavery. Modern etymologists are inclined to scout the idea that the word Slav came from the old Sclavian "slava," which signified "glory," but in the case of another perverted word there is no dispute. That word is "Mameluke."

In Turkey a mameluke was a slave boy, usually a Circassian, who did menial work in the household of the master. About the year 1250 a great body of these slaves were sold by Genghis Khan to the ruler of Egypt. In 50 years they had seized the government, assassinated the monarch and elected one of their number to the throne. Their government lasted until 1517, when they were overthrown by Selim I, sultan of Turkey, but they continued to be a power in the army until the beginning of the nineteenth century, when Mehmet Ali had them massacred, because no river could ever feel secure on his throne as long as the cavalry wing of his army was composed of mamlukes. Their very name had come to signify the master full qualities that belong not to the slave, but to the conqueror.

Reptiles Had China Like Humans.

Oddly enough, and for some reason quite unexplained, the nearest approximation to the human chin is found in some of the most ancient reptiles yet discovered—strange and primitive creatures whose remains have been unearthed on the shores of the northern Dvina. It is not to be imagined that they could talk, for they had no brains to speak of. Their chins, which are strikingly humanlike, must have been meant by nature for some entirely different purpose.

PEARL HAS FAMOUS HISTORY

Among Other Things, It Is the Oldest Object Used for Adornment of the Person.

The pearl is the only gem needing not the hand of man to bring to perfection, and history affords ample evidence of the intense fascination it has exercised upon the people of every age. The pearl is the oldest object of personal adornment.

Indian mythology often speaks of the pearl, attributing its discovery to the god Vishnu who is said to have caused it to be drawn from the ocean for his daughter Pandala. The records of the Babylonians, Egyptians, Persians and Romans also contain many references to the gem. The wife of Emperor Caligula, for an ordinary luncheon feast, is said to have decked herself with pearls to the value of $1,000,000; and Julius Caesar presented Servilia, the mother of Brutus, with a specimen valued at $250,000.

Philip II of Spain paid $200,000 for a single pearl known as "Peregrina." It was found in Panama, was pear-shaped and weighed 134 carats. Another king of Spain—Philip IV—purchased a pearl of Indian origin weighing 126 carats.

The largest pearl known is that which was once the property of Henry Philip Hope, Columbia in form, it is two inches long, four and a half inches in circumference at one end and three and a half inches at the other. It weighs 1,800 grains and is valued at $200,000.

It is known that the beauty of the natural pearl sometimes proves evanescent. To retain its shimmering splendor it needs air and light. Acids can affect pearls, and emanations from the human skin can. It is contended, destroy the precious lustre which, once gone, cannot be restored. Sometimes, too, owing to their comparative softness, pearls become scratched and thus a source of anxiety to their owners.

EFFECT THAT WAS LASTING

Dumas Had Ready Explanation of the Presence of Sleepy Ones in Audience.

The elder Dumas was celebrated for his neverfailing resource in every day conversation. In illustration there may be cited the following.

One evening he attended a theater in Paris with a literary colleague, witnessing a play written by the latter. The author of "Monte Cristo" noticed that one of the audience in the parquet had gone to sleep during the performance. He nudged his friend, pointing to the sleeper and whispered: "Is that the effect your plays have upon some people?"

Soon after the same couple went to the same theater on an evening when a play by Dumas was being produced. Again there was a man asleep in the parquet. "Look," said Dumas' friend, at the result of your dramatic works."

"Why, my dear fellow," was the reply, "that's the same man we saw asleep here the other night. He is not awake yet."

Allowance for Your Child.

A child may be given a small regular allowance for his own use. Through this he may learn the joy of immediate indulgence of trifling whims; or he may learn to expend his resources with discrimination, or he may learn the advantages of deferring expenditures for more favorable purchasing, says a writer in the Pittsburgh Dispatch. The child's claim to such an allowance can be justified to his mind on exactly the same ground as his claim to food and clothing and other material and immaterial wealth shared in the home. He gets these things not as a reward of merit, but through his status as a dependent member of a household.

Traffic on the Duna.

It is estimated that more than 2,000,000 tons of freight are transported over the Duna each year. Among its tributaries, the Mesha, Uwyat, Kaspiya, Ulla, Disna and Bolderaa are also navigable. The Beresina canal connects the Duna with the Dnieper, thus giving a freight route by water from the Baltic sea, across Europe to the Black sea. As is the general case with Russian rivers, the Duna abounds in fish, a very delicate species of salmon being caught in its rivers.

"Hohenzollern Luck."

"The Hohenzollern Luck" is a plain gold ring, with a black stone, in the possession of the kaiser. Frederick the Great received it from his father with a note, declaring that so long as it remained in the family the race would prosper.

Fresh Water Above Salt.

Schwerin is a curious lake near the seacoast of Alsatia. It is rise and fall in the lake by reason of an underground connection with the sea. At the bottom the water is salt; salt, but at the top is a layer of perfectly fresh water.

REMOVAL SALE AT BLANCHARD'S

-AT- COST 50-STOVES-50 -AT- COST

A NEW STORE BUILDING and a NEW STOCK is what we wish to show the City of Charlevoix next season. The new building is practically assured, but to open with a new stock will require some outside assistance. We mean by this that the stock we now have will have to be disposed of and we are going to start right in and clean house. THE FIRST OFFERING WILL BE STOVES AT COST AND LESS; some much less than cost.

You may wonder why we do this and ask, "What is wrong with those 50 HEATING STOVES you talk so much about?"

We answer, "Nothing wrong with them, all good stoves but too many different makes and our policy in the future will be to confine ourselves to two or three good makes instead of 25, hence this slaughter of prices."

It is not likely you will have the opportunity to buy stoves at these low prices again soon and we wish to impress you with the honesty of this sale. Invoices will be shown to anyone doubting our sincerity.

Comfort and Economy, or Expense and Misery—Which?

THE poorly heated home does not necessarily have the lowest coal bill. *Combustion* is the big thing. The ILINOY HEATER burns *all* the *carbon* and *volatile gases* and throws off every unit of heat in the *room*—none escapes up chimney. Perfect draft system, super-heated air fed to the fire-box—constant circulation of warm air in room. This heater saves coal and doctor bills. It means winter comfort at *less cost*. You haven't solved your heating riddles till you have bought the ILINOY—and the time to talk it over is *now—TODAY!*

We show in this advertisement a cut and description of the ILLINOY HEATER.

This stove is without a doubt one of the very best heaters inside.

It is thoroughly guaranteed and the stock left on hand of these heaters will be included in our sale.

After we wake you up on this stove sale other good things will be offered.

Following is a partial list of heating stoves at cost and less:

$38.00 MISSION MONOGRAM—Sale No. 44	$28.00
$30.00 SUPREME PENINSULAR Sale No. 56	$22.00
$55.00 PENINSULAR—Hard Coal Sale No. 58	$40.00
$30.00 NUBIAN HOT BLAST Sale No. 60	$20.00
$28.00 ILLINOY—Sale No. 66	$20.00
$25.00 ROUND OAK—Sale No. 67	$18.00
$20.00 COLES HOT BLAST Sale No. 24	$14.75
$14.00 AMITY MONOGRAM Sale No. 16	$9.95

We Also Have A Line of Air Tights Down As Low As $2.00.

ALL STOVES MARKED IN PLAIN FIGURES

BLANCHARD HARDWARE CO.

CHARLEVOIX, - - - - MICHIGAN.

Encourages Fatigue.

There is nothing so calculated to give a young man that tired feeling as annexing a rich father-in-law.

FOR SALE

I will sell at private sale the farm known as the John Sass Farm, in Evangeline township, 1 mile south of Ironton. Also two lots in the Village of Ironton.

CHARLES J. ZEITLER, Administrator.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, also 14 acres close to city. Apply to H. S. Harsha.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or telephone, H. S. HARSHA.

When Father Is Recalled.

Mr. Benedict—My daughter is the initiative and my wife is the referendum." Mr. Singleton—"And where do you come in?" Mr. Benedict—"Oh, I'm the recall. They recall my existence whenever the bills come in!"—Judge.

Americans and Dants.

Except the Bible, no work has had so much written about it as has the "Divina Commedia," and no work has been translated into so many languages; among those in our own four are the work of American translators. Moreover, Americans are to the fore in Dantesque comment. During the nineteenth century some five hundred publications dealing with the poet were written by Americans and printed in this country.

Skim-Milk.

To distributing the milk of human kindness the givers too often keep the cream.

Peaches in England.

A long time ago someone said that an Englishman eats a peach as if he were performing a religious ceremony. No wonder! In the London market a pair of a dozen peaches make an wholesale transaction. And the price! The London Telegraph recently printed an article on "Cheap Fruit," in which the statement occurs that "small samples" were worth two or three shillings a dozen, but that the best fruit could be bought at 18 shillings a dozen. Think of paying a quarter for a single peach! But there were some shops that cut the price, and that would sell you a peach for three pence—six cents.—Youth's Companion.

Weight of Building Materials.

Granite or limestone masonry, well dressed, weighs 165 pounds per cubic foot, coarse rubble weighs 154 pounds, dry rubble 138 pounds and well-dressed sandstone masonry 144 pounds.

FACTS FOR SUFFERERS

Pain results from Injury or congestion. Be it neuralgia, rheumatism, lumbago, sciatica, toothache, sprain, bruise, sore stiff muscles or whatever pain you have, quick to relieve Sloan's Liniment—brings new fresh blood, dissolves the congestion, relieves the injury, the circulation is free and your pain vanishes as if by magic. The natural qualities penetrate immediately to the core spot. Don't hoop on and feeling. Get a bottle of Sloan's Liniment, 25c, 50c, 75c, prices extend to 1st. Free 25c and 50c. $1.00 bottles contain 3½ times as much as the 50c size.

SEEING LIFE *with* JOHN HENRY

by George V. Hobart

John Henry Takes a Tango Lesson

THE idea originated with Hunch Jefferson. You can always count on Hunch having a few fresh ideas at the beffry where he keeps his buttermilk.

Hunch and his wife, Alice, live out in Westchester county, about half a mile from Uncle Peter's bungalow, where friend wife and I are spending the winter.

The fact that Uncle Peter and Aunt Martha had decided to give us a party was the inspiration for Hunch's brilliant idea.

"Listen, John," he marchhalvelled; "not one of this pish out here knows a thing about the tango. Most of them have a foolish idea that it is a wicked barbarian invented in Gotham who sold his patent rights to the Evil Dancers association. Now, I'll tell you what we'll do. We'll put them wise. We'll take about two lessons from a good teacher, then and on the night of the party we'll make the hit of our lives leaping them all to tango. Are you game to the possibility?"

"It listens like a good spiel," I agreed; "but will a couple of lessons be enough for us?"

"Sure," he came back; "we're not a couple of Patsys with no sense. We can learn enough in two lessons to make good in this back-woods town. Why, we don't want to dance like they do in Gotham, we don't want to get hard-boiled enough to make good in the high-class circles. We want just enough to be putting up statues in our honor."

Well, to make a long story short, in the cunning, we made arrangements next day with Hey Schwartz, dancing in attendance on the nobility and gentry of this modern home-wrecking proposition known as the tango, and paid him in advance the sum of $100.

It seemed to me that a hundred iron men in advance was a pifty little price for two lessons, but Hunch assured me the price was reasonable on account of the prevalence of rich scholars willing to divide their earnings with such bodys who could teach their feet to behave in time to the music.

We made an appointment to meet Hey at the hassler for our first lesson the following afternoon. Then we hiked for home on the 4:14, well pleased with our investment and its promise of golden returns.

That night Hunch and Alice went over to get of place for dinner. After dinner Hunch and I sat down by the log fire in the library and smoked cigarettes with Havana panatellas and proceeded to adjust the tango to our feet.

Into the next room came Alice and Peaches and sat down for their usual cackle.

Hunch and I started from our reversed sitting-room to hand Alice and Peaches. "You don't know what a surprise we intend to give you. Hunch is to realize that Hunch doesn't know a blessed thing about the tango or any of those baneful intimate new dances."

"The same with me, Alice," friend wife chirped in. "I believe if John were to attempt to dance I would be ashamed of him. Well, I guess I'd be broken-hearted. Naturally, I'd want that he must have learned it with a wicked companion in some lawless cabaret. And if he frequented cabarets without my knowledge—oh! Alice what would I do?"

I looked at Hunch in a new light and then we both looked out the window.

"For my part," Alice went on, "I trust Hunch so implicitly that I don't even question his motive when he telephones me he has to take dinner in town with a prospective real estate customer."

And I know enough of human nature," Peaches gurgled, "to be sure that if either one of them could tease his wife by telling her he was out at home, I think we're very lucky, both of us, to have such steady-going husbands, don't you, Alice?"

At this point Aunt Martha busted into the cackle room and the cackle took on another complexion.

In the sesthetic Dutch and I had passed away.

"It's cold turkey!" I whispered.

"I've been in the refrigerator for ten minutes and I'm chilled to the bone," Hunch whispered back.

"Can we get our coin away from Hey?" I asked.

"The next morning we had Hey Schwartz on the telephone from the St. Antorbit. The dog being to date he blew and got a few of the iron men back.

"Leave everything to me," Hunch growled as we shaved and dressed and indianfied to a friend.

"A man of Happyvetts," Hunch ordered, "How about it, Hey?"

Hey flashed a grin and tried to swallow his palate, so it wouldn't interfere with the set spiel suggested by Hunch.

Aunt Martha heard my comment on Hey's infirmity and was about to be some intensely sympathetic and tell him how her brother's wife was cured when Hunch interrupted loudly by asking after Uncle Peter's health.

"Never better," answered Aunt Martha. "He has spent all the morning arranging the program of dancing for our little party. He insists upon having the Virginia Reel, the old-fash-loned waltz, the Polka and the Lancers. Uncle Peter was a perfect horror of these modern dances and Peaches and Alice and I share it with him. Have you turned to Hey, 'Dont you think these modern dances are perfectly disgusting?'"

Poor Hey looked reproachfully at the old lady a second, then with gathering astonishment he slid silently off the chair and struck the floor with a bump.

Aunt Martha was so rattled over this unexpected effort on Mr. Schwartz's part that she spaz her coffee and Hey got most of it in the back of his neck.

When peace was finally restored the old lady came to the surface with an envelope which had been lying on the table near her plate.

"Is this your letter, John?" she asked, and then arranging her lorgnon, read with great deliberation: "Mr. I. Schwartz, Tango Teacher, care of Kennedy and Slayback's Cabaret, New York."

Peaches and Alice went into the kitchen right away quick.

Aunt Martha in pained surprise looked at me and then at Hunch and Hey Tried to Lend a Society Double.

finally focused a steady beam of interrogation upon the countenance of Mr. Schwartz.

They never whimpered.

Then Hunch took the letter from the open-eyed Aunt Martha and leaped to the rescue while I came out of the trance slowly.

"It has had Mr. Schwartz forged his ear trumpet," Hunch said quickly and Hey was eles to the tip in a minute.

Peaches sniffed suspiciously and I saw she had the gloves on.

"Hey, Schwartz's affliction is terrible," she said with a chill in every word. "How did you converse with him before our arrival?"

"Oh, he understandies the lip language and can talk back on his fingers," I hastened to explain, looking hard at Hey, whose mouth-trap was no token that he understood what was going on.

"I thought I understood you to say Mr. Schwartz is a real estate dealer," Peaches continued, while the thermometer went lower and lower.

"So he is," I replied.

Then she asked him his business address him as a tango teacher! Friend wife and slowly, and I could hear the jeebegs grinding each other in my ears.

"I think I can explain that," Hunch put in quickly. Then with the utmost delicacy he leaned over to Hey and said, "Mr. Schwartz, it's real easy. Tell the ladies politely with your mind telling me why you, a real estate dealer, should have a letter in your possession which is addressed to you as a tango teacher? Answer on your fingers."

Hey delivered the goods.

Hey's number he had both paws working overtime and such knuckle twisting no mortal man ever indulged in before.

He says, Hunch began to interpret, "Hey's brother is out his. He is intended for landers Schwartz, a school mate of his who is a victim of the cabaret habit. Mr. Schwartz is now complaining bitterly with his fingers because his letters and stuff intended for his renegade cousin keep piling up in his mail box. The mistakes are made because the initials are identical. He also says that—no—hopes—the presence—of—this—particular—letter—in—his—possession—does—not—offend—ladies because—while—it—is—addressed—to a—tango—dancing—professional—there are—quite—harmless—being—but—a—small—step—from—the—dentist."

Hey's finger, kept on working furiously as though he felt it his duty to wear them out, and the perspiration rolled off poor Hunch's forehead.

"Tell him to cheer up, Hunch," I told Hunch. "Tell him I'll speak his fingers and lose his voice."

Hey doubled up his eight fingers and two thumbs in one final shout and subsided.

"Its afraid we'll miss the 5:15 train if we don't hurry," said Peaches and I could see that the storm was over, although she still glanced suspiciously at poor Hey.

"And, Hunch, you and John can come home by yourselves, can you?" Alice asked as they started to flee for the door.

Then they cut it as we started to follow the family parade. "I'm back of the situation. It's a cuter, take it from little Hey. I'll have to charge you all for the sudden attack of four noses; then there's $19 for hardships sustained by my finger joints while conversing. The rest of the hundred and one men I am going to keep as a souvenir of two good-natured grabs who couldn't know what to do with a tango if they had one."

As we pulled out of the Mayonnaise I looked back at Hey, to think him with a farewell nod.

He was half way under the table, holding both hands to his sides and making funny faces at the carpet.

"He Had Both Paws Working Overtime, and Such a Knuckle Twisting No Mortal Man Ever Indulged In Before."

THE SANDMAN STORY

By Mrs. F. A. WALKER

THE MAGIC ROCK.

Once upon a time there was a little old woman who lived in a little house. She had a little dog and a little old pig.

People called her a witch, but if she was, she was a good witch, for she loved the dog and pig very much, and sometimes you could hear her singing to the pig:

"You shall have a silver pail
And a ribbon for your tail
And the pig would say 'Ugh, Ugh,' as if he understood. And then she would sing again:

"You shall have a feather bed,
And a pillow for your head
And the pig would answer "Ugh" again. Then she would sing to the dog:

"Bingle, you shall have a collar of gold
And eat your food from a silver bowl
And the dog would say "bow wow."

Not very far from the old lady was lived in the little old house with the little old dog and the little old pig lived a little girl named Margaret, with her sister Sarah. Margaret was a pleasant girl, but Sarah was disagreeable and cross. They were "surprise, and Margaret would tell Sarah that some day a fairy would take her, but Sarah was cross because she could not have pretty dresses and live in a big house.

One day Sarah was very cross, and Margaret was in feeling sad, and stood by the gate, crying, when the old lady came along with the little old dog and the little old pig.

"What are you crying about?" she asked.

Margaret told her.

"Hey Fairy tears," she said, "and listen to me. Tonight at 12 o'clock walk down the road until you come to a tree where an old owl is saying 'Who, who.' Take the path by the tree and follow it along through the woods until you reach a big rock. Tap on the rock three times and repeat this:

"Open, rock at break of day;
To what I ask do not say nay."

Then you must ask for the things you want, and wait for the break of day, but if you are asleep when day breaks the spell will be broken. A fairy told this to me, but I am too old to walk such a long distance, and be sides, I have all I need, and am content."

Now, Sarah heard what the old lady said, and she said that night she locked her in the house and went to the rock herself. She tapped the three times and said:

"Open, rock, at break of day;
To what I ask do not say nay."

Then she said, "I want a lot of money, and I want a big house and a coach and four black horses."

The rock opened and she went in and took a nap, and was awake before the break of day. When the light came, she saw the rock open, and a big lion put out his head and roared at her. She ran to her and she could, and did not stop until she reached home. There she unwound the bags and let her sister out.

"Can you go to the rock if you like?" she said, "but I will warn you that you will find a lion, who will eat you if he catches you."

This did not frighten Margaret, and the next night at midnight she walked down the road. "Who, who," said the owl, and she took the path as she had told her. When she came to the rock she tapped three times upon it and said the words:

"Open, rock, at break of day;
To what I ask do not say nay.

"I want money to make my sister and me comfortable, and I would like a goldilocks and the little old lady and a gold collar for the little old lady's old dog, and a ribbon for the tail of the little old pig," she said. Then she sat down beside the rock and waited for the daylight to come, but she remembered what her sister had said about the lion, and when it began to be light she went behind a tree and watched, but the lion did not appear, and when the rock opened she did not see a lion, and she looked into the opening. There was a box of gold for her, and a gold headed cane for the little old lady, and the collar for the little old lady's little old dog lay beside it, but where was the ribbon for the tail of the little old pig?

Margaret saw a large nut, and she cracked it open, and a red ribbon dropped out. She was glad, for she knew the little old pig to have the ribbon for his tail, the little old lady had promised it to him so long ago. Margaret took all her good fortune and ran home.

"It was just getting up. "Well, the dog did not eat you," she said. "Yes I am sure you too are fast as I thought. The little old woman is a bad old witch."

Then Margaret showed her the bag of gold. Sarah became very angry, for she thought Margaret would keep all of it, as she would have done, but Margaret emptied out half of the gold and gave it to Sarah, who was enough pleased and surprised. Then Margaret hurried to the little old lady's house, where the little old lady lived with the little old dog and the little old pig, and gave the little old lady the cane, and the gold collar for the little old dog and the ribbon for the tail of the little old pig.

The little old lady was so pleased that she danced around the room and the little old dog ran after her barking "Bow-wow," and the little old pig followed grunting "Ugh, ugh." Margaret was very happy because the little old lady and her little old animals were pleased, and when she reached home her sister met her at the door and kissed her. "I have been a very selfish girl," she told Margaret, "but I will try to do better in the future, and I shall live here with you, and not spend my money for clothes." And they lived in peace and plenty ever after.

MAKING HUT OF BRUSHWOOD

Lean Pole Against Tree, Then Thatch It With Branches—Thicker the Roof, Cooler the Tent.

A very simple hut can be made by cutting a pole and leaning it against a tree, binding its end there; then thatch it with branches or brushwood.

Where you have no poles available you can do as the South African negroes do—pile up a lot of brushwood, bushy stuff, etc., into a small well-like hut, leaving a small door in the side, and make your fire in the open part.

If your tent or hut is too hot in the sun, put blankets or more straw, etc., over the top. The thicker the roof the cooler the tent in summer. If it is too cold make the bottom of the wall thicker or build a small wall of sods or boxes a foot high round the foot of the wall outside. Never forget to dig a good drain all round your hut, so that if heavy rain falls in the night your floor will not get flooded from outside.

Zulus make their huts by planting in the ground a circle of long whippy sticks standing upright, then they bend the tops all down towards the center and tie them together, then they weave more whippy sticks around in and out of the upright horizontally, until they have made a kind of circular bird cage, this they cover with a straw mat or thatch of branches, leaves and the sticks. Sometimes a small hole is left in the top where all the sticks join, to act as a chimney.

WHAT CLUB BOYS ARE DOING

Dakota Youth Made Net Profit of $2.00 on Acre—Ohio Boy Reports Results Obtained With Corn.

In South Dakota one poultry club lady made a net profit of $8.00, based on selling 10 dozen eggs.

The state assist for Utah reports 15 to 20 the highest net profit for corn the season, while Oregon reports 150 over the same period.

A girl club member in Iowa canned 1,000 cans of her own raised corn and pies jointly, some good results have been obtained.

A pork and crop production boy of Illinois made $119 net profit for the season from nine pigs and an acre of corn. His corn yielded 56 bushels to an acre.

In Utah, where conditions are not favorable for a good yield of corn, one member making $3146 as a result of his continued work. His corn yielded 70 bushels per acre.

Practically all of the Sugar Beet Growers' members in Utah and Colorado. The state agent in charge of club work of Utah reports 14 tons as the highest yield, and $47.28 as the highest net profit. Five hundred boys and girls in Colorado last year show an average yield of 20.4 tons, and an average net profit of $27.60.

Wasn't Sho Right?

The lesson in natural history had been about the rhinoceros, and the teacher wanted to know how well the lesson had been learned.

"Now, sonny something," she said, "that is very dangerous to get near to that has horns."

"Yes, teacher, I know!" called little Annie Jones.

"Well, Annie, what is it?"

"An automobile."

A Rainbow Story.

The Indians have a lovely thought about the rainbow. They love flowers even as we do. The roses, lilies, pansies and pinks of the country, they know. When they see a rainbow they fancy that in the lovely colors are spread out, all the wild flowers—lilies, violets, etc., and the meat of the seeds are still living and blossoming anew in the heavens.

An Opinion.

Hudson Maxim, inventor of high explosives, says that the world's great est chemists, says, "The wreath of cigarette smoke which curls about the head of the growing lad holds his brain in an iron grip which prevents it from growing and so the man's development is as surely as the iron band on the feet of the Chinese girl."—The American Boy.

He Was Practicing.

Johnny was seated at the piano reading.

His Mother (from the kitchen)—Johnny, why aren't you practicing?

Johnny—I am.

His Mother—I don't hear anything.

Johnny—Well, I am practicing the pause.

Hard to Step.

"Pa, what is meant by 'freedom of the seas?'"

"It means that a nation's merchant ships have a right to go anywhere they please."

"Do they do that, pa?"

"No, my son. There is no such thing as 'freedom of the seas' nowadays, except for icebergs."

Secretly, every man believes his funeral procession will be the longest ever seen in his town.

Don't Poison Baby.

FORTY YEARS AGO almost every mother thought her child must have PAREGORIC or some other form of OPIUM or MORPHINE to make it sleep, and to PREVENT PAIN. TOO MANY will produce the SLEEP FROM WHICH THERE IS NO WAKING. Many are the children who have been killed or whose health has been ruined for life by narcotic laudanum and morphine, each of which is a narcotic product of opium. Druggists are prohibited from selling either of the narcotics named to children at all, or to anybody without labelling them "poison." The definition of "narcotic" is: "A medicine which relieves pain and produces sleep, but which is poisonous in other respects, and in excessive doses or sensitive cases causes coma and death." The taste and smell of medicines containing opium are disguised, and a lid under the name of some of them, such as "Soothing Syrups," etc. You should not permit any medicine to be given to your children without you or your physician know what it contains. CASTORIA DOES NOT CONTAIN NARCOTICS, it is a vegetable preparation. Genuine Castoria always bears the signature of Chas. H. Fletcher.

Warner's Safe Remedies

Warner's Safe Remedies have proven their worth as superior medicines by more than thirty-five years of trial. They have given remarkable results in the treatment of nonpeilous severe and almost helpless cases.

The words of praise from the many who have been benefited by their use prove their great value.

Warner's Safe Remedies are carefully prepared and absolutely pure.

Each for a Purpose

Warner's Safe Kidney and Liver Remedy, 50c and $1
Warner's Safe Cure, 50c and $1
Warner's Safe Diabetes Remedy, $1.00
Warner's Safe Nervine, 50c and $1
Warner's Safe Nervine, Constipation, 25c and 50c

At all druggists, or sent direct prepaid on receipt of price. Illustrated pamphlet free. Dr. Greene's Nervura blood and nerve pills are the best tonic. Ask for Warner's Safe Remedies. Dr. Greene's Nervura pills are the best tonic. Write for free medical advice. Address, WARNER'S SAFE REMEDIES CO., Rochester, N. Y.

DO NOT HESITATE

To Use Cuticura on Skin-Tortured Babies. Trial Free.

A hot bath with Cuticura Soap and gentle application of Cuticura Ointment at once relieve, permit rest and sleep and point to speedy treatment of eczemas, rashes, itchings and irritations of infants and children even in severer cases.

Sample each free by mail with Book. Address nearest Cuticura, Dept. XY, Boston. Sold everywhere.—Adv.

Boss Tweed's Old Home to Go.

Boss Tweed's old home at Fifth avenue and Forty-third street, New York, soon will give place to the 16-story office structure of the Guaranty Trust company. The house, one of the city's landmarks, covers a space of 62x100 feet. It was built for the notorious Tammany chieftain by Richard T. Wilson, some years ago for $120,000. The house was not built for a bribe. Tweed escaped from the penitentiary in Albany and made a swarm him to pack some clothes. They waited a long time at the front door and then realized that the prisoner had fled. Tweed had escaped to Forty-third street and John Jones to hell. He reached Spain, was caught and returned to the United States.

How to Clean Stone Window Sills.

In the Woman's Home Companion a Missouri woman told as follows how to clean stone steps or stone window sills:

"Get five cents' worth of the coarsest sandpaper and rub stone steps or stone window sills briskly until all marks are removed, then simply dust them with a duster or a rag. They will stay white much longer by using this method than everything from white water. I always wear a pair of canvas gloves, as they protect the hands from wet scrubbing."

Club Prognostications.

"I think it will rain before I get home."

"I know it will rain when I get there."

When all others fall to please
Try Parkinson's Coffee.

Some men are never neutral. They are either kicking or being kicked.

Tame Description.

"I saw your husband at the ball game yesterday."

"What was he doing?"

"Why, he seemed to be an interested spectator?

"That doesn't describe my husband. He's a cyclone rooter."

DON'T LET GRAY HAIRS

Make You Look Old. Restore Natural Color by This Guaranteed Method.

This ingredient adds natural shade to faded, gray hair, and is guaranteed to leave no stickiness, dandruff or any other disease and gives the hair the glossy appearance of youth. Sulphur is the ingredient that has been used for generations for this purpose. Sulphur darkens gray hair, but the ingredient now added to Sulphur prevents this. Ask any druggist for "Wyeth's Sulphur Hair Remedy."

A Fighting Submarine.

"I have been caught a six-pound catfish in your gulltoot."

"We did."

"Make much of a fuss?"

HERO OF TURKEY IS ENVER PASHA

To Him Is Due the Great Defense of Dardanelles.

Enver Pasha, Turkish minister of war, is young Pasha—he was made recently that Turkey had now 2,000,000 men under arms fighting in the Dardanelles and guarding the approaches to Constantinople.

Undoubtedly the supreme power behind the Turkish throne is Enver Bey

Photo by American Press Association.

ENVER PASHA AND TURKISH CAVALRYMEN.

—Enver Pasha now. He has had an almost entirely free hand in Turkish military affairs, and he has, it seems, as to the German officers, is unquestionably due the magnificent resistance the Turks have offered the allied fleets and armies in the Dardanelles operations. He has been styled the Napoleon of Turkey. He is the one strong personality that Turkey has had since Abdul Hamid was overthrown, by the Young Turk party in 1908. Enver, then little more than a boy, led the revolt against the sultan. Today Enver is only thirty-three years old.

Enver is a marvelous swordsman, a fitness gained in years of needs simplicity of life, possessed of a remarkable combination of the qualities of idealism and practicality, of the mystic and the man of action.

Of his personal personality an English author before the war: He is without a single exception I can recall offhand, save possibly Lord Kitchener, the most forceful individual I have ever known and for sheer magnetic attraction stands absolutely alone in my experience. In some other country he might be Napoleon, Bismarck or Roosevelt, or the United States—he could not fail of a great career. Here the higher a man climbs the surer he is to be marked for a fall, and Enver Bey has been in danger of assassination from the moment of his first appearance in Turkey. Impressive again leaves to manifest itself in his early teens."

THE WRECKAGE OF WAR.

Poland Devastated by the Terrible Battles Waged Over Its Territory.

War is no respecter of persons or places. The illustration shows the wrecked interior of a church in a little village called Pobiedziska that had swept through the place. The der-

FALLACY OF LONG STANDING

That Frost Is Most Likely to Occur in the "Light of the Moon" is a Wrong Idea.

One of the most tenacious beliefs is that the weather is affected by the movement of the moon. It is generally considered that frost is more likely to occur in the "light of the moon" than at any other time. For this reason people who think the frost is likely to destroy are planted at such a time as to be certain to avoid a full moon.

The moon reflects sunlight to the earth and produces the idea. It has minor effects, such as changing the position of the earth and causing minor deflections of the magnetic needle; these last, are however, so small that they have only been noticed by instruments of detection, and it has been proved conclusively that it has no relation to the change of weather. Regarding the two frost effects named, it is quite easy to understand that reflected sunlight from the moon cannot affect the weather; in the first place, more light is received from the sun in thirty minutes than from the moon in one year; and moreover, the greatest reflection is at full moon; from a logical point of view then it should be warmer instead of colder at full moon. This should disprove any argument that the reflected light makes it colder at full moon.

TYPHOID HITS MANY

Public Health Service Warns Cities and Individuals.

Two Hundred Thousand People Contract Disease During Year, of Whom 18,000 Die—Filth, Bad Food and Flies the Cause.

Washington.—During the year probably 200,000 people in the United States will contract typhoid fever, says a statement issued by the public health service. The average period of invalidism will be more than a month for every case, so that the economic loss, even if recovery does ensue, can be reckoned upon this basis, including the care and attention required.

Of those who contract the disease possibly 18,000 will die.

Fifty per cent of these will be between the ages of fifteen and thirty-five years, the very time of life when the loss is most frightful. Moreover, this is an annual toll and represents the minimum fatality which we have attained.

No sooner is the computation of the 18,000 completed than another series is begun and so on interminably. The weather, presence of flies, continuance of food products and the increased liability of infection through changes of residence makes it once more necessary for health bodies to sound a warning note.

Typhoid fever is a disease of filth. It can only be contracted by taking into the system the waste products of one previously ill of the disease. These waste products are conveyed from one individual to another usually by means of a third object, such as water, flies or milk.

Even if disease itself were never contracted in this manner we should revolt with abhorrence at the idea of such uncleanliness. For every case of the infection developing, someone, either the municipality or the individual, has been careless, and public opinion will soon regard such carelessness as criminal. In the eyes of the health officer typhoid fever is strictly a preventable disease.

For 10 years the causative organism has been known and studied. For nearly twenty years science has been in possession of most delicate blood tests for the recognition of the disease. Knowledge of the dissemination of the disease is consequently exact and definite.

Not content with accomplishments along these lines, the medical profession have even devised methods by which the public may live under sanitary conditions with perfect impunity, so far as this particular disease is concerned. Persons may take into their systems the filth which produces disease and death and yet remain free from harmful effects if the preventive treatment has been received.

In spite of these efforts the frightful mortality continues. A large proportion of the population is ignoring the principles which have been so well established. Further steps toward the prevention of typhoid must be the result of more general enlightenment of the mass of the people.

The avoidance of the infection rests primarily upon community action. The proper protection of water supplies, the eradication of filth and all its accompaniments, the sanitation of dairies and the safeguarding of milk are all problems which only community action as a whole can settle. Nevertheless, this does not absolve the individual citizen from responsibility, and he can do much for his own protection.

The eradication of filth is in part the duty of every citizen, and each should see that his own surroundings are in a satisfactory condition. He should guard against carelessness in the maintenance and preparation of food and withhold his patronage from those who disregard the rules of cleanliness, remembering that the foods which are most subject to contamination are milk and its products, also oysters and vegetables.

The role of flies in the dissemination of the infection is now generally recognized. The elimination of such fly-breeding places as garbage, manure and filth is most essential, but the proper screening of houses and the adoption of destructive measures are also of great value.

If, in spite of these precautions, the disease develops, it then becomes the duty of every citizen to implicitly follow the instructions given in order that the safety of others may not be imperiled, bearing in mind the fact that every case of typhoid fever is due to someone's ignorance or carelessness. No higher duty of citizenship than this can be conceived.

TWO BOYS CATCH A WOLF

Bag Him With Gunny Sack Near Small Town, Then Collect The Bounty.

Kansas City.—Cecil Lattimer, twelve years old, and his brother, James Edgar, ten years old, sons of J. J. Lattimer of Independence, took a wolf scalp to the county clerk's office in that city recently and claimed the bounty of $5.

The boys said they captured the wolf on the Frazier farm, southeast of Independence. When they saw it, it ran into a hollow log. They procured a gunny sack and tied it over the opening of the log, and then scared the wolf out into the sack.

FOR SALE

I will sell at private sale the farm known as the John Hess Farm, in Iron-line township, 1-mile south of Ironton. Also two lots in the Village of Ironton.

CHARLES J. ZEITLER,
Administrator.

FOR SALE—Resort cottages well located. House and lots in any part of the city. Also 14 acres close to city. Apply to H. B. Hawks.

WHY CLERK GOT A RANCH

Wealthy Retired Farmer Deeds Land to Man Who Correct the Winning Rooster.

Lyman, Neb.—Gus Stephens, a wealthy retired farmer, has deeded one of his ranches containing a section of land to Walter DeWitt, a clerk in a grocery store here. Stephens' act was the result of a rooster fight. Both men had been boasting for months as to whose rooster was the better fighter. Stephens purchased his fighter in California last winter, and DeWitt owned a Nebraska product.

Stephens told DeWitt he would give him a ranch if the Nebraskan rooster crowed last.

A fight was arranged, and a large crowd gathered under a big apple tree in the city park. At last the birds were turned loose. They went at each other viciously. At first they appeared to be evenly matched. After battling for almost half an hour Stephens' rooster showed signs of being exhausted. It was not long until he fell to the ground defeated.

PETRIFIED HEART IS FOUND

Washing Away of a Bank in the State of Washington Exposes Indian Relics.

Ridgefield, Wash.—Earnest Hawkins, a young man of this place, while engaged in hunting for Indian arrowheads and other Indian curios at what is called an old Indian arrow bed, about a mile north of here along the shore of La'e river, recently picked up an unusual curio having the appearance of a petrified heart of an infant.

It is said by old timers that Indians had a burying ground near where the petrified heart was found. Each year as the water washes down the bank more relics have been found, and the burying ground is exposed.

SOME PAINTER, THIS FISHER

Takes Can of Green Paint on Piscatorial Expedition Instead of Worms, but—

Pewaukee, Wis.—Bright and early one Tuesday morning recently Robert Nichols and E. F. Schmuetzer rose and ate breakfast together at a dining trip.

After rowing about two miles to their favorite fishing spot they started to get ready to fish and Mr. Nichols, who had got the bait and paraphernalia ready, reached for the can of worms.

Horrors! He had brought a can of green paint for bait!

Nichols is an artist. He took the green paint, painted a picture of a worm on the hook and the two caught quite a string of fish.

YOUNG PRINCE IN BATTLE

The eleven-yearold Crown Prince Humbert, who is visiting the Italian lines front, made his way along several miles of the Italian trenches and sent the following telegram to his grandmother, Queen Margherita:

"I am on Austrian territory. I assisted in an artillery engagement this afternoon."

MAN GETS HEARING BACK

Thrown Out of Automobile, His Head Hits Tree and Its Finds He Can Hear Again.

Aurora, Ind.—John W. Dean, city attorney age thirty-two, regained his hearing suddenly by an unusual treatment. Dean, with his brother and two companions, was out riding when their automobile skidded on the Wilmington hill, in Hogan township, and ran over an embankment, throwing the occupants to the ground.

Dean's head struck against a large tree with great force. He was soon revived and found that his hearing had been restored and that he could hear as well as he ever could, after being deaf for nearly a year.

Might Marry to Reform Them.

It girls could see how soon they are going to marry before breakfast there would be fewer weddings.—Topeka Capital.

LEMIEUR & COMPANY

GIVES OIL FORMULA

Rittman's New Process Proves to Be a Success.

United States Government Offers Formula for Making Benzol and Toluol to Everybody—Basis for Explosives and Dyes.

Washington.—Secretary Lane cancelled a contract made by the department of the interior with the Aetna Explosive company of New York, under which the company had agreed to expend $100,000 in the development of the process discovered by Dr. Walter F. Rittman for the manufacture of benzol and toluol from petroleum.

Doctor Rittman is the new chemical engineer of the United States bureau of mines whose discoveries have recently been widely advertised by the department of the interior as likely to revolutionize industries using petroleum and its products.

The action was taken by Secretary Lane on receiving information from A. J. Morham president of the Aetna Explosives company, that the results obtained from the production under the Rittman process had been so satisfactory that his company would start their plant on a commercially operative basis.

"The cancellation of the contract," Secretary Lane said, "is in accordance with the original understanding with the company to the effect that the government would withdraw from the contract as soon as benzol and toluol were produced by means of the Rittman process in commercial quantities.

"I am greatly gratified at the success which has been made in the mechanical development of the process and I feel assured that it has an important and successful industrial future, not alone as a source of two of the most valuable constituents of high explosives, but also as an efficient means of supplying drastuff bases.

"The mechanical improvements which can reasonably be expected to follow from continuous operation and more general use are certain to give even better results than those so far obtained.

"It should be a matter of national satisfaction to know that should the need ever arise the country can depend upon this process, which is the result of the labors of a government scientist, to furnish it with quantities of the raw materials for the manufacture of the most efficient explosives, a lack of which has been one of the greatest handicaps of the warring European powers.

"Of no less importance, however, is the commercial interest one to which these same products can be put, now that it has been proved that they can be produced on a commercial scale, and I am hopeful that the established possibilities of the process will give a decided stimulus to important chemical industries.

"The success which has attended the development of this government controlled process in co-operation with private capital has demonstrated the wisdom of the arrangement, and otherwise the process would probably be in the laboratory stage and its commercial possibilities would have continued to be a matter of conjecture. It is to be hoped that similar beneficial co-operation between the government and business interests can be had in future for the good of an entire industry.

"The department of the interior is ready to issue permits or licenses to persons other than those furnish assurances of good faith and that is desirous of employing the process.

"The Aetna Explosives company has made no effort to develop the Rittman gasoline process, and I expect to be able to make announcement as to the success of the other process on large scale operations within a short time."

Feelings to Be Considered.

"Do you know the Ten Commandments?" "Oh, yes," replied Miss Cayenne; "but I shouldn't venture to recite them in a general gathering of our friends. It might't be considered tactful."

Rabbit Fur for Hats.

Rabbit fur is said to be constituting what is left of hat-making in Germany, where 23 factories are in operation. The fur is considered much superior to the finest Merino for the purpose, and millions of rabbit skins are used annually.

MORTGAGE SALE.

Default has been made in the conditions of a mortgage dated December 1, 1913, given by Hannah Perrett and Frances V. Merritt, husband and wife, to the Five Cents Savings Bank, a corporation organized under the laws of Michigan, and recorded in the register of deeds of Charlevoix County, Michigan in Liber 87 of Mortgages on page 62, upon which there is said due and unpaid the sum of Twenty-Five Hundred Dollars (principal) with Ninety and Sixty Cents (interest and insurance bills), with Six Per Cent (6%) interest, and no suit or proceeding having been instituted to recover the debt secured by said mortgage or any part thereof; and the said mortgage being the property of the undersigned, notice is hereby given that pursuant to the power of sale contained in said mortgage on Saturday, the twenty-third day of January, A. D. 1915, at one o'clock in the afternoon, the undersigned will sell at public vendue, to the highest bidder, at the south door of the Court House in the City of Charlevoix, Michigan, the premises described in said mortgage, or so much thereof as may be necessary to pay the amount of said mortgage, with interest and costs, and all legal fees, viz.:

Lots Twenty-Three (23) and Twenty-Four (24) of Block Twenty-Five (25) in the Village of Charlevoix, according to the recorded plat thereof.

ALWAYS CLUBS OF A SORT

In Civilized Life the Association of Men of Like Interests Has Been Matter of Course.

In the eighteenth century the man of London passed the largest part of his time in coffee houses and taverns; when one looks for men of that age he will probably be found in a tavern.

No baker was so universal in every class in life of association in some place of entertainment; it was part of the life alike of the nobleman and the tradesman.

While the former enjoyed himself in one of the numerous houses in the west end, the latter was surrounded by his business rivals at the Cheese tavern in Fleet street or at the Sixpenny Card club, or at the Free and Easy at the Queen's Head in St. Paul's churchyard.

But when we go with the man of London to his coffee house or tavern we should not think too much of the place, for coffee houses and taverns were each only a building which by reason of its entrance was the most convenient for the purpose of assembling, whether of business or pleasure.

The important fact is the remarkable and constant and often informal association of men of like interests—civic or economic or literary or political, commercial, literary or social.

Thus association every one of which is usually called a club, even if it was without rules or officers, arose mostly into being from the beginning of the century, as usually also it ceased to exist when it became able had to be used for their meetings.

British Emancipation.

The first day of August, 1834, the orion mentioned, but erroneously, as the day on which the slaves in the British colonies were set free. They did not get their actual freedom, but an apprenticeship which was to precede and prepare for their freedom. It was ordained that all slaves should become "apprenticed laborers" to their masters. These slaves were of two classes. One class received actual freedom in 1838 and the other in 1840. It was found that on August 1, 1834, there were 700,000 slaves in the colonies affected by this emancipation act. All negroes born after that date were born free. Twenty million pounds sterling, or $100,000,000, was ultimately paid to the owners of these slaves, this sum being distributed ratably according to the market price of slaves in each colony.

Education City Girls Miss.

Why should every class society if ever have any domestic education or training, unless they get it in their schools. They are taught the boundaries of the United States and the source of the Nile; they learn that if you buy products at a certain price and sell at a higher you make money, but what to do with the money when you make it no one discusses. It is all making money or making money, not right use of money or things, that is impressed upon boys and girls from their primary class or to the bitter end. The children of well-to-do families in smaller places have opportunities for education in the real things of life which these city girls lack, but since our grandmother's day education and training in home affairs within the home walls has been neglected to a dangerous degree.—Woman's World.

"The best tea, coffee and baking powder is to speak it on with a basin of wool-lined sole such as is used in corsted bedroom slippers.

Futile Application.

"When I was a boy I thought I'd rather be a great baseball player than anything else in the world." "Did you?" "Yes, you have crossed my mind." "Not exactly. I have merely realized that there is no hope."

"Lost" Not Material.

A New York lawyer reported that his safe had been robbed, and when asked what the loot was, said his eyeglasses, a comb and a brush.

TAKE CARE OF THAT ITCHING! ALL ITCHING DISORDERS ON ECZEMA

Do you regard that itching as a serious thing? If not, why not? Unless you begin to fight it with Dr. Hobson's Eczema Ointment, the disease is likely to stay on for months and years. Scores of grateful users say: "Why did we waste those months and years in misery when we could get a remedy on the market?" This ointment is no experiment; it is absolutely healing in its power. Do not allow it to be your experiment. Buy a box to-day to fight the beginnings of eczema. 50c. a box.

MAKES PRISON LIFE EASY

Sheriff Provides Gymnasium and Write Pals Concerts in Jail to Divert Minds of Inmates.

Bellefontaine, O.—A gymnasium has been provided in the Logan county jail for the amusement of the prisoners by Sheriff George Smith, feeling that the time spent—some other form of recreation than reading, has put in the equipment at his own expense.

Mrs. Smith, the sheriff's wife, has placed two canary birds in the jail to help divert the minds of the prisoners. A man who has been a prisoner in the jail for several months has been permitted to have his graphophone with him all of the time, and twice weekly he has been provided, continuous programs being the rule.

WIFE GONE; CALLS HIM SLOW

Husband of Deserted Bride Says She Declared He "Plugged the House Too Much."

Florence, N. J.—William White of this place is sorely perplexed that he was deserted by his wife because he was too slow. He is a man of the old school, and he expected his wife to cook, wash and iron.

They were married in 1913, said White. Four months later my wife left me. I plugged the house two month. She wanted me dances, parties and the like. The next month I returned home to find the house empty. Both my wife and the furniture were gone to parts unknown. I haven't seen or heard anything of either since.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or telephone, H. S. HAWKS.

Humorous Fact of History.

The enactment of the law of habeas corpus marks an important epoch in the progress of civil liberty in England, and is regarded as one of the great achievements of Charles the second's reign. Charles himself did not want the law, but just at the time he was very anxious to curry favor with the people, and was afraid to oppose so popular a measure. The friends and foes of the act were pretty evenly divided in parliament, but in the final vote it was carried. The manner of its passage, however, was both comical and illegal. While the voting was going on a very fat lord arose and asked that his vote be recorded in the affirmative. In a spirit of fun the clerk announced ten votes for him, to accord with his great size. They were so recorded, and for some unexplained reason the "error" was never corrected. The strangest part of it is, the majority for the measure was less than ten; hence it would have failed of passage without the fat lord's extra votes.

WAITED 59 YEARS TO WED

Bride Says No Woman Can Pick Good Husband Before She is Fifty.

Sunbury, Pa.—Philip Graham, seventy-two years old, a widower of Epsy and Miss Harriet Powlen, fifty-nine years old, of Bloomsburg were married here last week.

Mrs. Graham told friends: "I had many chances to get married in my time, but I refused all my suitors, because it is my belief that no woman possibly can pick a husband she will be happy with the rest of her life before she is fifty.

"I am proud that I was an old maid, because I will live happily with my husband."

CHILDREN HURT BY NOISES

How the Little Ones Suffer From the Various Commotions of a Big City.

Very few mothers realize how extremely sensitive young children are to noises of all kinds and how much of their "naughtiness" is due to nervous irritation set up by all the house hold noises of the day.

To a certain extent every woman who has the care of children realizes this fact. When the baby goes to bed all the house is hushed in order that it may sleep.

But once the child awakens no consideration is shown to its tender nerves, and the evil consequences to the child's health are often very serious and cling to it all through life.

Doctors are always insisting on this paramount characteristic of the young child—its great nervous sensibility. And any mother who observes the child when a door is banged, a dog barks or a street trader shouts will notice its distress. At every bang or other sudden noise there is a nervous frightened start.

The result of a day's noise of all kinds to young children, especially if they are delicate, is a state of nervous depression and irritation.

This is commonly mistaken for temper and naughtiness, but it is real nervous illness. They not only become peevish, but their appetite fails and their digestion is thrown into disorder.

No doubt the evil effects of city life on children are due in great part to the incessant noise.—Kansas City Star.

SHE HAS "HYPNOTIC EYE"

Lindsay (Cal.) Man Complains Against Wife Who He Says Exercises Malign Influence.

Lindsay, Cal.—Alleging that his wife, Mrs. Mary Ferry, has a "hypnotic eye," and that for the last year she has exercised a malign influence over him, Wesley E. Ferry, a rancher, swore to a complaint for the arrest of Mrs. Ferry and asked that she be detained at the county jail until an examination can be made into her mental condition.

Mrs. Ferry made a statement to the officers following her arrest, in which she declared her husband is "half insane," and that he should, should be locked up and examined by the county alienists.

Still Worse.

"My life has been full of disappointments," said the lean and hungry man. "I have never been able to achieve my cherished ambitions or obtain the things I most earnestly desired. Never!"

"Huh!" returned the man on whose brow sat despair like a brooding hen over her nest. "I am worse off than that! My rich uncle left me his horse, buggy and harness, and nothing for us to keep!"—Kansas City Star.

Good Lamp Light.

To those who have oil lamps a few hints will amplify their care. If they are used every night they should be kept filled and trimmed every day. Wash the lamp chimneys when the dishes are washed. Do not fill the lamp quite full. Leave about one inch for expansion.

Machine "Breaks In" New Shoes.

A Milwaukee inventor has devised a machine which is intended to save us the pain and trouble of "breaking in" new shoes. Leg-like levers, over which an endless belt passes, have suitable foot portions to receive the shoes. When the machine is in operation the shoes are acted upon by a walking movement exactly as if they were on a person's feet.

Bride Says No Woman Can Pick Good Husband Before She is Fifty.

No Prejudiced.

A candidate for a situation as schoolmaster in old Phoebe Ryer's glades, being asked the shape of the earth, replied: "Well, some folks likes it round and some likes it flat, and I've flusterly teached it both ways."

DUTCH TOWERS

By MARTIN CONWAY

HOLLAND in its quaint way is a land of romance, but of a burgherish solid sort, the very antipodes of the romance of the sunny East. Dutch romance is the child of industry, enterprise, dogged courage, fogs and waterways, and its great days fell within the limits of the seventeenth century. Then ships of Holland sailed all the seven seas and brought home wealth and tales of adventure. Then its sailors hammered at the arctic icepack and passed their trade among tropical spice islands. Then it was that De Ruyter sailed up the Thames with a broom at his masthead; then, too, that Rembrandt painted and Vondel rhymed. That also for Holland was a great building age, when prosperity caused cities to grow, canals to be dug, ports to be built, and the multiplex activity of Holland to manifest itself in all kinds of buildings and shipings upon the surface of their amphibious land—half earth, half water. Thus it is this Holland of Rembrandt's day, and thereabout that remains most interesting in the travelliser, and it is the buildings then erected that are most worthy of study and presentation within the travels.

Amsterdam, when Rembrandt went to settle there about 1631, was passing architecturally through a period of transition. The small core of the city, where everything was on a small scale, still retained many relics of the medieval age. The canals in it were narrow, the accommodation for ships was exiguous. A growth-by-accretion and an expanding trade were finding themselves horribly cramped.

Amsterdam grew like an onion, by layers surrounding layers about a center. From time to time new rings of canals were dug, and residential streets and their more rings outside them. Of course fortified walls were erected round the whole at different dates, but they never lasted for long and had to be replaced by new circuits as the city expanded. The most of each new circuit became a canal within the next. Those who were responsible for the important changes made at the beginning of the seventeenth century had the good sense not to destroy every memorial of mediæval days. In particular they spared some of the old fortification towers, applying them to a new purpose and refitting them accordingly. Thus the tower called Montelbaanstoren, which still stands by the old Schans, one of the largest basins of the earlier canal system, was a part of the mediæval fortifications. They turned it into a picturesque hall tower by the addition of a superstructure set up in the year 1606. Though this was done before Rembrandt's day he omitted the example to an admirable drawing he made of it, thus giving one among countless instances of what might be called, of his attachment rather to the past than to the coming taste of the people of his day. The only other high tower of Amsterdam drawn by him was the Westertoren or tower of the Westerkerk or the Prinsenstoren, which unfortunately, we cannot produce in this place. That tower was a favorite with the folk of Amsterdam and figures more than once from it referred to, in narratives of Dutch existence. As a memorial of bygone days, for instance, when a plotter cliff is said to have stood out of the sea about as high as the Westertoren. It is a stately tower, composed of four retreating rectangular stages, each with columns at the angles, not unlike some of Wren's towers in the city of London.

The Westertoren, however, carries us down rather too late, when Palladian ideas were affecting Dutch architects. This was a feature of the change of taste, which made the art of Rembrandt old fashioned and terminated his prosperity. The Mint Tower of 1646, and the others shown in our illustrations, are examples of Amsterdam steeple architecture of Rembrandt's condemnation. If they must be called fantastic they are certainly picturesque, and admirably suited to enliven a small view of canals on one side of a foreground of crow-stepped gables.

These are the typically Dutch towers, these buildings of the days of Dutch romance. Taller towers we can find in Holland, but they are Gothic, and represent the style elaborated in France. France also set the style of architectural style in the eighteenth century. In the seventeenth century Holland stood on her own feet, and other folk imitated the style of Holland. The Dutch style of Holland England: it was imitated in the remarkable buildings erected in Denmark for Christian IV. it penetrated to the ends of the earth. It went with Dutch adventurers to New York, to Cape Town, to the Cape of Good Hope, where examples of it may still be hunted out by patient searching.

Our illustrations include a few of the earlier towers of Holland, about which a word or two must be said. Here, for instance, are the Cathedral and one of the mediæval gates of Maastricht, both of them in any sense characteristically Dutch, for the Holland that the world admires was created in the fire of the Reformation wars. The cathedral church of St. Servatius at Maastricht is of early Christian foundation, and it is even claimed that portions of the existing walls date back to the sixth century. The building as we see it, however, is a great romanesque church of Rhenish style, with restored eleventh century towers at the angles of its apse and a later Gothic bell tower adjacent to a side aisle. Utrecht and Delft have bell towers of a like kind, the latter being somewhat more elaborately garnished. Another such tower is in Paradise itself, if we are to believe Hubert Van Eyck's picture of that Heavenly Jerusalem, which adorns altar at Ghent, unless the Germans have carried it off.

Medieval Maastricht was not a large place. The Cathedral was in the center of it; not more than five hundred yards away are the remains of the city walls of 1204. The adjacent gates of war make the military architecture of a given date everywhere much the same. Thus the tower, flanked south gate of Maastricht is not different in design from many another that can be found in the old cities of Europe. But though it had little individuality to start with, the adventures and patchwork of time have endued it with a picturesqueness of its own. The builders gave it practically no decoration, but such solid work receive all they need from the hand of time, which adds grace with unerring skill. The planner as diffine may have been to start with, the better time adorns it, provided it has been built with sound materials, good workmanship and in good proportions. Most of England's noblest mediæval towers have lost their spires and even its crenelonnary eyes ugly. To the Saxon citizens it was a matter of delight, for instance, when a pinnacle cliff is said to have stood out of the sea about as high as the Westertoren. It is a stately tower, composed of four retreating rectangular stages, each with columns at the angles, not unlike some of Wren's towers in the city of London.

The Westertoren, however, carries us down rather too late, when Palladian ideas were affecting Dutch architects. This was a distinctive

Northern Michigan

Petoskey News: George M. Miller, son of Mr. and Mrs. William Miller, of Charlevoix, and Miss Winnifred Kempton, daughter of Mr. and Mrs. Jerome Kempton, of Lake View, came to Petoskey Tuesday and were married by Rev. L. H. Manning at the Methodist parsonage at 12 o'clock (noon).

On Wednesday morning last, Robert Dennane, aged 51 years, a farmer in Wilson township, was found dead in his bed, having expired from heart failure. He had never been down sick but had had trouble with his heart for some time. He had worked the previous day digging potatoes and retired as usual.

Sunday afternoon about 1:00 o'clock the Ford car driven by Mr. and Mrs. Grant Keiser of Bliss township, near Lovering, turned turtle on the Hogan City-Petoskey road, seriously injuring both occupants. Mr. and Mrs. Keiser were moving to St. Johns, Mich., to visit relatives who were seriously ill, and while driving down a long grade in the high wind Mrs. Keiser's hat blew off. Mr. Keiser attempted to grab the hat as it flew by him and lost control of the car. Both were buried underneath the car and were rescued by a passerby. Mr. Keiser received a bad gash in his head and other painful bruises. Mrs. Keiser was seriously hurt, sustaining a broken collar bone with possible internal injuries. They are now at the Petoskey Hospital.

The European war is believed to be responsible for considerable activity in commercial circles in Northern Michigan, says the Cheboygan Tribune. Grayling and Cheboygan have recently acquired plants for the manufacturers of storage of gunpowder and dynamite. It is presumed that the DuPonts are behind extensive land purchases which have been made there, but questioning and visits to the tract near Grayling are discouraged, while cameras are not allowed. Grayling, like most of the northern part of the lower peninsula, is rich in pine stumps and pine stumps are rich in turpentine and other chemicals which are used in the manufacture of explosives. This town has a number of railroad branches radiating in every direction into the districts formerly covered with pine, and when the industry here is under way it will be easy to deliver 10 cars of pine stumps daily to the factory. The Grayling plant is practically independent of Grayling. It is situated about one mile from town, and has about its own railroad siding. A big factory is going up, as well as dozens of houses for the men to be employed in the plant. Houses of a more pretentious type for foremen are now being erected. At Cheboygan a powder store-house has been erected in a place of wild land near the rifle range used by the local national guard company.

All boating stoves at cost at Blanchard's.

making starch.

It is a good plan, when making starch in a stew, of some less fuel than of soap and add them to the starch. This gives a beautiful glossy finish to collars and cuffs, and will prevent the irons sticking.

Surely in Hard Luck.

An old darky appeared in the doctor's office one morning, plainly very low in his mind. The doctor, recognizing his old patient, greeted him in his most inspiriting manner "Well, Rijah, how is the rheumatism these days?" "Fohly, pohly, sah!" replied Elijah dejectedly. "Jeeshe me, Marse Doctor, I'se jist a mighty picture of pain."

Stimulating Contempt of Court.

A case was appealed to the United States Supreme court because in one of the necessary papers in a murder case the clerk had made the date 1912 instead of 1913. He had used an old blank with the "1912" printed, which accounted for the mistake. This is a sample of legal technicalities carried to absurd ends.—Pittsburgh Gazette.

GIRLS' AND BOYS' MENTALITY

Female Begins Early to Develop It, Scientists Say, But She Stops Before the Boy.

"It may be taken as an accepted fact," writes a German scientist, "that the average age of speech-development is several months earlier in the girl than in the boy. While it is not very rare to find a year-and-a-half-old boy still unable to talk, the development of speech has made considerable progress in girls of this age, and in certain later periods of life her further advancement is even more obvious.

"At fifteen the male is generally only a big boy, while the girl is often quite a finished young girl. But her mental development not only begins earlier, but stops earlier. It is probably not to be doubted that in the young woman of twenty-five all the powers of the intellect which are capable of developing are at least indicated and formed and generally already quite well established. The twenty-five-year-old youth, on the other hand, is still full of unguessed possibilities for the future. The exceptions that occur do not vitiate the average law that the comparative cycle of development is relatively smaller in the girl. In women the conservative tendencies natural to their sex are most marked; in men, the progressive tendencies."

Not Consistent.

Rankin—"Bearhough says he is going to quit the union." Phyle—"Why?" Rankin—"Because he says he can't see the consistency of letting the walking delegates hire an automobile."

Philosophy of Life.

"Where a man can live he can also live well; but he may not have to live in a palace."—Marcus Aurelius.

FOR RENT—Small house on north side, furnished or unfurnished. Apply to C. Danto.

RHEUMATISM AND ALLIED PAINS —THEY MUST GO!

The congestion of the blood in its flow causes pain. Sloan's liniment penetrates to the congested and sluggish blood to flow freely. The body's warmth is renewed; the pain is gone. The "man or woman who has rheumatism, neuralgia or other pain and fails to keep Sloan's liniment in their home is like a drowning man refusing a rope." Why suffer? Get a bottle of Sloan's, 25c and 50c. $1.00 bottle holds six times as much as a 25c size.

Best chance you ever had to buy a heating stove. Call at Blanchard's Hardware and be convinced.

. . Local and Personal Notes . . .

Loyal Order of Moose meets every Monday night.

The U. S. engineers survey steamer Hancock was in this port Monday.

Harry Moscow, a Charlevoix boy, has entered the Ferris Institute at Big Rapids.

Mrs. W. J. Bachow left Monday evening for Detroit, where she will visit friends this week.

Frank Metcalf and wife left Wednesday morning for Iron Mountain for a two weeks' visit with relatives.

The board of supervisors of Charlevoix county will meet in annual session at the court house next Monday.

In the Charlevoix-Mancelona foot ball game which was played at Mancelona last Saturday, the result was a tie—0 to 0.

Dr. R. B. Armstrong left last week for Nashville, Tenn., with V. E. Shwab and family. He expects to be back October 10th.

Capt. O. E. Wilbur and wife leave this week for a trip to the Pacific coast, taking in the San Francisco Exhibition. In Chicago they will be joined by their son Hart.

Mr. and Mrs. J. L. Crane and son Percy left Monday for Janesville, Wis., to attend the wedding of their son Jacob Leslie Crane to Miss Ruth Fifielder of that city.

A. I. Cramer, manager of the Inn, left Monday morning for his home at Damariscotta, Maine, where he will spend a few weeks before going to Southern Pines, N. C. for the winter.

In decisions of the Supreme court that were given out Tuesday in one upholding the Railroad Commission in ordering the Pere Marquette and G. R. & I. railroad to make through rates with transfer at Bay View station.

Miss Clare Finucan, of this city, who has been a second grade teacher in the Detroit schools, has been promoted to the position of critic teacher in the normal department, with a raise of $10 per month in salary.

A movement is on foot to secure a fog whistle at this port. Marine men claim that with a westerly wind the fog bell cannot be heard. Petitions are already in circulation, and other strong efforts will be made.

The Electric lighting system is on the hog owing to a breakdown at Bellaire. The fiscal steam generating plant made an effort to supply the current, and to make a bad matter worse, the engine broke down, Tuesday evening. As we write, Wednesday noon, there is a faint hope that we may get light and power soon. But the Lord only knows.

That the potato and bean crop will be practically a total failure this year is the contention of Ivan Maystead and N. E. Larson, the experts in potatoes and vegetables of the Michigan Agricultural college. These men have visited farms and commission men in nearly every portion of the state during the past three weeks as a part of the college extension work and in every place found the same discouraging conditions.

Now that the price of sugar has gone down the people of this section can do a good turn to the peach growers by canning up a liberal supply of the fruit there, furnishing a market for the local product. There is nothing better in the winter than Grand Traverse peaches on the table and nothing now stands in the way of the people canning a large supply. Peaches are cheap and sugar is again back to a normal level which makes the inducement strong for the prudent housewife to get busy in the canning line.

Thousands of bushels of potatoes are rotting in the ground throughout southwestern Michigan, and reports by commission men here say that the same conditions obtain in all the potato growing sections of the north central states. The crop has been attacked within the last two or three weeks by the blight, in the worst known form in 30 years, and some growers stand in danger of losing their entire output. The epidemic is general, but potatoes in heavy soil are suffering the most. The wet season is held responsible for the firm hold the disease has taken, and the rapidity with which it has been spreading. According to some potato growers, the crop will be the smallest in years.

The Clinton street sewer is still out of commission.

Mr. and Mrs. Tom Leland returned Thursday from their western wedding trip.

The city authorities have decided to postpone until spring the re-surfacing of the Bridge street pavement.

R. P. Foley, of the Belvedere Hotel, left Monday for Winter Park, Florida, via Chicago, where he will stop off a few days.

Stanley Finucan left Friday for the Ferris Institute at Big Rapids, where he will begin a two years course in pharmacy.

W. H. Aldrich, of Chicago, a pioneer resorter on the Belvedere side, is seriously ill at his cottage, under the care of Dr. Wilkinson.

Married, October 3rd, Mr. Rudolph F. Fick, of Chicago, and Miss Carrie M. Cole, of St. James. Rev. Lloyd C. Vinyard officiating.

R. F. Sloan, city engineer, has been notified of his election as a member of the American Society of Mechanical Engineers, the headquarters of which are in New York city.

Archie Livingston, Asst Cashier of the Charlevoix State Savings Bank, is off for a two weeks vacation. Mr. and Mrs. Livingston are visiting friends at Lansing and Mt. Pleasant, Mich.

Aleck J. Cameron, of West Boulevard, left Tuesday morning to spend the winter with his daughter in Texas. His many friends here hope to meet him again in the spring, well and hearty, notwithstanding his nearly four-score years.

Mrs. D. F. Meech and Miss Marion Harris left Sunday night for a trip through the west. They will make a short call on friends at Minneapolis, then proceeding to Seattle, Portland, San Francisco and San Diego. They will be absent about two months.

Adam Plister has bought of H. S. Harsha the building and lot now occupied by S. M. Rose as a barber shop. The lot is 30 feet front on Bridge St., and Mr. Plister intends in the near future to erect a good building thereon.

The Michigan bean crop has been damaged to the extent of $6,000,000 because of wet weather, according to estimates of Prof. V. M. Shoesmith of the Michigan Agricultural college, who is in close touch with conditions throughout the state. Further losses may be expected next year because many farmers will be compelled to plant poor seed, he explains. The crop will probably not be more than 30 to 35 per cent normal," said Shoesmith lately, "and as the crop is usually worth $10,000,000 to $12,000,000 you can figure out the loss for yourself. No section of the state seems to have escaped the ravages of the dread diseases anthracnose and blight, which are caused primarily by the wet weather. The loss will be heaviest in the Thumb region, the principal bean section. Beans are sure to be high next winter.

They are the Sunday after-dinner ramble, when your chicken dinner is kicking you in the ribs, that a ramble through the town opens your eyes to the progress that is being made in the town you live in. From Brookside cemetery to Mount Mclosky, from Western Boulevard to the railroad bridge, are the pleasant, cozy homes of the all-the-year-round folks, and there is no town anywhere that can beat it. Time was when Antrim street was a concentration of ramshackle houses, and it was not so long ago, either. It is the longest street in town, and at three o'clock last Sunday afternoon it disclosed itself to the writer as one of the finest streets in the city. The ramshackles have disappeared, and in their place are pleasant homes bordering a well paved boulevard, with green lawns and grass, thrifty shade trees. Horibut avenue, on the south terrace, Mason and Clinton streets and Park avenue, all leading to the lake front city park, all combine to constitute the prettiest little city in Northern Michigan. And still the good work goes on.

Buy your heater at BLANCHARD'S while the "At Cost or Less Sale" is on.

WANTED—Rent out. Team of horses for their keeping until April 1, 1916, or will sell one or both on time to responsible purchaser. Call phone 68, Charlevoix. 22-26-4t.

Beaver Island News

Capt. Charles Roe is rebuilding the dock at Wildwood Harbor at the southeast side of Heaver Island for the Citizens Resity Co.

Ulysses McCann went to Charlevoix Monday on business.

James T. McHosogh arrived home Saturday from Charlevoix.

Sheriff Novak and Prosecuting Attorney Lewis spent several days here last week on business for the Farmers' Fire Mutual Assurance Co.

Last Friday morning at 3 o'clock fire broke out in C. C. Gallagher's bowling alley, occupied by George Williams, destroying the pool room, bagpipe shop and tailor shop. Partly insured.

Mr. and Mrs. John Stephens arrived home Monday after spending several days at Charlevoix and vicinity looking up a farm.

Mr. and Mrs. Henry O'Leary, of Charlevoix, are spending a week here visiting friends.

Capt. M. J. Bonner, of Charlevoix, spent several days here last week on business.

Dan Boyle is home from Escanaba where he spent a month visiting friends.

Carlton Hoyle, of Harbor Springs, is here visiting friends.

Mrs. Joe A. O'Donnell returned home from Chicago last week.

Eleanore Gallagher returned home Friday from Petoskey where she was visiting her sister Mae.

Miss Cornia Morton returned to her home at St. Louis, Mo., after spending the summer on the island.

Miss Carrie McCauley went to Chicago last Wednesday.

Charles Parrant went to Charlevoix last week on business.

Ray and Robert Karnes returned to their home in Chicago after spending several weeks on the Island visiting friends.

You will have to see the stoves and prices on sale at Blanchard's to realize the extra values being offered.

County Normal Notes

H. RICHARDSON

Miss Cleo Thorne, graduate of the class of 1915, is now teaching near Advance with an enrollment of twenty-five pupils. Five of the pupils are eighth graders.

Miss Clare Finucan has secured the position of critic teacher in the Detroit Normal. Miss Finucan was a graduate of one of the earlier classes and taught in country schools for about two years. Later she attended the Ypsilanti Normal and last year was one of the primary teachers in Detroit.

Miss Bessie Aldrich, graduate of the class of '15, is teaching the Johnson school with an enrollment of sixteen pupils.

Edna Carroll and Edith Harbour spent the week-end at their homes in Central Lake.

Miss Rose Groenink, graduate of last year's class, is teaching at Phelps. She has a school of forty pupils.

Miss Mary Holce enjoyed Saturday and Sunday with her sister in Petoskey.

Ruth Chellis spent Saturday and Sunday at her home in Ellsworth.

Florence Maddaugh and Catherine LaLonde spent Sunday with friends and relatives in East Jordan.

The question of ventilation is being discussed in the study of school management. Some very interesting and helpful experiences have been related by different members of the class.

Miss Martha Marcindale, member of one of the former classes, has been appointed critic teacher in the county normal at Port Huron. Miss Martindale taught for several years in the rural schools of Michigan. Later she attended the Ypsilanti Normal College and afterward taught in the Detroit schools.

The Normal class are doing very well in the sale of Lecture Course tickets and hope to do better in the future with the co-operation of the town's people.

GET RID OF THOSE POISONS IN YOUR SYSTEM!

You will find Dr. King's New Life Pills a most satisfactory laxative in relieving the poisons from your system. Accumulated waste and poisons cause manifold ailments unless removed. Blotches, spots before the eyes, blackness and a miserable feeling generally are indications that you need Dr. King's New Life Pills. Take a dose tonight and you will experience grateful relief by morning. 50c.

GRAND RAPIDS WHOLESALERS

Trade Extension Tour Ends in Charlevoix With Rousing Meeting—The Bad Weather Does Not Dampen Hospitality

Notwithstanding a howling wet gale, the Grand Rapids Trade Extension event in Charlevoix exhibited the ability of Charlevoix to be hospitable and enterprising. The special train bearing the wholesalers arrived at 5:30, it was met by a large number of automobiles and the crowd was brought to Bridge street, where an hour was spent in calls upon our business places and talking with the retailers.

Then the bunch was whisked back to its train for supper. At eight o'clock they were brought back to the Charlevoix Theatre for the public meeting, and it was a stupendous success. Mr. Fendergast, of the Furniture City, opened the meeting with greetings of the wholesalers, which was ably replied to by acting mayor Priest. Other speakers gave interesting talks, Lizie Shanahan making a very excellent speech on behalf of the best little city anywhere.

But the program was not all talk. The superb Furniture City Band executed a program of high class music, punctuated by vocal numbers that were a concert in themselves. The band was by far the finest organization of its kind that ever visited Charlevoix.

The theatre was packed, even to the aisles. The Charlevoix sweet was the wind-up of the tour, the train returning to Grand Rapids without a stop. Much regret is expressed that the visit could not have been an hour earlier with better weather, that the visitors might be shown the charms of Charlevoix the Beautiful.

DEATH OF W. H. ALDRICH

W. H. Aldrich, of Chicago, one of the best known and most popular members of the Charlevoix Summer Home Association, died at his cottage Thursday night, aged 70 years.

Mr. Aldrich was always one of the last to leave Charlevoix in the fall. He was about town up to about ten days ago, when he contracted a severe cold, which developed into pneumonia.

He was a most ardent lover of Charlevoix, and took a deep interest in everything that concerned its growth and civic welfare, always contributing generously to any cause that involved the betterment of local public conditions.

With his family he began his summer sojourning here thirty years ago, building the cottage where he died twenty-eight years ago. Personally he was a most genial and courteous gentleman, always on the lookout for opportunities to do good with his money.

Few of those old-time summer residents have died since he has was more keenly felt by this community than in the passing of this good soul.

The remains were taken to his Chicago home Friday.

BEARING FRUIT

We are in receipt of a circular issued by the Wholesale Liquor Dealers' Association, and which is undoubtedly being scattered broadcast in dry territory, arguing the wet cause from the standpoint of the recent action of the State Federation of Labor at Traverse City endorsing the open saloon.

This paper, which fought in two local option battles, not unanimously held to the principle that its readers do not want too much of one thing as regular newspaper diet, and that there is time enough in which to kill a snake when you hear the rattle, or see its head above the grass.

The adoption of the Traverse City resolution, and the circular letter above referred to, have a distinct and ominous rattle; indeed, the coil of the serpent is plainly visible.

We still hold to the opinion, previously expressed, that the action of the Traverse City convention did not voice the true sentiment of labor. We do not hesitate to express the opinion that the underground influence of the open saloon interests, with a corruption fund of ample dimensions, was at the bottom of the whole matter, but that a large majority of the rank and file of organized labor will refuse to be led into error.

COMMON COUNCIL

At the meeting Monday night petitions were granted for sidewalks on the west side of Burns street.

Nichols and Ainslie street sewer confirmed by resolution.

Petition of R. M. A. Johnston to remove the Frazier shoe store building and Blanchard warehouse to lot 11 block 7, Mason street, granted. Also barn in rear of Charlevoix Theatre to same premises.

REDUCED prices on hard coal base burners—call and see our line of towns before you buy. We can save you money. CHARLEVOIX HARDWARE Co.

FRANTIC FIGHTING IN LOOS CELLARS

Eyewitness Describes Great Battle Won by the Allies.

HAND GRENADES WERE USED

British Had Great Difficulty in Dislodging the Hemin Germans, Who Offered Most Stubborn Resistance. German Directed Fire From House Occupied by British Colonel.

"I am now able to write a straight and clear story, with many interesting details, of the fighting in France and Belgium," says a special correspondent of the London Daily Chronicle. "For some time it was impossible to obtain anything like a connected narrative, as divisions, brigades and battalions disappeared into the smoke and could only send back brief messages to tell how the day was going, how severe was the conflict and how great was the success. Now, however, after the first rush is over, there is time to tell the story of one of the greatest achievements gained by British troops in this war.

"The first two trenches were carried with a rush at the point of the bayonet, a large number of Germans being killed. But the uncut wire made the first check and was a formidable obstacle. But our men, reckless of life then, attacked it desperately. They stood up under a deadly fire of machine guns and forced their way through the entanglement.

Dead Man Erect in Their Path.

"One of the most extraordinary incidents among the grim scenes which took place in the smoke and mist occurred when a company of 'killies,' advancing at the charge, came face to face with a very tall German, who, although stone dead, with a bullet through his brain and with his face blackened with the grime of battle, stood erect in their path, wedged in some strange way in a low trench. It was so startling and uncanny that, with one accord, the wave of men parted and swept each side of him, as though some ominous specter barred the way.

"Hank after rank streamed up, and at last the front line of men poured through and swarmed forward to the village, and then, three-quarters of a mile further on, as they ran shouting hoarsely, they were faced by the fire from an enormous number of machine guns, and from every part of the village there came the steady rattle of these weapons, pouring out streams of lead. There were machine guns in the windows of many houses and on top of the "tower bridge"—tall mine cranes which rose 300 feet from the center of the village—and in the narrow trenches dug across the street. In the cemetery to the southwest of the town which our men had passed there were no less than 100 machine guns, so it was to itself a fortification of great strength.

"Hank after rank streamed up, and at last the front line of men poured through and swarmed forward to the village, and then, three-quarters of a mile further on, as they ran shouting hoarsely, they were faced by the fire from an enormous number of machine guns, and from every part of the village there came the steady rattle of these weapons, pouring out streams of lead. There were machine guns in the windows of many houses and on top of the "tower bridge"—tall mine cranes which rose 300 feet from the center of the village—and in the narrow trenches dug across the street. In the cemetery to the southwest of the town which our men had passed there were no less than 100 machine guns, so it was to itself a fortification of great strength.

"Our Britons Captures Thirty Germans.

"Here and there small parties of Germans in trenches defended themselves with the courage of despair and would not yield until they were killed to the last man. Others were causing rather than courageous in their methods of fighting. A great mass of them were undoubtedly surprised and demoralized by the rapidity and sweeping strength of our attack, and it was by the wholesale surrender that we took so large a number of prisoners. Men of this class, after the first resistance at rifle range or with machine guns, seemed to have no fight in them at all. In one house entered by a little kilted signaler thirty Germans, including an officer, surrendered to him after he had shot down three who tried to kill him.

"In one cellar an amazing incident happened which reveals the highest form of courage and self sacrifice that cannot be denied our enemy. The colonel of a battalion which will receive a high place in the history for this day's work came into Loos after his men had already gone from hill 70. With stragglers and other men he established a rearguard, in a house practically untouched by shell fire.

"At this time there was little shelling on the artillery officers on other side were afraid of killing their own men, and the house seemed fairly safe for the purpose of a temporary signal station. But the colonel noticed with surprise shortly after his arrival that heavy shells began to fall very closely, and the Germans guns were obviously aiming directly for this particular building. He ordered that the cellar be searched, and three Germans were found. But it was only after he had been in the house forty minutes, in a deeper cellar which had not been seen before, that the discovery was made of a German officer who was actually telephoning to his own batteries and directing their fire. Suspecting that the colonel and his companion were therefore officer directing the general operations, he had round the shells to fall upon the house. Hearing such a rocky shot would mean his own death as well as theirs. In any case, he was certain to die, and he died bravely, having made this supreme sacrifice of courage. The telephone apparatus is now a trophy in our hands."

FOR RENT—Small house on north side, furnished or unfurnished. Apply to C. Danto.

THE PRESIDENT AND THE TARIFF

The President's letter to ex-Governor Cox of Ohio is no evidence that he looks with favor upon any change in the schedules of the Underwood tariff, no matter how much the treasury may be in need of revenue. Mr. Wilson is a free-trader. For years he nursed this theory in the academic shades of the colleges where he taught. It runs through all his books and speeches; and finally, by the fortune of politics, he was enabled to put it into practice. To surrender that principle now, to admit that the tariff bill has been a failure, would be to pull out the corner-stone of the whole structure of Woodrow Wilson's political belief—and his letter to Mr. Cox conveys no intimation of any such purpose.

The main thought in this letter is a familiar one. It is a repetition of the startling assertion, made for the first time in the President's Indianapolis speech, that he "put one over" when the Federal Trade Commission was established and that that commission is, in effect, a tariff board.

This may, indeed, be so; but the men who voted for the Trade Commission law did not think so. And if Mr. Wilson attempts to make tariff changes on the basis of recommendations coming from the Trade Commission, we can foresee lively times in Congress.

"THE TIMES ARE OUT OF JOINT"

Has the world gone crazy?

Eastward the star of empire is trying to wend its way.

The Faiser, after an earnest season of prayer, has decided to go to the assistance of his beloved ally the Sultan of Turkey. In order to get to the Dardanelles he is obliged to smash poor little Serbia, brave but impotent, a grain of wheat between two millstones.

Bulgaria, the existance of which has been twice saved by Russia, and which for many years suffered from Turkish oppression, has joined the Teutonic allies in their attack on Serbia. Greece, bound to Serbia by a solemn treaty of alliance, has refused to go to the assistance of its neighbor. The Greek king is the Kaiser's brother-in-law. See? Another scrap of paper.

Meanwhile, the Turkish soldiers, effeminated by Germans, continue to slaughter Christian Armenians, while the Kaiser prays and preaches.

And it is all for land greed and the spread of German "civilization."

HENRY FORD OUT OF HIS ELEMENT

Henry Ford, of Detroit, is the architect and manufacturer of a vehicle closely resembling an automobile. That is a popular and useful article goes without saying. It does the work for which it was created, and does it well.

As a result of these facts Henry Ford is a multi-millionaire, with philanthropic qualities of head and heart. But the sum of the above facts brought down, completes the analysis of Henry Ford's usefulness in the realm of human endeavor. We doubt if he could successfully rival Henry Nichols saw-mill.

When he attempts to butt-in on the billion dollar English war-loan as an obstructionist his voice has no more effect than the rattle of one of his vehicles.

Peace at any old price, with an offer of ten million dollars as a war-quencher is Mr. Ford's most recent bugle call but it does not for one instant check the murder of Christians in Turkey, nor the march of the Kaiser's hosts to help the murderers in their brutal work.

Mr. Ford does not believe in war, and "preparedness" to him means war. He would not make a cartridge or a shell—not him—even for Uncle Sam, because cartridges and shells are made to kill folks. He would much prefer building vehicles and piling up his millions.

Traverse City Record: Night schools will be commenced in all five school buildings throughout the city next month, evening and the number of sessions each week and the courses it be taught will depend upon the number of pupils who present themselves to the opening sessions. It is expected that the term this year will extend beyond the Easter vacation instead of a few weeks, as has been the case heretofore. There is no reason why there should not be a large attendance at all of the buildings this winter, as the classes are open to all the grownups who feel that they are in need of more education. This will be the third year that the plan has been in operation and former results have been exceedingly good.

RHEUMATISM AND ALLIED PAINS —THEY MUST GO!

The congestion of the blood in its flow causes pain. Sloan's liniment penetrates to the congested and sluggish blood to flow freely. The body's warmth is renewed; the pain is gone. The "man or woman who has rheumatism, neuralgia or other pain and fails to keep Sloan's liniment in their home is like a drowning man refusing a rope." Why suffer? Get a bottle of Sloan's, 25c and 50c. $1.00 bottle holds six times as much as a 25c size.

SYNOPSIS.

—12—

Hall Hamilton, artist photographer, proposes to Carolyn Rosamund Royalton at a party he is giving. She shows that he is fickle, however, by his indiscreet flirtation with Dorothy Dale, a pretty girl who is visiting Rosamund. Hall tells her he loves Dorothy, but she tells him that Rosamund is the girl he must marry. Hall asks her to marry him, and she promises to do so. Dorothy tells him she will have Rosamund invite him to a party to be given by her that night. Hall goes home to find a letter from Dorothy saying she will not be at the party. Hall decides to have a practical joke on Dorothy. He hires a hall and invites a number of his friends to a party to be given at the same time and place as that to which Dorothy has invited him. He has a dance orchestra and a supper prepared. Dorothy's party is a success, but she is disappointed because Hall does not come. Hall's party is a failure, as his guests, who had been invited by him, do not come

WILD HOGS AS WATCHDOGS

Brought Up With Herds of Goats or Flocks of Chickens—They Are Sure Protectors.

In some parts of Mexico the wild hogs, which the natives call jabalis—literally beasts in their natural state, are used as watchdogs. If they are caught young and brought up with goats they will go out into the hills with the herd and fight off coyotes or other wild animals; if they are raised with chickens they will protect them, and round a ranch house all night they are as useful as any dog.

Although fierce by nature, they can be tamed until they follow their master round like a dog. The landlord of a hotel in one of the border towns even keeps one of the wild hogs as a plaything for his baby son.

The jabali is only first cousin, however, to the domestic pig. Swine are divided into two main branches: in one line is the farmer's pig, descended from the wild wild boar of Europe; the other is the jabali, which is really a peccary. But the jabali is quite "pig" enough, with his small, feeble snout, long mottled bristles and long, sharp tusks.

REDUCED prices on hard coal base burners—and we will give you a ton of coal before you buy. We can save you money. CHARLEVOIX HARDWARE CO.

COUGHS THAT ARE STOPPED!

Careful people see that they are stopped. Dr. King's New Discovery is a remedy of tried merit. It has held its place in the market for 40 years. Youth and old age testify to its soothing and healing qualities. Pneumonia and lung troubles are often caused by delay or treatment of a King's. New Discovery stops those hacking coughs and relieves the condition. Money back if it fails. 50c. and $1.00.

Hair Demand Exceeds Supply.

During the last few years the exportation of human hair from Japan has increased to the point that the demand for it now far exceeds the available supply. Especially when compared with that of the average European, the hair of the Japanese women is extremely long, elastic, and strong, which gives it superiority for commercial purposes.

The United States and France offer the principal markets for the Oriental dealers. In Europe it is much used for wearing purposes, the hair being bleached by chemical treatment, dyed in different colors, and subsequently woven with silk into ribbon materials and heavy fabrics suitable for draperies and upholstering, some of which command prices of several hundred pounds a yard.

Healthy Reaction.

Fortunate are they who react healthily. They have an easy path through life, no matter what they may meet. The habit of reacting healthily from the small trials gives them power to withstand the big tests, even the calamities.

And pitied are they who react unhealthily. Every day of their lives they inflict torment on themselves, no matter how favored they may be by fortune. Their practice of reacting unhealthily from small things makes them easy victims of the big trials.

FOR SALE

I will sell at private sale the farm known as Lake Race Farm, in Eveline township, 1-mile south of Ironton. Also two lots in the Village of Ironton.

CHARLES J. ZEITLER, Administrator.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, also 14 acre close to city. Apply to H. S. Hayden.

.·. Local and Personal Notes .·. ·.

The Bridge street bill paving work is completed.

Mrs. Galo Hines arrived from California Thursday.

Peaches galore at John Fagan's at 75 cents per bushel.

S. M. Sou & Sons have a very readable ad in this issue.

W. J. Rachow, attended the bankers' banquet at Traverse City Tuesday night.

The schooner Rosa Belle, lumber laden for Sheboygan, has been windbound here for a week.

Capt. P. McCafferty left Monday for Grand Rapids having drawn the ticket as a grand juryman.

Hon. A. Butters attended the banquet of the Northwestern Bankers' Association Tuesday night.

The steamer S. M. Stephenson is here from Cleveland with a cargo of coal for the Wood and Coal Co.

W. C. Donaldson, of Hancock, joined his wife at the Emmet home, this city, Sunday for a week's stay.

Paul Harsha left last week for Ann Arbor, where he begins a full course of the study of electrical engineering in the University.

Rev. Wm. T. Roberts, of Escanaba, superintendent of the upper peninsula District Baptist Board of Missions, was in the city Tuesday

Hale Studebaker and wife, of San Dieuis, Calif., are here on a visit with Mrs. J. A. Cameron, Mrs. Studebaker's grandmother. Mrs. S. is a daughter of the late Ed. Newman.

A. J. Hamilton and wife left in their car Friday morning for a trip southward, visiting Montague, Grand Haven and Muskegon. They will be absent about two weeks.

A. F. Bridge and wife left Thursday for Chicago and Wisconsin points to visit friends. They will visit Ann Arbor on the trip, returning in their car, which "young Bob" took with him when he returned to college last month.

Horrible! Horrible! Opportunity for the Civic Federation to move immediately in the interest of public morals! The Charlevoix Odd Fellows are raffling an automobile to raise funds to purchase county picnic grounds.

Mr. Chappell, of Galesburg, Ill., who recently bought a six acre lot at "Young America Point," this side of Ironton, has a force of men and teams at work cleaning it up preparatory to building a cottage next spring.

As not passed by the last legislature raises the pay of supervisors from three to four dollars per day. Township clerks, members of township boards, boards of registration, board of health, inspectors and clerks of election and highway commissioners are entitled to $3.00 per day.

The regular monthly meeting of the Woman's Missionary Society of the Congregational church will be held on Friday at 2:30 in the parlor of the church. The Cradle Roll with the mothers will be guests. A child in the midst is the topic. Social hour follows the program. The offering goes to the Home Mission.

Five Charlevoix old ladies met by chance at the home of one of the five one day last week. The youngest was 79 years old and the oldest 80. The mother of one of them raised ten children; the mother of another raised seven children; two of the old ladies were each the mother of twelve children, and one had twelve brothers and sisters.

Under the 1915 law a county surveyor is entitled to $6.00 per day for his services, and fees for surveyors are made more stringent. He is required to obtain the original survey data from the state land commissioner before laying out a plat. Hereafter, also, records of fifteen years standing can be used as evidence.

The regular report from the Pere Marquette Railroad company showing the train performance of the month ending with last Sunday was not received at this office. Train No. 9 coming north was on time every day, and train No. 10 from Bay View to Chicago was late but a few times. The percentage of on time trains of the Pere Marquette was higher than any other road in the state for the 1915 summer season.

W. E. Bedwin's dray made some excitement on Bridge street Thursday in a runaway. Coming across the bridge the owner went adrift and started the team into a swift charge down the street, with Gene on board, doing his best to stop them. A. I. Fitch, who was on the sidewalk opposite Park avenue, rushed into the street and seized the horses by the bridles. He was knocked down about the time the off horse also fell, and he fell on Mr. Fitch, the near horse dragged the dray over both man and beast. By this time the outfit was brought to a standstill, and Mr. Fitch extracted. He was conscious but evidently badly hurt. He was carried to Dr. Wilkinson's office, where the doctor gave him a thorough examination. It was feared that he was internally injured, but up to this writing nothing of this kind has developed. No bones were broken, and the damage was chiefly bruises, which, while not serious, is painful.

C. V. Miles, of the Majestic Theatre is in Detroit this week on business.

Judge S. A. Correll, of the probate court, is in Grand Rapids on business.

The State street sewer is about completed from Park avenue to Clinton St.

Lawrence McCann and wife left Friday morning for an auto trip to Montague to visit relatives.

Mr. and Mrs. Geo. W. Bates and Mrs. Smith, of Petoskey visited Rev. Lloyd C. Vinyard, Monday.

Earl Young and wife returned Sunday evening in their car from their wedding trip to southern Michigan.

James Kehoe, of Traverse City, F. M. trainmaster, was in the city Monday on business with the Rock Product Co.

J. Byron Cook of Belding, Mich., is home for a short visit with his parents, Mr. and Mrs. John Cook on Mason St.

We don't think Lizie Shanahan for telling our copyrighted stories at the wholesalers' meeting last Friday night.

Albert Edwards and Rev. L. C. Vinyard leave Monday for Saginaw to attend the Baptist State Convention, visiting Detroit before returning.

Rev. C. E. Taggart left Wednesday for Niles, Mich., to visit his daughter, and to Tipp City, Ohio, to spend Sunday. He will be absent about three weeks.

Chas. Munyon is erecting a residence on his place near the cemetery. The house is being built with cement brick manufactured on the ground, including foundation material.

Monday, October 11th was the beginning of the fall year of the Shakespeare Study Club. They have planned to read "Pericles," "Two Gentlemen of Verona" and three parts of Henry VI. Mrs. R. W. Paddock, Mrs. J. L. Crane and Mrs. G. W. Crouter are the executive committee.

Saturday morning disclosed little patches of snow in the roof gutters, and at seven o'clock Saturday morning for a quarter of an hour we were favored with the first daylight snow storm of the season. It was taken as a hint of what is to come later, and there is no hard feelings on our part.

Regarding the Clinton street sewer trouble, which has cost the city a good bit of money, the cat is out of the bag. On Thursday a whole undershirt was dragged out. This seemed to dam up the flow with other material. How on earth this garment reached the sewer is a mystery, but undoubtedly somebody's wash-tub was the cause.

HYMENIAL

Married, at the home of the bride's parents, in Saginaw, Oct. 12th, Mr. Clinton Gates and Miss Marie C. Kirchner. At home in Charlevoix after a brief visit with friends in Detroit.

Married in Petoskey, Tuesday, Oct. 12th, Capt. Peter Donald Campbell to Miss Julia Ada Corlett. After a short wedding trip Capt. and Mrs. Campbell will be at home in Charlevoix after January 15th.

We take the following from a Janesville, (Wis.) paper: "Tuesday evening occurred the wedding of Miss Ruth Elizabeth Field, daughter of Mr. and Mrs. J. F. Field, of Janesville, Wis., and J. L. Crane Jr. son of Mr. and Mrs. J. L. Crane, of Charlevoix, Mich. The bride was attended by Mrs. Joseph Blake, of Oak Park, Ill., as matron of honor and Miss Ruth Crane, classmate at Vassar College, and Mr. Percy Crane, brother of the groom was groom's man. The bride's gown was of white satin, heavily embroidered with pearls and trimmed with Venetian point lace. She carried a shower bouquet of lilies of the valley and roses. Mr. and Mrs. Crane left for Charlevoix, Mich. where they will spend few days before going to Colorado Springs, Texas. Mr. Crane is a civil engineer with the firm of Hains & McDonald, of Kansas City. Among the out of town guests present were Mr. and Mrs. J. L. Crane, Charlevoix; Mr. and Mrs. Halverson, of Whitewater, Wis.; Mr. and Mrs. W. A. Donohoe Jr., of Chicago; Mr. W. S. Hafferan, of Chicago; Mr. T. E. Hoffer, of Madison, Mr. and Mrs. Sage, of Delaware; Mrs. Rose King, of Chicago; Miss Lois, of Madison, and Edwin Fifield, of Beloit.

County Normal Notes

RUTH CHELLIS

Miss Ethel Hogg, of Bellaire, has been given special permission by the State Department of Public Instruction to enter the normal. She makes thirteen members in the class.

Florence Maddaugh and Florence Milner were teachers in the training room during the absence of Miss Whiting last Wednesday morning.

The sixth grade children of the training room spent a period hoeing in the garden under the direction of some of some of the normal students.

The kind which was brought to the normal class has been indentified as a hermit thrush and the woolly bear caterpillars are still very interesting to what they are spin their cocoons for winter.

The basket ball has arrived, but is not yet ready for use.

Wednesday morning Miss Himes and Miss Whiting attended the wedding of Miss Hallie Bon and Mr. Harold Hess, Miss Bon was a member of the class of 1911.

LOOKING ON THE SUNNY SIDE

Anything is Better Than to Give Oneself Over to Pessimism That Will Spoil Everything.

Since we all have more or less misfortune to meet let us strive to meet it in the right way. Why sit down and bewail the ill luck that is ours? Why turn our sorrow over and over until it has shoved it into every new phases of misfortune? No! Let us stand up bravely and bear its weight, no matter how heavy the load may seem, and, with our eyes fixed on the glimmer of light, let us walk swiftly out of the dark paths into the sunlight.

Once we have learned to walk on the sunny side of life darkness will have no further terrors for us, for we will carry our sunshine around with us in the depths of our hearts. The sunshine of the mind is far warmer and brighter than the sunshine which we see and feel with our physical senses.

Once we have gained the true sense of real mental sunshine we will have the means to pull ourselves out of every Slough of Despond without any outside aid. For just as Bunyan's Pilgrim Progress was mental, so it is with all of our journeys through life. What we really accomplish must first be worked out in mind.

Learning to pick out the gleam of light from the dark pall, learning how to avoid the sloughs of despond and how to walk in the sunshine is not easy, but even the attempt at learning it gives us a happiness far in advance of the reward of happiness and peace. Every little effort in the right direction will bring wonderful returns that the only wonder is that so few of us make the effort.—Pittsburgh Dispatch.

LENDING A HELPING HAND

Teamster Gave Handcart Pusher a "Lift" That Was Something to be Appreciated.

Here is an interesting street scene, drawn by a writer:

The handcart was of a familiar sort—a pair of high wheels with a long platform of slats resting on the axle and a crossbar at one end for a handle. A man stands behind the crossbar and grasps it, as a propel the vehicle.

The handcart was piled high with big bags piled with waste paper—a cumbersome, heavy load that would have been hard to handle anywhere, and was doubly troublesome going up a steep hill against the strong broad way. The handcart man had to bend over to put his weight into the push, and strain to keep the load moving at all.

Coming up behind him was a driver with an empty truck, drawn by a pair of big horses. When the driver saw what was ahead, he started at his teams a little and skillfully set the end of the pole square in the middle of Texas. Mr. Crane is a civil engineer with the firm of Hains & McDonald, of Kansas City. Among the out of town guests present were Mr. and Mrs. J. L. Crane, Charlevoix; Mr. and Mrs. Halverson, of Whitewater, Wis.; Mr. and Mrs. W. A. Donohoe Jr., of Chicago; Mr. W. S. Hafferan, of Chicago; Mr. T. E. Hoffer, of Madison, Mr. and Mrs. Sage, of Delaware; Mrs. Rose King, of Chicago; Miss Lois, of Madison, and Edwin Fifield, of Beloit.

Dog Helps Man Make Living.

A dog named Rover, owned by a gentleman in Sacramento, Cal., has been taught to turn the wheel that furnishes the motive power for a knife sciissors-grinding machine. Rover gets on the wheel of the grinder and treads merrily treads, treads, while his master sharpens scissors and knives. The professor is proud of his achievement, and when business is slack he will run to the wheel and bark reproachfully at his master until the good man feels obliged to attach the rope which turns the wheel. Rover never seems so happy as when business is brisk, and he can send his large wheel around and around for a whole morning. He will then sleep for half an hour after he has had his dinner, and he ready for work again with his master in the afternoon.—The American Boy.

Wanted to Repeat.

Stranger—"Seventeen years ago I landed here in your town and you struck you for a dollar. You gave it to me, saying you never turned a request like that down." Citizen (heavily)—"Yes?" Stranger—"Well, are you still going?"—Judge.

GETTING THE SAVING HABIT

What Earner of Money Needed Was Simply a Stimulus to Make Economy Attractive.

The following is an account of what competition did toward encouraging a bank account:

"I am on a newspaper. I have always made a salary in excess of simple living requirements, but I was a free spender and did not save.

"A baby came, and I felt an added responsibility. I was afraid—actually frightened for the first time in my life. Then I gave the matter of saving some thought, but I could not decide upon any course of action.

"At the office one day a business discussion made me see that what I needed in my home was competition.

"That night on my arrival home, I said to my wife that I would, beginning the next Saturday, give her half of my salary and I would keep the other half and we each take an equal share of the household expenses.

"At the end of the first month I left my bank book on the library table. I wanted to surprise her. That evening she handed it to me and said she thought I was doing fine. Looking at her closely I saw that she resalized she was challenged. She did not speak, however, of any disposition she might have had in mind.

"A month later I found her bank book on the library table identically as I had left mine. She had beaten me, for the balance showed a little over $10.50 more than my own for the corresponding month, and $15 in excess of my deposits for the first month.

"We are now in a race. We have enough to buy a home if we should join funds."—American Magazine.

CELEBRATE DAY OF LIBERTY

Festivities of Swiss Cantons to Which All Visitors to the Country Are Attracted.

August 1 is the day when the liberty of the Swiss cantons is celebrated. At Geneva one of the favorite forms of celebration is to illuminate colored lights on the great fountain of "jet d'eau" that rises out of the lake. Every color of the rainbow plays over the towering column of white spray, washing it in this shining rainbow dress. At night the water seems to float in the air like a many-colored banner. This jet d'eau or jet of water is schnowhaufen in the Swiss cantons is unique in the world. At the place where the waters of Lake Geneva narrow into the river Rhone, a small jet of water is schnowhaufen to the height of 300 feet. Every color of the rainbow plays over the towering column of white spray, washing it in this shining rainbow dress. At night the water seems to float in the air like a many-colored banner. This jet d'eau or

FISHES of the DEEP SEA

by L. HUSSAKOF in the AMERICAN MUSEUM JOURNAL

SOME DEEP-SEA FISHES

SOME DEEP-SEA FISHES

CONVENTION CHART

UP TO the time of the "Challenger" expedition, very little was known regarding the fish life of the abyssal depths of the sea. Only about 50 species were known. But the wonderful collections brought back by the "Challenger" from her four-year cruise (1873-1876) made known the strangeness and even weirdness of this fish fauna. Several kinds of deep-sea fishes have been collected—some of them dredged from a depth of more than a mile—and it required a huge canvas to describe and picture them. From this volume dates our real knowledge of the fishes of the abyssal deep. The "Challenger" expedition was, indeed, a "Columbus voyage" in ichthyology. It opened a new chapter in the history of the science.

Since that time many deep-sea exploring expeditions have been sent out by the various nations, and hosts of other fishes have been brought up from the oceans in all parts of the world. More than a thousand species are now known, and we can appreciate at the full value the richness and strangeness of this fauna. Moreover, not only do we know the fishes themselves, but, as a result of the scientific investigations carried on by the various expeditions, we now know a good deal of the physical conditions under which they live, so that we can, in a measure at least, explain their ways and wherefore of their extraordinary characteristics.

When we think of life in the deep-sea, there comes to mind, first of all, the enormous pressure which these creatures must withstand. This pressure becomes the greater the deeper we go down, and in the profoundest depths it equals thousands of pounds to the square inch. The result of this pressure is that the tissues of these fishes are tender and loosely knitted together. When they are brought up on, of the dark depths and the great pressure under which they live is removed, the expansion of the gases within them bulges out the eyes, and often blows out the viscera through the mouth, while the muscles collapse, leaving them soft and flabby like moist rags. Most deep-sea fishes are very small also, usually only a few inches in length, and it is probable that this reduction in size has contributed, to some extent at least from the great pressure under which they live.

Another important condition is the dimness of light, or even darkness in the profound depths of the sea. If we imagine ourselves descending into the deep ocean, we see the light grow dimmer and dimmer as we go down, until finally a level is reached beyond which no light penetrates at all. The entire vast depth below it is in eternal darkness. Now the fishes living in this dim light, or in total darkness, have been profoundly modified by it. In some species the eyes have become very small, and in some cases have entirely disappeared. There are even fishes in which the skin and scales of the body have grown over the eyes, so that, where the eyes should be, so that these fishes are, as has been aptly said, "blind beyond redemption." Other forms, on the other hand, have been so affected in a entirely different way. The eyes, instead of growing smaller, have grown larger, as if in the attempt to catch every fleeting ray of light. In some fishes this has been carried to the point that eyes have become like enormous goggles.

Most deep-sea fishes have luminous organs of one kind or another, so that they carry their own light about with them. In some the entire body glimmers, the coating of slime which exudes from the pores and lateral canals, emitting a soft silvery glow. In others rows of minute luminous organs run along the sides of the fish, or there are flashing light-spots on the head or face. What a wonderful sight would be to us a small black fish fitting through the silence and darkness of the deep with its headlights and rows of porous gleaming through the darkness like some small ship passing through the night with its portholes all aglow! Some deep-sea fishes have a luminous organ at the end of a feeler on the head.

A pertinent question may be asked: How do we know these fishes glow and glimmer, since no human eye has ever beheld them in their abyssal home? The answer is partly from analogy and partly from actual observation. When one is in a boat in the tropics, on one of those sultry nights when everything is a dead calm and the black clouds hang so low that sky and sea form one continuous blackness, then one may see the glimmering fishes darting out of the path of the boat, their forms, silvery and glowing, outlined for an instant against the blackness of the sea. This effect is chiefly due to the visibility of the silvery scales reflecting their bodies. Why shall we not believe, then, that in deep-sea fishes a similar phenomenon takes place, particularly as in many of them the slime pores and canals are greatly developed and must exude large quantities of slime? Then one, on deep-sea expeditions, on favorable occasions, as for instance, a dark calm night, fishes that have been brought to the surface and placed in water were seen to flash light from the ends of the tentacles or the photophoresent pores precisely as we should have expected from a study of these organs. Major Alcock, in his interesting volume, "A Naturalist in Indian Seas," mentions a specimen brought up from a profound depth which "glimmered like a ghost as it lay dead at the bottom of the pail of turtle soup." So that by inference, as well as by actual observation, we must believe that what we call luminous organs in deep-sea fishes, emit light into the darkness about them. In the case of fishes totally blind, the absence of light is compensated for by the development of enormous antennæ-like feelers, modified from fin rays, so that these fishes can feel their way, as it were, through the darkness.

The absence of light, however, entails another important consequence. As is well known, no plant life can exist in darkness. There is therefore no vegetation of any kind in the profound depths of the sea. The deeper fishes are, in consequence, all carnivorous, the more powerful ones seizing and devouring the weaker ones. It is a world of ceaseless struggle and ceaseless suspense. Many have enormous mouths, and formidable teeth to insure holding the prey. In some forms the teeth are so large that the mouth cannot be shut!

The phosphorescent nature of the water in the profound depths of the sea, is always low and near the bottom, where life is free from disturbance, even at the surface. Undoubtedly this has an effect upon one fisher strength to see yet known what it is. The amount of oxygen dissolved in the water also is much less than in water nearer the surface. The pressure is greatest of the deep-sea fishes is modified to suit their peculiar conditions. The gill diameter has become much reduced in size, and in a number of instances some of the gill arches have lost their filaments.

The fishes are apparently adapted to a much smaller oxygen supply than those living nearer to the surface. When we think of the vast diversity among these fishes, of the opposite zones, and that representatives of a single family or group that has become specially adapted to life in the deep ocean, "we see how wonderful are the ways of God in the creation of the plants in a work on deep-sea fishes will show how widely different types are represented. In fact, a great many families are included in the deep-sea forms. There are sharks and rays, salmonoids, herrings, perches, eels, and representatives of many other families. We can explain this heterogeneity among these in this way. We may imagine that fishes of many different kinds in their search, so to speak, for the uncomplied corners of the sea, found a haven in those deeper waters where they were free from pursuit by their enemies. In the course of time they migrated farther and farther into the deep, a change in habitat taking place part passu with the changes in structure. Having started out with different organizations and possessing different degrees of variability, they became differentiated in diverse directions, so that while some developed enormous mouths, powerful teeth, or phosphorescent organs, others became bottom-living and sluggish or commensal but their eyes. Still others developed long feelers for groping their way through the darkness. Now and again, however, fishes of separate groups developed similar structures, so that there are many striking cases among deep-sea fishes of what the biologist calls "convergence," or parallelism.

The museum has recently prepared for exhibition a number of typical deep-sea fishes arranged in the form of a group. The preparation of this exhibit involved many technical difficulties, such as the preparation of the fishes in transparent or translucent media, to represent them as glimmering in half-light, or with "portholes." Considerable experimenting was necessary to accomplish this group, but all the difficulties were overcome, thanks to the ingenuity and perseverance of Mr. F. P. Bickelhaupt, the museum's taxidermist staff. The group, as it now stands, contains about twenty types of deep-sea fishes. It is not, of course, a group in the sense of the habitat groups displayed in the museum; it is not a section, so to speak, taken from nature and transplanted to the museum. In nature so many deep-sea fishes are not to be found in so small a space. What the group represents is a number of fishes which are in nature scattered over a vast area and through a great height of water, here brought together for museum purposes into a few square feet of space. Each fish is reproduced accurately with its phosphorescent pores and tentacles as these are known to exist. Why one or two exceptions are enlarged several times, as the fishes themselves are very small. It has been known that the phosphorescent organs do not glow with a steady light, the illumination of the group has been arranged so as to have these luminous organs flash intermittently. Furthermore, the illumination is arranged so that one may view the fishes for a few seconds in full light, as if in a moonlit exhibit, and then see them, when the light goes out, as they are supposed to appear in the darkness of the profound depths. It is only by their own phosphorescent organs.

Near the top of the group is seen a fish which lives on the border line between the region of dimness and total darkness. Many of the fishes living in this region are not of a uniform sombre hue but are brilliantly colored. Nemecopsis is one of these. The body is "one dazzling sheen of purple and silver, set off by lustrous red, which is a sparkling constellation of luminous organs" (Alcock).

The shining fish in the center is Barathronus diaphanus, a small fish known from a single specimen, which was dredged in the Indian ocean at a depth of a little over four-fifths of a mile. The model of it is one and one-half times the natural size. The phosphorescent fish with the curious long tail (at the right) is Gigantura chuni. It also is known by only a single specimen. This was brought on from a depth of four-fifths of a mile in the Gulf of Guinea, on the west coast of Africa. The model is twice the natural size.

The jaws of dark fishes with enormous gaping mouths (near the top, at the right) are Gastrostomus bairdii. This species is common than some of the others, a number of specimens being in several museums. The models of it in the group are copied life-size from a specimen in the museum. The species occurs in the Atlantic ocean, one specimen having been taken off the ocean "from Providence have been dredged from a depth of nearly three miles.

Near the bottom of the group at the left-hand side is seen an eel-like fish with a line of light dots. This is an enlarged model of Sirichthys thalassa paradoxus, a small silvery fish which distributed in all the seas where deep-sea fishes are known. The generic name it bears was given it in allusion to the fact that the dots are provided on long slender tentacles. The species ranges from a depth of a little less than a mile to two and one-half miles. Another form with tentacles is Gigantactis vanhoeffeni, a species typical of many deep-sea fishes which have a tentacle, terminating in a luminous organ, attached to the head. This tentacle serves as a lure for attracting prey. The present species is known by only two specimens which were found in the Indian ocean at a mile and a mile and a half from the surface. The creature is a very small fish, the model being enlarged six times.

HIS STATUE.

"As a motorist, is John is the running?"

"Is he? He ran up a bill for repairs, ran down the mechanic, ran away from a running concerto of the crowd and was run in by a policeman."

NATURALLY.

"The new idea of fresh air games is working well in the street cars."

"Yes, indeed. The inmates are just crazy about it."

JUST IT.

"That motorist was developing railroad speed when the cop got him."

"I see. A case of arrested development."

TOCK GULDFISH TO CIRCUS

Woman Had No One to Leave Them With, So She Took Them Along.

I went over to Ionia to do some shopping," explained our old friend, "and I've been laughing ever since.

There was an awful crowd on the streets, and it wasn't Saturday, so I didn't know what was the matter. But a cop on a horse told me that the circus was in town. To think I'd forgotten that—and stand the chance that it was too late to think about circuses, so I finished my shopping and got home as speedy and then went to the station to get the 5:10 for home.

There was quite a crowd in the depot—people going home from the circus, mostly. I noticed one woman all dressed in her best and carefully holding a covered tin pail on her lap. Every now and then she would take the cover off look in, and then put the cover on again. Then another woman came in and spoke to the woman with the pail.

"Well, did you have a good time?" she said. And what have you got in your home—something good to eat?

"No; settled the other. I'll bet you can't guess what I've got in this pail, so I'll show you." And she removed the cover.

"Goldfish!" exclaimed the woman, taking a look "Did you buy them, honey? I thought you had some at home.

"These are the ones I had at home. You see I wanted to go to the circus, and there was nobody at home to leave them with, so I brought them along.

"I went outside to hunt, and I laughed and laughed to think of a woman dare ship bring the cow, too!"—Cleveland Plain Dealer.

Christian Epic in Stone.

Just back of the line of stalls in Alsace, within the zone where the Germans destroyed the cathedral, another of the marvelous most worth the wonder of civilization stands unscathed to the varying chances of battle. This is the beautiful cathedral of Strasburg, an architectural glory which makes mock of modern satisfaction at the expense of earlier centuries. The enormous old minster, fashioned whether by the devil in fell, one of the choicest Gothic visions ever dreamed b, a master mason, a man who knew how to make of stone a passion and religion, and thus a means for preference and daily bread. Strasburg cathedral is a Christian epic in stone. Exquisite in proportion and detail, it rises, a great pile, out of the surrounding city. The spire of the minster is a masterpiece, excelled by no other steeple and equaled by but few. After finishing the one spire, builders never attempted to construct the proper companion to it. Strasburg cathedral is most lovely of Gothic cathedrals in that it possesses a greater harmony in proportion of height. The building was begun in 1176.

If Death Ends All.

And suppose after all that death does end all. Next to eternal joy, next to heaven, next to eternal love and who have loved us—next to these it is the greatest thing in the long drapery of eternal peace. Next to eternal life is eternal sleep. Upon the shadowy shores of death there are no troubles cases no wave. Eyes that have been worn, but would not overflowing dark will never know again the burning touch of tears. Hearts that have broken will never speak again the broken words of grief. Lips that have kissed to be silent. The dead do not weep. Within the tomb there is no sorrow, no suffering. And in the rayless gloom is crouched no shuddering fear.—Robert Ingersoll.

German Ingenuity.

The German engineering corps has been successful in many instances in their efforts to build bridges when faced by a strong fire of small guns in war it was found that bridge building was a slow and difficult under cover of darkness, because the builders were obliged to use many remote parts of the ocean "from Providence have been dredged from a depth of nearly three miles.

Near the bottom of the group at the left-hand side is seen an eel-like fish with a line of light dots. This is an enlarged model of Sirichthys thalassa paradoxus, a small silvery fish which distributed in all the seas where deep-sea fishes are known. NO MORE GRAY HAIRS

Restore Youthful Color. No One Will Know You're Using Anything.

Physicians and scientists have proved that lecithin and iron, But why use them when you can buy Hair's Mix Health? Enough accompanying Hair's Mix Health will be sent free to any reader of this paper who forwards name and address. Something marvelous; no possibility to results that drugging and dyeing cannot equal. Hair's Mix Health is a fine dressing. Some druggists sell it, or you can get it from the Hair's Mix Health Co., Dept. 1, Detroit, Mich. Hair's Mix Health Soap stores or barbers are recommended for dandruff and scalp troubles. Hair's Mix Health Soap is a fine shaving soap.

Sad Omission.

Dorothy was so homesick at her first party that the hostess mother suggested that it would be better for her to go home. Dorothy gladly accepted the idea, but a few minutes later, answering a timid knock at the door, the hostess' mother found Dorothy bathed in tears.

"Well, Dorothy, I'm glad to see you again. Did you decide to come back?"

"No, no-o, I f-f-forgot to say I had such a nice time!"—Christian Register.

CURED OF BRIGHT'S DISEASE.

Mrs. A. L. Crawford, Medfield, Mass., writes: "Doan's Kidney Pills cured me of Bright's Disease, and I am healthy and strong today and have been blessed with good health ever since my cure. When the doctors pronounced my case Bright's Disease I was in such a serious condition that they could not do anything for me. I kept getting worse, my ankles to my knees swelled and my eyes puffed so I could hardly see. As a last hope I thought I would give Doan's Kidney Pills a trial. I gradually improved and kept on taking them and they cured me completely."

Doan's Kidney Pills, 50c per box at your dealer or Doan's Medicine Co., Buffalo, N. Y. Doan's Dyspepsia Tablets for indigestion have been proved. 50c per box.—Adv.

Good News for Hungry Man.

They had been settled in their spick and span new home just one week, and on the Saturday Reginald rushed home eagerly from his office.

Emmeline met him on the doorstep, her face wreathed in smiles.

"Oh, darling," she gurgled, "wifey has made you something awfully nice and special for your dinner today! Guess!"

Reginald, who liked good things to eat, reeled off a list of about fifty of his favorite dishes. Then he paused in dismay. His precious Ermie was weeping.

"What's the matter?" he gulped.

"O-o-oh!" she sobbed, as she threw herself on his neck. "My h-h-heart is broken. I—I thought you'd guess straight off that I'd m-m-made some b-b-butterscotch!"

Something to Hold Him To.

Always be the same as you are now, he whispered to her tenderly, and it is all I ask, my dearest one.

"And if I am you will always love me?" she said quietly.

"Yes," he answered, "always."

She looked beyond him—into space. Only she knew that ere long she would be quite different, but she was praying aloud!

Then she smiled into his face. "And the more you see of me the greater will be your love, will it, not?" she asked.

"Yes," he answered, "I swear it!" And thus she was comforted.

Proud Cow.

Flatbush—What's the cow slashing her tail about so, do you know? Bedbrook—Not; we don't have any cows in our flat.

WAS MISERABLE COULDN'T STAND

Testifies She Was Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Lackawanna, N. Y.—"After my first child was born I felt very miserable and could not stand on my feet. My sister-in-law advised me to try Lydia E. Pinkham's Vegetable Compound and my nerves became firm, appetite good, step elastic, and I look that 'tired feeling' That was six years ago and I have had three fine healthy children since. For female troubles I always take Lydia E. Pinkham's Vegetable Compound and it works like a charm. I do all my own work."—Mrs. A. F. KREAMER, 1574 Electric Avenue, Lackawanna, N. Y.

The success of Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, is unparalleled. It may be used with perfect confidence by women who suffer from displacements, inflammation, ulceration, tumors, irregularities, periodic pains, backache, bearing-down feeling, flatulency, indigestion, dizziness, or nervous prostration. Lydia E. Pinkham's Vegetable Compound is the standard remedy for female ills.

Women who suffer from those distressing ills peculiar to their sex should be convinced of the ability of Lydia E. Pinkham's Vegetable Compound to restore their health by the many genuine and truthful testimonials we are constantly publishing in the newspapers.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

Warner's Safe Diabetes Remedy

In diabetes the nutrition is impaired and the health is in a state of wage! In the blood, and the failure of the kidneys to remove it, hence a gradual wasting away while eating well.

Symptoms of this disease are increased thirst, excess of urine, emaciation and dry skin, often with sweetish odor.

I had diabetes and was given up by all doctors of my town. I took Warner's Safe Diabetes Remedy and am now perfectly well."—Rev. Alvin H. Morton, Sand Hill, Ga.

Sold by all druggists, or sent postpaid on receipt of price, $1.25. Write for sample and information.

WARNER'S SAFE REMEDIES CO. Rochester, N. Y.

How the Fight Started.

A man went into a local hardware store Saturday and said, "I want to buy a saw," relates the Colorado County Liner. The merchant showed him one and he said, "How much is it?" The merchant replied, "$1.60." The customer said, "I can buy the same saw from Hoosmobody & Co. for $1.35." Mr. Hardware Man said, "I will sell you that saw at Hoosmobody's terms." The customer gave the merchant $1.35. "Now," the hardware man replied, "give me twenty five cents for express charges, five cents for money order and two cents for a stamp." The customer forked over the money. Mr. Merchant hung the saw back on the hook and said, "Now you can buy it." Exit Mr. Customer.—Kansas City Star.

Mobilized.

"Are you not afraid that moths will get in the house now that your woolens are away?"

"Oh, I suppose they will, but I'll give 'em a warm reception. I've got four quarts of moth balls piled on the dining room table, and if a moth shows up in my house I'll mail it to Sousa's bandsmen and keep it up all the evening, but I'll force the moth to surrender."

Fiction.

"What kind of fiction does Fleecer write?"

"Mainly promissory notes and I. O. U's."

An ugly baby is something no mother ever possesses.

Strength for Thinkers and Doers

Good appetite, a well-balanced stomach, reserve energy, and a keen zest for work and sport are among the results of the regular use of

Grape-Nuts

and Cream.

This nutritious ration contains the full food value of the whole wheat and malted barley, of which it is made—including the mineral salts of the grains—potash, iron, lime, etc., so lacking in white bread and many common foods, but which are essential to thorough nourishment of body, brain and nerves.

Grape-Nuts is partly pre-digested—a food for weak and strong, old and young. It is not only a strength builder but a delicious, satisfying dish which appeals to appetite.

Regular users know

"There's a Reason" for Grape-Nuts

Sold by Grocers everywhere.

SMILE ALWAYS HAS A VALUE

May Be a Lesson in This for Those Who Think Life Is Hard for Them.

Apparently it had been a bad day for the big, pompous business man; had he been built in wheat just before the two million bushels contract with the miller was executed, for he slammed his office door shut with a bang and mumbled something profane concerning the breaks in the market as he shambled out into the street.

He might have known that one of us would have to turn out, but he expected me to do it, and I wasn't in a pleasant frame of mind myself, what with a trying headache all afternoon and a fuss with the boss. So I didn't get out of my way, and he bumped against me, and we both went down, regardless of other, so we just naturally came to a gather, while the big business man picked himself up from the pavement and must exude large quantities of slime." Then one deep-sea expeditions, on favorable occasions, as for instance, a dark calm night, fishes that have been brought to the surface and placed in water were seen to flash light from the ends of the tentacles or the photophoresent pores precisely as we should have expected from a study of these organs. Major Alcock, in his interesting volume, "A Naturalist in Indian Seas," mentions a specimen brought up from a profound depth which "glimmered like a ghost as it lay dead at the bottom of the pail of turtle soup." So that by inference, as well as by actual observation, we must believe that what we call luminous organs in deep-sea fishes, emit light into the darkness about them. In the case of fishes totally blind, the absence of light is compensated for by the development of enormous antennæ-like feelers, modified from fin rays, so that these fishes can feel their way, as it were, through the darkness.

The absence of light, however, entails another important consequence. As is well known, no plant life can exist in darkness. There is therefore no vegetation of any kind in the profound depths of the sea. The deeper fishes are, in consequence, all carnivorous, the more powerful ones seizing and devouring the weaker ones. It is a world of ceaseless struggle and ceaseless suspense. Many have enormous mouths, and formidable teeth to insure holding the prey. "Solomon's Judgment"

By ETTA BARRY BIGGS

Copyright, by W. G. Chapman.

Dr. Alvin Ross passed down the street groomed by pleasant words and fame, love-lor all humanity in his heart. Dr. Juneau Lysle on the other side of the thoroughfare, head down, a scowl on his handsome face, curtly nodded when addressed, hatred and suspicion in his heart.

"Don't speak oh?" remarked an observant stereotype to a passer-by. "Thought they were like brothers when they first came here."

"Business rivalry, I suppose," was the careless response. "You see, when they came here they sort of divided the town; Lysle took the west end, among the fashionables. Ross chose the larger and poorer section. I suppose a sort of professional jealousy has resulted. Anyhow, they're at dagger's points."

The speaker had the situation very per cent wrong. The two young physicians had been close chums at college. They had decided to locate in the same town when their future field of operations. Everything had been harmonious. It was by preference that Doctor Ross selected a desk where the poor and lowly lived. The another reason he had little capital, while Lysle did have some. It would cost money to build up a fashionable clientele and Lysle was best equipped to provide it.

Now it chanced that within a week after coming to the village Lysle met Vashti Arnold. She was a member of an exclusive family residing in a show country place a few miles from town. He was very much in love with her and Vashti seemed impressed. Twice Ross accompanied him in his calls. Then one evening the servant announced to Lysle that he called that Miss Merriam was indisposed. The next day he heard that she had went for Ross to attend her. This the suspicious nature accepted as a direct slap in the face. Ross had no right to invade his professional territory, he hotly reasoned.

To make it worse, he was further advised later in the week that all though Miss Merriam was entirely convalescent, Ross was a constant visitor at her home. This infuriated him.

"The mean, disloyal sneak!" fumed Lysle. "He has gone back on my friendship. Thought they were like brothers when they first came here."

"Jealous rivalry, I suppose," was the careless response. "You see, when they came here they sort of divided the town; Lysle took the west end, among the fashionables. Ross chose the larger and poorer section. I suppose a sort of professional jealousy has resulted. Anyhow, they're at daggers' points."

The speaker had the situation very per cent wrong. The two young physicians had been close chums at college. They had decided to locate in the same town when their future field of operations. SYNOPSIS.

—5—

Hall Bonistelle, artist-photographer, prepares for the day's work. He reminds himself of a party he is expected to attend that night. Mr. Burnside, editor-in-chief of the Dollars Daily, calls upon him and his left eye blackens and closes. Hall's friend, Miss Flodie Flower, visits him and Mrs. Rosa Riparian calls at the studio. Hall asks Flodie to marry him and she promises to give him an answer at the party. Rosamund Gaylord visits Hall's studio and he tells her he has a date with Flodie and she offers to wait until the evening. Flodie arrives and Hall proposes to her in spite of the makeup but he is obtuse. Jonas Hartshorn, Flodie's father, calls and Hall tells him that Flodie's reply is "Yes." Hall is to call on Flodie before midnight. Flodie arranges to have the three men meeting again tonight. Hall's friend, Jack Dalton, visits his cousin, Sally Wheatly. Hall arrives at the party and Flodie introduces him to her father. Hall is thunderstruck when Flodie tells him that he is her fiance. Hall faces the three-horned dilemma by startling him.

CHAPTER X—Continued.

He went up to her, but she darted away like a cat. "Oh, no! Mr. Hall-Bonistelle! Don't!" she protested.

He stopped in amazement. "Why not? What's the matter?"

"Oh, you've proposed to three women today!" she lamented plaintively, she sat down and looked at him with a beggard face.

"Well, what if I did? They didn't accept me, did they? Haven't I a right to ask somebody else, under the circumstances—with so much at stake? Why, they may all refuse me, even now; I'm not at all certain! I can't risk a fortune on their whims! Nothing but cold and blowing cold! D'you think I intend to stand for this I-will-and-I-won't business? Not much! I'm glad they did put me off, now. It's the luckiest thing in the world. It gives me a good excuse to take you. Why, I was so rattled, Flodie, it never occurred to me I could marry you."

Flodie rose; her hazel eyes snapped. "Oh, didn't it? Well, then, Mr. Bonistelle, evidently there are several other things that didn't occur to you! Do you think you can treat me this way and expect me to stand for it?"

"What way? Lord, haven't I asked you to marry me, Flo?" He stared at her in surprise.

"No, you haven't asked me! No, you've insulted me! All you've done is to announce coolly that you have decided to marry me!" Flodie, aroused, fairly stormed now.

"Oh, you don't! Well, I'm sure under stood, Flo. Of course I'll ask you. If you want the conventional, orthodox proposal!" He smiled patronizingly at her whim, as at a pouting child, the dropped gracefully upon one knee. "Will you marry me, Flodie?"

"Have some one else in Flodie's video. "No!" she cried harshly. "Get up, Mr. Bonistelle! You actually do make a mistake. You've forgotten who I am, haven't you? Why, I'm only the girl who's been your friend! I'm just a 'queer little tyke,' who 'is always happy!' Ha! Ha! Ha! Why don't you laugh? I thought I always made you smile? Just a little good joke, that's all I am! Didn't you say so yourself?"

"But, Flodie!" Hall approached her placatingly, amazed at her outburst.

She pushed him away. "No, sir! Not much! I'm not so anxious to be a lady of leisure as all that, Mr. Bonistelle! What I'm after is a man with the love left out! No, sir! I would say not!"

"But, Flodie!" Hall could scarcely believe his ears. "Why, what's all this got into you? Why, hang it all, I had no idea you felt like that!" He stared at her.

She made a queer, whimsical face—at herself or Hall, who knew?—and went on.

"No, I'm only little Flodie, the Egg Hotter! And you're so used to me that when you do want to get married I'm present to you, too, three weeks before you give me a thought. I only come in as a last resort—Flodie, the Forlorn Hope! Mr. Bonistelle, do you think I'm the sort of girl to marry like that?"

Flodie, transformed by this long, pentup rage, was a new and startled creature; her eyes shot sparks, the color flared upon her cheeks.

Hall, dumfounded, stared at her, speechless. If a baby had suddenly attacked him with claws it could not have more amazed. He didn't know her in this aspect; she took his breath away like a strong wind. His impulse was to defend himself, but he was overcome by her emotion. He struck out any way—blinding, like a swimmer in rapids, he tried to placate her. "But, Flodie—dear! I know—but I want you!"

"Oh yes, I know you want me—and why? So that you can win four million dollars. That's all you want. You'll have to get married, so you'd better take me! I suppose I'm good enough. Oh, it's as simple as daylight, is it? Well, I'm not so simple, so I look When I marry a man, Hall Bonistelle, it'll be because he loves me, remember that, and not just to help make fortune!"

Hall watched her, fascinated, as she stroke up and down, her eyes flashing, her body lithe and eager, accenting her anger with free, unconscious gestures. "By Jove!" he exclaimed, "I wouldn't know you! Why, I never saw you like this before! What's happened to you? I didn't know it was in you!"

She turned scornfully. "Oh, I've got a lot in me that you've never seen, Hall Bonistelle. I've got a little pride, for one thing.

"I'd hate her hard: in spite of herself, she let it ring in its white-hot, naked soothlight. "And haven't you a little love, too, Flodie?"

She snatched her hand away. "Love! What do you know about love! she exclaimed scornfully, and walked from him. "Why, your father knows more about real love than you do—thousand times!"

Still he stood and looked at her as at a marvel. "Flodie Flower," he declared, "you may believe it or not, but I'm in love with you. I never I am! Why, you're magnificent! By Jove, I never saw such spirit! Why in the world haven't you ever shown me this were before? I'd have proposed to you six months ago!"

"Well, you're too late, now!" She was trembling. Suddenly her strength left her. She sank into a chair.

He went up to her appealingly. "See here, Flo, I do want you, don't you understand that little girl? And I'm going to have you, too, no matter what happens! D—n that money, anyway! I wish it never had been left me! See here, Flo, let's begin all over again! come on out right now and marry me, will you—will you?"

"No!" she sobbed.

Now there are two "noes" a woman can say. One comes through clenched teeth; it has a rising inflection; the other is an outand out bark and has the downward thing. Few men know what different things they mean. Hall stood silent for a moment, watching her. Then his tone changed. "Well, I don't know that I blame you," he said finally. "I've been all kinds of a cad today, but I guess this is the limit. Of course I've been blind. You're right I've been so close to you I haven't really seen you. And now that I do—it's too late. Say, Flodie, did you mean that? Is it really too late? Won't you let me prove that I am in earnest at last?

"Oh, how can I believe you? You're early, aged nearly an hour recognizing his decorative schemes, patting a-of pulling it into something more careless, and more accessible to her own sense of beauty.

For the occasion Mr. Smallish had also decorated himself. In his hired evening suit he looked, if possible, a bit more pathetic than usual.

Flodie had arrayed herself for the evening with simplicity and artful grace. She wore white mulle, which, happily escaping the schoolgirl touch, darinaly showed her neck to admirable advantage. Flodie's hair disclosed, perhaps, more of her attractive care. She had caught that charm of careless in curlsnce for which clever women strive. Hall Bonistelle's first glance told her that she had succeeded. She answered his exclamatory compliments with a shrug.

"You wait!" he announced, shaking his finger at her. "Just as soon as I have it out with those three women I'm coming after you! Remember that! I've got to get rid of them somehow. Lord knows how, but I'll do it! And then, Flodie Flower, it'll be your turn! Mark my words! I intend to marry you up before midnight!"

"You won't!" she exclaimed and slammed the door in his face. When she came out, a few minutes later, she found him in the studio, frowning.

"Confound it!" he said. "I'm all up a tree without my watch! I've got to keep track of the time tonight, though, it's important. I want to know how long I've got."

"There's the clock," said Flodie, "can't you look at that occasionally?"

"I wonder how near right it is?" he asked. "It's been losing time lately, hasn't it?"

"Shall I ring up Central and ask?"

"Will you, please? Thanks!" Hall walked to the tall grandfather's clock in the corner and opened the door. While Flodie went into the office.

After a moment, she called out, "Ten twenty-two, Mr. Bonistelle!"

"Lord, it is awfully slow, isn't it? All right!" Hall put the minute hand

Brilliant Conception for Winter Wear

Whether they came from the brain of some brilliant American or from some old-world one of those noted guilds of a French creator, the coat and dress and hat which here make up an exquisite costume proclaim the high art. From the crown of the head to the tips of her toes the model pictured is correctly answered in the choicest offerings of the season.

The dress is made of a soft satin gathered into bands of a simple plush at the bottom, and an overskirt of the plush which falls in folds from the waist down. As in nearly all dresses of pile fabrics the bodice shows a combination of chiffon and satin with heavier fabric.

The coat is the shortest of the three fashionable lengths from which one may choose. It is designed with a jacket which falls to the lower edge of the belt. The belt is noticeably narrow and inconspicuous.

The sleeves are full and gathered in to a soft cuff. A very clever and original touch appears in the collar. They are mere bands of the plush, edged with satin-covered cord and attended into a pointed end. This end is slipped through a narrow band of the plush which forms a side like the end of a bow of ribbon.

The neck is finished with one of the many new high collars, but it is not close-fitting. It is finished with a tie of the satin-covered cord. Pearl buttons having a dark rim are used for fastening the coat from neck to waist line. The skirt portion is straight and gathered into the belt at the sides and back.

The last word in shopping bags and walking boots finish the debuts of a chic and entirely correct ensemble.

All neck-wear apparently closes in front. The net chemisettes, however, frequently close in the back.

"No, You Haven't Asked Me!"

The Arrows Flew Very Near Them.

Two Little Demi-Season Coats

Designed for wear during the autumn months, in the milder climates, these two little coats will serve throughout the winter in the warmer parts of the country. They are made of faille silk, poplin, or similar silks woven with a heavy rep, but may be developed in any of the soft firmly woven satins or in plain supple woolen goods.

The coat of rose-colored faille at the left is made with a long bodice with a short pointed skirt set on it. There is a wide belt of velvet, with a square hanging tab at the front, which hooks at one side. The plaits in the skirt portion are omitted at the front, leaving a plain panel which falls over the side.

The sleeves are full and plain, finished with a turned-back cuff made of the same material as the coat. The collar is finished without a collar of the material, but a pretty collar of cream-colored cherry lace adorns. Flat buttons in a lighter shade of rose have the most popular for fastening down the front.

The odd and smart little garment at the left appears to be a combination of both dress and coat. A box-pleated skirt portion is set on to a long waist. A plain skirt is set on over the plaits at the sides and back and is cut in one piece with the short belt across the front. This portion is lined with a light tan silk and finished around the edges with a piping.

The coat fastens at the left side with hooks and eyes and is finished with suitable braid put on in a Vandyke pattern. The sleeves are plain and moderately full, with close-fitting cuffs overlaid with a heavy lace. A collar to match finishes the neck.

The materials in linens are shown with the coats. That at the left is of soft cream-colored silk gathered in about the neck with several rows of shirred tucks. It is gathered in to the shape of the crown by circular rows of the shirred tucks at the back.

The linen suit, dyed of a delicate tint, is made with a plain bodice and pulled crown of velvet, and prettily trimmed with buttons. Buttons fasten with chic straps.

JULIA BOTTOMLEY.

THE SANDMAN IN STORY

By MAX F. A. WALKER

ILLUSTRATED BY PHILLIPS

THE BROKEN ARROW.

John and Frank lived in a cabin on the prairie. This was many years ago, when the Indians were not so friendly with the white man as they are now, for they thought he had taken their hunting grounds from them and killed them without a home, and every white man they saw they shot at with their bows and arrows, or, if they found his home, they would burn it and kill all the people.

John and Frank drove many miles with their father and mother in a big wagon called a prairie schooner and drawn by two horses. It had a covering of sailcloth that kept out the rain, and all their cooking utensils and bedding, as well as other things, were carried in there. It took many days to reach the place where their father had intended to locate and some nights they made their beds on the ground and other times in the wagon, but they enjoyed it, and, best of all, the cooking was done over a fire built upon the ground.

After they reached the place it was a long time before they had a house or cabin, and they had only two rooms when it was finished. There a place was built for the horses, and the boys were told they could ride old Hannibal, who was a big, clumsy old horse, but very gentle. They used to climb up the fence and then jump on, and would grass him by the mane and the horse would put his arms around his brother, and away they would go over the prairie. Sometimes Hannibal would bother them, so their father and mother felt it was safe for them to ride alone.

One day, after they had been there about a year, their father had to go to the nearest settlement, many miles away, and could not return before the next day, but their mother did not feel afraid to remain there so long without seeing the Indians. The boys cried to go with their father and then turned back, but the days were so long that they could always have fun. Old Hannibal trotted along, enjoying it as much as the boys did, when they would make a queer whinnying noise, and the boys saw that he understood.

They did not know that horses could scent Indians, but they felt that something was wrong, and Hannibal jogged toward home, the boys clinging on as well as they could, when "Whiz! whiz!" something flew past them. Frank, who was behind, turned and saw a short distance from them three or four Indians. He did not tell John, but told him to hurry home, and Hannibal jogged faster.

"Whiz! whiz!" came again and this time the arrows flew very near them.

"Are the Indians after us?" asked John.

"Yes," said Frank; "hang on and we may get home safe." but John said they were beating fast.

The men had been watching the boys through a eyeglass and saw how the way old Hannibal acted that something was the matter. They saw the Indians. She went in and barred the door and waited for the boys, for she knew the boys would not have a chance of escape if they reached home at the house and her only hope was that he would gallop on to the town, where there would be men who would not think the boys would be alive if they should be prayed.

Meanwhile the boys were near the barn, and "whiz!" again came the arrows. This time they felt a sharp pain, and just then old Hannibal ran into the barn.

The Indians came up behind them, looked around the barn and in the stable, looked in the window and for some unknown reason did not break through. The men may have thought the place deserted, as there was no sign of life, but where were the boys, and why did the Indians give up looking for them?

The mother saw from her hiding place that the Indians were going and heard no sound mixed with them. But where were the boys? She did not dare think about that. She listened to them. After a long time she unbarred the door and went into the yard, and there she saw old Hannibal. They she listened. Did she hear something? No, no! Yes, it came from under the floor. Again and again this time she heard very plainly "Hush! hush! we are under the floor!"

And there they were. As old Hannibal had trotted into the barn the boys fell from his back and rolled into a hole in the floor, and finding the horse dressing under the stable, they had in some miraculous way escaped the eyes of the Indians.

The mother took a ladder and soon rescued them but they were pinned together by an arrow through the flesh on their calm shoulders. The people who lived on the prairie in those days knew how to do all sorts of things, and the mother bandaged them up in row and dressed the wounds. Then she knelt and thanked the One who had watched over and saved them.

This happened many many years ago. John and Frank still have the broken arrow, which they show to their grandchildren, who think it the best of fun to hear the story of the broken arrow and the Indians.

JUDGE WHO WAS ONCE A BOY

Many a Lad Has Owed His Start in Life to Kindly Encouragement of Inquisitive Tendency.

An eleven-year-old reporter interviewed Judge Hosack of the municipal court on the subject of boys and their parents. The answers set down by the aspiring journalist prove that the judge has not forgotten his own boyhood. Many a lad has owed his start in life to kindly encouragement of the inquisitive tendency. It is easy enough to snub a youthful questioner or put him off with curt, unsatisfactory answers. Yet it has been said that the beginning of reforms is to ask questions and the start can hardly be made too soon.

The boy is to be pitied without a live, quick mental reaction to the stimulus he receives from all manner of natural phenomena. It is a good sign when the child wants to know and is not satisfied with mechanical, dreary and listless routine. Most of us trudge on to the end of our lives the society of some wights not too busy to reply. Life is a standing interrogation. The man who writes with force and feeling needs to ask intelligent questions of the whole visible universe, and to explore the secret places of his own spirit. He needs not to discourage the same tendency in others, no matter how young they are.—Philadelphia Public Ledger.

BROTHERS JOIN A PIG CLUB

Three Sons of a Georgia Dairyman Win Considerable Money With Hogs While Attending School.

MICHIGAN is prominently a horticultural state. Its many regions of soil adapted to fruit-plant production and the proximity to markets in the populous cities of Michigan, offer unsurpassed opportunities for men with a limited capital to rent or secure a share farm for a series of years and by applying the modern scientific care and attention, a profit may be realized in a year or two when it would require 10, 15 or 20 years to achieve if one had to plant out the trees and wait for them to bear. Frequently this business of renting orchards is carried on with young orchards are being established. In Bulletin 237 of the Michigan experiment station may be found the facts and figures on the results that have actually been secured in this work of experimenting or improving old orchards.

Peaches.

Peach growing has, for a great many years, been a very important fruit industry, especially in the western part of the state adjacent to Lake Michigan. The business now requires much care and skill, because of the "Bonanza" days, but with intelligent work and good judgment a peach orchard is an important factor in farm property. In Special Bulletin 63 of the Michigan experiment station is to be found the story of the life history and profit of a young peach orchard that anyone who contemplates setting orchards should peruse, with great care. The details as to starting the orchard and selecting a site are fully given in this bulletin.

Cherries.

Cherry raising is becoming a very large and important fruit industry in certain parts of the state, notably in the Grand Traverse region. Very large orchards are found in that region as well as for some distance south even as far as Ionia county. Very large orchards of both sweet and sour cherries are flourishing, also in certain parts of the upper peninsula, large orchards have recently been put out. More of the variation of sour cherries than sweet cherries have been observed and also demand for sour cherries from canning factories indicate that they can use a great many more of the latter. The sweet cherries demand extra care and skill and the best shipping facilities to handle them properly and their culture should not be attempted by anyone until they have had some experience in fruit growing.

Pears and Plums.

Pears and plums are grown successfully in all the important fruit regions of the state. Some very old pear trees are located in the eastern part of the state. The culture of the pear demands a fairly strong, heavy soil, whereas peaches and sour cherries will flourish on the lighter soils and plum and prune culture should be confined to regions where these crops may be transported very quickly after picking.

Small Fruits.

The profits from small fruits are fully equal to those from tree fruits, but as with all fruits, general care and culture is the most important feature that determines the profits of all small fruits and as "setting in, undoubtedly lent in importance. The small fruit culture of Michigan has developed so rapidly in the last few years that the last United States census shows Michigan as ranking third with all other states in the matter of small fruit acreage, and second in value of small fruit products.

Strawberries.

The strawberry is the most important of the small fruits and by many considered the choicest of all small fruits. The strawberry can be grown upon almost any soil that is suitable for corn and potatoes after proper preparation.

Gooseberries.

The second earliest fruit ready for market is the gooseberry. Its market, however, is less than that of the strawberry but it is not nearly as perishable and can be picked and used at various stages of maturity. More of this fruit is being commercialized and grown every year. The profits are good—sometimes being as high as two hundred dollars per acre.

Currants.

Like the gooseberry, the currant does not require the care that the strawberry does and finds quick and ready market.

Red Raspberries.

Raspberries are in greater measure of profit to the small fruit grower—they demand is always strong for good fruit used in the fresh state or for canning and preserving.

Other varieties of small fruit that can be raised in Michigan at a profit are the black raspberries, purple raspberries and the blackberry, which is usually grown in the southern counties.

Grapes.

Grapes are prominently a horticultural state. Its many regions of soil adapted to fruit-plant production and the proximity to markets in the populous cities of Michigan, offer unsurpassed opportunities for men with a limited capital to rent or secure a share farm for a series of years and by applying the modern scientific care and attention, a profit may be realized in a year or two when it would require 10, 15 or 20 years to achieve if one had to plant out the trees and wait for them to bear. Frequently this business of renting orchards is carried on with young orchards are being established. In Bulletin 237 of the Michigan experiment station may be found the facts and figures on the results that have actually been secured in this work of experimenting or improving old orchards.

Peaches.

Peaches placed too high are likely to cause bruise foot, and they are also likely to decrease the internal ripeness—a very serious ailment in laying hens. The foul roosting in a hen house is a better choice than placing in safety to the earth than has been the case in the past. Should be on a poultry house. The former has space in which to perform the natural descent, while the latter is forced to descend in a more perpendicular manner.

Let the perches be placed as recommended above, and have them all on one level, for when they are placed at varying heights the birds make the fall, in such cases allow the cows to have access to the grounds from the same as they are given access to salt. By this method I have stopped the trouble of the hens being scared when I was feeding them.

Perches for Shipping Eggs.

Always ship eggs in baskets or cartons made for the purpose, and never in dirty old crates, packed to sawdust or bran.

RIGHT HEIGHT FOR PERCHES

Eighteen Inches to Two Feet is About Right—Have Plenty of Space Between Them.

Perches should not be placed more than two feet from the floor of the roosting house. Experiments with the breeds of fowls 18 inches will be quite high enough. They should be placed far enough apart to allow the birds to descend from them with ease.

CAUSE OF THUMPS IN PIGS

Common Cause is Too Much Fat and Too Little Exercise—Make Young Shoats Get Out and Hustle.

Any pigs dying of "thumps" That's because they are too fat and take too little exercise.

They are too fat because their dams gives them lots of rich milk. When they begin to get those rate rolls of fat over their shoulders, look out! Especially if they do not get much exercise. Give them a good chance to get out on the ground and hustle around. Cut down the sow's ration in time to prevent this by making her shrink in her milk.

Make the little fellows exercise by limiting them about the yards with a broom, or, least, them away from the sow and making them find their way back.

CAPONS ALWAYS IN DEMAND

Any Season is Appropriate Provided Fowls Are of Proper Age and Weight—Operation is Simple.

Caponizing is easily and quickly done and pays well for the trouble, if that not only the quality of the flesh is improved, but also that the fowls grow much larger. Cockerels are in ways in demand at high prices.

Caponizing is best done when the fowls are between two to four months old or when the cockerels weigh about a pound and a half. There is little profit and some danger in attempting to caponize birds six months old, while fowls smaller than two or three months have not developed sufficiently and at the same time are difficult to operate on. As to the season of the year, any season is appropriate provided the birds are of the right age and weight, but April to October is generally selected.

It takes all the way from five and a half to seven months for capons to reach perfection in flesh and size. Fowls weighing from nine to ten pounds generally command the best price.

A good poultry raiser can do his own caponizing. Caponizing sets of the proper instruments can be bought for from one dollar to three dollars. Full directions accompany each set. With a little practice the operation can be done easily and pays well.

Capons need plenty of green stuff, good grit, fresh water and charcoal. To fatten they should be fed twice a day. Cornmeal, oatmeal and graham flour mixed with sweet milk and skimmed milk is a good ration for producing flesh.

Fattes Turkeys for Christmas.

To fatten the turkeys for the Christmas market, feed whole corn at night and give them all they will eat of other fattening foods in the daytime with a plenty of clean water.

Pick Peaches When Mature.

Pick peaches when they are mature but not soft; handle them as if they were eggs, and haul them on wagons equipped with bolsterstraps.

LOOK TO WORKERS' SAFETY

Elaborate Precautions Taken to Prevent Accidents in Plants Where Gunpowder is Made.

Workers in gunpowder plants, when enter a storm come up adjourn to the watchhouse surrounded by the guard proper and enjoy themselves till the storm is over.

Lightning is not the thing danger dreaded in gunpowder plants. Metal is dreaded—its hard surface may cause explosions—and hence on the workmen's clothes the buttons must all be of bone.

The workmen's clothes must be pocketless, so that they may not carry matches or knives and a workman, no matter how dandified his tastes, must not wear turned up trousers, since in turn-ups grit is harbored, and grit in a gunpowder mill is as danger as matches are fire.

In all the buildings of these plants care is enforced on any sort of iron material is exposed. The floors, too, are made very slight, so that in the event of an explosion they will blow off easily. The doors all open outward to make escape easy, and the plant is usually surrounded with a stream of water, into which the hands are trained to dive at the first sign of danger.

Only Himself in Blame.

"I'm a self-made man, I want you to know." "Did ought you should have bollered for help."—Cincinnati Times-Star.

New Dress Inspirations.

The footprints of fashion have to remain three proof thoroughly in times for new inspirations, so we really should not be surprised at the results of their labors. They have gone back now so deep into the "olden" that one wonder whether they will ever get back again. One one copy of this expression is a usual adaptation of the old English round-crown coat, with its short circular shoulder cape and full skirt. These features appear on a dress of Lyons and black striped taffeta, which has the shoulder cape cloth plaited horizontally to the flat in front, but rolling from the collar in back. Thousands of years ago, Egyptian ladies had folds between the shoulders of a mathematic faille frock. They have even popped into the convent and fashioned a new girdle arrangement after the mina cord which drops with long ends from a single knot in the waist to the hem of the skirt in far fora. Where, oh! they go next? We must hold our breaths and wait.

HORTICULTURE IN MICHIGAN

By H. J. EUSTACE,

PROFESSOR of HORTICULTURE, M.A.C.

STRAWBERRIES THAT MADE RETURNS OF OVER $700 PER ACRE.

GOOSEBERRY PATCH.

CELERY.

THIS STRAWBERRY PATCH IS MAKING THE OWNER RICH.

A FIFTEEN-YEAR-OLD ORCHARD WORTH $500 AN ACRE.

Press "Michigan—the Land of Plenty" MICHIGAN is prominently a horticultural state. Its many regions of soil adapted to fruit-plant production and the proximity to markets in the populous cities of Michigan, offer unsurpassed opportunities for men with a limited capital to rent or secure a share farm for a series of years and by applying the modern scientific care and attention, a profit may be realized in a year or two when it would require 10, 15 or 20 years to achieve if one had to plant out the trees and wait for them to bear. Frequently this business of renting orchards is carried on with young orchards are being established. In Bulletin 237 of the Michigan experiment station may be found the facts and figures on the results that have actually been secured in this work of experimenting or improving old orchards.

Peaches.

Peach growing has, for a great many years, been a very important fruit industry, especially in the western part of the state adjacent to Lake Michigan. The business now requires much care and skill, because of the "Bonanza" days, but with intelligent work and good judgment a peach orchard is an important factor in farm property. In Special Bulletin 63 of the Michigan experiment station is to be found the story of the life history and profit of a young peach orchard that anyone who contemplates setting orchards should peruse, with great care. The details as to starting the orchard and selecting a site are fully given in this bulletin.

Cherries.

Cherry raising is becoming a very large and important fruit industry in certain parts of the state, notably in the Grand Traverse region. Very large orchards are found in that region as well as for some distance south even as far as Ionia county. Very large orchards of both sweet and sour cherries are flourishing, also in certain parts of the upper peninsula large orchards have recently been put out. More of the variation of sour cherries than sweet cherries have been observed and also demand for sour cherries from canning factories indicate that they can use a great many more of the latter. The sweet cherries demand extra care and skill and the best shipping facilities to handle them properly and their culture should not be attempted by anyone until they have had some experience in fruit growing.

Pears and Plums.

Pears and plums are grown successfully in all the important fruit regions of the state. Some very old pear trees are located in the eastern part of the state. The culture of the pear demands a fairly strong, heavy soil, whereas peaches and sour cherries will flourish on the lighter soils and plum and prune culture should be confined to regions where these crops may be transported very quickly after picking.

Small Fruits.

The profits from small fruits are fully equal to those from tree fruits, but as with all fruits, general care and culture is the most important feature that determines the profits of all small fruits and as "setting in, undoubtedly lent in importance. The small fruit culture of Michigan has developed so rapidly in the last few years that the last United States census shows Michigan as ranking third with all other states in the matter of small fruit acreage, and second in value of small fruit products.

Strawberries.

The strawberry is the most important of the small fruits and by many considered the choicest of all small fruits. The strawberry can be grown upon almost any soil that is suitable for corn and potatoes after proper preparation.

Gooseberries.

The second earliest fruit ready for market is the gooseberry. Its market, however, is less than that of the strawberry but it is not nearly as perishable and can be picked and used at various stages of maturity. More of this fruit is being commercialized and grown every year. The profits are good—sometimes being as high as two hundred dollars per acre.

Currants.

Like the gooseberry, the currant does not require the care that the strawberry does and finds quick and ready market.

Red Raspberries.

Raspberries are in greater measure of profit to the small fruit grower—the demand is always strong for good fruit used in the fresh state or for canning and preserving.

Other varieties of small fruit that can be raised in Michigan at a profit are the black raspberries, purple raspberries and the blackberry, which is usually grown in the southern counties.

Grapes.

Grapes are prominently a horticultural state. Its many regions of soil adapted to fruit-plant production and the proximity to markets in the populous cities of Michigan, offer unsurpassed opportunities for men with a limited capital to rent or secure a share farm for a series of years and by applying the modern scientific care and attention, a profit may be realized in a year or two when it would require 10, 15 or 20 years to achieve if one had to plant out the trees and wait for them to bear. Frequently this business of renting orchards is carried on with young orchards are being established. In Bulletin 237 of the Michigan experiment station may be found the facts and figures on the results that have actually been secured in this work of experimenting or improving old orchards.

Peaches.

Peaches placed too high are likely to cause bruise foot, and they are also likely to decrease the internal ripeness—a very serious ailment in laying hens. The foul roosting in a hen house is a better choice than placing in safety to the earth than has been the case in the past. Should be on a poultry house. The former has space in which to perform the natural descent, while the latter is forced to descend in a more perpendicular manner.

Let the perches be placed as recommended above, and have them all on one level, for when they are placed at varying heights the birds make the fall, in such cases allow the cows to have access to the grounds from the same as they are given access to salt. By this method I have stopped the trouble of the hens being scared when I was feeding them.

Perches for Shipping Eggs.

Always ship eggs in baskets or cartons made for the purpose, and never in dirty old crates, packed to sawdust or bran.

Cut down the sow's ration in time to prevent this by making her shrink in her milk.

Make the little fellows exercise by limiting them about the yards with a broom, or, least, them away from the sow and making them find their way back.

Hen Manure for Garden.

Giving ordinary barnyard manure a value of $[illegible] per ton, hen manure is worth approximately $7 per ton. It is an excellent manure for garden crops. If properly used. On account of its strength it is likely to burn the roots and stems of plants unless thoroughly mixed with the soil.

Birds and Fruit.

The complaints against the robin have been on his fondness for cherries, strawberries, blackberries, raspberries, pears, peaches, prunes, grapes and even olives in California. The bird's direct consumption of cultivated fruits seems more limited, being practically confined to cherries, strawberries and blackberries, and its fruit-eating period is very short, being only from late fall to early spring, when the insects which it prefers are scarce.

Tincture of Iron in Good.

A few drops of tincture of iron put into the drinking water is a good thing for the hens, and some people insist that it prevents many minor diseases. Even if it does not it will do no harm.

Children Cry For Fletcher's CASTORIA

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opinum, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhoea. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

C. DANTO & SON.

212 Bridge St. Phone No. 60

Local and Personal Notes

Mrs. C. Y. Cook left last week for Jackson to spend the winter with her sisters.

The house at 112 Clinton street, owned by Maggie Cotter, is being enlarged and remodeled.

W. E. Bedwin returned home Saturday from Akron, Ohio, where he visited his son Louie, for ten days.

D. N. Gregory has sold his farm in Marion to Charles Jones, of Boyne City, and will remove to Montana.

Warren Moore, the past two weeks, has thoroughly renovated and redecorated his restaurant.

Mrs. W. J. Rachow returned last week from Detroit where she has been visiting friends for several weeks.

The closed season for fishermen began October 10th, and all hands are busy fixing the nets for fall and winter fishing.

After a month's absence at Nashville, Tenn., and other southern points, Dr. Armstrong returned home Saturday.

The merchants of Charlevoix, as usual, contribute generously toward the annual plowing matches. Wonder if Montgomery Ward chipped in?

The ladies of the Barnard M. E. church will serve their annual pumpkin pie supper Friday evening, October 22. A good entertainment has been prepared.

Miss Florence Hanshaw, of the County Bank force, leaves this week on her vacation trip, which will take her to Niagara Falls and with relatives in Detroit.

Ed Vought and Alfred Brown left Monday for Bay City as delegates to the Grand Lodge of Odd Fellows at Bay City. Mrs. Wm. Cowan goes as a representative of the Rebeccas.

Capt. P. McCafferty, who was serving on the Federal grand jury at Grand Rapids, was called home Saturday owing to the death of his mother at St. James. He left for the island Monday morning.

Germany is evidently going along with the idea that if the Kaiser cannot clean up on the big nations of Europe he can on the smaller ones. Belgium and Serbia are examples to prove the logic of this conclusion.

On Monday evening a pot-luck supper was spread on Mr. and Mrs. Clinton Cooper. After the serving of a fine supper the evening was spent with dancing and games. About forty were present and all report a fine time.

Another of those fine displays adorns the window of the Charlevoix Hardware Co. It is a hunter's display, and it makes the hunter crazy to get into the woods. The log cabin, the axe and pillow of the lessee, the hunter's camp accessories, all combine to make it a study in nature.

Mrs. Dr. Barney and children left this morning for Grand Rapids by rail. Friday morning Dr. Barney leaves with his car. At Grand Rapids the family will join him in the car for a tour to some southern point, just where it has not been fully determined, where they will spend the winter.

There is every prospect that old King Winter will settle down to business early all over the country as snow storms have been reported from many sections in the north during the past few days. These indications give cheer and comfort to those who are in the habit of prophesying hard winters and deep snow.

Because he couldn't agree with the public utterances of Henry Ford, regarding the war loan to the allies, and question of United States preparedness, James Cousens, vice-president and secretary of the Ford Motor company announced his resignation. Cousens declared he would retain his holdings in the Ford company, but would have nothing further to do with the administration of the concern's affairs.

At the Barnard M. E. church next Sunday will be held a Sunday School Rally. Appropriate exercises are being prepared and will begin promptly at 2:00. There will be special music conducted by Dr. A. M. Wilkinson and the male quartette. Also short addresses by Dr. A. M. Wilkinson, Miss Hinsen of the county normal, the pastor and others. All are very cordially invited to be present.

There was a pleasant gathering last Wednesday afternoon in honor of Mrs. Eliason at the home of Mrs. Elinson, under the auspices of the Ladies' Aid of the Congregational church. After the refreshments were served Mrs. C. T. Taggart, on behalf of the Aid Society, presented an electric table lamp to Mrs. Eaiison, who is the church organist. A silver mounted casserole was the gift of "The Coelians" and other gifts were made by personal friends.

Season tickets for the Lecture Course are now being sold. It is being put up to some of the business men along the street that they are in business and can ill afford to refuse to take season tickets and support the course. Some of the business men had a lecture course in the way of a Chautauqua last summer, and because this was not supported as a whole they got $50 worth each of entertainment more than they expected. Good talent has been secured for this winter course and as we now have more time to enjoy it, it is worthy of support.

Rev. C. E. Taggart is attending the National Council of Congregational churches in New Haven, Conn.

Nick Shores had the honor to take out the first north woods hunting license, and leaves for the north this week.

James Leonhoute, book-keeper at the Charlevoix State Savings Bank, is spending his vacation at Zeeland, Mich.

Capt. F. D. Campbell, who has been three weeks in Illinois and Wisconsin, returned Saturday, with eyesight and general health considerably improved.

Archie Livingston, Assistant Cashier of the Charlevoix State Savings Bank, and family, returned Saturday after spending their vacation at Lansing and Mt. Pleasant.

Our uncle "Dick" Williams, of Evesline, was in town Tuesday carrying his eighty odd years still lightly. He brought us a strawberry which he picked from his grapes which is the size of a big plum and just as juicy.

The U. S. revenue cutter Morrill, from Detroit, was in this port Saturday bringing a small motor dory for the coast guard station, to be used in patroling for motor boats not complying with the law. Look out for next season.

A bright, clean-cut Greek, just too young to be a soldier, is behind the counter at George Gidson "Sugar Bowl." We cannot spell or pronounce his name, and he cannot yet talk English. He is a cousin of George. He came from Athens, and here's betting he will make a good American.

BOARD OF SUPERVISORS

As we close these columns the board of supervisors is still in session, every little having been done in open session as matters of record, as but one or two committees have reported. Of course it is well known that the work of the board is done in committee room. About Thursday the reports will begin to float in.

At last Thursday session the board listened to talks by representatives of the county agricultural society and the development bureau. Time very profitably employed was when the board listened to a talk from W. J. Rachow, representing the bankers of the county. Mr. Rachow gave the board a very clear comparative statement embracing county finances for the past five or six years, making some suggestions that the board evidently approved, as it gave the speaker a rising vote of thanks.

The board will probably clean up its work Saturday.

There is a deadlock between the county road commissioners and the board of supervisors over the location of the Charlevoix and East Jordan road along the Lookout section. A radical difference of opinion as to whether the road should go via the Mat Allen hill or the lower route may be responsible confronting the commissioners. The latter body had referred the matter to the board with the recommendation that the lower route be taken. The board, Wednesday, by a considerable majority, voted in favor of the upper route. The commissioners refuse to comply with the action. Now it is up to the board to adopt the commissioners' plan. The law is on the side of the commissioners, but the appropriation is in the hands of the board.

PROBATE COURT

Estate of Andrew R. Struthers, deceased. Petition filed for appointment of administrator. Hearing Friday, Oct. 22, 1915, at 10o'clock.

Estate of John Hamilton, deceased. Petition filed for determination of heirs. Hearing, Thursday, Oct. 21, 1915.

Estate of Catherine Walters, deceased. Will of deceased admitted to probate. John Hack named as executor in said will.

GETS GOVERNMENT INSURANCE

Mrs. Van Vanlaven has been notified by the postoffice department that her application, made more than a year ago, for death benefit in the case of the death of her husband, has been granted, the amount being $2,000.

Mr. Van Laven was the carrier on Route No. 4 out of this city, and the claim was made on the grounds that death was caused by exposure.

PARK AVENUE PROPERTY

Last week the Shawley house, 217 Park avenue, was bought by Dr. Greisdelder, who has occupied the house the past two months. He has moved in Dr. Pinkard the lot on the hill in the rear, adjoining the city water tower.

Dr. Greisdelder intends to overhaul and remodel the house.

Reading One's Own Books.

Cultivated men and women have always counted good books among their most valued possessions, and one can not believe that this taste can be satisfied without definite loss to our civilization. The spoken word can never supplant the written word; and, in fact, the present tendency in all to ward substituting print for speech. Nor can reading in public places take the place of reading one's own books in the quiet of one's home. Books that are owned will patiently on the reader's leisure; and to have yet the hand one wants, when one wants it, is and must remain one of the supreme luxuries of a cultivated life.

Books, too, when personally owned, gather around themselves a wealth of personal associations. The very binding, paper and title-page recall the conditions under which the book came into our possession. As we open its pages we remember the last time we read it, the place and circumstances, and the people with whom we discussed it. Books have personality and they must always remain the warm friends of their possessors.—Atlantic Monthly.

REDUCED prices on hard coal base burners—call and see our line of stoves before you buy. We can save you money. CHARLEVOIX HARDWARE Co.

Peculiarities of Dye.

Closely related to yeast, fungi discovered in Switzerland by a Japanese scientist have been found to dye silk a beautiful rose color, but to be harmless when used in the manufacture of beer.

Ancient "Saunterer."

A "saunterer" in the old day was one who had made a pilgrimage to the Saints' Terra, the Holy Land. The connection between the word and place is clear.

Age of Oysters.

As the result of examinations of the surface lamellae of the shells of over six hundred oysters of known age, and of various sizes from eighteen months to six years, made by Miss A. L. Massey, and noted in the "Scientific Investigations" under the section on fisheries, the following conclusions are given as to the relation between age and the number of surface lamellae, or growth rings. Miss Massey states that so oyster of eighteen months or two summers appears to possess at least two rings, but may have as many as five; one of three summers has at least two rings, but may have six. A four-yearold oyster may have only three rings, or may possess seven or eight.

How to Tell a Train's Speed.

Count the clicks of the wheels on one rail (because joints alternate) for 30 seconds, and the result will be the miles per hour the train is running. There are 176 30-foot rails in 5,280 feet. The train, say, is traveling at 45 miles per hour. It covers 135.5 rails in one minute, or 2.25 rails in one second, which, multiplied by 30, equals 67.5 rails in 30 seconds, or 45 miles per hour. If 33-foot rails are used the result would be 40 rails in 30 seconds as 45 miles per hour, but it is fairly accurate and can be done easily with a little practice.

FOR SALE

I will sell at private sale the farm known as the John Race Farm, in Eveline township, 1-mile south of Ironton.

COMMON COUNCIL

Ordered that Park avenue and Clinton street crossings be made passable.

Purchasing committee instructed to secure and install two watchman's clocks for police department.

SCHOOL COMMISSIONER'S NOTICE

The County School Commissioner will be in Charlevoix Saturday from 1 to 5 p. m. in the music room, first door to the right off from the main hall, first floor of the high school building, for the purpose of consulting with members of school boards, teachers and patrons. He will be glad to confer with you in regard to any school work in which you are interested, and to talk over any trouble that may have arisen.

Same hours and same place the fourth Saturday of each month of the school year unless otherwise announced. It rests with you to make this worth while.

Sincerely yours, May L. Stewart.

ESCORT COULDN'T SEE JOKE

Incident at Coney Island That Probably Tenfold Thrower a Lesson He Needed.

A large well-dressed man and a handsome woman were the cynosures of Brooklyn's Coney Island, New York. They had been waiting some time for the man's wife and the woman began to yawn. Now yawning is a very unsatisfyin performance in public, and rather a dangerous one in a Coney Island crowd, for some young man bent on relieved threw a handful of confetti into the crowd and orifice. The woman coughed and sputtered, and the boodlum skipped with delight. Her escort saw him thought it was a grand joke, too—all but the woman's escort. He relaxed out one powerful arm and grabbed the skylarking youth by the shoulder. Then he brought his fist down on the young man's straw hat, crushing it and drying his head through the crown and partly over his ears. Next he turned the young man around and kicked him with all the force and swiftness that enthusiasm and force angor to gether with the strength afforded. If that youth recovers from that kick and throws confetti again he will be careful in picking his target. And, maybe, the handsome woman if she yawns again in a hurry will not do so in such a mob as turns out to see a Coney Island relaxation.

With the Essayists.

Of all the displays of art the essay is the most indefinable, the most subtle, because it has no scheme, no program.

It does not set out to narrate or to prove; it has no dramatic purpose, no imaginative theme; its method is essentially subjectivation, just as it talk a man may speak frankly or his own experience and feelings, and to avoid any suspicion of egotism, it his confidences are designed to illuminate the thoughts of others rather than to provide a confession and a self-gratification.

The essayist gives rather than claims; he conquers rather than parades. He is led by his interest in others to be interested in himself, and it is as a man rather than as an individual that he raises the stage.

Yet he is surprised at the discoveries he makes about himself, raises than complacent, he most conscious his own discrepancies rather than exult in them.

The Woman's Benefit Association Of The Maccabees

The Largest, Strongest, and most Progressive Society of Women in the World.

Non-political and non-sectarian. Offers more opportunities to women than any other society. Good training and future success, love of humanity and protection of helpless little children.

A splendid opportunity for broad-minded and sympathetic women to join this great fraternal chain of one hundred and eighty-six thousand women banded together for the betterment of their own sex. This Organization has a national reputation for this great work in the interest of women, and has already paid into homes of deceased and distressed members over twelve million dollars, every dollar going into some home in time of want and distress. We cannot begin to record the deeds of loving kindness and sympathy that have gone hand in hand with these disbursements.

This Organization has risen to high position in Fraternal Insurance through the hearty co-operation of its members and has built up by the management of its officers, a reserve of over eight million dollars.

The Woman's Benefit Association of the Maccabees was founded in Michigan by Michigan women in 1898; the cornerstone of its own building, laid in Port Huron, October 22, 1913, being the first woman's benefit association in the world to erect its own building.

Your loved ones are protected by our death benefits; we will see that you have protection with our burial benefits. We will take care of you when sick through sick benefits and hospital service.

First in Fraternity, First in Stability
First in the Hearts of its Members

We want a competent woman to act as organizer in this locality. For further information address Mrs. Alberta V. Proulx, Great Commander for Michigan, 411 St. Aubin Ave, Detroit, Mich.

Northern Michigan

Boyne Citizen: R. E. Newville will leave tomorrow for Lansing where he will assist at the dedication of the new I. O. O. F. Temple at the state capital on Friday. On Monday Mr. Newville will attend the session of the Grand Lodge of the State of Michigan. On Thursday of next week he will be installed Grand Master and assume his official duties.

Harbor Springs Republican: A drive through the country district reveals the fact that the farmers are optimistic in spite of the damage done by the heavy frosts. They are plowing and getting ready for a larger crop acreage than ever. One farmer expressed it in a very pat way when he said, "I have lived here over forty years and never saw any such season before and don't believe I'll ever see another like it. Anyway we have escaped floods, cyclones, tornadoes and the great potato blight that the other fellows had along with the frost and Emmet county is good enough for me."

Harbor Springs wants a hotel that will operate the entire year. As conditions are now, just as soon as the summer resort season is over all of the hotels nail up their doors and there is not a place where a traveler may stay except at private homes. Business men realize that a large amount of business is lost by the town because it has no hotel. The difficulty with putting one up, however, would be that the liner summer hotels would get all of the business during the summer and the proposition would not be a paying proposition. The matter is being thoroughly agitated and it is believed certain that some way out of the trouble will soon be found.

Central Lake Torch: The little town of Toreal Lake, known now as Eastport, is located at the head of Torch Lake. The first house was built by Mr. Andrews in 1866. He also started to build a shingle mill on the creek just north of the bridge, but, having but one arm he made slow progress. The first school house was also built in 1866 and was located near where the Congregational church now stands. It was built of logs with no windows, no chinking and bark roof. The desks and seats were so constructed that the students sat facing the wall. Miss Eva Davis had the honor of being called teacher. She was a sister of Mrs. William Burns. In 1869 Mr. Phillips came and built a house on the lot now occupied by Mr. Gates. In 1872 James Williams bought out Mr. Phillips and moved his family to town. He took the timber off the land now occupied by Eastport. He also kept the postoffice and carried the mail, going one day to Charlevoix and the next to Elk Rapids.

Ellsworth News: There are but few towns in western Michigan at present putting forth a greater effort to expand than is Ellsworth, a thriving little community in Antrim county, small in number, but very, very large in the possession of the better kind of community spirit. Everyone in the town, from the old men, who have passed their active years, to the little children is actively interested in the future of the community and are doing all that they can to boost it. Ellsworth claims that it is the best town in northern Michigan; it insists that the land in its vicinity is the most productive in the entire section, that they can produce the biggest crops and that they possess the best markets for their produce. At regular intervals Ellsworth holds board of trade meetings. These gatherings aren't held in the back end of some store and attended only by the "leading citizens," but are held in the largest hall in the place and every time there are so many who want to attend that enough chairs can't be squeezed into the hall to accommodate everyone. Practically everybody in town attends, and farmers from 10 to 12 miles around come to add their bit of encouragement and help for the community's future. "What can we do to make a bigger and better town?" is the question which every Ellsworth citizen, young and old, is asking these days.

Private Sale

Beginning Thursday, October 14th, I will offer for sale: 2 leather rockers, 2 oak rockers, small stand, ladies desk and chair, round golden oak dining table (48 inch), several small rugs, Reliable Electric Vacuum Cleaner, three burner Perfection oil stove and oven and a lawn mower. All articles are in A 1 condition and can be bought for less than wholesale price. A. B. BALL
Phone 146 96 Mason St.

FOR SALE—One horse, two buggies and two harnesses. Will sell for cash or approved note. Dr. Levi Lewis.

No Trick to Reduce.

If you are too stout, don't take fat reducing medicine; cut down on your diet, get out-door exercise, and you will assume normal lines and reduce to normal weight. Avoid sweets, sugar, cream, fat meats, and especially potatoes. Live mainly on lettuce, spinach, cabbage, lean meats, young onions, celery, tomatoes, etc. Take animal toast instead of bread and butter. If you can't do this, your body fattening foods you will cease eating fat cells. It is no trick to reduce if you practice self-denial.

Bird Importations.

The number of birds imported into the United States annually amounts to about 500,000, and as many as 17,000 have become dwellers in America within one day. The half million feathered strangers represent 1,500 different species, but the greater number of the importations are of canaries, parrots and game birds.

Valuable Hoft.

British scientists have discovered that a cut added to the mutting that grows in Brazil yields an oil of much value in the manufacture of soap.

FOR RENT—Small house on north side, furnished or unfurnished. Apply to C. Danto.

County Normal Notes

The normal students are starting their basket ball practice with encouraging enthusiasm.

The front of the normal room is decorator with a frieze parallined and refined leaves made by the girls.

Miss May Stewart, school commissioner of Charlevoix County, gave the normal class a very interesting and practical talk concerning the discipline in country schools.

Miss Edna Singley visited the county normal Wednesday. She is teaching nineteen children at the Hoppard school, four being eighth graders. This school is equipped with the Waterbury heating system.

Mr. Dwight L. Wilson, a lawyer and surveyor from East Jordan, gave the high school students and normal class a very helpful and interesting talk. Mr. Wilson was the former principal of the Charlevoix high school.

The normal class had a wiener and marshmallow roast on the beach Tuesday night of last week. Everything was progressing finely when a rain came up and drove the girls to shelter. Miss May Stewart, school commissioner, was one guest of honor.

The Woodward school teacher, Miss Annie Metcalf, visited the county normal Thursday morning. Her school has eleven pupils, one of whom is an eighth grader. Miss Metcalf has organized a Mothers' Club in connection with her school which meets every two weeks.

Optimistic Thought.

Wish rather to be well spoken of than to be rich.

PROMINENT WOMEN OF MICHIGAN

MISS HYA H. WEST,
MRS. ALBERTA V. PROULX.

Miss Hina M. West, twenty-three years age, organized the Women's Benefit Association of the Maccabees. On October 21, in the cornerstone of a beautiful $200,000 home office building for the society will be laid with great ceremonies at Port Huron.

Miss West is Michigan woman, she began her work on October 1, 1892, with no business and no funds. To-day there are over 186,000 women enrolled in membership, and there are over fund of the society reaches nearly the nine million dollar mark. She was elected away with her own hand over twelve millions of dollars to benefits.

Mrs. Alberta V. Proulx, of 411 St. Aubin Avenue, Detroit, is the great commander for Michigan, and she is to be congratulated on the success she has attained for the society in this State.

Members from all parts of the state are taking a great interest and nearly every review will be represented. A special all day session will be held, and will be conducted by Miss West, from Detroit, alone, at the large public meeting to be held the evening of October 21, at Masonic Temple, Port Huron.

Beaver Island News

Charles Roddy spent several days at Charlevoix on business.

J. C. Northcott, of Garden Island, went to Petoskey Monday to visit his wife who is in Lockwood hospital.

Fr. E. J. Jewell went to Grand Rapids Monday.

Mrs. Lenard, of Chicago, is at her cottage, arriving Monday.

U. J. McCann went to Charlevoix last week to have some dental work done.

Peter McCauley went to Elk Rapids and other points.

Mrs. Fred Nackerman and son went to Grand Rapids on a visit Monday.

Willard A. Smith, of Charlevoix, spent several days on the island hunting, returning home Monday.

Supervisor Gallagher and Green spent Sunday home returning to Charlevoix Monday.

C. C. Gallagher, wife and little son Robert returned home to Escanaba Saturday.

Miss Evelyn Palmer returned to Petoskey after spending two weeks visiting her parents.

Wm. Kerns of Chicago is visiting friends for a few days.

Miss Iona R. Gallagher is visiting sister Mae at Petoskey for a few weeks.

Miss Katherine Floyd returned home after spending six months in Chicago.

Miss Lulu F. Maloney and family of Chicago visited friends on the Island Monday.

John S. Stephens, wife and family moved to Charlevoix last week.

Mrs. Wm. Wichter died at her home on Garden Island last week, aged 70 years. She leaves her husband, nine children, her mother Mrs. Vincent, seven sisters and four brothers. She was buried from the Holy Cross church Oct. 11.

Miss Teresa Barrett visited friends here Monday.

The City of Boyne took 350 sheep to Manitowoc Island last week.

Mr. Michael McCafferty died at her home, Saturday, Oct. 16, aged 88 years. She leaves four sons and two daughters.

Mrs. Charles Bradley, of Chicago, is visiting friends for a few days.

Capt. Peter McCauley, of Charlevoix, is here attending the funeral of his mother.

The light house tender, Hyacinth, was here this week with supplies for the light house.

Mrs. Albon Smith arrived on Monday's boat to attend the funeral of her grandmother, Mrs. McCafferty.

Anthony McCafferty of Escanaba attended the funeral of his mother here Tuesday.

SPECIAL SERVICES

Next Sunday morning there will be a service at the M. E. church for the aged. The pastor will preach at 11:00 sharp. Mr. A. Bittner and others who were in the choir long ago will furnish the music. All the aged and shut ins of the city are most cordially invited.

To Protect Wall.

To wash, paint or varnish wood work, to keep it from marring the wall, use a piece of window glass with a straight edge about twenty inches long to hold between your work and the wall. This can easily be cleaned and will not warp or bend as does a piece of cardboard, which is sometimes used.—Clayton: Plain Dealer.

GOOD FIT GUARANTEED

CHARLEVOIX HIGH SCHOOL FOOT BALL TEAM LOST AGAIN

Fail to get Harbor Springs Game—One Man Fractures Collar Bone and Another Quits The Team

—Score 13 to 0

Because one Ed. Krulik by name sustained an injury during the first of Saturday's game with Harbor Springs, which forced him to the side lines and out of the fracas Charlevoix High was compelled to acknowledge the Harbor men superior in the first gridiron encounter of the season between the two schools. The final count was 13-0, two touch downs and a goal after touch down being responsible for the score. This is not saying that those who manned the joint did not put up a good quality of foot ball, but Krulik was the mainstay in the open style of play and after his retirement quarter back Hallett was forced to erase any forward passes from his list and depend on the old army game. Krulik was examined upon reaching home and it was found that his collar bone was fractured. He will be out of the remaining games on the schedule. This is the second accident of this nature that has occurred this season.

The Harbor Springs aggregation is probably one of the most formidable in this part of the state and possesses several real star. The noticeable trouble was the lack of speed, which would have been "nuts" for Charlevoix in the open style of play, but for the aforesaid accident. Wilson, Harbor's full back, was the big ball carrying ground gainer for the home team, netting two 40 yard runs each ending in a touch down stands. Outside of this man none of the Harbor players gained regularly against the Charlevoix defense.

For Charlevoix, Hallett, Durance, Butler and Krulik distinguished themselves both on the defensive and offensive. Probably as good an exhibition of real backing the line seen in these parts by a man in tight is Durance was shown during the last quarter of the game. Charlevoix held the ball in mid field but by repeated bucking and successful drives by Percy which netting any where from five to fifteen yards the ball was carried to the ten yard line where time was called. Another minute and Charlevoix would have scored and practically through the ability of Durance's 180 pounds to penetrate the Harbor's line. Durance was the star outshown any, with the exception of Wilson, and raised his stock one hundred per cent. He was fast, picked his holes in good style and fought to the end. Usher's end runs netted as much ground as any formation during the game and he was by odds the most intuitive sort of footed some of the skeptical ones. Butler played his last game and by way of injection he made a poor pass during the whole affair while on defensive he worked hard and was in the game for every minute time after time. Butler burned his togs after the game. The team lost to him as he was a consistent man for the pivot job and was regularly at his post.

The game started with Charlevoix kicking off to Harbor who returned the ball three yards. During the first quarter the ball exchanged hands repeatedly on punts and holding for downs including one for the Harbor team a backward pass to Wilson and a run of forty yards brought the score up to 6 points for the Harbor crew by at goal failing. Before the quarter closed Charlevoix carried the ball within Harbor's territory but was held for downs and the ball went over and was booted out of danger.

In the fourth quarter Wilson got away again for another sprint on practically the same formation as on the first run and ran through an open field dumping Durance and Hallett at his feet on the way and boosting Harbor's count up to 13 points after driving the ball over the bar on the attempt at goal. With six minutes to play Charlevoix started in to retrieve herself and after receiving the ball from Wilson right down the field on her way to glory only to be stopped by the whistle after a brilliant showing of fast and heady playing. It was the old time reason, they waited too long and lost a game they could now had if they had started that real fighting spurt about four quarters earlier.

The game closed with the ball in Charlevoix's possession on Harbor's ten yard line and every man working his hardest for the last touch down.

Although the boys were defeated there had one of the best trips of the season and are loud in their praise of the "enemy" and the treatment they were accorded while at the Harbor. While there the fellows were shown through the new high school, a pleasure which they certainly enjoyed.

GET RID OF THOSE POISONS IN YOUR SYSTEM

You will find Dr. King's New Life Pills a most satisfactory laxative for removing poisons from your system. Accumulated waste and poisons cause headaches and sluggish bowels to result. Freshness, ease before the eyes, blackness and a miserable feeling generally are indications that you need Dr. King's New Life Pills. Take a dose to-night and you will experience grateful relief by morning. 25c.

Loafing—Work—For Some.

Sometimes, by our lazy sentimental moods, we wonder if a holiday isn't inserted to remind us how work is.—Milwaukee Journal.

HOW COAST GUNNERS ARE TRAINED

"IT is upon the seaboard guns that the security of the nation will depend should an enemy succeed in crippling our fast-flying fleet, the navy, and dictate demandments to the cover of the harbors and the protection of the heavy rifles and mortars of the army. The question is, can these seaboard batteries hold a foe at bay?"

On our continental shores we have a total of 26 coast defense commands, and 21 of them are located upon the Atlantic littoral. But even though there are fewer stations on the Pacific coast, still those are very formidable. Without considering weapons of eight inch caliber and under, we already have mounted in total upon our two shores of 372 12-inch mortars, 105 12-inch rifles, and 132 10-inch rifles. The aggregate strength of the personnel of the coast artillery, according to the latest figures, is 15,000 officers and 1,420 agreeably to the force authorized by law, and this is an intimation of the success by heavy work that the men would have to face in case of hostilities, because we are minus a vitally necessary element.

The average layman has not the slightest knowledge of the extremely technical duties of the Coast Artillery corps, and to be proficient these soldiers have a many-sided education. There is the task of getting the advantage of the enemy before the foe can locate the position of our guns and mortars, and the whole system of defense is the exact opposite of the way in which a hostile squadron would approach its aggressive task.

From the very beginning of the planning of our existing seaboard batteries the idea of concealment was the first concern. The mortars were designed to be hidden away in pits—each of them holding four of these weapons. The heavy rifles were to be in plain sight, with their threatening muzzles peering over the crests of parapets. Instead, the disappearing carriage, between the firings, would have gone far toward the power to crouch while loading or awaiting service and then, when the moment for firing arrived, to spring up suddenly from behind their embrasures, shoot at the foe, and by the force of their own recoil to sink from view and into position for reloading.

How is it possible for weapons of this sort to be aimed at their targets? It is commonly known that in naval service the guns are held upon their quarry by means of electrically operated mechanisms that swing and elevate the rifles so that the cross hairs of the telescopic sights can be kept right on a moving target even though the sea be rough and the vessel roll. The gun pointers are undisturbed by this motion, and at 17,000 yards and more are able to do some wonderful shooting. But the gun pointers and trainers in the barbet pits and the emplacements of the big rifles do not, themselves, see the enemy. Yet despite this seeming handicap still they are able to do some extraordinarily effective work.

The army gun pointers near New York, with 16-inch disappearing rifles, have been able to fire four shots in a total elapsed time of less than five minutes and these were concentrated upon a target four miles away being towed at the rate of something over five miles an hour. Just one shot struck the target and actually passed through a rectangle 15 feet high by 55 feet long. At 6,000 yards the same caliber gun at Fortress Monroe scored six hits out of six shots at a moving target. The actual elapsed time of the firing was slightly over two minutes, the batteries scoring 14 hits per gun per minute.

The science of surveying has made these achievements possible, even though, as has been said, the guns *and* mortars must be trained and elevated by men who cannot see their targets. It is a wonderful theorem in plane geometry that the length of the two sides of a triangle may be found if the length of the base and the degree of the two angles formed by the sides in question with this base are known. In the case of the coast artillery problem the distant ship of the foe is at the remote tip of the imaginary triangle, and the known base is the earth between two observing or range-finding stations. This interval may be a mile or more and within some limits the longer the better for accuracy.

Many-eyed seem from afar at our coast defense stations. Instead of big bird boxes mounted upon towering tubular supports or wobbly or even shaky masts, there are always two or three, and officially they are known as the primary and secondary range stations. In each of them, in time of a drive, there are at least two men, sometimes by means of a delicately graduated mechanism a powerful telescope from right to left, and his function is to keep the moving target constantly at the point of intersection of two cross hairs in the field of his instrument. His companion may be stationed at a distance of a mile or more by the telescope with the permanent base and the far-away foe.

Now, some thing is being done at the other range station at the opposite end of the base. A time bell rings, and at each of these stations, every minute and at the third stroke the man reading the angular elevation of the target measures it off on the plotting room located where Lieutenant Commander Bell and Ensign Bell are stationed.

In the plotting room a group of men make use of the information coming to them intermittently from the range-finding towers and by a graphic process determine with great nicety the distance of the target and steaming foe. The plotting table or board where this information from the observers is applied is a big semi-circular affair—the curved edge being graduated to fractions of a degree, while the straight edge or diameter represents on a definite scale the length of the base line between the two spotter towers. At each end of this base line is a pivoted ruler. One is called the primary and the other the secondary—corresponding to the range-finding station with which its operator is in touch by telephone. Here is what follows:

The soldiers at the primary and secondary stations turn the rulers in accordance with the separate angles telephoned to them. A third man operates the ruler called the gun arm, which measures the distance or range of the axis of this triangle. As the word of command from the range officer the observers at the two telescopes bring their powerful instruments to bear in unison upon a chosen part of the remote ship. At the order "Take," the scale readers telephone the figures to the operators at the plotting board. In a few seconds the man in charge there has placed on a large sheet of paper a dot at the point where the two straight edges meet and has marked this peerless point No 1.

Again, a minute later another dot is made where the shifting straight edges meet, and this is numbered 2. Intermediate plots are recorded for No. 3 and No. 4, and if the distance between these dots is uniform the plotters know that the target is moving at a steady speed and the path now gives a visible trace of the direction in which the foe is advancing. As yet none of the weapons has been pointed, nor, if mortars are to be used, even aimed.

The pointers marks upon his paper a fifth point ahead and in line with the four other dots. This is his "predicted point" where the enemy vessel should be a minute later. In this interval of time it is necessary for the men in the plotting room to do a number of things necessary to make it possible for the weapons to score a hit. The pointers are not enough to know. Let us assume that the foe is to be attacked by means of mortars and that the projectiles are to soar thousands of feet into the air upon their long flight that may take the better part of two minutes before plunging upon the vulnerable decks of the hostile dreadnought.

It is needless to say that long the shells will be in the air at that range how far the target will move during the flight of the missiles, how much the path of the projectiles will be influenced by drift due to their own rotation and the effect of the prevailing wind, the exact powder charge that will be needed to propel the shells into being determined by the range and the state of the atmosphere, and finally, how much ahead the mortars must be aimed in order to allow for these factors. These complications are due to the method of indirect fire employed, and in this particular the mortars are not so accurate as the big rifles and, therefore, are more difficult to handle in order to insure good results. The final point set in the plotting room is No. 5 and two minutes further along than No. 1, the "predicted point." The latter being verified by the angles given by the observers at the spotter stations when the vessel is duly reported at the proper moment.

All of this has taken longer to describe than actual performances calls for, because the error factors which have been just mentioned are tabulated and are quickly worked out graphically by means of cunningly devised apparatus. It must be evident that in an interval of four minutes a big ship 12,000 or 14,000 yards off would not get measurably closer, and once the proper range is found and the mortars loaded the shifting range is quickly verified and the guns set accordingly.

The men in the towers and those in the plotting room are at work all the while. At definite intervals the instruments are sent by telephone from the plotting room to each battery or mortar pit, and less these vocal directions be misunderstood all dials and orders are visibly reproduced. For this work the telautograph is employed, and the words and numbers are made to check the telephone calls.

As has been said, there are four mortars in each pit, and as a general thing there are four of these pits at each defense station. In other words, a score of high explosive shells can be launched by indirect fire at a foe. If but two of these hit, the vessel would either be destroyed or gravely damaged, because none of her decks would be able to withstand such an onslaught. In practice the performances of such a battery have been splendid. As a matter of record, one mortar company has fired a score of shots in 5 minutes 45 seconds, and in that interval six hits and another company has scored eight times out of ten shots during a span of 9 minutes 25 seconds. The projectiles produced from 700 to 1,000 pounds, and are charged with from 30 to 60 pounds of high explosive.

For the disappearing guns the modus operandi differs in some particulars. The range finder of the shot is far another than in the case of the mortar shell, the powder charge is not varied to suit different ranges and the aim of the gun piece is not a deciding factor. Therefore, corrections are more easily made, for the time when it does fire, is pointed right at its target. The principal element of the battery commander is to know the range, and this is telephoned and reproduced by the telautograph at the firing stations.

The battery commander also follows the enemy ship with a telescopic range finder that employs a short vertical instead of a horizontal base. This serves as a check and at each gun there is a telescopic sight which is functioned independent of the weapon—the operator looking over the parapet and following continually the moving mark. By swinging his telescope horizontally he causes the lateral angle to be indicated at the gun station below, and there the trainer swings the weapon in unison and the elevator raises the muzzle according to instructions from the range-finders.

When the rifles have been loaded and the moment for action arrives these great war dogs rise upon their hydraulic mounts, and thrust their muzzles above the heavy parapets of concrete. Instantly there is a thunderous boom—the gun-pits are enveloped in their murderous mission. Before the thin veil of smoke has been swept aside the men have sank behind cover, and but for the momentary flashing of their muzzles there is nothing to show the epidemic of the hostile craft where the attacking guns lie.

HER EQUIPMENT.

"That girl is fishing for a husband."

"Then I suppose she uses a baseline in hope of a good catch."

AFTER 60 YEARS' HOLIDAY

J. C. Chase, Eighty-Five, Goes Back to Scenes of Early Success in the Gold Fields.

The spectacle of an old man, eighty-five years of age, fitting himself out as a prospector and taking his blanket into the bush after sixty years' vacation from the same sport of work, proved interesting to the residents of this old mining town, says a Forest Ville, dispatch. What made the incident more interesting was the fact that the prospector is a wealthy man and has no need any more of his own world's goods.

The stranger is James C. Chase, who mined in the headwater of Jim Crow canyon in the early '60s, and who took out enough to enable him to live in comfort among his relatives ever since.

He took his "pile"—and later invested in the rich apple district in Washington, and recently came to California to visit the five.

Chase was not successful in his first days panning as he was in the lode, but was delighted when he found color in his pan. "I think I could show some of you old miners a trick in this business yet," said Chase to some of the men who have been mining here with indifferent success for years.

The old man does not look more like a miner than any man of any other calling. He looks like a country gentleman, and he does not resist the temptation to step the ground where he built the foundation in his younger years.

Chase was not successful in his early life rang in his ears and he could not resist the temptation to come back to the place where he laid the foundation in his younger years.

The old man does not look more like a miner than any man of any other calling. He looks like a country gentleman, and he does not resist the temptation to step the ground where he built the foundation in his younger years.

HANDICRAFT FOR BOYS AND GIRLS

By
A. NEELY HALL and DOROTHY PERKINS

Copyright, by A. Neely Hall

FOR CITY LOT BASEBALL.

There would be less chicanery to vacant lot ball games if adjoining property owners could be relieved of their fear of breaking windows. Those on owner this article, and call his attention to Fig. 1. that he may see exactly what you propose to do, and it is not likely that you will have difficulty with him.

Make each frame to fit the window opening, in the manner shown in Fig. 2, using 1x2 inch "furring strips," lapping the ends and fastening them in connections with strips of tin (Figs. 3 and 4). Use 1-inch mesh chicken wire netting at the hardware store to cover the frame.

Before hanging the screens in place, purchase a pair of hooks and a pair of screw-eyes. Screw the hooks into the eyes into the top edge of the frame, and the hooks into the top of the window frame.

A wire covered backstop will not only save you boys lots of chasing after passed balls" and "fouls," but also give protection to adjoining property.

Fig. 4 shows the completed frame work. The first portion to build is the frame, which consists of the two 2x4 uprights A, and three horizontal pieces B. Eight feet square is a good size for this frame, but make it wider if you can. Cut a notch in each end of uprights A, also one in the center of the length, of the right width and depth for the horizontal members B to fit in. Then place the uprights A upon the ground, and spike pieces B in their notches. Before finishing the frame, buy wire netting and staples, and cover it.

Have several boys raise and support the framework on the spot it is to occupy, then quickly drive stakes C into the ground, and connect them and upright A with diagonals D, and the ends of D and A with pieces E.

Uses easily meet in good air the best to be bought, can be made of slight or ten ounce cotton duck, stiffened as desired. Fig. 6 shows a diagram for cutting the cloth. Use the longest lengths, and sew them up all but one end, lapping the edges and sewing with a double row of stitching. Then turn the sack inside out, stuff with sawdust, and sew the end shut.

Get a strap long enough to buckle around the waist, and sew it about the sack with straps of canvas sewed across it (Fig 6). Prepare a target with a staple in its top (Fig. 7), and drive one of these into the ground in front of the sack, in each base.

Uneasy almost anything at all served the purpose of the target, but if you want a ball game, but if you want one of regulation form, make it as shown in Fig. 10. Taking a square piece of plank (Fig. 11), cut off corners A, and notch them out as shown, and a tapered stake to fit each notch, and nail in place as shown in Fig. 10.

Did Not Hold on to Trouble.

Someone remarked that "a virgin and apparent youthfulness of an acquaintance who had received advanced years, received the answer: "Yes, and she's been through a good many hard times, too; but, you see, she never was one to hold on to trouble." There was truth and common sense in that honestly summing up of the case. Troubles come to everyone but it is the holding on to them—living them over and over in regretful complaining, darkening today with the dark yesterday, refusing to leave ever yet and feel the brightness of the future—that makes them destroy courage and ruin the life.—Exchange.

Optimism.

"What you need in this town," said the genial stranger, "is more optimism."

"There's plenty of optimism in Crimson Junction," replied Binnacle Bob. "There isn't a man in the place who isn't an optimist during the first twenty minutes of a poker game."

IN STERLING LIVES A GIRL

Who Suffered As Many Girls Do—Tells How She Found Relief.

Sterling, Conn.—"I am a girl of 22 years and I used to faint away every month and was very weak. I was also bothered a lot with female weakness. I read your little book 'Wisdom for Women,' and I saw how others had been helped by Lydia E. Pinkham's Vegetable Compound, and decided to try it, and it has made me feel like a new girl and I am now relieved of all these troubles. I hope all young girls will get relief as I have. I never felt better in my life."—Mrs. Irene Tetreault, Box 115, Sterling, Conn.

Massena, N. Y.—"I have taken Lydia E. Pinkham's Vegetable Compound and I highly recommend it. If anyone wants to write to me I will gladly tell her about my case. I was certainly in a bad condition as my blood was all turning to water. I had pimples on my face and a bad cough, and for five years I had been troubled with leucorrhoea. The doctors called it 'Anemia and Exhaustion,' and said I was all run down, but Lydia E. Pinkham's Vegetable Compound brought me out all right."—Miss Lena Myers, Box 74, Massena, N.Y.

Young Girls, Heed This Advice.

Girls who are troubled with painful or irregular periods, backache, headache, dragging-down sensations, fainting spells or indigestion, should immediately begin to regain health by taking Lydia E. Pinkham's Vegetable Compound.

When all others fail to please

When a saloonkeeper is proud of his place he calls it a saloon.

Sign Number Twenty-One

By DORIS ADA MATTESON

(Copyright, 1915, by W. G. Chapman.)

Tom Stibbs was just setting the last of a sixteen-sheet poster in place on Sign 21 of the Universal Advertising Syndicate, when the ladder under him shook. He looked down quickly.

Hello, there!" he shouted. "What ever are you doin'?"

A man had ...ne rushing around the corner at a high rate of speed. As he turned it he glanced backward. This caused a stumble. His hat fell off. The next moment he was up the ladder. He was a nimble, quick-acting individual, for like an acrobat he pulled himself on alongside of the bill poster. Then he grabbed the long flaring paste brush from his hand and gave him a blow directly under the chin. Tom Stibbs went heading to the girls will get relief as I have. I never felt better in my life."—Mrs. Irene Tetreault, Box 115, Sterling, Conn.

Massena, N. Y.—"I have taken Lydia E. Pinkham's Vegetable Compound and I highly recommend it. If anyone wants to write to me I will gladly tell her about my case. I was certainly in a bad condition as my blood was all turning to water. I had pimples on my face and a bad cough, and for five years I had been troubled with leucorrhoea. The doctors called it 'Anemia and Exhaustion,' and said I was all run down, but Lydia E. Pinkham's Vegetable Compound brought me out all right."—Miss Lena Myers, Box 74, Massena, N.Y.

Young Girls, Heed This Advice.

Girls who are troubled with painful or irregular periods, backache, headache, dragging-down sensations, fainting spells or indigestion, should immediately begin to regain health by taking Lydia E. Pinkham's Vegetable Compound.

Why That Lame Back?

Morning, lame back, sharp twinges when you bend or lift, dull, aching back all day, nagging backache, weak, tired kidneys, urine too often, scanty or scalding. Don't wait for Bright's disease, diabetes, dropsy, or gravel. Use Doan's Kidney Pills. Doan's Kidney Pills regulate the kidneys.

An Illinois Case

Thomas Hill, 1007 Jackson Street, Peoria, Ill., says: "I was laid up with a lame back and had sharp twinges when I bent or lifted. My back pained me so I could not stand stooping in my work. My limbs swelled and my kidneys were disordered. I was almost crippled. Doan's Kidney Pills cured me in a few days."

Get Doan's at Any Store, 50c a Box.

DOAN'S KIDNEY PILLS
FOSTER-MILBURN CO., BUFFALO, N. Y.

Paxtine

A Soluble Antiseptic Powder to be dissolved in water as needed for Douches

In the local treatment of women's ills, such as leucorrhoea and inflammation, the function of Paxtine are very effective. Women who have used other douche powders find Paxtine far more satisfactory and economical, as a little more than a teaspoonful of Paxtine powder makes a quart of a powerful germicidal and deodorizing solution. This is because Paxtine is more cleansing, disinfecting and healing properties.

Paxtine is sold by druggists, 50c. a box, or by mail. The Paxtine Toilet Co., Boston, Mass.

PAXTINE

In introducing some one of E. R. Stone Mfgs. Sheet Iron Fence Posts. Write at once. E. R. Stone, Mfr., Box 96, Toledo, O.

The KITCHEN CABINET

Some children roam the fields and hills,
And others work in noisy mills;
Some dress in silks, and dance and play,
While others divide their lives away;
Some strive with death and toil and woe
And some must suffer all day long.

WAYS WITH CHOCOLATE.

Chocolate is such a general favorite with everyone that any dish or combination using it will not come amiss.

Chocolate Pie.—Take a pint of milk, a pinch of salt and a half a cupful of butter; put on to boil; add a half cupful of grated chocolate, a half cupful of sugar, and mixed with a quarter of a cupful of flour; cook until smooth. Flavor with vanilla and bake in a bottom crust. Cover with whipped cream. This makes a good sized pie.

Chocolate sauce to serve with ice cream or as a pudding sauce is delicious. Mix well one-half cupful each of grated chocolate and sugar, add a half cupful of cream and heat slowly and well blended.

Chocolate Gelatin.—Take a pint each of milk and cream, a half cupful of sugar, a half box of gelatin, two ounces of chocolate and a teaspoonful of vanilla. Cover the gelatin with one-half cupful of cold water and let soak for half an hour. Put the milk and cream into a double boiler to scald; then the gelatin. Take from the fire and add the vanilla and fold in the whipped cream when it is cooling but enough to chill in a mold.

Chocolate Fudge.—Take a half cupful of milk, two cupfuls of sugar, a square of chocolate and a third of a cupful of corn syrup. Cook together, adding a tablespoonful of butter during the boiling. When a ball is formed by dropping in cold water, remove and add nuts if desired. Let it cool a while before stirring or set it into a dish of cold water while stirring.

Cream puffs filled with a chocolate mixture dipped in chocolate frosting make a most delicious small cake.

Chocolate Filling.—This is a most delicious filling or frosting for a plain chocolate cake. Take a cupful of sugar, five tablespoonfuls of cream, one egg beaten and two squares of chocolate, cook in a double boiler for an hour. Then beat and when thick enough put on the cake.

AIDS TO HOUSEWIFE.

When delicate laces become soiled they may be cleaned by squeezing them through skim milk to which a little baking soda has been added. They come out of the milk looking like new with not the trouble of ironing. Pieces on a Turkish towel.

Never fill enamel pans with cold water after removing them from the stove. The sudden change of boiling mixtures as the sudden change of temperature cracks the enamel.

When the rubber gasket of a bottle of liquid when traveling wrap them well and place them in your rubbers, put the rubbers together and wrap them well.

A simple cure for hiccoughs which will be welcomed as it is a "never fail" one. Take a teaspoonful of his mouthful of cold water and hold it in the mouth, swallowing with a sure tightly with the fingers. Then with the ears stopped, swallow the mouthful at a gulp. If the cure does not prove a cure, try it a second time. It will not prove a cure at the first trial, but it will not come again.

Wash the rubber gasket of your fruit jar with warm water and put it on the jar. Then it will not be necessary to boil it before using it.

THE APPETIZING APPLE.

In spite of the fact that the apple was the downfall of our ancestors, we still enjoy the forbidden fruit, and without doubt it has a large place in our affections. There are apples of every variety in the market the year round, so that we can use apple in the favorite way we want to. It would almost seem as if there had been everything said about serving apples, but some new combination or arrangement is springing up each day. For the common baked apple, to add to its attractiveness a marshmallow placed on top while they are still hot, or even before they come from the oven, makes a pretty garnish. Serve them with whipped cream. Whipped cream with a cube of jelly or a sprinkling of nuts on baked apples affords a pleasing variety. Fillings for cored apples that are to be baked are many. Nuts, raisins or currants, chopped dates and figs chopped and mixed with lemon juice. Chopped bloaty meats is another well-liked filling; prunes, too, are a delicious variety.

Apple Compote—Stewed stew sliced apples in a rich syrup, being careful to keep them whole. Cool them and pack it into cups to mold, setting it on ice to chill. Turn out the rice and serve with a cream. Arrange the apples neatly around the mold, then pour the rich syrup over all. Surround with sweetened cream and serve. Apple dumplings are favorites of the boys, young and old. Roll out a rich biscuit dough, cut in squares and wrap a whole peeled apple in each square, pinching the corners to keep them right. Bake and serve with sugar and cream.

Apple mixed with celery nuts and a plain salad dressing served in pretty apple cups, which are made by scooping out the apple at the stem end after cutting off a neat slice leaving the stem in, makes a most tempting salad dish and all.

Apples added to chicken salad make it go farther and are also an improvement.

An apple added to a potato salad is well liked, giving an added zest.

Life is an arrow—therefore you must know
What mark to aim at, how to use the bow:
Then draw to the head, and let it go!

THE TOOTHSOME OYSTER.

Although oysters are not so nutritious as we once were led to believe, they are easily digested and are most delightful flavor in many dishes.

Fried Oysters.—Dip oysters into beaten egg diluted with milk, then into crisp cracker crumbs. Fry in deep fat and serve with sliced lemon.

Curried Oysters.—Allow six oysters to each person. Prepare a sauce by frying two large sliced onions in butter and mixing with two tablespoonfuls of curry powder, two ounces of grated cocoanut, a little sour orange and soup stock. Simmer for half an hour, then add the oysters and heat through. Serve with boiled rice. Then season to the juice of a lemon and serve very hot.

Baked Oysters.—Take about two dozen oysters, one cupful of fine cracker crumbs, half a pound of cheese and two cupfuls of milk. Butter a baking dish and cover the bottom with a layer of buttered crumbs, lay a layer of oysters on this and cover with cheese, seasonings and a layer of crumbs, and another layer of oysters and so on, ending with a layer of crumbs. Pour over the oven, making a pretty garnish. Serve them with whipped cream. Whipped cream with a cube of jelly or a sprinkling of nuts on baked apples affords a pleasing variety. Fillings for cored apples that are to be baked are many. Nuts, raisins or currants, chopped dates and figs chopped and mixed with lemon juice. Chopped bloaty meats is another well-liked filling; prunes, too, give a delicious variety.

Apple Compote.

NATURE HIDES ITS SECRETS

Scientists, Using the Finest of Instruments, Admit That They Have Learned But Little.

Greenwich (Eng.) observatory was founded by Charles II, mainly for the purpose of investigating the movements of the moon in the interests of navigation, but through generations of astronomers have in the intervening two and a half centuries been working at the problem the moon has not yet been made amenable to their mathematics. The astronomer royal in his report of the work at Greenwich during the last year, calls attention to the increasingly big deviation between the calculated position of the moon in the sky and its real position as shown by the Greenwich observations.

This deviation has lately been increasing in a serious manner, the error last year being more than 12 times as large as it was 30 years ago, the average annual increase amounting in the two decades to half a second or are in longitude. The cause of the failure of astronomers to make the moon amenable to their exact mathematics based on the dynamical laws of gravitation, is believed to be some attractive force of which we are at present ignorant, though in all probability one factor is the true shape of the earth, which still awaits accurate determination. Fortunately the chronometer and wireless telegraphy have made seaman practically independent of lunar observations; in ascertaining their position in the trackless oceans.—Westminster Gazette.

Fleas as Broad Jumpers.

The jumping powers of fleas have been much exaggerated, according to a bulletin on insect misnomers just issued by the department of agriculture. The species known as the human flea (Pulex irritans) is probably the best jumper. According to Smith, the maximum horizontal distance this species can jump is 13 inches and the maximum vertical distance less than eight inches. The question of the flea's jumping powers is of importance in connection with the spread of bubonic plague and other diseases of which this insect is the carrier. The Indian plague commission, which has investigated the habits of the Indian rat flea, finds its maximum horizontal jump to be only five inches, while Stimson records the maximum height to which the jump of three and one-eighth inches. Consequently of the "high, wide, and handsome" jumping.

Cottonseed Flour Nutritious.

Flour made from cotton seed is a valuable food for general consumption and an inexpensive substitute for meat. It is remarkably high in protein, which is the food-producing substance of meat, and is readily digested by the gastric juices.

Cottonseed flour is made from the kernel of the seed after the oil has been pressed from it. It is a highly concentrated food and is in no way intended to replace wheat flour or oatmeal or cereals. It could not safely be used as such because in excess of protein is probably as damaging to the human system as the lack of it. It should be mixed with wheat or four parts of wheat flour in making into a cough.

Seeing the Pacific.

Nurses of Balboa bears a peculiar relation to Panama. He was not the first conqueror of the country nor its first settler, nor was he the organizer or administrator of the government in this part of Spanish territory, nor he was the first white man to behold the broad sweep of ocean which we now call the Pacific, and he was a from Panama territory.

Nova Scotia's History.

When discovered by the British in 1497 the Nova Scotia was not named. A few years later it was settled by the French, who called it Acadia. It passed to the English by the treaty of Utrecht, in 1713, and they changed the name from Acadia to Nova Scotia. This name was first used in a grant made by King James I. who was born in Scotland, and chose a name in honor of his native country. The royal grant under the name was made to Sir William Alexander, a Scotchman, who wrote poor poetry, and was created Lord Stirling by king James.

Conservation Begins at Home.

The child is our greatest national asset. Conservation should begin at home. Pure, clean food and proper care are necessary for the infant. Statistics prove that one-breast-fed infant dies to every ten artificially fed. The physician, the midwife and the mother must be taught the necessity of breast feeding. The child must not be deprived of this hereditary right on the issue protest. The expectant mother in the last stages of pregnancy should be taught the proper hygiene of this period.

Trained Crabs Catch Rabbits.

Crabs are put to a curious use on certain parts of the Devonshire foreshore. They are used to catch rabbits. Having loaded a promising burrow, the master takes a crab and affixes a short length of lighted candle to the back of its shell. The behavior of a crab which finds itself in a narrow burrow is well known. It backs in reverse. It therefore starts away up the burrow at top speed, ignorant of the rabbit is horrified at the sight of a jogtrotting flame coming to his sanctuary. Off he goes for the other exit, only to find himself, when he emerges, in a trap.

Two Babies.

Mrs. Newms—O I wish you could see Mrs. Wiggles's baby. It is perfectly lovely, mass a delicate skin texture as it is! It's a perfect little cherub, with the loveliest eyes, the sweetest little mouth, the cunningest little nose, and eyes of heavenly blue. It looks as if it just dropped from heaven and every tiny feature has been fashioned by the angels.

Mr. Newms—Is it as nice as our baby?

Mrs. Newms—Mercy! no, not half—New York Weekly.

Drawing the Line.

Tomdiffe—Is it true that young Greene's engagement is off? Hojax—Yes, Tomdiffe—What was the trouble? Hojax—He wouldn't stand for a flat?" Hojax—No; with one."

What Every Woman Should Know.

A woman is not expected to know much about Russian history or the by-ways of politics of the Austrian empire, but every husband expects his wife to know right off the bat where he threw his dress tie the last time he took it off.—Detroit Free Press.

The Doll Ona.

She—Oh, Charlie, this is so cold! I would like to have something around me. Has—What would you care to have, a fur coat? She—Oh, no, I'd be brought a shawl.—Michigan Gargoyle.

His Supposition.

"So much good advice is constantly being bestowed upon engaged couples and so much of it is misguided," remarked Professor Pate, "that I am constrained to believe that love also blinds at lawsuits."—Judge.

MORTGAGE SALE

Default having been made in the conditions of a certain Mortgage whereby the undersigned Mortgagee, Ella Hayes, of Charlevoix, Michigan, executed and delivered to Ella Hayes, as Mortgagee, of Charlevoix, Michigan, a Mortgage bearing date the 1st day of September, 1910, and duly recorded in the office of the Register of Deeds, for the County of Charlevoix, State of Michigan, in Liber 3 of Mortgages on Page 49 on the 6th day of September, 1910, which said Mortgage was given to secure the payment of the sum of $4,000.00 Dollars, and the said Mortgagee has elected to declare the entire principal sum of said mortgage to be due and payable, and there is now due and payable on said mortgage the sum of $4,000.00 Dollars, and no proceedings have been instituted to recover the said moneys or any part thereof, and the said Mortgagee has elected to declare the said mortgage to be immediately due and payable, and the said Mortgagee will be foreclosed by a sale of the premises described in said Mortgage, and the said Mortgagee will be necessary to satisfy the amount due thereon, and principal and interest, together with the costs and expenses of the Foreclosure and sale, including the attorney fee allowed by law, and in the Mortgage provided, the premises covered by said mortgage are described as follows:

The entire South-west quarter (1) and the South-east quarter (2) of the South-east quarter (4) of Section (2) township (33) North, Range (7) West, in Charlevoix County, Michigan.

HER PART OF THE OUTPUT

All That Girl Really Had to Do to the Gloves Was to Put on the Finishing Touch.

"I've got a new place," said Gertie. "Where?" asked Sadie.

"In the Hight & Lett glove factory."

"Isn't that nice?" said Sadie. "Maybe a pair of gloves some time, will you?"

"Yes, maybe, after a while. I like the work awfully well.

"But isn't there a lot to it?"

"Oh, not much. It's real simple. And we girls have lots of fun."

"But how do you ever get those little pieces sewed in between the fingers?"

"Oh, you mean the—the—well, I've forgotten what they call them; but I don't do that."

"Oh, you just do the rest of it?"

"Now, not exactly. You see, the cloth is woven in one department—it's just like silk stockings you know—and the gloves are cut out in another. Then they send them to one, my department, where they put in those little pieces you spoke of. And then someone else puts on the tips of the fingers, and someone else does fancy stitches on the back, and someone else does something else they up, you know, and someone else puts the buttons on, and—and—I don't know lots more to it! And it's so interesting. And then they send it to be looked over, and the mean old thing that inspects is always sending them back to the girls to do some more."

"And what part do you do?" Sadie asked.

"Oh, me! When you buy a pair of gloves they are always stitched together in pairs. Well, that's what I do."—Wheeling Register.

TAKE CARE OF THAT ITCHING ALL TROUBLING BORDERS ON ECZEMA

Do you regard that itching as a serious thing? It is. Unless you learn to fight it with Dr. Hobson's Eczema Ointment, the disease is likely to cling for months and years. Scores of grateful users say, "Why did you waste those months and years in agony when so cheap a remedy was on the market." This ointment is no experiment. It is absolutely healing in its power. Do not allow it to become serious. Buy a box to-day to fight the beginnings of eczema. 50c. a box.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate Office, in the City of Charlevoix, on the Twelfth day of October, A. D. 1915.

Present: Hon. Stevens A. Correll, Judge of Probate.

In the matter of the estate of John Hamilton Gardner, Deceased.

Charlotte Gardner having filed in said court her petition praying that said court administer the estate of said deceased, and that the 1st day of November, A. D. 1915, be appointed for hearing said petition.

It is ordered that the 1st day of November, A. D. 1915, at ten o'clock in the forenoon, at said Probate Office, be appointed for hearing said petition.

It is further ordered that public notice thereof be given by publication of a copy of this order for three successive weeks previous to said time of hearing, in the Charlevoix County Sentinel, a newspaper printed and circulated in said County of Charlevoix.

STEVENS A. CORRELL, Judge of Probate.

(First Publication Aug. 19, 1915)

MORTGAGE SALE.

WHEREAS, William Moore and Columbia L. Moore, his wife, of Charlevoix County of Ind., Charlevoix County, Michigan, made and executed a mortgage on the 1st day of April, 1910, to the Charlevoix County National Bank, of Charlevoix, Michigan, which was recorded in the office of the Register of Deeds, for Charlevoix County, Michigan, in Liber 3 of Mortgages on Page 475 on which Mortgage there is claimed to be due at the date hereof for principal and interest the sum of Four Hundred Twenty-one (421) Dollars, and no proceedings having been taken at law or in equity to collect said amount, or any part thereof, and the said Mortgagee has elected to declare the said mortgage to be immediately due and payable, and Mortgage will be foreclosed by a sale of the premises described in said Mortgage, and the said Mortgagee will be necessary to satisfy the amount due thereon, and principal and interest, together with the costs and expenses of the Foreclosure and sale, including the attorney fee allowed by law, and in the Mortgage provided, the premises covered by said mortgage are described as follows:

Lot one (1) of Section one (1), containing 36.46 acres of land, more or less, in the Township of Charlevoix, Charlevoix County, Michigan.

Dated this 1st day of August, A. D. 1915.

CHARLEVOIX STATE SAVINGS BANK, Mortgagee.

Attorney for Mortgagee:

THE SUPERVISORS

County Legislature Adjourns After a Fortnight Session in Which The County Affairs Was Carefully Looked After.

After a full two weeks' session the board of supervisors adjourned without day Saturday afternoon.

In about the only warm issue before the board—the ironton section of the Charlevoix and East Jordan highway—the board, to which the question of location was unnecessarily referred, refused to recede from its decision in favor of the Mat Allen bill. Appropriation was made subject to that decision. The matter is now up to the road commissioners, which body favored the lower route. It is now the upper line or no money.

The committee on settlement with road commissioners reported accounts correct. Same report from committee on county treasurer.

The report of the road commissioners showed that on road building for 1913 and 1914 $50,583.25 had been expended, as follows: East Jordan and Boyne Falls, three miles, $15,561.05; Charlevoix and East Jordan, three and one-quarter miles, $7,774.23; Boyne City and Charlevoix, two miles, $12,000.37; Emmet and Grand Traverse State road, two miles, $9,945.97. Salaries of three commissioners 1913 and 1914, $5,207.88. Machinery bought for above years, from general fund, $4,651.95; bought by commissioners from appropriations, $889.06.

Board voted $600 for agricultural society. No appropriation for development bureau.

Equalization committee reported total valuation, real and personal, of county, as $11,798,619.

The report of the poor commissioners showed that the year's expenditures for the poor of the several townships, including maintenance of county farm was: $14,250.36. Allen T. Greenman was elected school examiner, and Herman Goodman was elected poor superintendent in place of E. A. Cross, who declined re-election.

An appropriation of $300 was made for the maintenance of the East Jordan bridge.

Ordered that $20,000 be borrowed in equal amounts between the five banks in the county, at seven percent interest.

Voted to sell county lots on the State street hill. Clerk instructed to advertise.

PLOWING MATCH

Twentieth Annual Plowing Match of Marion Center Grange a Very Successful Event

The Marion plowing matches are milestones in the onward march of agricultural progress in that locality. They fitly serve as "team-accement days" in the school of farm learning.

Last Thursday's event was more than ever a justification of the enterprise. The weather was fine and the turn-out from both country and city was encouraging to all concerned. Socially the event was very enjoyable. The Ladies Auxiliary of the Grange served a bountiful chicken pie dinner.

Following are the prizes awarded:

Sod. Class No. 1.—First prize, Henry Black; second prize, William Hunter; third prize, William Eastcott.

Class 2, General Purpose.—First prize, Clarence Meggison; second prize, Ed. Gregory; third prize, Alfred Williams; fourth prize, Len Rice.

Class 3, Junior class.—First prize, Fred Trimble; second prize, George Willis; third prize, Clarence Elliott; fourth prize, Albert Cook.

Boys' Class, No. 4.—First prize, Byron Meggison; second prize, Frank Cook; third prize, Floyd Black.

A portion of the afternoon was devoted to field sports, constituting a splendid outing for the young folks, while the grown-ups talked shop.

BISHOP GALLAGHER HERE SUNDAY

Coadjutor Bishop Gallagher, of Grand Rapids, arrived in this city last Sunday afternoon by motor-car from Petoskey. Besides on escort of prominent Petoskey Catholics, four Charlevoix cars with parties of Catholic citizens met this party well out on the Petoskey road and joined the escort.

At the Petoskey depot confirmed a class of about fifty young people. At 6:30 after a lunch served by the sisters, the Bishop was whisked back to Petoskey where he was booked for a seven o'clock banquet.

GRANDILOQUENT DICTION

The editor of the Grand Rapids Herald wrote a piece last week about the arrival of autumn that fairly took our breath. And this is the way he described his pulse:

"A flash of scarlet! A gleam of ochre! A tinge of brown! An All-mighty Artist at work with the rainbow for his palette! A symphony of gorgeous color! The lands ablaze with autumnal grandeur! Skies as blue as the heart of the ocean's deep! Air as clear as a diamond's refract! The year's last lovliest smile!

Holy smoke!

THE GOVERNOR AND MILITARY TRAINING

Our good gray governor, as an humble follower of that great pacifist, Mr. Bryan, come out with very emphatic denunciation of military training in the schools and colleges. In this attitude he strikes at the very root of the policy of military preparedness, which is so earnestly advocated by a large majority of the people of the United States, including the chief executive and his cabinet. The governor sees in it a tendency toward militarism.

Discounting, for the sake of argument, the thought of possible war and the need of soldiers, military training in the schools and colleges, within proper bounds, is of great moral and physical benefit to the boy or young man whose training and discipline has been confined to the "benevolent" and indulgent processes of home government. The "setting up" that a boy receives under the supervision of a trained noncommissioned or commissioned officer of the regular army or National Guard, augments his physical force and endurance and induces correct carriage. Moreover, the lessons of discipline, which begot self-discipline, are most valuable to the boy who, at home enjoys his fellows, absorbs the idea that his personality is supreme.

He is taught that in whatever calling in life he may choose he is under a higher authority, and subservient to a higher judgment. Military training inculcates, as no other training will, prompt obedience to the commands of legally constituted authority.

What makes the governor's attitude more surprising is the fact that he has risen his elevation to the gubernatorial chair, been brought face to face with the pains of trained soldiery. Two years ago, as commander-in-chief of the Michigan National Guard, he sent approximately three thousand trained soldiers to the copper country to suppress insurrection and protect life and property. All right thinking citizens approved the act, and results justified it. The writer personally heard the governor express his pride in the brigade under his nominal command.

The lad who is properly taught how to handle a rifle in ranks, form fours and company front, who knows how to strike his shelter tent and make his blanket roll, is the boy from whom the good soldier is made, and he who says soldiers are not necessary flies in the face of history and good American sense.

With Mr. Bryan, the governor believes in the Monroe doctrine, but does not believe in providing means for its enforcement. This doctrine never was in greater danger than now, and the country was never in poorer shape to maintain it.

The governor, like the president, is a teacher of surpassing ability, wedded to a conviction that creates business men with foot-ball training on the side. A little of West Point or Culver spirit injected into our educational system cannot be characterized as a tendency toward militarism of the European sort. It is but sowing the seeds of preparedness.

CONCERNING WOMAN SUFFRAGE

The president went home to New Jersey and cast his ballot for woman suffrage. The result in the State was a defeat of the proposition by a large majority.

The president's attitude on this issue is not strange, considering the fact that at this particular time he is more than usually susceptible to feminine influence. Probably the good lady who will soon preside over the white house had a more direct and forcible influence over his vote than public sentiment has had over his Mexican policy. But long life and happiness to the president. It matters nothing that his opinions are challenged by an obscure country journalist of opposite political faith.

We have too high a conception of the power of woman at the hearthstone to impose upon her a joint responsibility with man in the electorate. We believe that domestic economy is coordinate with political economy in National progress. In the former sphere of human endeavor woman is supreme. Moreover, she exercises a potent influence in the latter, which is not unlike the power of the glacier, the source of which is in the lofty mountains, towering above the wrangling life of the plains below. From the hearthstone to the hustings is a pathway beset with danger to the hearthstone.

The ballot already lies at the root of enough discord in the turbulent political haunts of man, without invading the sacred precincts of his domestic domain.

RHEUMATISM AND ALLIED PAINS —THEY MUST GO!

The congestion of the blood in the nerve causes pain. Sloan's Liniment increases the congestion and starves the blood to deadness. The body's warmth is renewed, the pain is gone. The man or woman who has been rheumatic, neuralgic or other pain and fails to keep Sloan's liniment in their home is like a drowning man refusing a rope." Why suffer? Get a bottle at druggists, 25c, and 50c. $1.00 bottle holds 3 times as much as 50c size.

TELEPHONE IMPROVEMENTS

General Repair Work Being Done on Toll Line Owned By The Michigan State Telephone Co.

General repair work is in progress on the thousands of miles of toll line controlled and operated by the Michigan State Telephone Company throughout the State of Michigan, getting the long distance circuits in such condition that there will be the least possible amount of trouble during the winter months as a result of the severe storms occurring during that season which put the toll department of the company to the test.

The Michigan State Telephone Company prides itself on the excellent service rendered over its toll lines. To keep these circuits in perfect condition requires careful attention to the minutest detail at all times and especially during the months immediately preceding the stormy days of the winter season. It is the established policy of the company to anticipate trouble and to remedy defects on its lines before any difficulty arises. This requires the expenditure of thousands of dollars to eliminating trouble breeders. A considerable amount of equipment is discarded that might possibly be made to do further service at the risk of interruptions. However, "service first" is the slogan of the Bell organization which believes it false economy to try to save in equipment at the expense of public convenience.

People in general have no conception of the many little things that are given attention by the maintenance department of the telephone company to keep the lines in a condition. Sagging wires, broken glass insulators, overhanging branches of trees along the right-of-way, deteriorating cross-arms and pins, all these and many other matters like them go to make up the mass of detail that demands attention if toll lines are to be operated at their highest efficiency.

The pent-up energy of Michigan's youth that gives vent to itself during the summer months, in part, by throwing stones at everything in sight, costs the Michigan State Telephone Company thousands of dollars annually. The carvest of broken insulators every fall reaches considerable proportions. They are carefully inspected at this time of the year and if defective, replaced, for, if neglected, they will likely result in a great loss of transmission equivalent at a later date, which would make the service unsatisfactory. Even the little fir-cones that fasten the line to the glass insulators must be in perfect condition if the company is to take no chance on having the service impaired. The pins that hold the insulators must be sound lest they give way during a storm and permit the wire to be blown over against the other, destroying the service.

The trimming of trees along the right-of-way is receiving special attention as an enormous amount of trouble is caused when they are allowed to interfere with the wires. Branches and twigs that come in contact with the wires sap the current and reduce the transmission

THE RETURN OF THE ARMORER

1—Front Shield of Henry VII (Hilsmere and Hesters)
2—Helmet, Sixteenth Century
3—Helmet, Late Middle Ages (Fourteenth Century)
4—Helmet, Late Seventeenth Century
5—Helmet, Early Eighteenth Century
6—Helmet, Late Fifteenth Century (Fourteenth Century)
7—Helmet, Late Middle Ages (Fourteenth Century)
8—Helmet, Late Middle Ages (Fourteenth Century)

MARSHAL MAURICE of Saxe, writing in the middle of the eighteenth century, explored the disease of defense's armor as being the cause of large number of casualties in battle. He very truly observed that most of the wounds caused by sabre, sword, lance, or pike thrusts would be minimized, if not prevented, by the use of some kind of metal protection. He does not suggest that its weight and unwieldiness was any drawback, for he recommends a cuirass made of buff leather, reinforced with metal strips, weighing in all 30 pounds, as a very useful equipment, and he gives as his opinion that it was only the cost of armor which brought about its disuse. From the middle of the sixteenth century there had been much discussion as to the practical value of armor, and Sir John Smythe writing in 1590, cites the death of Sir Philip Sidney from a spent bullet as a reason for adhering to the old fashion in military equipment. As early as 1549 armor was proved by musket or arquebus, and in 1590 Sir Henry Lee, master of the armories, arranged a trial to determine the respective merits of Shrewsbury and Flight's arquebus and Insbruck metal, with results disastrous to the homemade product.

In the Tower collection, under the date of 1667, we find that one Richard Hale proved his armor as well proof against as will cover the bullet in the palm of the hand." It was this proof by musket or arquebus which brought decadence of the craft of the armorer, who had by late those lost the art of tempering his metal, which produced the greatness and comparative excellence of the seventeenth century—proof against firearms, it may be so heavy and inconvenient as to be entirely unsuited for extended expeditions, and for the use of mounted cavalry. The best relic of the composite suit of plate was the small cross-shaped gorget worn by infantry officers up to about the year 1830. Once this had been a practical protection to the throat, but latterly it shrank to a small piece of brass, little larger than a regimental badge. Quilted armor, brigandines, and chain mail were occasionally used after gold armor had been given up, but these were solely used against the attack of the assassin. Napoleon III is said to have worn a defense of mail, the cavalry of the Confederate army in the American Civil war favored a vest lined with plates of steel, and Neil Kelly, the bushranger of our own day, wore a helmet and cuirass of bulletproof boiler plate. The thin strips of steel used in the brigandine were only of value against sword cuts, and it was for this purpose that they were employed in the "secrets" or hat linings, of which there are still large numbers in the Tower, and in the hat of Hradzsan in Prague, in the Ambrasian museum, Oxford. The modern French and German defences of this nature would seem to be quite useless against bayonet and rifle. For many years firearms have brought forward contrivances, claimed to be bulletproof, which provided little in the means on the music call stage, but none ever proved to pass the searcher's rifle wielding invention. As has been repeatedly pointed out in recent articles on this subject, the only value of armor at all at the present day is as a protection against glancing or spent bullets. It has no value whatever against the point-blank impact of a projectile, for, even if the defense is not penetrated, the repulsive shock is as serious as a bullet would. It is therefore this glancing surface which should be studied if armour is to have any place in modern warfare, and metal of a high temper and light in weight should be employed. It is undeniable that such defenses will ever be officially recognized, for, if issued on a large scale, they would greatly impede the mobility of troops already carrying more dead weight than did the soldier of the sixteenth century in his suit of half-armor. If such contrivances are purchased privately an exhaustive test should be insisted upon, and proof should be recorded by some recognized authority. It is said that Charles I, when the Armorers company of London were ordered to carry out such tests and proved an armor that satisfied the inventor with their mark. If these defenses are carefully made of leather, or material other will assuredly be far more of a danger than a protection.

It is impossible to criticize the modern productions without seeing them in actual use in the field, and it would be a great loss if the gilded shield with crossed bars in its direct opposition to the theory that the "glancing surface" is of importance, for here, wherever the bullet strikes, it will deliver its blow full on the target, and not fly off at a tangent as it would from Henry VIII's picket shield which is preserved in the Tower. The only shield—or rather, the only required condition, except that it should be portable—was a little quadrangular, with the crossed bars of the sixteenth century. The French infantry appear to provide some helments for the bullet in the straight brim and high crown, but again it should be noted that it is generally admitted that practically this defense is seen in action.

Besides the military body armor of the late seventeenth century in the Tower collection there are a few interesting specimens of siege implements which were the precursors of modern contrivances. The chevaux de frise of the days of Wellington and a sense of sergeants' pike joined by horizontal rods, and so arranged that they can be arranged across a road on the breach in a wall as a protection against cavalry—an antecedent of the present barbed wire entanglement. The suppose mantels of leather and iron have continued in use from the time of the Romans up to today, and the wooden trapping that were used in the middle of the seventeenth century show that even then armor was seriously used in the trench work. Several of the eighteenth century muskets in the Tower of London have brass cups fixed to the barrel or butt from which grenades were thrown, a necessary precaution when the fuse used was the slow match, step by step we can trace the evolution of military defense, and it is peculiarly interesting to find that today, in the light of all our scientific knowledge and experience, we are suddenly forced back to make use of appliances of four hundred years ago, which we had not recently considered worth the trouble to discard.

The facts show that from the stone age onward armor has been a necessary evil. It has always been worn. At the present day, to be sure, it appears less for service than as a uniform of the bodyguard of royalty. And you recall that cuirassier and steel breastpiece are still seen in St. James park, on St. Patrick's, or indeed in Republican France, where the tradition of the bodyguard of the emperor still survives. But even these relics of ancient armor are known to be serviceable, saving many a guardsman from wounds of saber or lance or even high velocity projectiles when striking at an angle.

It is true that the disuse of armor followed the invention of better grades of powder, but it must, nevertheless be remembered that during the time when armor was worn efficient in Europe, gunpowder was in common use. During the latter half of the sixteenth century not only cannon but guns and pistols were seen everywhere. Never theless armor continued to be used. It was in many cases the matter of expense which limited the wearing of armor, for in those days the suit of armor was high, very high. Clearly, therefore, a man would be loth to wear a really good harness—one which might have cost the equivalent of ten thousand dollars if the present purchasing power of money—and yet if he did not he gave him was not complete he preferred then to wear comparatively heavy armor, and in the end to neglect wearing armor altogether.

It can be found that the armor kept away from him, the range of firearms increased. Later on he took a chance of receiving a wound.

At one only during the Thirty Years war, say before 1650, that where armor of very great weight—almost intolerable—was made use of. Then, too, one must remember that there was for a long time a feeling that armor was not heroic. Even in earlier centuries many a distinguished officer thought it chivalrous to appear in battle only partly armed. Thus we read of historical personages going into battle with helmet visor raised, and of such a knight-errant as Sir Philip Sydney fighting bareheaded. The feeling that it is discreditable to wear armor is strong even at the present day.

The reasoning runs, "It is cowardly to take advantage of an adversary. Shoot a man in a duel would not wear a shirt of mail; so why should he be armed in battle, which is only a duel on a larger scale?

Shields should be and are already in constant use. It may be recalled that the Japanese developed this system effectively in their war with Russia, especially in the capture of "Two Hundred and Three Meter hill," where they moved along in front of the advancing infantry on quarter times the Japanese sometimes wore a flat shield along open the broad, but always as a defense against shot.

When one considers the value to the community of even one soldier, surely no nation should afford not to protect him as best it can.

The descendents of an individual now among us thousands in the course of a couple of centuries, so one can figure out what the human losses to the countries now at war may represent in the future. If armor will save even a few hundreds of men it will certainly pay as a national investment to use it. The time will soon come when governmental commissions will take up the matter effectively.

COUNTRY OF DISTRESS

ARMENIA HAS BEEN A SUFFERER FOR MANY CENTURIES.

Russian, Persian and Turkish Flags Float Over the Land—Possibility That Liberty May Result From the European War.

The lesser nations have come into prominence during the war because of the efforts of patriotic committees to revive ancient governments. The Balkan states and Poland and Lithuania are examples. Of late there have been numerous reports of distress in Armenia, due to the conflict of Russian and Turkish arms. Months ago voices were raised in England on its behalf when it was seen that Russia, England and France were to be banded together against the Germanic-Turkish powers. Now comes the demand that the aspirations of Armenia be recognized, that the Christian people who for generations have suffered persecution be permitted to order their own affairs, and to take up the self-government which they lost many years ago.

Armenia, like Poland, lies today in three parts. A portion is under the Russian flag and a portion nominally under Persia. But the greater part is in subjection to Turkey. In Russian Armenia there are about a million natives; in Persia, 150,000, and in Turkish Armenia, 1,500,000. Religion, caste and business, with the influence of international politics, have been the causes of much misery. The Christian faiths are split. There are Gregorians, Roman Catholics and Protestants. The lot of all Christian Armenians—and this includes the vast majority—has been especially hard in Turkish Armenia, where there are 4,500,000 Moslems. Armenia lies south of the Caucasus and the Black sea. Anciently it was a kingdom, enjoying a high degree of culture many centuries before the Christian era. Later it was under the dominion of the Medes and Persians. The Hebrews in their wanderings, came into contact with the Armenians. In the mightiest days of the Roman empire, Armenia experienced at first subjection and then a degree of protection to which its later lot stood in grim contrast.

Early in the sixteenth century Armenia's partition became definite. That period marked the military rise of the Moslem. From the introduction of Christianity the conflict between Moslem supremacy and Christian was assured, and was the forerunner of the dreadful massacres of the nineties. The modern "Armenian question" appeared after the signing of the treaty of San Stefano, which was to the Armenians less than a "scrap of paper." Turkish assurances were given, as given to the powers, were never carried out. Persecution increased, and Russia was only little better than Turkey. The vicious elements of the Moslem population were stirred, purposely, it seemed, and the massacres of recent history followed. Russia, perhaps through the influence of Roman Catholics, and Russia attempted a like service for Greek Catholics, and the fury of the mob fell on the Greek Protestants. Meanwhile Great Britain and the United States the latter to a less extent, interceded themselves in the affairs of the European powers in general, prevented massacres, or, if massacres occurred, prevented their continued, and up to the time the present war began revolutionary movements were developed for relief from Turkey. The time is especially favorable for the consideration of Armenian claims.

Dead Man Drives Horses.

While John Ferrell, of Sherman, died had not built upright on the wagon seat, his lax reins hanging between his stiffening fingers, his team of horses trotted safely for more than a mile on the highway from Lodi to the foot of Garrett mountain from Lodi to Rockfield, N. J.

Garrison, sixty-seven years old of 43 Passaic street, Rockfield, Lodi was one of the largest contractors in that vicinity some years ago. He started to drive from his home in Lodi to his stone quarry at Rockfield. Often his horses had passed this way to the quarry. As the familiar end of the journey the horses stopped.

Men at the quarry saw Garrison seated on the box, silent, motionless. No one knew when they died. The horses shook him, they lifted him from the wagon. County Physician Amerson said heart failure had been the cause of death. He said he believed the horses drew up at the quarry.

Floating Base for Submarines.

The South American country of Brazil may soon possess an innovation for submarine warfare in the form of a floating submarine base capable of taking care of six submarines of the 400-ton type. It will be provided with the necessary auxiliary equipment for charging the accumulators and air reservoirs of the underwater craft.

The floating base, or tender, will be 315 feet long, 31 feet beam, and will have a draft of 13 feet. Sixty-six hundred horse power will be developed by the six-cylinder Diesel engines, of the two-cycle single-acting type.

A Italian company is at Spezia is building the craft for early delivery to Brazil. It is to be taken over by the Italian government.

Girls Will Marry Crippled Soldiers.

A letter in the London Daily Mail says: "Young girls have expressed the fresh of English girls have expressed their willingness to marry crippled British soldiers and to care for them as their contribution to their country's cause. The offers came in the form of a published suggestion that plucky girls might be of service so, and all that stands in the way of the success of this wholesome matchmaking is that no degree of plain and patriotism seems sufficient to overcome manifest shyness. The girls have as—"of to marry but they cannot walk up to the first-hobbled soldier they see and tell him so. Meetings are to be arranged by certain women at the London end, and, where these self-sacrificing girls will be introduced to the jolting hundred they have agreed to take as husbands.

Hen Lived in Well.

When a cover was removed recently from an old, abandoned well here on the home of Sharon Dupree, Deep and street, after the well had been closed up for over nine months, it was discovered that a hen, which had been missing for over nine months, was at the bottom of the well.

The hen made her presence known by her clucking, and was rescued by L. D. Palmer.

In addition to the hen, Mr. Palmer brought up 27 eggs which the hen had laid during her long confinement. The fact that there were plenty of worms and bugs in the well enabled the hen to keep alive.—Macon Dispatch.

CUTICURA SOAP BATHS

Followed by a Little Ointment for Baby's Tender Skin. Trial Free.

They afford infants and children great comfort, permit rest and sleep and point to speedy healment of eczemas, rashes, itchings, chafings and other skin and scalp troubles, nothing better at any price for the nursery and toilet.

Sample each free by mail with Book. Address postcard, Cuticura, Dept. XV, Boston. Sold everywhere.—Adv.

Hard to Damage.

"Alpine scenery is very grand."

"Very durable, too. I imagine it will pull through the war all right."—Kansas City Journal.

When all others fail to please Try Denison's Coffee.

A textile made in China from raw silk can be buried in the earth a year without deteriorating.

Keep Young

Doan's Kidney Pills

Just as well be young as seventy as old at fifty.

Many people past middle age suffer backs, ears, aching backs, and distressing urinary disorders, when a little help for the kidneys would fix it all up. Don't wait for grand, strong testimony. Bright's disease not in your way. Use Doan's Kidney Pills. They have helped thousands, young and old. They are the most widely used remedy for bad backs and weak kidneys in the whole world.

DOAN'S KIDNEY PILLS 50c at all Stores Foster-Milburn Co., Prop., Buffalo, N.Y.

Generous sample on receipt of 10c from MOONE CHEMICAL CO., ROCHESTER, N. Y.

Sick Women Attention

Is it possible there is a woman in this country who continues to suffer without giving Lydia E. Pinkham's Vegetable Compound a trial after all the evidence that is continually being published, which proves beyond contradiction that this grand old medicine has relieved more suffering among women than any other one medicine in the world?

We have published in the newspapers of the United States more genuine testimonial letters than have ever been published of any other medicine for women, and every year we publish many new testimonials, all genuine and true. Here are three never before published:

From Mrs. S. T. Richmond, Providence, R. I.

PROVIDENCE, R. I.—"For the benefit of women who suffer as I have done I wish to make known what Lydia E. Pinkham's Vegetable Compound has done for me. I did some heavy lifting and the doctor said it caused a displacement. I had to have my womanhood taken from me before I was born and inflammation set in, then nervous prostration, from which I did not recover until I had taken Lydia E. Pinkham's Vegetable Compound. The Compound is my best friend and when I hear of a woman with troubles like mine I try to induce her to take your medicine."—Mrs. S. T. Richmond, 54 Progress Avenue, Providence, R.I.

From Mrs. Maria Irwin, Peru, N.Y.

PERU, N.Y.—"Before I took Lydia E. Pinkham's Vegetable Compound I was very irregular and had much pain. I had lost three children, and felt weak all the time. Your Vegetable Compound has helped me so nothing else has done, and I am thankful every day that I took it."—Mrs. Maria Irwin, R.F.D. 1, Peru, N.Y.

From Mrs. Jane D. Duncan, W. Quincy, Mass.

SOUTH QUINCY, MASS.—"The doctor said that I had organic trouble and he doctored me for a long time and I did not get any relief. I saw Lydia E. Pinkham's Vegetable Compound advertised and I tried it and found relief before I had finished the first bottle. I continued taking it and I went through middle life and am now a strong, healthy woman and earn my own living."—Mrs. Jane D. Duncan, 3 Spear Street, W. Quincy, Mass.

Write to LYDIA E. PINKHAM MEDICINE CO. (CONFIDENTIAL) LYNN, MASS. for advice. Your letter will be opened, read and answered by a woman and kept in strict confidence.

Steel Pipe Piles.

Piles of steel pipe 14 feet 7 inches in diameter and three-quarter inch thick have been driven in the new quarter of the landing at Bishop Canal Zone, and their tops have been cut off level by an acetylene torch—some cuttings being completed in four minutes. About two feet of concrete in the bottom end served to sink the pipe which, when being driven, was fitted to the top with re-enforced concrete. A ballasted frame 24 feet high by 10 feet long and 12 wide was used to guide the piles, and was moved about by a derrick crane.

Cost of Sugar Beets.

A recent investigation into the cost of sugar beet growing in England showed that the expense incurred by the farmer in growing an acre of sugar beets was approximately $41 representing a cost per ton of beets of $4.10. The charge for lifting and transportation brought the cost of the beets delivered at the factory up to $6.10 a ton.

MICHIGAN'S MANUFACTURING INDUSTRIES

FIRST ARTICLE

(From "Michigan—the Land of Plenty.")

NO state in the Union offers greater opportunities to the manufacturer than Michigan. The history of the growth of the manufacturing industries at the state is proof conclusive of the truth of this assertion. While the growth of manufacturing industries has been closely related to the development of the splendid transportation facilities of the state, yet the rapid advance in manufactures dates back as far as 1855, when the first canal, affording connection with the eastern seaboard, was opened. The transportation facilities of the state at present, both by rail and by water, are excellent. With over nine thousand miles of railroad, Michigan is sixth state in the Union in its length of trackage. The state borders on four of the great lakes, which furnish splendid rail and water transportation facilities, the state is most fortunately located with reference to the great markets of the country. It should be noted that Michigan is located but a short distance from the center of population of the country, thereby giving the state remarkable market advantages. New York, Buffalo, and in fact the entire East is a ready and accessible market for Michigan products. Cleveland, Indianapolis, St. Louis and the other cities of the South are within easy reach. Chicago, Milwaukee, St. Paul, Minneapolis and other cities of the West likewise receive their portion of made-in-Michigan goods. There are, perhaps, two reasons why Michigan place Michigan in the fore ranks as a manufacturing state. One is the abundance of water power afforded by the many rivers and streams, and, second, the varied manufacturing industries within its borders.

Importance and Growth of Manufactures.

Michigan has for many years been one of the leading manufacturing states. In 1904 the value of its manufactured products amounted to $411,169,000; in 1909 it had increased to $713,396,000, and in 1914 it amounted to $685,109,000. The early development of manufactures in the state was due largely to the utilization of its extensive forests, while the growing markets afforded by the rapidly developing West, and advantageous situation of the state with reference to the markets of both the East and the West, and its important central location have all contributed to its later progress.

During 1914 an average of 244,000 wage earners, representing 2.3 per cent of the total population of the state, were employed in manufactures, while in 1909 an average of 229,000 wage earners, or 3.2 per cent of the total population were so engaged. During this period the number of manufactured products per capita of the total population of the state increased from $25 to $184. The proportion which the manufacture of the state represented of the total value of the products of manufacturing industries in the United States increased from 1.1 per cent in 1849 and 1.2 per cent in 1899 and 1.3 per cent in 1909. The growing industrial importance of Michigan is indicated by the fact that in the value of manufactured products it has advanced from seventeenth place among the states of the Union in 1849 to ninth in 1899, eighth in 1904, and seventh in 1909.

In 1909 the state of Michigan had 9,119 manufacturing establishments which gave employment to an average of 271,071 persons during the year and paid out $153,858,000 in salaries and wages. Of the persons employed, 221,499 were wage earners. These establishments turned out products to the value of $685,109,000, to produce which they used materials to the 600 were utilized. The value added by manufacture was this $317,407,000 which figure best represents the net wealth created by manufacturing operations during the year.

Manufactures.

Five leading industries of Michigan, as measured by value of products—1909.

Industries	Value of products	Per cent of total for all industrial in the State. Value of products.	Wage earners. Number.	Per cent of total for the industry in United States Wage earners.	Value of products.
Automobiles, including bodies and parts	$98,651,461	14.4	28.8	28.3	35.3
Lumber and timber products	85,555,000	12.5	15.4	3.7	4.1
Foundry and machine shop products	45,396,000	6.6	6.1	1.9	2.1
Flour and grist mill products	37,280,000	5.4	2.2	1.1	1.1
Furniture and refrigerators	25,641,000	4.2	2.2	3.9	3.9

Automobiles.

The manufacture of automobiles in Michigan on any considerable scale commenced in Detroit less than a decade ago, although it had been carried on to a limited extent prior to that time. The industry developed rapidly, and by 1904 Michigan had become the leading state in the manufacture of automobiles, which position it held in 1909. In 1904 Michigan contributed 26.6 per cent of the total value of products for this industry for the country as a whole, while in 1909 the proportion had increased to 38.8 per cent. The total value of products of this industry in Michigan in 1909 was $98,651,000, which was more than twelve times the amount reported for 1904, while the value added by manufacture for this year was more than that reported in 1904. Of the total value of products, the cost of materials and values added by manufacture for the state in 1909, the automobile industry contributed 14.1 per cent and 17.5 per cent, respectively, while of the total increase in the value of the state's products for all manufacturing industries in Michigan, $98,651,000 of the $88,653,000, or over one-third, was reported for this one industry.

Lumber and Timber Products.

This industry in Michigan dates from 1834, when the first steam sawmill was built in the Saginaw valley. Lumber and timber products were reported in 1849 there were 558 establishments reported, which employed an average of 1,344 persons and turned out products valued at $2,464,000. In 1909 there were reported as well as those which prepare pickles, preserves and sauces. In 1909 there were 1,980 establishments reported for these seven industries, which employed 30,879 persons and manufactured products valued at $100,656,000, adding $75,440,000 to the cost of materials by the process of manufacture. This group of industries, however, is of much less importance relatively when measured by value added by manufacture or average number of wage earners than when measured by value of products owing principally to the comparatively simple processes involved in the manufacture of flour mill and grist mill products, and butter, cheese and condensed milk, and in slaughtering and meat packing. Each of these seven industries showed a noteworthy increase in value of products during the decade, the largest percentage of gain being that of 154 in the beverages industry and the smallest that of 41.1 in the flour-mill and grist-mill industry.

Beyond the Limit.

Redd—Traveling at 60 miles an hour continuously, a train would cover the circumference of the earth in 17 days.

Green—So would an automobile.

"No, it wouldn't, for the automobile driver would have to spend a lot of time in court."

The Easy Way.

"Here's a woman wants a divorce because her husband throw chopped onions in her face."

"Well, she didn't have to swallow his fists as long as she kept her mouth shut."

Appreciation.

He—Madam, I am proud to inform you I am a suffragette today.

She—You needn't be. Anybody can see some amateur had bungled the job.

WHY HE WAS IN THE WAY

Presence of Chaplain Prevented Drivers Talking to Their Horses as They Wished.

The weather had been very wet for weeks, and the roads, "somewhere across the Channel," were in a very bad state.

Consequently, it was not surprising that a wagon in a certain British supply column suddenly dived into a hole full of mud, and refused to budge.

At the critical moment up came an army chaplain, who at once proffered his services.

"Men," he said, "I see you're in difficulties. Can I be of any help?"

"Yes, sir," answered a burly sergeant, bluntly, as he mopped his brow, "you can give us the greatest help by making yourself scarce."

Making himself scarce!" gasped the chaplain. "Why, how—"

"Yes, sir," broke in the sergeant, "you see, we can't very well say to the horses what they'd understand, while you are about!"

LADIES! LOOK YOUNG

How Thousands have Restored Natural Color, Dandruff Removed

Gray-haired persons will be interested in the reports of thousands who have regained the successful accomplishment of Hay's Hair Health. It is not a dye, but a tonic. It does not rub off, but is so prepared that the natural color and lustre of youth is restored. Not a sticky, greasy compound, but a clean, Grayness and some scalp troubles and hair troubles are due to a lack of nourishment and a little attention will bring back the color and lustre of youth. Hair becomes soft, fluffy and beautiful. Dandruff is a germ disease and must be treated as such. Hay's Hair Health is sold by druggists at 75c a bottle, or direct upon receipt of price and dealer's name also sent to Philo Hay Specialty Co., Detroit, Dept. 17. Price refunded if it fails. Adv.

SAVED MINISTER'S LIFE.

Rev. W. H. Warner, Frederick, Md., writes: "My brother was delicate, my back was affected and took the form of Lumbago. I had been troubled with rheumatism, pains in my muscles, pressure or sharp pain on the top of my head and nervous dizzy spells. I had other symptoms showing that my kidneys were at fault, so I took Doddy's Kidney Pills. They were the means of saving my life."

Dodd's Kidney Pills, the pop-box at your dealer, or Dodd's Medicine Co., Buffalo, N. Y. Dodd's Dyspepsia Tablets for Indigestion have been proved, 50c per box. Write for Hogsbeard Hints, also music of National Anthem free.

GOOD ENOUGH AS A SAMPLE

Quality of Helping Was All Right, But in Quantity It Left Much to Be Desired.

Jacky had been asked out to a "grown-up" dinner. Swelling with pride, he took his seat at the bottom of the table and looked round—slightly awestruck—at the imposing collection of wines and unctus.

Then his attention became fixed on the ancient relative who was carving an enormous turkey, and his mouth watered as he saw the big helpings being handed round.

But the carver, who did not know much about little boys, cut off a tiny portion for Jacky.

"Is that the part of the bird you like, my little man?" he asked, as a servant handed Jack the plate.

Jack looked at it for a moment, and then handed it back.

"Yes," he said; "I'll have some of that, please."

Hereditary.

The baby had swallowed his bottle of milk, and the proud mother thought it would be a good time to get him to sleep. "Hush!" she said to her. "The baby simply guzzled."

"Isn't that perfectly wonderful!" said the mother.

"Well," replied the baby's uncle, "it reminds me very much of the way his father takes when he has been busy with a bottle."

Paw's Little Joke.

Little Lemuel—Say, paw, what is a stenographer?

Paw—The diamond, my son, is one kind of a stenogram.

Time is money.

"Yep, but it's mighty tough if time is all you've got to spend."

Case of Hunt.

"You're not smoking as much as you used to. Did your doctor order you to stop?"

"No. I'm a martyr to fashion."

"What's fashion got to do with smoking?"

"If you saw my wife's dressmaker and milliner bills you wouldn't ask such a foolish question."

Fitting Reception.

"How do your women audiences take to your candy-making lectures?"

"Oh, they just eat 'em up."

Nothing flatters a fool so much as asking his advice.

The General Says—

Roofs don't wear out—they dry out. When properly made they dry out very slowly and give the best service.

Certain-teed Roofing

Made with water-proof asphalt and coated with a harder blend of asphalt, which keeps the soft saturation within—the life of the roofing—from drying out quickly. Guaranteed 5, 10 or 15 years according to thickness. Guarantee backed by the largest Roofing and Building Paper Mills in the World.

Sold in your town at reasonable prices by your local dealer.

LEAVES JAIL FOR MINISTRY

Pardoned Murderer Has Become Highly Educated During 20 Years He Spent in Prison.

George Jones, who was serving a life sentence in the state penitentiary for murder, has walked north a free man, pardoned by Governor Hatfield. At such he left for Kentucky, where he will enter a college and prepare for the ministry. Jones, who was model prisoner—Mountain (W. Va.) Dispatch New York World.

Jones's life sentence for the killing of Miss Emma Davis, daughter of Colonel Stoleton John W. Davis, who has been changed, in prison, to relief work for years. When Jones was received (1) he was illiterate, of a mind of a child of twenty, who could neither read nor write. Today he is a well-educated man of forty. He killed Gordon Setle, a gambler and barkeeper, in a dispute over money. He is known as a quiet, good man.

Those Poor London Cats!

An urgent appeal is made in behalf of a cats home, stating that "the dreadful war will break up unless our kind friends help us to hold on," moves the Times in an editorial present.

"In the throes of the most frightful war of modern times," remarks the paper, "when millions of human beings are suffering death, mutilation, famine, disease and the added anguish that comes of seeking before and after, enormous bereavement, what about our animals seem a little out of season.

"Our serious phase of the cat situation is the large number left behind by departed or interned Germans in London directed to Philadelphia Record.

"If one had a voice which would reach to Gen Foch or Field Marshal French, we would say, 'Stop! Two hours for us cost us—'"—Philadelphia Record.

Annual Fur Opening Sale

Wednesday, Nov. 3

Entire line of Fur Coats, Muffs, Scarfs, Etc., of a leading Fur Manufacturer on sale for this day only.

J. L. CRANE.

.·. Local and Personal Notes .·. .·.

E. F. Sloan has leased and is occupying the Miller house on Park avenue.

Hon. A. Buttars and wife are at Northport visiting Mr. Buttars' brother for a week.

Mrs. Perry Bossman of Detroit, spent Sunday here with her sister, Miss Maggie Colter.

The steamer Colombia took a load of shingles from Beaver Island to Traverse City Sunday.

Call in and inspect our job stock and samples. The Sentinel is at the front in all classes of work.

At the rink Saturday evening of this week there will be a Hallowe'en skating party and masquerade.

Otto Hines, Earl Muller and Dr. Will Mitchell attended the big foot ball game at Ann Arbor Saturday.

The State street sewer work, moving south, has reached Antrim street, and is still progressing satisfactorily.

There will be a special meeting of the Maccabees on Friday evening, October 29th. A large attendance is desired.

In another column Mrs. Thos. Shawley advertises a sale of her furniture and household effects at 217 Park ave.

Lou Comfort, of the lighthouse construction department, joined his family here Saturday on a five day leave of absence.

Mr. and Mrs. A. J. Hamilton returned home last Friday evening from their two week's auto tour through the southern part of the state.

Miss Helen Armstrong left Friday for Ann Arbor for a few days visit, then going to Saginaw to attend the State Teachers' convention.

Geo. A. Crouter and wife, Mrs. Geo. W. Crouter and Mrs. W. E. Hampton, left Thursday morning in the Crouter Buick car for a tour through the south.

The ladies of the Eastern Star will serve a Hallowe'en supper at Masonic Temple Friday evening of this week from 5 to 8. Bill 25 cents. Everybody invited.

The steamer Kansas, which has been on the Chicago-Racine-Milwaukee run, came in Tuesday in place of the Missouri, thus ends the N. M. T. business here for this year.

Mr. and Mrs. J. S. Baker leave this week for St. Augustine, Florida, where they have leased the Grenada, a winter resort hotel owned by Musselman, the rug man, well known here.

About twenty Lady Maccabees went to Marion Monday to celebrate with Mrs. James Adams her 70th birthday. The ladies went loaded with much good cheer and good "vittles."

An interested visitor to Charlevoix last week was Mal Livingston, who, as boy and man, formerly lived here. It is fifteen years since he last saw the town. He now lives at La Crosse, Wis.

Forrest Bartholomew returned from Chicago Saturday with the plans and specifications for the new Blanchard store building, the work on which will proceed as soon as the ground can be cleared.

Mrs. Jones McCrory went to Grand Rapids Monday, where she will visit friends for a week. Mr. McCrory will follow her with the car taking Mrs. McCrory in for an auto tour to their winter home in North Carolina.

The new 70 foot dock of the Coal and Wood Co. was completed this week. Work will be commenced at once on a 70 x 80 foot warehouse, which will be completed before navigation opens. Next season the old warehouses will be demolished and another large warehouse erected. This will give the Coal & Wood Co. about 200 feet harbor front.

Mr. and Mrs. E. L. Hollingsworth, of Rensselaer, Ind., well known members of the Belvedere summer colony, announce the engagement of their daughter Cecilia to Mr. Horace B. Cloubourn, of Harmony, Maine. The groom is a graduate of Dartmouth College. The bride has many acquaintances in Charlevoix.

A country editor wrote to a catalogue house for some advertising. They replied that they would be glad to use his space, but would like to know what territory his paper covered, whereupon he told them: "This paper goes from New York to San Francisco, from Canada to the gulf, and it keeps me working until two o'clock in the morning to keep it from going to h——."

Mrs. A. M. Dolberg, of 116 W. Upright avenue, was given a surprise on Monday afternoon, in honor of her birthday, by a number of her lady friends. Music and sewing were enjoyed during the afternoon. A birthday luncheon was served, after which she was showered with beautiful gifts from her many friends with their best wishes.

Jacobs & Dawson is the name of a new grocery firm that will open up in the Paddock building, next door south of the Sentinel building, about November fifteenth. Carpenters are at work preparing the premises. A plate glass front will be included in the improvements. The firm is composed of Henry Jacobs, of this city, and E. L. Dawson, who comes from Mancelona.

Mr. and Mrs. Allen B. Bell, of Marquette, were Sunday guests of Dr. and Mrs. King.

Sim Baker joins Mr. and Mrs. J. S. Baker in their winter sojourn in St. Augustine, Fla.

Mrs. Ava Smith left Tuesday for Chicago, where she will visit her sister, Mrs. John McCabe.

Mr. and Mrs. Lawrence McCann returned home last Friday from their auto trip to Whitehall.

Mrs. John Maloney and children left Tuesday for their home in Chicago after spending the summer here.

Mrs. Elizabeth Monty, of this city, has been admitted to the Michigan soldiers' home at Grand Rapids.

Born, to Mr. and Mrs. Arthur Bennett, on south Bridge street, an eight pound boy last Thursday morning.

We still have a number of those handy kitchen implements for sill pad-up or new subscribers. Call in and get one.

Mrs. Mae French Aldrich of Chicago, widow, and three children of William Aldrich, who died Oct. 7, in Charlevoix, will share his $400,000 estate.

Contractor Fred H. Thomas has a force of men at work remodeling the Shawley house, on Park avenue, recently purchased by Dr. Greenfelder, of Chicago.

The U. S. coast survey steamer "No. 2" came in Sunday and the engineers are making a survey of both channels to ascertain the needs of the harbor for the coming year.

Hon. E. B. Harris, of Antrim county, has been appointed a member of the committee on uniformity of practice, one of the most important committees of the Michigan Association of Probate Judges.

G. V. Nash, of Middleton, Ark., is here for a two weeks' visit with friends, meanwhile arranging for the wire fence enclosure of his pasture land at Norwood, on which a herd of cattle will be moved in next spring.

The late Alex Cameron carried $2,000 insurance policy in that stanch and popular Order of Maccabees, and one day last week Andrew Ross, deputy grand commander for this district, handed Mrs. Cameron a check for the amount of the policy.

The steamer City of Boyne, when about mid-channel, bound hence, Wednesday afternoon, blew out her cylinder head. The weather was fine, and the boat lay in the regular channel course for about an hour, when, along came the tug Margaret McCann, bound hence for inspection, which took the crippled steamer in tow. The steamer Columbia immediately took her place on the island route while repairs were being made.

Y. M. C. A. work in Charlevoix county for 1915 and 1916 has been suspended. Considering the stringency of the times this action is not a surprise. People who feel kindly toward the work of that organization, and who, under normal conditions, are willing to contribute toward its support, feel that their several church obligations are about all that they can afford. We hope that the time is not far distant when Y. M. C. A. work will be resumed under the efficient and effective leadership of Mr. Ball.

Building and rebuilding is going on all about town, and local deliveries of building materials are active. The number of men employed gives the lie to the statement that Charlevoix is a dead town. Of course general business conditions are anything but satisfactory, but, barring effects of the summer frosts upon mercantile interests, local conditions and prospects should cause no one to jump off the bridge. There is no reason for pessimism. Let us all take up our belts one more hole, swat the croakers and keep going.

COMMON COUNCIL

At the council meeting Monday night the resignation of Dr. W. R. Barney as alderman from the second ward was accepted. Resolution of thanks for efficient and faithful service. Capt. Wm. Pinsoneault elected to fill the vacancy.

City engineer was instructed to resurvey all of Dixon's unrecorded plat, also Nettleton's plat of the village of Charlevoix, for the purpose of recording Dixon's unrecorded plat.

Moved and carried that mayor appoint three members of the board of public works to act in conjunction with electric light committee at some convenient time to review and discuss electric light matters.

Opinion of attorney Dallas Boudeman as to validity of contract between City of Charlevoix and Henry Lucarelli was read by city attorney. Received and filed.

Council went into committee of the whole to consider matters of interest to the city.

COUGHS THAT ARE STOPPED!

Careful people see that they are stopped. Dr. King's New Discovery is a remedy of tried merit. It has held its own on the market for 46 years. Youth and old age testify to its soothing and healing qualities. Pneumonia and lung troubles are often caused by delay of treatment. Dr. King's New Discovery stops those backking coughs and relieves a grippe tendencies. Money back if it fails. 50c. and $1.00.

School Commissioner's Column

May L. Stewart, Commissioner

Two-thirds of the schools visited to date.

A classified list of qualified teachers will be out soon.

The new directories for teachers and officers were mailed the 21st. For extra copies of the same apply to the commissioner.

Reading circle classes will soon be organized for winter study of the questions on pedagogy. There will be four of these classes with headquarters as follows: In Boyne Falls under the leadership of Supt. Fox, in Charlevoix beginning Saturday Nov. 20th in charge of Miss Hines, in Boyne City and East Jordan. Every teacher should belong to one of these circles.

The school officers' meetings will be later than usual this year. The state department writes that it can arrange for these in November and December. Watch this column for further pertinent items.

The state librarian writes that we can have but three of the old traveling libraries to have and to hold forever. Five had been ordered. We are sorry to disappoint the last two.

Several schools are getting the improvement germ. The Taintor school is plastering, Hoart Lake is painting, Three Bells is contemplating in general, Norwood has introduced the recommended text in arithmetic and pieces on putting in all uniform suits the coming year.

Marion center is studying on the "how" of a new standard plate. Her customary energy will make short work of this problem.

Three schools are now ready for a state inspector to tell them what else they need to do to have their buildings endorsed by the Lansing authorities. Will your school be in line?

The county commissioner will be in Saginaw this week attending the commissioners' section of the state teachers' association. On her return she will be ready to finish her fall round of visits with new vigor.

Let the commissioner know your plans. Watch for your school in these columns.

SALE OF FURNITURE —AND— HOUSEHOLD EFFECTS

ON SATURDAY, OCT. 30, AT 10:00 A. M.

I will dispose of my furniture and household effects at 217 Park avenue. Must dispose of same at once.

Mrs. Thos. Shawley.

Not a Matter of Gossip.

"Ah!" I have often heard of you, Mr. Gloom," scarcely said the representative of an eastern publishing house who called on only the few persons in each neighborhood who were of sufficient intelligence to appreciate the valuable literary works which he was purveying. "Uh huh!" returned the dour and savage citizen. "Never heard of my being civil to a book agent, did you?"—Kansas City Star.

In the Same Box.

The Village Grocer (genially)—"Look here, Aaron! What makes you put the big apples on the top of the barl?" The Honest Farmer (cheerily—"What makes you comb that long scalplock over your bald spot?"—Puck.

Rifles and Cartridges for Your Big Game Hunt

JUST as soon as game became scarce enough to make men critical about their rifles, sportsmen in every community got to demanding Remington-UMC.

The demand for Remington-UMC Big Game Rifles and Remington Metallic Cartridges has been growing ever since.

The Remington-UMC Dealer here in this community is the man to go to. He knows what's happening in the sport today. You'll know him by the *Red Mark of Remington-UMC*—and his store is Sportsmen's Headquarters.

Sold by your home dealer and 835 other leading merchants in Michigan

Remington Arms-Union Metallic Cartridge Co., Woolworth Bldg. (233 B'way) N. Y. City

Barnard Items.

Mrs. Fred Grimell who has been ill for some time is slowly recovering.

Hiram Potter and wife are the proud parents of a son, born October 20th.

The Stork visited Frank Matchett and left a daughter "Miss Francis" October 25.

The Ladies' Aid will meet with Mrs. Will Shapton November 3rd. This will be in the nature of an exchange sale, special music has been arranged. A large attendance is desired.

Luther Trimble, a former Barnard boy, but now located in the Saskatchewan, had "bumped" a crop of grain this year—7500 bushels wheat, 3000 bushels of oats, 240 bushels of barley.

The Ladies' Aid held their annual pumpkin pie supper Friday, October 22. Victrola music was a feature of the evening and the various "familiar" afforded much amusement. Over $15 was added to the treasury.

Rally Day was observed last Sunday in the M. E. church, and a large attendance enjoyed a most interesting service. Dr. A. M. Wilkinson, of Charlevoix, led the singing; Miss Himes, of the county normal, gave a most helpful talk; greetings were extended from the superintendent of the Charlevoix M. E. S. S., Dr. Wilkinson and the Atwood school, Mr. E. Jolliffe, and Rev. Hood also addressed us. Mr. A. B. Clarke, the retiring superintendent, who has given many years of faithful service, gave a look backward. The male quartette of Charlevoix M. E. added much to the service with appropriate selections. Mr. Dornberg sang beautifully the solo, "In the Secret of His Presence." Recitations by Jean Lewis and Hazel Beattie, followed by "America" closed a most inspiring service.

Beaver Island News

John Cheney called on the trade last Monday.

W. E. Stephens, president of the B. I. C. C. was in town.

Supervisors John Green and W. J. Gallagher returned home from the Board of Supervisors meeting Saturday.

V. C. Shrider representing the Stand-ard Oil Co. of Grand Rapids was here last week.

Oscar Martin returned home after spending several days at Chabogan visiting friends.

Joseph Burke returned home Saturday after spending several days at Charlevoix.

Wm. Driggett, of Charlevoix, spent several days here last week.

James Martin returned home last week after spending ten days at Chicago visiting friends.

Mrs. Ed. B. Gallagher and daughter went to Otsville on a visit.

Mr. and Mrs. E. B. Northcult returned home Friday from Petoskey where Mrs. Northcult has been in the hospital for the past month.

Mrs. James Burns went to Saginaw this week to see her brother John who is sick.

Miss Winnie Lafreniere went to Petoskey Tuesday.

Married, at the Holy Cross Church Wednesday, Patrick Bonner and Rose Boyle.

Str. Columbia took a load of cattle to Harbor Springs Friday from here.

FOR SALE—One black mare colt, two years in June. Can be seen at Wm. Santoss farm in Norwood Township. For further particulars write Mrs. J. W. Paradise, Charlevoix, or Gen. Del.

GET RID OF THOSE POISONS IN YOUR SYSTEM!

You will find Dr. King's New Life Pills a most satisfactory laxative in relieving the poisons from your system. Accumulated waste and poisons cause manifold ailments unless removed. Dizziness, dark before the eyes, blackness and a miserable feeling generally are indications that you need Dr. King's New Life Pills. Take a dose tonight and you will expect some grateful relief by morning. 25c

County Normal Notes

Miss May Stewart, the county commissioner, called on the county normal Monday.

The normal class attended the morning and afternoon session Tuesday of the board of supervisors to hear the final discussion concerning the location of the state reward road from Charlevoix to East Jordan.

Miss Ella Smith, state supervisor of county normal schools, called on the Charlevoix county normal Wednesday and gave us a very interesting talk on the way to teach children the Palmer Method of writing.

The Charlevoix county normal students attended the plowing match at Marion Center. They visited Mr. Wm. Wither's model dairy, Mr. Elmer Ingall's sanitary dairy and the Black school—Miss Mary Berg, the teacher of this school, had excellent exhibits in fruit, grain, seed, wood seed, layers on farm industries and seal work. The school was in very good condition.

Two of the students of the Charlevoix county normal, Ruth Chellis and Florence Maddaugh, were delegates at the district convention of the Woman's Christian Temperance Union at Mancelona. They also visited the county normal at Mancelona.

Miss Sophie Berg, of the class of 1915, visited the county normal Thursday morning.

- BLANCHARD HARDWARE COMPANY -

The Woman's Benefit Association Of The Maccabees

The Largest, Strongest, and most Progressive Society of Women in the World.

Non-political and non-sectarian. Offers more opportunities to women than any other society. Good training and future success, love of humanity and protection of helpless little ones.

A splendid opportunity for broad-minded and sympathetic women to join this great fraternal Union of one hundred and eighty-six thousand women banded together for the betterment of their own sex. This Organization has a national reputation for this great work in the interest of women, and has already paid into homes of deceased and distressed members over twelve million dollars, every dollar going into some home in time of want and distress. We cannot begin to record the deeds of loving kindness and sympathy that have gone hand in hand with these disbursements.

This Organization has risen to high position in Fraternal Insurance through the hearty co-operation of its members and has built up by the management of its officers, a reserve of over eight million dollars.

The Woman's Benefit Association of the Maccabees was founded in Michigan by Michigan women in 1892; the corner-stone of its own building, laid in Port Huron, October 29, 1918, being the first woman's benefit association in the world to erect its own building.

Your loved ones are protected by our death benefits; we will see that you have proper burial with our burial benefits. We will take care of you when sick through sick benefits and hospital service.

First in Fraternity, First in Stability First in the Hearts of its Members

We want a competent woman to act as organizer in this locality. For further information write Mrs. Alberta V. Doolle, Great Commander for Michigan, 411 St. Aubin Ave. Detroit, Mich.

BOY SCOUTS OF AMERICA

Movement Inaugurated to Organize The Boys of Charlevoix and Vicinity into a Drilled Troop of Scouts

With no sectarian leanings, and with world-wide peace as a fundamental principle, a movement has been well started to organize a troop of Boy Scouts in Charlevoix; in fact an organization has already been effected, so far as executive preliminaries are concerned.

For the troop itself more than sixty boys have already been enrolled and officers of the troop selected as follows:

Scout Master—Lloyd C. Vinyard.

Assistant Scout Masters—Herbert Taggart, George Cary, William Sanford.

Troop Committee of Citizens—Chas. Cary, A. J. Usher, Will Bellinger.

Mass meetings will be held every week in the assembly room of the high school, at which time a literary study program will be given and some one of our home business men will speak. More than twenty business and professional men have volunteered. Capt. Willard A. Smith will instruct in drill and camp life.

Superintendent Craig will act as chairman of the mass meeting; Prof Loving has been elected as Athletic Director, assisted by Prof. Vogt. The Scout Master says he expects to make this enterprise a benefit to the boys socially, morally, mentally and spiritually. The next meeting will be held at the Baptist Church next Monday evening, at seven o'clock. All invited.

"THE MELTING POT"

(Reviewed by W. Stephen Bush)

To appreciate the power and poetry of Zangwill's story, one must see this feature film made by the Cort Film Corporation. There are few written living today who wield a pen of greater power than Zangwill one of literati, and it may be doubted whether he ever wielded it with more enthusiasm and inspiration than in the story of "The Melting Pot.

A young jew, David Quixano, a gifted musician and full of that spiritual power which is a heritage of his race, is living with his family in Kushineff when that ill fated city becomes the theater of fierce and bloody religious persecution of which the jews are the victims. Waves of bloody violence overwhelm David's home and he is left desolate in the world. He has heard of a new country in the distant West where men are allowed to work out their destinies and where religious bigotry and persecution are unknown. Fate ordains that he should go to the new land. Conditions in the new world are at first strange to him and to keep soul and body together he has to play in concert hall of the East Side and contend with hardships and struggles. As he absorbs the American spirit, his vivid fancy conceives the idea of writing a symphony called "The Melting Pot." Into this symphony he crowds all his rare musical talent, seeking to symbolize in sound the genesis and the growth of this new world which now stands at the head of human civilization.

To be shown at the Majestic Theatre, Friday evening, November 12th.

Board of Education

Charlevoix, October 19, 1915

Regular meeting of the Board was called to order by vice-president Bridge. Trustees present, Bridge, Nordman and Hiller.

The treasurer's report shows a balance on hand of $1563.16.

The following bills were presented and read:

TEACHERS FUND

155 Fay Bell	$49 72

Moved and supported that the bills as read be allowed and the secretary be instructed to draw orders on the various funds for the amount of each respective bill. Motion carried.

These minutes were read and approved and on motion the Board adjourned. E. J. HILLER, Sec'y

FOR SALE—Resort cottages well located. House and lots in any part of the city, also 14 acres close to city. Apply to H. S. Harsha.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate office, in the City of Charlevoix, on the 20th day of October, A. D. 1915.

Present, Hon. Edward E. Corey, Judge of Probate.

In the matter of the estate of John Fleid Deceased.

Frank Gallagher Fox having filed in this court his petition, praying that a certain instrument in writing, duly signed, on the 11 day of November, A. D. 1913, and a codicil thereto, signed on the 9 day of May, A. D. 1914, which is the document, or last will and testament of said deceased, may be admitted to probate and that the executor therein named be appointed executor of said estate.

It is ordered that the 8th day of November, A. D. 1915, at 10 o'clock in the forenoon, at said Probate office, be and is hereby assigned for hearing said petition.

And it is further ordered that public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said time of hearing, in the Charlevoix County Sentinel, a newspaper printed and circulated in said County of Charlevoix.

EDWARD E. COREY, Judge of Probate.

A true copy.

EDWARD E. COREY, Judge of Probate.

GET RID OF THOSE POISONS IN YOUR SYSTEM!

You will find Dr. King's New Life Pills a most satisfactory laxative in relieving the poisons from your system. Accumulated waste and poisons cause manifold ailments unless removed. Dizziness, dark before the eyes, blackness and a miserable feeling generally are indications that you need Dr. King's New Life Pills. Northern Michigan

Joseph Cozart, 23 years old, a fisherman of Traverse City, was drowned at Sutton's Bay last Wednesday. Cozart with three companions made their home on a fish tug, and when the other men awoke they failed to find Cozart. Later in the day his body was found near the wharf. The body was brought to Traverse City for burial.

On Tuesday the directors of the Grand Rapids Association of Commerce voted a resolution favoring the early completion of the Boyne City, Gaylord & Alpena Railroad into Alpena. They have appointed a committee to push the work as fast as possible. This action is in response to a concerted demand by the Grand Rapids wholesalers and retailers who are stirred over the prospects of opening up a new country from which wealth will be drawn and to which wealth will be carried. The road is within twelve miles of completion now and Alpena has offered substantial aid toward the last link.

Marion Island was rediscovered the other day, when the owner, Mrs. Marion Fowler, of Palo Alto, Cal., was taken to the isle beautiful by Judge A. B. Curtis and R. J. Price in the latter's gasoline-launch Sioux. The island, formerly owned by Mrs. Fowler's father, the late C. J. Hall, has been in the family about 45 years and has been owned by Mrs. Fowler since the death of her father 25 years ago. It had been bought by him as a present and keepsake for her and was named in her honor, but during all these years she had never seen the place. During her recent visit here, in company with Mrs. Fowler, of Palo Alto, Cal., formerly of Chicago, she expressed her desire to visit her island and Mr. Curtis promptly arranged for an afternoon trip for the party. Mrs. Fowler was agreeably surprised at the scenic beauty of her possession. [Marion Island is the large island about six miles north of Traverse City.]

Traverse City Record-Eagle: The Grand Traverse apple grower is beginning to get his just deserts these days. The demand for winter apples is getting stronger. The current price is $3.00 per barrel for number one stock and $2.50 to $4.00 for fancy. A few growers who have been well posted as to market conditions have received offers that run as high as $5 a barrel for stock that could be guaranteed. Orders are being received daily, the buyers in the different apple consuming centers all seem to get a goodly supply of the king of fruits before the prices go to the high figure which seems almost certain. Potatoes are in good demand. Many buyers are buying so as to get the benefits of the advance that is certain as winter. An outsider in the city yesterday said that a few days ago he was with one buyer who bought 25 carloads of tubers that he might have a good supply on hand to meet future demand.

Boyne Citizen: H. A. Hanson, superintendent of the A. W. Richard Granite and Marble Works, of Traverse City has been in this city the past few days completing arrangements for the W. J. C. Soldiers' Monument. The order was given Saturday evening. The monument consists of a 5 ft. 10 in. x 8 ft. base surmounted by a second base, that by the die and that by a statue of a soldier 5½ feet in height, cut from blue granite. Overall it will measure 12½ ft. weighing about 25,000 lbs. It will stand on a concrete foundation. The statue will be cut in the shops of the above company and Traverse City and will be shipped to reach here near the first of May. It is planned to make the unveiling a big affair at which some outside speaker of importance will be present. The ladies of the W. R. C. who are responsible for the securing of the monument, deserve the highest praise. They have met with difficulties at times in raising the funds but have persevered despite all and have been rewarded to the extent that about one-half the funds are now available and next Decoration Day will see a magnificent monument in Maple Lawn Cemetery.

Life in its Various Forms.

The sea teems with life, and animals and it has been estimated that the amount of life in the sea exceeds that of the land, square mile for square mile. Animal life is found nearly everywhere, even at the greatest depths; but it flourishes best at or near the shore. On the other hand, plant life seems to be absent over the bottom of the ocean basins. It is plentiful at the surface, where the sunlight plays an important part in its growth.

Know Value of His Work.

Boston mail: The best figure for Sir James Murray, greatest of dictionary makers, might be taken from one of his conversations between Johnson and Boswell. In old age Boswell said to Johnson, apropos of the dictionary: "I too did not know what you were undertaking." Yes, sir, was the answer, "I knew very well what I was undertaking—and very well how to do it—and have done it very well."

Safety Pin an Old Idea.

Queen Victoria's reputed invention of the safety pin has been exploded by the recent discovery on the island of Mycene of one supposed to have been made at least 900 years B. C. This gives it the safety first honors.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or telephone, H. S. Harsha.

FOR RENT—Small house on north side, furnished or unfurnished. Apply to C. Danto.

SYNOPSIS.

—14—

Hall Rosamunde, great photographer, proposes to Flodie Flodie, a stenographer, who was asked to write a resume of a party he is to give in the studio that night. Hall's friend, Alfred Jaggs, and Jonas Bran, a millionaire, are conducting the party. Mr. Blackbird, a detective, is on the job. Flodie, which begins at midnight that night. Hall gives everything away to Flodie. He gives her an answer at the party that night. Miss Carolyn Dalton, for Hall, proposes to her. She agrees to give him her answer in a month. Flodie tells her her mother's ambition for her marriage. She, the elder, is determined that Flodie shall do time for show. Hall's certain way out. Flodie's mother, Mrs. Hopkins, and Hall fails to marry on time, plans will Flodie, to be married overtime. Hall's plans to marry someone before midnight. Flodie's mother, Mrs. Hopkins, and Hall are married. Mr. Blackbird, detective, finding clients in which Flodie figures, finding clients in which Flodie figures. Once they find out you have money, and they'll jump at the chance you see! They'll jump all over you!"

Before the astonished Jonas could reply, Alfred opened the door to a lady gorgeously arrayed in blue. Flodie gave one look at her then whispered aside, to her husband: "There's the first one of 'em now! Mine, Gale!" Then she simpled for her, and, sniffing frangipani scornfully, and welcomed Rosamund.

An elaborate, intimating picture of feminine frippery was Rosamund Gale, as she came in by making a stage entrance. Something was to happen to-night. Rosamund was on the war path.

She barely acknowledged Flodie's greeting, or Jonas' presence, but cast a hasty anxious glance about, then, seeing no women, seemed to breathe freer. "Where's Hall?" she asked almost immediately.

"Oh, somewhere about. In with the musicians, probably." Flodie turned to Jonas. "Mr. Hassinburg, Miss Gale!"

Jonas bent over her. "Why, now, they's a lot o' Gales down in Branford, I know! I live. I wonder if you—"

"Tell Hall to hurry please!" cried Rosamund to Flodie. Flodie started off, smiling, but Rosamund caught at her arm and held her. "Wait a minute, though! Miss Fisher, listen! Has anything—anything important happened?"

"What d'you mean?"

"Oh, I mean—well, nothing exciting, has it?"

Flodie reflected. "Why, I'm afraid Alfred has spilled some salad on his new dress suit, Miss Gale. If that's what you mean?"

Rosamund did not condescend to answer. She left hastily and passed hurriedly into the dressing room and diverted herself of her wraps. Jonas had lost time to return to Flodie. "So, she's one of 'em, is she? Pretty gal, by jiminy! When she was out walkin' and without noticing them, had gone to the door of the reception room, and looked in, scowling.

Here, the rugs were all up and the floor waxed for dancing. The musicians were scraping and tuning their instruments. Hall Dorlicotte was in a corner, arranging a vase of flowers. Rosamund darted in and swam up to him. No, she's not one bit like a different creature, smiling, radiant, angelic, smiling, on an air of gladness. She seized Hall's hand excitedly.

"Oh, Hall," she exclaimed dramatically, "she's perfectly delighted! It's all right, and you needn't worry a moment longer! Aren't you glad?" She hung on him fondly as if she expected him to embrace her.

Hall had turned white. Rosamund's beauty had instantly disarmed him. He could no more have said the hot retorts he had contemplated than he could have struck a child. With his hand procrastinated, fumbling her hand, "Really?" he managed to say. "Love? That's fine!"

"Well, why don't you kiss me, Hall?" Rosamund's eyes were on the door, watching nervously for interruptions. Flodie could be seen.

Hall looked over his shoulder, embarrassed. "Oh, these musicians—I don't want them to—say, wait till we can be alone!"

She stared at him in annoyed surprise, then gave another irritated glance at the door. "For goodness' sakes, what difference does it make? Why, I'm willing to try it. If you be. I don't see where I could do better, and you'd win a good man if you got me, mine, if I do say it!"

"Thank you kindly," said Flodie, but I don't really know what in the world I'd do with you if I got you."

Jonas stared at her as if she were raving. "You don't know what you're talkin' about! Don't you realize if you marry me you'll get four million dollars? Lord, any other gal would jump at the chance to have the spendin' o' that money."

"Let 'em jump!" said Flodie. "That's my advice. Mr. Hassinburg; you take it! Don't you jump! I don't want to give you a tip—" She went up to him and took him confidentially by the lapel of his coat. "There will be three women here tonight, and all of 'em can jump the grandsperm. Once they find out you have money, and they'll jump at the chance you see! They'll jump all over you!"

Before the astonished Jonas could reply, Alfred opened the door to a lady gorgeously arrayed in blue. Flodie gave one look at her then whispered aside, to her husband: "There's the first one of 'em now! Mine, Gale!" Then she simpled for her, and, sniffing frangipani scornfully, and welcomed Rosamund.

An elaborate, intimating picture of feminine frippery was Rosamund Gale, as she came in by making a stage entrance. Something was to happen to-night. Rosamund was on the war path.

She barely acknowledged Flodie's greeting, or Jonas' presence, but cast a hasty anxious glance about, then, seeing no women, seemed to breathe freer. "Where's Hall?" she asked almost immediately.

"Oh, somewhere about. In with the musicians, probably." Flodie turned to Jonas. "Mr. Hassinburg, Miss Gale!"

Jonas bent over her. "Why, now, they's a lot o' Gales down in Branford, I know! I live. I wonder if you—"

"Tell Hall to hurry please!" cried Rosamund to Flodie. Flodie started off, smiling, but Rosamund caught at her arm and held her. "Wait a minute, though! Miss Fisher, listen! Has anything—anything important happened?"

"What d'you mean?"

"Oh, I mean—well, nothing exciting, has it?"

Flodie reflected. "Why, I'm afraid Alfred has spilled some salad on his new dress suit, Miss Gale. If that's what you mean?"

Rosamund did not condescend to answer. She left hastily and passed hurriedly into the dressing room and diverted herself of her wraps. Jonas had lost time to return to Flodie. "So, she's one of 'em, is she? Pretty gal, by jiminy! When she was out walkin' and without noticing them, had gone to the door of the reception room, and looked in, scowling.

Here, the rugs were all up and the floor waxed for dancing. The musicians were scraping and tuning their instruments. Hall Dorlicotte was in a corner, arranging a vase of flowers. Rosamund darted in and swam up to him. No, she's not one bit a different creature, smiling, radiant, angelic, smiling, on an air of gladness. She seized Hall's hand excitedly.

"Oh, Hall," she exclaimed dramatically, "she's perfectly delighted! It's all right, and you needn't worry a moment longer! Aren't you glad?" She hung on him fondly as if she expected him to embrace her.

Hall had turned white. Rosamund's beauty had instantly disarmed him. He could no more have said the hot retorts he had contemplated than he could have struck a child. With his hand procrastinated, fumbling her hand, "Really?" he managed to say. "Love? That's fine!"

"Well, why don't you kiss me, Hall?" Rosamund's eyes were on the door, watching nervously for interruptions. Flodie could be seen.

Hall looked over his shoulder, embarrassed. "Oh, these musicians—I don't want them to—say, wait till we can be alone!"

She stared at him in annoyed surprise, then gave another irritated glance at the door. "For goodness' sakes, what difference does it make? Why, I'm willing to try it. If you be. I don't see where I could do better, and you'd win a good man if you got me, mine, if I do say it!"

"Thank you kindly," said Flodie, "but I don't really know what in the world I'd do with you if I got you."

Jonas stared at her as if she were raving. "You don't know what you're talkin' about! Don't you realize if you marry me you'll get four million dollars? Lord, any other gal would just

DOINGS OF THE VAN LOONS

Far be it from Grace to disobey Father

GOES BAREFOOT 35 YEARS

J. M. Haigler, Now 75, Not Eccentric, But Does It for Health and Comfort.

Carlton, Okla.—For 35 years J. M. Haigler of Carlton has gone without the wear round, and now, at the age of seventy-five he is devoid of aches or pains or physical blemishes of any sort. He is a normal man of extraordinary physique, standing six feet tall and weighing 235 pounds. He is as spankish as a boy of seventeen.

"I don't remember of ever being sick," he says, "and I have always eaten what has been set before me with the relish of a hungry man. I have lived outdoors as much as possible and have always been active, both mentally and physically. Maybe that has helped to keep me young."

There is nothing eccentric about Haigler. He is practical and uncontentious, of exceptionally sound business judgment, and is generally well known and liked throughout the state. He is the father of five sons, all strong and husky men, owners of large herds of cattle, horses and hogs and thousands of acres of land.

When the elder Haigler was Democratic county chairman he called the convention to order with the thermometer many degrees below freezing, and presided in his bare feet, while the other members were wishing for a stove. He goes barefoot to Kansas City.

Haigler contends that it is conducive to health and happiness to go barefooted, and that his barefoot habit is no more whim or caprice.

Small Income.

Of course we could propose it to women who change their entire lives by matrimony; it is women who take on colossal responsibility by matrimony. The woman should surely be allowed to choose the man for whom she feels herself able to work and live. Not propose, don have had it all to their own hands up to now, and if they have married the wrong woman they have only themselves to blame for it.—Women of the World.

Small Boy's Request.

Little Claude has been told that Uncle Ezra is afflicted with a squint eye, and forgets that he has been instructed to say nothing about it. "Will you let us take your eye a little while, Uncle Ez? My other maybe rolled down the register."

Everything Worth While.

Never think yourself too insignificant or the thing too mean. You and it have an infinite capacity for observing, serving and, reaping real glory.—J. F. W. Ware.

MRS. ANGEL, 72, STOWAWAY

Woman Says Son, Who Was in Second Cabin, Smuggled Her Aboard.

San Francisco.—Mrs. Destina Angel is said to be the oldest and the only woman stowaway that ever came to San Francisco. She is seventy-two years of age and arrived from Honolulu on the liner Korea.

Her son, George Angel, traveled second class, but smuggled his mother on board, the old woman declared. Mrs. Angel was sent to the immigration station.

IS BLUSHING BRIDE AT 79

And Her Fond Bridegroom Is Few Months Her Senior in Oregon Romance.

Grants Pass, Ore.—The oldest couple ever married in Josephine county have just started on their honeymoon. John M. Jones, the bridegroom, lacked only two months of eighty years, and the blushing bride was seventy-nine years.

The bride, Millie Lorimer, was married in white and carried an immense bouquet of asters. Both have lived in Oregon for many years.

TAKE CARE OF THAT ITCHING!

ALL ITCHING ROBBERS ON ECZEMA.

Do you regard that itching as a settled thing? It is? Unless you begin to fight it with Dr. Hobson's Eczema Ointment, the disease is likely to cling on for months and years. Scores of grateful users say: "Why did you waste three months and years in agony when so sorely a remedy was on the market." This ointment is one experiment: it is absolutely healing in its power. Do not allow it to become serious. Buy a box to-day to fight the beginnings of eczema. Get a box.

REMARRIED AFTER 30 YEARS

Michigan Couple Are Reconciled by Efforts of Son, Who Was Friendless.

Jackson, Mich.—It has just been learned that Mrs. Florida G. Wilmore, daughter of the late Col. Hugh Richard of Jackson, was married at Albuquerque, N. M., to William Wilmore.

Forty years ago their marriage in Jackson was a social event. Thirty years ago they were divorced. Now they are reunited through the efforts, it is said, of their son Hugh, who has been friendly with both during all the years of their estrangement.

BURGLAR WAS ONLY MONKEY

Some Was Cafe Cellar, and Mohawk Was Much in Need of a Drink.

Lawrenceburg, Ind.—When burglar alarms were turned in from the home of Floyd W. Miller, the jewelry store of Mrs. Roxana Superchiandi and the cafe of Isadore L. Harry, the night policeman made a hurried run for the buildings. After a search it was found that Mohawk, a large monkey belonging to a show, had escaped from its cage and caused the alarms.

The monkey was discovered in the cafe cellar, where it had broken several bottles of beer and so drunk it had to be attended by a doctor.

Trapping the Elusive Mouse.

Every housewife has had the exact sense of finding a carefully prepared mouse trap devoid of its bait, but in spring and minus its victim. This can be avoided and Mr. Mouse's cake taken assured by using for bait cheese crumbs instead of a large lump. To get the cheese crumbs must pass down and thus set off the spring. A lump, on the other hand, is easily stolen.

French Army Corps.

A French army corps is made up of 24 divisions of infantry—for other troops attached to the army corps, see below. Each division is made up of four thousand one hundred strong, and each regiment of infantry is made up of three battalions of infantry. Counting 1,000 to the battalion, the regiment is 3,000 strong, and the division is 12,000 strong. Each army corps is made up of two divisions of infantry, and the army corps is 24,000 strong. The cavalry is made up of regiments of cavalry, and the regiment is 1,000 strong. The cavalry is made up of divisions of cavalry, and the division is 2

LOVE in a HURRY

COPYRIGHT, BY GELETT BURGESS

CHAPTER XII—Continued.

—15—

The party was now in full swing. Some dancing went in the reception room, dancing or watching, the dancers. The evening grew in life and merriment. Mr. Doremus, back from his interview with Flodie, was infected by the spirit. He blossomed suddenly and unexpectedly into hilarity, and encouraged and stimulated by the cheer of the young actresses, he came, in spite of himself, the center of the part. The co-ed may not let him off till Alfred Rosalind, blushing furiously, appeared in the doorway.

Supper is ready—I mean—er—supper is served!" he announced, and escaped into the hall.

The first embroiled who had been polling Mr. Dudgeon with pickle, now surrounded him, bound him with overgrown garlands and carried him off, shaved, through the office, where Flodie was presiding over tables of salad and sandwiches, into the supper room, where they enthroned him on an old Spanish chair, and waited on him like Bacchus. The gentlemen rushed back and forth with plates and cups, and everybody began to talk and laugh. Beer bottles popped.

Hall was now becoming desperate. It did not seem at all so easy as he had expected. If only Flodie hadn't got her back up so foolishly! Well, he must at least, be at his ease. He had been the life of the party, he was the center of the attention, he was on with the new. And, for that, he must have the answers of the two women. He left the company and walked into the studio, where deserted, to look at the clock. Heavens! It was already half after eleven. Something would have to happen in a hurry!—

Carolyn Dally's appeared in the doorway, smiling. She was wearing corn color in a costume no man could have described in five minutes after he had seen it. Carolyn's clothes were always not only original but characteristic of her.

She sauntered in, and dropped upon the couch, to look up at him good-naturedly. Hall's hopes rose. It was going to be easy, thank heaven. She didn't at all have the manner of a prospective owner.

"Well, Hall," she began, "you don't seem particularly anxious to see your friend, when the last dance of the evening comes around, the scholars and their parents gathered for the award of prizes, and the grotesque schoolmistresses could not bear to let any child go disappointed. When commencement day came F. C.'s name also was read out for a special medal. He was awarded "For cheerfulness during the recession hour."

Studious Girl Neglects Her Hair.

I heard Miss O'Neil once tell the story of a young lady who acquired five languages while doing her hair, said a prominent London man. Then she recited her three pages round, and found to her surprise that no one seemed particularly anxious to engage her. They really could not stand the look of her head. She discovered the cause of her failure at last when one very irritable old gentleman who called on told her that he would prefer one language to three if a brush and comb were thrown in with the lot. She had manifested habits of tidiness to the attractions of irregular curls.

Each year the import of opium from India into China is reduced by 5,000 chests.

Now what?" she took a cigarette from the table and gracefully lighted it, puffed out the smoke, and yawned.

As she drew in her lips, the fine, frenzied struggles were getting smoother, and more violent. "Oh, hang it all, Carolyn, you know I was only fooling, of course! Why, we were laughing all the time, you know that! I had no idea you'd ever accept me! Do you mean to tell me that you are in love with me?" he asked bitingly.

"Not at all. I see no need of lying about it, whatever. But you certainly do amuse me." Her eyes danced.

"Well, I should say! It was hardly enough to accept a man simply because he amused you!" This was the best Hall could do, now; he was getting winded.

"Oh, yes," she replied jauntily, "on the contrary, I'm quite sure that I will want to be amused all my life—especially when I'm married."

"Married! Do you consider that we are engaged?"

She looked at him with surprised eyes. Her dainty chin was approaching climax. She began to wind in her lies in a short length, speaking faintly—slow here. Hall: "You're not trying to get out of a—something, are you?"

Hall gasped, wearied with the duel. "Now, Carolyn, let me explain just how it is—I like to tell you some thing—I want to—hang it—you make it so damned hard for me—what I mean is—"

Carolyn rose and looked him in the eye. She laid her hand on him; and soft as was its touch, he felt as if it were a great man for the ladies. "Hall, see here! Are you trying to get out of it, or aren't you! Just tell me that!"

"Why—why, I think you're carrying the joke a little too far, Carolyn, that's all—honestly I do!"

Carolyn now had him at the edge of the boat. She jerked him in with a laugh. "My dear old Hall," she said, and her voice was honey-sweet, "I'm carrying it only far enough to want to hear that ring you bought today for me. Where is it?" She actually began to feel in his waistcoat pocket.

He backed off in terror. "I haven't any ring!"

Carolyn smiled. "Well, never mind. We don't want anyone to know just yet, anyway, do we? Kings can wait. Now come over here and sit down, and I'll tell you exactly what we're going to do." She proceeded to lead him, too dazed to resist, toward the couch where they sat down together. "Now be brave," she said, smiling, "I'll let you hold my hand. You do just what I say, and you'll never regret it. I hate engagements; they are neither the excitement of friendship, nor the satisfaction of matrimony. So, at just nine o'clock tomorrow morning, you are going to call on me and will toddle down to a jeweler's for a ring. Well just cut out the white veil and downcast eyes and everything. All you have to do is to get a gold band on my finger, and my share will be to say 'I will' and become Mrs. Hall forthwith. What's the matter?"

Hall was staring toward the door. "My cousin, Jonas," he said.

"Oh, brother!" Carolyn's eyes alight. "Just as we wanted to arrange everything."

Jonas Hassinghay, tall and gaunt, eating a lettuce sandwich, strolled in, the cool self-possession of the very experienced critticlist leader in town. He was perfectly sure of himself, without wealth, or power or social training, he was blessed with an equanimity that might have envied. If Jonas had never been embarrassed in life, he

Hall looked at him, for the first time with relief, and rose.

"Jonas Hassinghay," he said, "let me present my cousin, Mr. Hassinghay."

Jonas put the sandwich behind his back, and bowed. Carolyn looked up at him, amused.

"Hally?" Jonas queried, "never heard of that name before, to my knowledge. What be it, Fortunatus? With the grace of a veteran, he dropped down beside her on the couch.

At any other time Carolyn would have welcomed his quaint charm. But her cue were now for Hall, and she was anxious. Her answer was vague.

Jonas however, did not appear to notice it. His work was plain. He had to give himself attractive, and get rid of Hall. He launched forth, therefore, on a description of the town of Brasford while Carolyn yawned behind her fan.

At the first pause Hall broke in. "By jove, Carolyn, I've got to get some photographs in my room I promised to show Mr. Doremus! Cousin Jonas will take care of you all right. Carolyn, he's a great man for the ladies! Good-bye! Hall, see here! Are you trying to get out of it, or aren't you! Just tell me that!"

"Why—why, I think you're carrying the joke a little too far, Carolyn, that's all—honestly I do!"

Carolyn now had him at the edge of the boat. She jerked him in with a laugh. "My dear old Hall," she said, and her voice was honey-sweet, "I'm carrying it only far enough to want to hear that ring you bought today for me. Where is it?" She actually began to feel in his waistcoat pocket.

He backed off in terror. "I haven't any ring!"

Manager Miles, of the Majestic Theatre, scores another big success Nov. 12th, in presenting Zangwill's "The Melting Pot." This is one of the biggest film attractions now on circuit.

The game warden's patrol boat, with deputies Smith and Eddy on board is in port. She will make this port headquarters during the opens fishing season. Four tugs from this port will gather eggs.

The wife of James Ostrum died last Wednesday evening. The funeral was from the Antrim street home on Friday. The family requests us to convey thanks to neighbors and friends for kindness shown.

A Schauffler Tea will be given by the missionary society of the Cong'l church at the home of Mrs. A. E. Mason Nov. 10 from 3 to 6:30. A short musical program will be given at 4:00 followed by light refreshments. All are cordially invited.

The Aid Society of the Cong'l Church was entertained to a luncheon at the home of Mrs. S. C. Adams at Ironton by the ladies of the Ironton Aid Society Thursday Oct. 31. Twenty-five ladies were taken to Ironton by auto and the Ironton ladies proved themselves royal entertainers.

Since 1902 the state highway tax apportioned among the various counties has amounted to $3,865,000, according to figures compiled by Auditor-General Fuller, in the same length of time, according to the auditor-general, the counties have contributed in all to toward the sum of $2,940,288.38.

The price of Michigan potatoes will continue to increase until next spring, in the opinion of O. K. White, member of the extension staff of the Michigan Agricultural college. An over-optimistic government potato crop estimate, and the poor quality of this year's Michigan tubers, is responsible.

The SENTINEL is not in the business of booming neighboring towns either in its advertising columns of editorially. Time and space can be better employed by us in booming Charlevoix and its business interests. We will not accept advertisements from outside towns in competition with Charlevoix dealers.

Under the law passed at the last session of the legislature a hunter is permitted to kill but one deer during a season. With his license he is given a metal seal with an automatic lock. As soon as he kills a deer the hunter is required to attach this tag to the deer and it is unlawful for a hunter to have in his possession a deer to which a seal has not been attached. The seals are numbered to correspond with the license.

Sister Marguerite is the largest county in the state and much of its area is still but sparsely settled, it probably is not remarkable that within its confines the timber wolf is present in considerable numbers. But it would appear that the warfare waged against this predatory animal should, after all these years, have attained greater inroads. To date this year the pelts of fifty-five wolves have been presented at the court house as evidence of rightful claim to the bounty joint by paid by state and county. And all but three of the animals were adults. The bounties paid aggregate $1,424.

Alex Bush and wife returned home Tuesday from their eastern trip.

The fishing tug Fisherman, of Mackinaw City, is here for fall fishing.

A. B. Ball, Y. M. C. A. secretary, has taken up the work at Mason, Mich.

The steamer City of Boyne failed to make her Tuesday Island trip owing to a fierce northwest gale.

E. B. Ward has the contract of excavating for the new Blanchard block, and Ed. Brock has the bricklaying job.

Dr. Armstrong spent three days the past week shooting ducks and things on Garden Island as the guest of Made Jensen.

Floyd Better, at his electric supply store has installed a literatory for Rectifier, for recharging batteries used by motorboats and automobiles. This supplies a long-felt want, and Mr. Better enterprise will be appreciated.

Rev. C. E. Taggart, who has been in attendance at the National Congregational Council held at New Haven, Conn. will return this week to take up the regular church services. Let the whole congregation endeavor to be present at the first service after the vacation. The Chellans will furnish the music.

Work on the new Blanchard Hardware Co. building is well under way. The old warehouse was demolished last week, and the Frazier store building was sold to Mrs. Ed. Eagleton and is being removed. Mr. Frazier has removed his shoe stock to the south store of the Hortholomew block. On the new building Curtis has the carpenter job and Bouthron will install the heating plant.

BOY SCOUT PROGRAM

Following is the Boy Scout program, for the meeting to be held in the Central School Bldg., at 7:30 p. m. Friday, November 5:

National Hymn
Divine Service.....Rev. L. C. Vinyard
Music
Addresses.....Supt. Craig and Others
Business and Announcements
Papers on Literature..Kenneth Widdifield
Papers on Science.....Jack Superman
Papers on Religion.....Herbert Taggart
Toasts.....Prof. Ewing
Music
Adjournment
Kenneth Widdifield, Scribe.

CIRCUIT COURT TERMS

In the matter of appointing the times for holding circuit terms in the 13th judicial circuit of Michigan;

Under the provisions of law I hereby fix and appoint the times for holding circuit court in the 13th judicial circuit of Michigan, as follows:

Antrim County:
The fourth Monday in February
The second Monday in May
The second Monday in October

Charlevoix County:
The first Monday in February
The fourth Monday in May
The third Monday in August
The first Monday in December

Grand Traverse County:
The first Monday in March
The second Monday in June
The fourth Monday in September
The second Monday in December

Leelanau County:
The third Tuesday in February
The first Tuesday in May
The first Monday in August
The third Tuesday in October

Dated this first day of November, A. D. 1916.

FREDERICK W. MAYNE,
Circuit Judge.

11-4-5

DEVELOPMENT BUREAU WILL CONTINUE WORK

Traverse City Record: Secretary John L. Gibson of the Western Michigan Development bureau was in the city today arranging for a meeting of the executive committee in this city next Friday, when the matter of ways and means for next year's campaign will be discussed.

The plans of the bureau have been pretty well agreed upon. Despite the fact that the income from county appropriations has been reduced one half, the bureau will continue to push its work with vigor, and the fact that this year has been a poor crop year will only serve to make them the more determined to carry out their plans to a successful issue. One thing that has been decided upon is to advertise and help boost only those counties that contribute to the bureau, instead of making a general campaign for the entire region, regardless of whether or not they helped finance the bureau.

IRRITABLE CHILDREN OFTEN NEED KICKAPOO WORM KILLER

There is a reason for the disagreeable and fretful nature of many children. Think of the unrest when the child's body is possessed by tiny worms sapping its vitality and clogging its functions. Whatever may be the cause, "what children have worms is a fact." Your child's peevishness and irritability has a cause. Give Kickapoo Worm Killer a chance and if worms are there this humanly harmless remedy will eliminate the annoying parasites. 25c. a box.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, also 14 acres close to city. Apply to H. S. Harsha.

Splendid New Line

OF

Work Pants AND Underwear

Winter Supplies -- AT -- Rock Bottom Prices--

We are headquarters for all WINTER SUPPLIES and will save you money on your—

Groceries, Feed, Boots, Shoes.

We buy our goods in car lots, therefore we are in a position to meet all competition including the Chicago Mail Order Houses.

Don't delay; Bring in your complete list of winter supplies and our prices will surprise you.

We invite comparison.

Make your Hard Earned Dollars Count.

Two cars of

Gold Coin Flour

and one car of

Red Comb and Cackle Chicken Feed

just received, buy while you have the opportunity of saving money.

S. ORLOWSKI & SON.

Give your Child Dr. King's New Discovery for Coughs and Colds.

Dr. King's New Discovery is a Doctor's Prescription used for over 45 years. It is a pleasant and children like it.

You cannot use anything better for your child's cough and cold than Dr. King's New Discovery. It is prepared from Pine Tar mixed with healing and soothing balsams. It does not contain anything hurtful and is slightly laxative, just enough to expel the poisons from the system. Dr. King's New Discovery is antiseptic—kills the cold germs—eases the phlegm—loosens the cough and soothes the irritation.

"I have used Dr. King's New Discovery for the past three years and use it continually in my family. My children are very fond of it for it keeps them free from cold. I can't say too much for it, and take pleasure in recommending it to my friends." *Mrs. A. S. Haines, Francesia, N. Y.*

Don't put off your treatment. Coughs and colds often lead to a chronic cough, pneumonia and other serious lung troubles. It is also good for adults and the aged. Get a bottle to-day. All druggists.

BEAN SITUATION IN NORTHERN MICHIGAN

It is well known among Michigan bean growers that the crop being harvested is much below the normal, both in yield and quality. The growth has in most cases been stunted, the plants have not podded heavily, and in spite of the fact that good seed was sown the continuous wet weather has caused the diseases to develop more extensively than ever before in this bean region, growing beans as a staple crop. Many fields have already been plowed under for seeding to wheat, and many fields are barely worth harvesting or will yield a very light crop. It is estimated from rather general observation about the state that the crop will be very much picked will not be more than 30 or 35 per cent of normal and may be considerably less.

Michigan bean growers may not, however, approve the conclusions in regard to a suitable source of seed beans for the 1916 crop. In most cases the home grown beans cannot be recommended for planting, but on account of the high market price of beans, there will be a strong demand and temptation to plant badly diseased stock. The use of such seed will greatly increase the percentage of foll beans, but it will cost cheaper to buy good seed even at a price more in line with the market price, rather than to grow a badly diseased crop and pay 5 to 7 cents a pound for picking and hand sorting the product. The following suggestions may be of value in securing good seed; In regard to "mottled" beans, it is thought by said that some of the seed grown in northern Michigan has given very good results, healthy and quite free from comparatively free from disease. Many of the beans in northern Michigan are badly diseased, even in a normal season and there is always more or less uncertainty in buying seed from an unknown source. Many of the beans in northern Michigan were killed by frost in August to that they are considered much superior to the fall seeding for this purpose, and millions of rabbit skins are used annually.

FREE UNTIL 1916

Have you subscribed yet for the Youth's Companion for 1916? Now is the time to do it, if you are not already a subscriber; for you will get all the remaining issues of 1915 free from the time your subscription with $2.00 is received.

The fifty-two issues of 1916 will be crowded with good reading for young and old. Reading that is entertaining, but not "wishy-washy." Reading that leaves you, when you lay the paper down, with a good taste in your mouth, aspirations, with a broader outlook on life. The Companion is a good cause to tie to if you have a growing family—and for general reading, as Justice Brewer once said, no other is necessary.

If you wish to know more of the brilliant list of contributors, from our ex-President down, we will write for the new volume in 1916, and if you wish to know something of the new stories for 1916, let us send you free the Forecast for 1916.

Every new subscriber who sends $2.00 for 1916 will receive, in addition to this year's free issue, The Companion Home Calendar for 1916.

THE YOUTH'S COMPANION,
Boston, Mass.

THE MINISTERIAL ASSOCIATION

The following is the program of the Ministerial Association and Sunday School Institute to be held in the M. E. Church Nov. 16-17:

TUESDAY NOV. 16.

1:45 Devotionals...Rev. Harry Walker
2:00 Address, Training for Leadership...Dr. John A. Brown, Chicago
2:40 Address, Missionary Instruction...Miss Helen F. Patton, Chicago
3:20 Address, Organization for Efficiency.....Dr. Harry C. Wilson, Chicago
4:00 Sectional Conferences

EVENING SESSION

7:00 Devotions.....Rev. A. T. Cartland
7:15 Address of Welcome from the city.....Acting Mayor George Frost
Welcome from the church and Sunday school...Dr. A. M. Wilkinson
Response.....Dr. W. F. Kendrick
8:10 Address, The Twentieth Century Sunday school.....Dr. Harry C. Wilson

WEDNESDAY MORNING

9:30 Devotions...Rev. L. H. Manning
9:45 Address.....Dr. H. C. Wilson
10:05 Address.....Miss Helen F. Patton
10:45 Address.....Dr. A. A. Brown
11:15 Sectional Conferences

AFTERNOON SESSION

1:00 District Stewards Meeting
1:30 Devotions.....W. W. Lamport
2:00 Address.....Dr. H. C. Wilson
2:20 Address.....Miss Helen F. Patten
3:00 Address.....Dr. A. A. Brown
3:30 Sectional Conferences
4:30 District Business
7:00 Social gathering for minister's wives.

EVENING SESSION

7:00 Devotional and praise service
7:05 Address, The Rural Church Bungess of Detroit, State Supt. of Sunday School and Young People's Work.
7:45 Address.....Dr. Robinson, of Nimpoo, China, will deliver an address illustrated by lantern slides.

Sunday afternoon at Sunday School, "Wright and Wrong."

Tuesday evening, Bible Study. Subject, "The Lord's Titles."
Wednesday evening, Social Union B. Y. P. U. at the church.
Thursday, 2 p. m., Workers' Conference conducted by Dr. H. C. Wilson of Detroit, State Supt. of Sunday School and Young People's Work.
Thursday evening at 7:30 Dr. Robinson, of Nimpoo, China, will deliver an address illustrated by lantern slides.

In The Probate Court.

October 30th. In the estate of Adelia M. Miller—order made closing hearing claims. On the same day in the estate of William Barkley, Maggie Barkley, widow of deceased appointed administratrix of the estate, files bonds and receives letters of administration.

November 2nd. Estate of Willis O. Hoffman, deceased. Petition by administrator to revive hearing claims, and hearing on supplemental final account adjourned to November 18th at nine o'clock, when the entire matter will be heard.

SUDDEN MUSCULAR ACHES AND PAINS—NEED NOT BE!

That is—if you use the right remedy. Sloan's Liniment is a real necessity in every home—for young and old. Its worth is praised in doctors' offices. A stiff neck from colds, children's sprains, those aching muscles, that sharp neuralgia pain—these find quick relief in Sloan's Liniment. Every home meets with sudden aches and accidents. Your home needs a bottle. 25c., 50c. and $1.00.

His Disinclination.

"Come, mah brudder," invited Deacon Inwaites, addressing a stranger who had wandered into the revival meeting, "don't yo' want to jine de heavenly band?" "No, sah; ah ca'kaine for de bib' dese de same!" was the polite reply. "I done played de trombone in a minstrel band all last season, and isn't got no' dan half mah salary twell plumb yet!"—Kansas City Star.

Wear Furs of Necessity.

Throughout the cold latitudes of China during the winter the Chinese of all classes wear fur, wool or half-lined garments. Even the coolies have their sheep or goat skins, and people of the middle and official classes have many sets of garments lined with the richest furs. Their houses are rarely heated to a comfortable temperature, and in consequence they wear their furs both indoors and out.

Father's Hope.

Father's son—Dad, I'm that his son won't be such a fool as I asked was when young, and he won't put it up to the boy in just the way—Atchison Globe.

SENTINEL HAS GOOD COMPANY

The SENTINEL has on a good many occasions called attention to the weakness and inconsistency of the existing primary election laws, which were enacted with a view of correcting the evils of the Australian ballot, under a somewhat different coloring, continue to exist. In an address delivered at Grand Rapids last week by former president Taft that eminent statesman thus expresses himself:

"In place of the old machine which diagnosed the people because of utter disregard for their rights arose a new machine, the initiative, referendum, recall, and recall of judicial decisions. Here the speaker voiced his well known antipathy to the referendum and recall, especially the recall of judicial decisions. The new machinery, he said, takes three times as much effort to operate it as the old. Under the old system even though the boss was in control, he was keen enough to get some good men on the ticket with him or his friends. Now the system of the general primary is so cumbersome, is open to so much corruption, prevents men of small means from running for office, and really leaves the question of nomination to the few, that he believes the system is open to more unfortunate conditions than the old one. The recall, he said, destroys individual responsibility and sends expert knowledge which it never yet has received away—those states where it is supposed to have reached the highest point of efficiency."

HUNT BLACK WALNUT

Demands of War Cause Shortage in Supply.

is the Best Wood for Gun Stocks and Experts Are Trying to Find a Suitable Substitute—Two Dying Trees Sell at Top Price.

Washington.—The European war has caused a marked shortage in black walnut for the manufacture of gun stocks, and agents of gun manufacturers are scouring the forests.

Recently two partly decayed black walnut trees in the Arkansas National forest, Arkansas, were sold at $20 per 1,000 feet on the stump. This is the highest price ever paid for any unfinished hardwood so far as it known, and certainly for any sold from a national forest.

The two Arkansas trees were in splendid condition for manufacture in gun stocks, officials say. The black walnut has long been recognized as the best wood for gun stocks. The American pioneers made rifle stocks of walnut, but the war has made musket stocks were of black walnut.

At a convention of gunsmiths held in Omaha, Neb., in August, 1911, the consensus of opinion was that, black walnut was the superior material for hard woods for gun manufacture, with maple second and persimmon third. It was held that gun stock material should be air-dried for 20 years before being used in construction.

During the Civil war walnut for gun stocks was procured from the North and South by purchasing miles of fence rails, and by taking doors and wainscoting from barns and mills where the wood had been seasoned for a quarter to a half century. The toughness and durability of black walnut is well known.

The forest service has a record of a roof of black walnut shingles in the Shenandoah valley of Virginia that has shed the rain successfully for 75 years. Black walnut boards used in the construction of the famous Alamo at San Antonio, Tex., was found to be perfectly sound when the building was restored in 1913 after a period of 175 years.

Apparently buyers have been about as scarce as black walnut suitable for immediate use in the manufacture of gun stocks as they have been in the European market since the war began for military use in Europe. Owing to the increasing scarcity of black walnut gunmakers have for some time been experimenting with possible substitutes.

It is understood that the forest products laboratory at Madison, Wis., is making tests of gun lumber, which laboratory has been considered of a rather low grade, as a substitute for walnut for gun stocks.

The laboratory also is conducting experiments designed to develop a substitute for teakwood as a backing for armor plate on the older of our great dreadnaughts and battleship cruisers.

The general belief is not aware that a throughout backing of teakwood lies behind every belt of armor, acting as a sort of cushion between the armor and the steel hull proper. The reason for this is that the back of the armor and the steel hull are both rough and do not meet exactly. The backing of teakwood serve to bring the two more firmly together, the protection of the armor from the steel sinking into the wood.

Up to date no suitable substitute for teakwood has been found. The most promising is Port Orford cedar, a product of the Northern Pacific coast. Teakwood is popularly regarded as impenetrable. The experiments are not very hopeful of finding a suitable substitute for it. There is some talk of making tests with different varieties of hardwood from the Philippine islands. So far only wood found in continental United States have been used.

In addition to the laboratory tests conducted at Madison, tests of the resistant qualities of different woods when exposed to the action of salt water between plates of armor and steel are being carried on in the Gulf of Mexico and off the Pacific coast.

Gets Money Value.

The man who spends all his money on his family at least gets something for it.—Detroit Free Press.

MISSIONARY PROGRAM

Following is the Missionary Program to be given at the Baptist church Friday, November 5th, at 2:30 p. m:

Hymn.....Jesus Shall Reign," No. 697
Prayer.....Mrs. Chas. Carey
Devotional Exercises.....Mrs. Parmelee
Hymn..."Our Country's Voice Is Pleading," No. 664
Monthly Missionary topic with instruction to the study of Missions for the coming year.....
.....Miss Caroline G. Miller
Solo.....Jennie Carey
Indiloste from Indian Life.....
Mrs. Fred Thomas, Mrs. G. King
Adjournment by President.....
.....Mrs. W. A. Sanford
Benediction by the Minister.
Everybody most cordially invited to attend.

THIS MAIL ORDER MAN FINDS A TELEGRAM A GOOD CLOSER

"There goes letter number 8" said Reynolds, who conducted a correspondence school, "I suppose its no use to try another but my luck is bad."

"It's try a wire on the day the time limit expires" suggested Miller, who was the optimist of the outfit.

Reynolds agreed. Well with the psychological effect of receiving a telegram might be strong enough to close some shaky prospects. We will try them: 'Special oiler expires today. Suggest you telegraph acceptance collect.'

"Let's try it on a small unit" agreed Reynolds. It might cost a quarter.

And it did. Out of 100 telegrams sent, 17 wired acceptance. Now this mail order man counts telegrams as a strong closing asset.

GUNSOLUS SHEPARD

Married, at the Methodist Episcopal parsonage, by Rev. Quinton Walker, Saturday Oct. 30, Mr. Irvin Gunsolus of East Jordan and Miss Rosetta Shepard of the same place. The young people are well and favorably known and have the best wishes of their many friends.

From the Latin.

The Russians, who were slightly influenced by the Latin racic, say that "dogs bark and the wind carries it away," but the Prussian, influenced by Germans and English, who have inherited more than they wish to acknowledge from ancient Rome, all agree that "barking dogs don't bite," and we have also in English the warning to "have a care for a silent dog and still water," which is clearly a free translation of the Latin original.

Nails Used in Surgery.

It is said that common iron nails are now successfully used by surgeons in the repair of broken bones. The nails, which are used to hold the pieces in place within the healing process goes on, are soon covered with a sort of rust-resisting substance and their presence occasions no trouble or ill effects. Some time ago surgeons reported cases in which nails and even ordinary sewing wire have been used for this purpose.

Grease the Nail.

All mechanics know that a nail when oiled or greased is much more readily driven through hard woods. Elmer S. Ellis of Pomona, Cal., has devised a receptacle for grease or other lubricant, to be contained in the handle of a hammer from which the nail can be inserted and withdrawn without wounding the labor and of little loss of time.—National Magazine.

Peculiar Fillet Block.

A. C. Oliver of Woodstock, Vt., has a fillet block made somewhat smaller than a man's fist. Through one end of it is an irregular hole smaller at a lead pencil, caused by a vein of iron which had rusted out. The rock of a dock plant has grown through the hole, fitting it snugly and extending some distance in the ground beyond.

Trained Nurse of Great Value.

One of the most valuable weapons against infant mortality is the trained visiting nurse who enters the home and notes and instructs the mother.

Northern Michigan

East Jordan Enterprise: At the home of the bride's parents in Eveline township, Miss Mary Kathryn, Daughter of Mr. and Mrs. John A. Cooper, was united in marriage with Mr. Wellington F. Walker, the ceremony being performed by Rev. Quinton Walker, of Charlevoix. Mr. and Mrs. Walker will be at home on their farm in Eveline township after Nov. 5.

East Jordan Enterprise: A real estate deal was closed a few days ago by which the East Jordan Lumber Co. purchased a tract of 2,200 acres of timber land this side of Alba, which constituted the last tract of the David Ward timber here. The tract adjoins the land previously purchased by the East Jordan Lumber Co. of the Ward Estate and will furnish stock for several years operations of their mills here.

U. S. Inspectors Walls and Mulligan, of Grand Haven, condemned the tug Arthur at Cheboygan last week. The steamboat inspectors are getting very strict and unless a boat comes right up to the law in every respect it will be condemned. The boat will never again turn a wheel as it would require too much money to repair it to come up to comply with the laws. The Arthur is well known in Charlevoix harbor.

East Jordan Enterprise: On Sunday afternoon we hear that Road Commissioner D. Hayward came up from Charlevoix by auto to see Engineer H. L. Winters, who started back with him, making seven persons in the car. Some distance north of the city on the Charlevoix road something went wrong with the steering gear and the car went into the ditch and turned turtle. All of the occupants were bruised, and one had ribs fractured. It was almost a miracle that no one was killed.

A wire from the Chicago Tribune to the Petoskey Evening Times-Journal morning says Hatten Josephson, of Petoskey, has written Mr. Farwell, of the Chicago Law and Order League, saying an army of five thousand persons are ready to dynamite churches and kill reformers if saloons are put out of business. He signs himself in these letters as executive agent of the anti-prohibition league. The city and county directory gives no such name as "Hatten Josephson," but no doubt some person with an anarchist trend of mind has written these letters.

Petoskey News: County Clerk Madsen says deer hunters are not going to the north woods from this section this year in as large numbers as last season, the poor season being responsible for keeping many at home. "I can't afford to go this year, crops too poor," is the remark heard in the country just now when hunting on the north shore is mentioned. Only a dozen licenses have been taken out so far, Charlee Whitlaken getting the first one. There will be a small aired truth, however, early in November just a few days before the actual season opens.

Boyne City Special: Boyne City will soon have one of the best theatres in northern Michigan. The Bellamy opera house has been closed and extensive repairs are being made on the building. The structure is being entirely remodeled in the interior, a new front is being built, a cement alcoy is to be erected opening into the building from the street and leading from the lobby to the opera house proper will be a covered way of brick. The front and lobby will be brilliantly and artistically lighted and the place will present, withal, a true metropolitan appearance. When dramatic productions are not booked, high-grade photo-plays will be presented. The place will be open all the time. This city has long needed and wanted just the sort of a theatre that will now be provided.

Boyne City special: It will not be many days before the White Lumber company will be turning out the finest grade of lumber for its retail trade. A temporary mill is now in course of construction to re-place the plant destroyed by fire several weeks ago. A number of the very latest lumber finishing machines have been ordered and they will be installed in a few days. At the time when the mill was erected, several years ago, the machinery was of the latest and and most efficient type, but the new equipment which has been ordered is so far superior that it makes the old machinery destroyed in the fire appear out of date and inefficient. Definite plans looking for a permanent plant have not yet been completed, but it is certain that a strictly modern mill will be put up in the course of a few months. In the meantime the temporary structure will turn out finished lumber to supply the demand for the recognized high-grade quality of lumber products for which the White concern is noted.

Boyne Citizen: After a brief business session last evening the I. O. O. F. extended to R. E. Newville, member of the local order and recently installed as Grand Master of the State of Michigan, the Honor of the Order. Following this session the doors were thrown open to the Odd Fellows, Rebekahs and their families. A prayer by Rev. M. W. Duffey preceded the introduction by the Noble Grand of Grand Master Newville. Mr. Newville spoke for about twenty minutes explaining the duties of the new office and the gratitude he felt towards those present for their manifested congratulations. He was responded to by Hon. J. M. Harris who intermingled wit and story with a thirty minute reply in which he paid high tribute to the honored one. A program of readings by Master Alberta Fogg, Mrs. A. F. Hays, Geo. Marble and Mrs. Burt Fosley followed, interspersed by selections from the Edison victrola furnished by A. E. Watson. Rev. M. W. Duffey addressed those present for a few minutes closing with the presentation of a silver cup to Grand Master Newville who responded tastefully.

Boyne Citizen: Two of the most unsavory cases requiring the administration of Justice came before Justice Nurko yesterday. Both were accusations of indecent liberties taken by men with girls under the age of fourteen years. The case against J. Johnson was dismissed last evening after several hours of examination failed to develop sufficient reliable evidence to warrant a case in the circuit court. Lemara and Velma Ikens, ten and thirteen years respectively, were on the stand as accusing witnesses against Johnson but their testimony was not of the straightforward kind and failed to impress either the justice or the prosecuting attorney as being sufficient. A "framed up" is rumored and further developments may be expected after thorough investigation. The C. Green case will in all probability go to the circuit court although this has not been decided definitely as we go to press. The accusation were made by two little girls each aged ten years. The charge is of such character and so revolting to the normal man that it is inconceivable that the accused can be guilty and every doubt is given him, as will every opportunity to clear himself. The case has attracted extraordinary attention because of the fact that the accused has been considered a straight, forward, upright Christian man. His friends are loth to believe him guilty and are affording him every opportunity to prove his innocence.

Original Forms of Life.

It is believed that the original forms of life began in the ocean many million years ago, and at one time "life has life there ceased. Many of the earliest forms are now extinct; others have gradually increased in number and variety from their beginning to the present time. How long ago the beginning no one has definitely determined; but it is known to have been many million years ago for the remains of extinct animals and plants are found in the oldest sedimentary rocks.

Daily Thought.

A man's own conscience is his sole tribunal and he should care no more for that phantom "opinion" than he should fear meeting a ghost if he crosses the churchyard at dark.—Lycurgus.

Barnard Doings.

Mrs. Elizabeth Tullock, mother of Mrs. A. Bulhuis, is very poorly.

Mrs. Robert Trimble and Floyd Black spent the week end with Thomas Trimble, of East Jordan.

The condition of little Robert Dougherty, who is taking treatment at Charlevoix, remains unchanged.

Mr. and Mrs. Frank Kadon, of Boyne City, motored to Barnard Sunday and called at the home of Mr. Will Burns.

Many old neighbors and friends of Mrs. A. N. Chase, now living in Glen Haven, remembered her birthday with a postal shower.

A "Men's Class" is being arranged for in S. S. Let the men of Barnard show their desire for such a class by being present Sunday.

The school children enjoyed a pleasant afternoon, which their teacher, Miss Cora Driggett, planned for them in honor of Halloween. Games and refreshments pleased the "youngsters."

The infant daughter of Mr. and Mrs. Frank Manchett, who had been in a serious condition for several days, passed away Sunday afternoon. Much sympathy is extended to the parents in the loss of their first born.

A Halloween Party was given by Lucile Lewis at her home Friday evening, twelve of the young people were present. The house was decorated with Halloween colors, jackolanterns and seed corn. Much excitement was caused by the mashing of the hair for upper. Fortune telling and various games helped to make a most pleasant evening.

Mr. Peter Block's birthday anniversary was remembered by a number of friends and neighbors Tuesday, October 26. The evening was pleasantly spent with games and the creating of some "brand new" animals from the vegetable kingdom. The judges awarded the Kinner's home, created by Peter Block first prize. A delicious Dutch Lunch was provided by the hostess and served by the men.

A jolly crowd enjoyed a Halloween Party at the home of Miss Dorothy Beattie Friday evening. A lazy rack and auto conveyed many of the young people from Charlevoix to the farm when the house was prettily decorated for the occasion. About thirty were present and all were masked, causing much merriment. Various Halloween games were played. A box lunch was served and to the the hostess added pumpkin pie and coffee.

County Normal Notes

RUTH CHELLIS

Mr. Ruel Chellis, of Kilsworth, visited the normal Tuesday afternoon. He teaches the Chamberlain school and has forty-two pupils enrolled.

For arithmetic, the class is writing a descriptive paper on their visit to the glooring match.

Mr. Joseph La Londe made a short visit at the normal Wednesday morning.

Several of the grade high school teachers, also the normal teachers attended the Michigan State Teachers' association at Saginaw last week. Three of the normal students had charge of the training room and the seventh grade room during the absence of Miss Whiting and Miss Lamereaux. Miss Hazel Richardson taught the seventh grade and Miss Carroll and Miss Madlaugh taught in the training room.

Miss Milner had charge in general of the normal room during Miss Hinsdale's absence while she classes to be taught were assigned to the remaining members of the class.

Miss Stella Blanchard was called home last week Wednesday on account of the illness of her mother.

McCLELLAN-TAYLOR

Married, at the M. E. Parsonage, Sunday Oct. 31, by the Rev. Quinton Walker, Mr

The TEMPTRESS

BY H. M. EGBERT

(Copyright, 1915, by W. G. Chapman.)

The little Welshman and Van Trevor looked at each other in the silent shabby library. The little Welshman was obviously in need of a job. Van Trevor thought. A scene of commission rose up in him as he inspected the shabby figure.

"Well, Mr. Evans?" he inquired blandly.

"I have come with reference to that advertisement for a man to catalogue your books," said Evans. His heart was thumping madly; he was desperately afraid Van Trevor would see his need and cut down the salary.

"You are acquainted with the classics, I believe?" inquired Van Trevor.

"Yes, sir. I studied Greek and Latin at Cardiff university. I know French and German, a little Hebrew, some Spanish."

Van Trevor extended his hand cordially. "My dear fellow, that is satisfactory," he said. "The work should last about three months. You understand it is not permanent, of course?" he added.

"I only need it for the summer, sir," replied the little Welshman. "I am studying at the Theological seminary. I have a means of working off our board after the term begins."

He hesitated. The use of the plural form had betrayed what he was not from anxious to reveal. "My wife and myself," he explained, hesitating.

Van Trevor nodded. "Well, my dear fellow, about the salary," he said aloud. "Would—er—forty dollars a week be satisfactory?"

The little Welshman could not refrain a gasp. In his wildest dreams, he had hoped daringly for twenty-five.

"That's settled, then," said Van Trevor. "And now, Mr. Evans, you

"She's Too Good for That Little Shrimp."

must lunch with me and meet Mrs. Van Trevor."

Mrs. Van Trevor proved to be a little, vivacious brunette. She shook hands with Evans cordially, and they sat down to lunch in a magnificently furnished room, while a butler served them.

Evans was conscious of a painful diffidence. A gentleman by birth, a long period of hardship had made him self-conscious. He wondered whether he was using the right fork and wrestled. The Van Trevors seemed straikes for etiquette. In Wales one met all classes upon a free and easy basis, here there seemed to be a conventionalized ritual, a little distant, and puzzling. The Van Trevors drew him out about his wife. "You must bring her to see us," said the rich man's wife, as they parted.

II.

Lelia Evans' beauty and copper hair was the sensation of Mrs. Van Trevor's afternoon. She said had been married six months. She had run away from a wealthy home in Cardiff to go to America with the little Welshman. Those six months had been of unmitigated hardship. Her illusions of happiness in the New World were shattered. She loved her husband but she hated the sordid barenessss of life in furnished lodging. The visit to the Van Trevors had opened up a new vista of life for her.

She clung to Evans' arm as they left the house together.

"Dear," she said, "Mrs. Van Trevor has asked me to come to the house every day to read to her secretary. What do you think of it? She is going to pay me twenty-five dollars a week!"

Evans was reverence by emotion. "They are splendid people, Lelia," he said. "Who would have thought that we should find such good friends in New York? It looks like a prosperous future for us, doesn't it, dear?"

Elsie Van Trevor and her husband met together in their drawing-room after the guests had gone.

"What do you think of them?" asked Van Trevor.

"She's dear," said Elsie. "She's too good for that little shrimp. Too good altogether."

"Poor little devil!" said Van Trevor. "He told me he—he's saving up for an operation on his ear. He says it's likely to prove serious some day if he doesn't have it done."

"She's too good for him," his wife repeated, following her train of thought. "I don't see how she came to marry him. If I have any chance I'm going to open her eyes. Why, he isn't even a gentleman, dear."

III.

Elsie Van Trevor had gone to their bungalow at the seashore and taken her secretary with her. The little Welshman was catalogue the books in the library alone.

He missed his wife greatly. It was their first separation. Somehow he felt that Mrs. Van Trevor's sudden friendship for Leila boded ill for them both. But Leila had been crazy to go; there were to be house parties and all sorts of gaiety, and later Evans was to be invited for a day or two.

Somewhere a bell had been ringing furiously all the morning. The little Welshman wondered where it could be. He threw up the window and looked out. Suddenly a violent pain shot through his head, as if a knife had pierced him. The bell was in his own head. And the pain was stab sing without ceasing.

He screamed with the agony of it. He tried to stagger across the room, collapsed, and moaned upon the floor. He saw Van Trevor standing over him, a look of fear in his eyes. Dimly through a period of unconsciousness he grew to a dim realization of the jolting ambulance, the footfalls of the white-capped nurses, and the sickening smell of the ether cone.

He opened his eyes to find himself in a bed in the hospital. His head was swathed in bandages.

"You'll do finely now," the nurse said, and he composed his eyes a second time to see Van Trevor at his side.

"How are you, my dear chap?" he asked. "By George, that was touch and go, but the surgeon says you're all right now."

"You haven't told my wife?" asked Evans weakly.

"No. I thought it best not to alarm her," answered the other.

Van Trevor never came again through the slow days of convalescence. Evans' letters to Leila were unanswered. Gradually a sickening fear began to creep into the little Welshman, a sense of some indefinable tragedy. At last, when a few weeks had passed, he was permitted to leave the hospital. He hurried to the Van Trevor house. The butler, who opened the door, stood in his way.

"Mr. Van Trevor left a letter for you sir," he said, handing him a little envelope.

The little Welshman opened it. It stated briefly that the work had come to an end, and included a check for five hundred dollars.

Evans tore the check to pieces and threw it upon the floor in blind rage. Agony and rage.

IV.

The bungalow stood side by side in twin cottages at the edge of the shore. Near by, at the huge hotel, were music and dancing, and the mirth of holiday-makers. Many couples, strolling along the road, looked askance at the seedy little man, with the bandage about his head, who sitting hunched up toward the bungalow at the end of the row.

In the shadow of a pine tree Evans halted. The bungalow was ablaze with lights. He heard the voices of Van Trevor and his friends, and the tittering laughter of his wife. Then, came a laugh that made him clutch at his heart—Leila's.

Then suddenly the little Welshman seemed to become inspired with a strong personality that had never been his. He strode through the open door into the living-room, and stood there at the door.

He saw a look of fear in Van Trevor's eyes, astonishment in the guests', wonder in Leila's. The little, shabby man suddenly dominated the situation.

"High!" explained Leila, leaping to her feet. "You are lit! What is the matter?"

"I have come to take you home, dear," said Evans.

Mrs. Van Trevor advanced with mincing steps. "This is Leila's husband," she explained to the group. "He has been unwell, you know. Mr. Evans, it would really have been more decent to have written."

"Come, dear," said Evans, taking his wife's arm in his. In that moment he saw all the strength in the eyes of the old love and the new pleasures. It was a hard test for best Leila in the storms of uncertainty.

"Leila is certainly not going away with you," exclaimed Elsie Van Trevor angrily. "This is an outrage! Leila, dear, we will protect you."

With a swift, nonsensical gesture Evans tore the bracelets from Leila's arms, the pendant from her neck, and cast them down. And, while they still stared at them, they were gone, and Leila clung to her husband's neck in hysterics.

"High, dearest!" she wept. "What was it? Why didn't you write? I didn't know you had been ill. They wanted me to get a divorce—I thought if you hadn't come they would have made me do anything—anything. Keep me! Guard me! Never leave me again!"

And in her husband's clasp she felt at last a safeguard against the danger that had been her. Yet, was it that chemeforward their real life would be together.

His Disillusionment.

"Come, mah brother," invited Deacon Hawbee, addressing a stranger who he had wandered into a revival meeting, "don't you want to jine de heavenly band?" "No, sah! but I can't do dat, de deacon said, in the polite reply. "I done played de trombone in a minstrel band all last season, and I just got clear and half mad enough I will plumb yit!"—Kansas City Star.

Grease the Nail.

"All mechanics know that a nail when other grease is lacking, moves easily through hard wood. Make a little of this stuff. I just devised a receptacle for grease or other lubricant, to be contained in the handle of a hammer and when the nail can be inserted and withdrawn without wasting the lubricant and at little loss of time."—National Magazine.

General Confession.

People occasionally announce their intention of "summering" or "wintering" here or there, but oddly enough they never say they will "fall" or "spring" in any place in particular.

Concerning the Remodeling of Old Gowns

The problems of the home dressmaker in the matter of remodeling last year's gowns to make them up to date are much simplified this season. She may take advantage of the vogue for combinations of plain cloth and for fabrics, and of the continued —or of sleeves and blouses of chiffon under skeleton bodices of heavier goods. But most useful of all to her is the liking for guide in both silk and wool materials. Made up in combination with plain cloth they are a style feature.

Skirts trimmed with bands of fur cloth—which is a new name for certain plushes—and coats of the fur cloth or of combinations of it with plain goods make an attractive suite as the season has to offer. Plaids are used in the same way and their field is even wider because afternoon gowns and even dressier ones employ them. They are unusually effective because the fashionable colors of the season are dark and the plaids unusually rich.

A pretty combination is shown in the picture above. The straight, most scanty full skirt is made of a dark shield with the cross-bands of white. The belted jacket has a square opening at the front which allows the use of one of the lacey crazolle chemisettes and turnover collars that add much to the becomingness of dark frocks. The plain sleeves which reach to the wrist are finished with plaid cuffs half-buttons and silk braid. The belt is of the same material as the jacket and fastens with button and brass ornament at the left side.

The plain material appears in a wide band about the skirt, but is more often seen in two or three narrower bands.

This model is well adapted to the nearly grown miss as well as to young women.

There are many good patterns for skirts to be made up in plaid materials. Such skirts should never be tissey. The broken surface and mixture of colors in the material make it necessary to choose plain designs.

Shoes Displayed for Fall and Winter

The shoes displayed for fall and winter show are more quiet in design and decoration than those worn during the summer. But, compared to those of former seasons, they are elaborate. The new footwear shows novelties in cut, combinations of two or more materials, and color combinations in the same shoe, addition to methods of fastening and minute attention to the details of finishing.

The public, and especially the feminine public, is growing more discriminating and more exacting each year as to footwear. America already boasts the best shaped and best made shoes produced. Now, small items of finishing, such as the buttons used, shape of buttonholes and management of stitching are counted upon to impart much style to the finished footwear. The shortening of skirts brought in the high shoe and it remains. For the street there is a number of smart designs, of which two are shown in the picture. A third very popular boog items on the inside and seems to be cut in two pieces with a seam running up the middle front from toe to vamp and another up the back. These seams are stayed with bands of contrasting leather. That in front widens to a narrow tip on the top of the vamp. A similar slow in satin is worn with evening gowns, (matching them in color), instead of satin slippers.

The boot is known in the picture made of tan leather with patent leather vamp. The new, partial vamp of machine stitching made a feature worth considering in its make-up. Two rows of rather large buttons are provided for fastening by way of ability. The buttons are sewed on together it is a trim and smart motes, which adds much to the beauty of shape of buttonholes and management of stitching are counted upon to impart much style to the finished footwear. The shortening of skirts brought in the high shoe and it remains. For the street there is a number of smart designs, of which two are shown in the picture. A third very popular boog items on the inside and seems to be cut in two pieces with a seam ra-

Big Mats of Velvet.

The revival of black velvet hats is a pronounced feature of the ultra smart apparel. Almost to the exclusion of any other ornamentation these large, picturesque affairs are straying by embroidered in white wool floss (in them are noted spreading designs so large and fine is so bold and bizarre a stitch in the wool that they often extend entirely around the brood, fine brims. Conventional flower and fruit designs greatly magnified are present.

Good Use for Ultra-Violet Rays.

Herman and Japanese physicians, working together, demonstrated that it is possible to cure cancer, tumors, nose and other body cavities with the ultra-violet rays.

"All told, the bernagilist in the tender of the moment. This collosus is trimmed for all the world like that of Italy's military man, and the big flat rosette of coque plumage is supplemented with a good deal of masterness which cascades down to the shoulder.

THE SANDMAN STORY

by Mrs. F. A. WALKER

HOW JAMIE FOUND A HOME.

Jamie was a little boy eight years old, but he felt the weight of years upon his shoulders as he looked at little Alice sleeping and saw a tear still wet upon her little thin cheek. She had cried herself to sleep from hunger, and Jamie felt that something must be done at once. His mother had been dead four weeks now. At first his father kept sober and worked, and they managed to get along very well. Jamie took care of Alice and the house, but one night his father did not come home, and then Jamie was told that the judge had sent him away for six months. The four was nearly gone and the food had given out the day before. Jamie had not eaten anything but crusts of bread for two days. He had managed to get milk for Alice until today, but the last of the money he had received for a locket of his mother's was gone now.

"I shall have to sell her ring," said Jamie, taking it from a corner of a drawer, "and she told me to keep it for Alice and tell her when she was old enough that she left it for her."

He Looked at the Houses as He Went Along.

but I cannot let Alice starve." he said. "and I will go while she is asleep."

He could not keep back the tears when he looked at the ring in a pawnbroker's.

"What's the matter, kid?" asked the man, good-naturedly.

Jamie told him as well as he could, for he was crying now.

The man looked around, to be sure that no one was by him, for it was never do to let anyone think he had a kind heart then he took a quarter from his pocket and gave it to Jamie.

"Here's the ring," he said; "keep it."

Jamie was too surprised to say anything but "Thank you," and he ran to the store and home as fast as he could.

Alice was awake and crying for "brover." He gave her some bread and milk, and then he washed her face and combed her hair. Then he put on another dress, which was not quite so ragged as the one he had on.

"Alice go out," she said. But Jamie did not answer; he was thinking.

Alice went to sleep when it was dark, and Jamie put on his coat and cap. He then wrapped a shawl around Alice and taking her in his arms, opened the door and went out. He walked a long distance, and at last came to the part of the city where the houses were the best and he looked at one of the streets. He looked at the houses as he went along, one was a very brilliant house with lights in it, and Jamie went up the steps. Alice was asleep and he rang the bell, and then laid her carefully in the vestibule, then he rang the bell and hurried down the steps. He went across the street and watched. He saw the maid open the door, and a lady took Alice, who was crying by this time, and carried her into the house. It took all of Jamie's willpower to keep from running across the street when he heard Alice cry; but when the door was closed he walked down the street.

Then he thought, "Suppose they do not keep her," he said. "and put her out in the cold again or send her to the orphans home." He went back and walked up and down in front of the house, but the door did not open. At last he knew Alice was safe and he could go away without knowing if the people with whom he left Alice would be able to keep her. He went to the house and rang the bell.

"Are you going to keep her?" he asked the maid who opened the door.

"What do you want?" she asked, thinking he was a beggar.

"I love Alice so, I make sure you would let Alice stay here before I went away," he said.

"Why, what a queer boy," said the maid, pulling him into the hall; "did you leave that poor little child on the steps in the cold? You could to be beaten."

Jamie" did not answer. He knew that she was angry, but he did not mind that.

"Here's the villain that left the baby," she said as a lad, came down the stairs.

"Are you going to keep her?" asking as the middle front from toe to

Jamie asked again. But Alice had heard his voice. Throwing off the shawl she called, running as fast as her little legs would carry her.

Jamie dropped his bundle and took her in his arms, the tears streaming down his cheeks, while Alice covered his face with kisses.

The maid wiped her eyes, and the lady told Jamie to sit down and tell her why he had left Alice on her steps. Jamie told her that his mother was dead and that the judge had sent his father away; that he had tried to take care of Alice, but he was too small to get work that would support both of them. He wanted Alice to have a good home, and he thought as they were rich they might want a little girl, and so he brought her to them. The lady was crying when Jamie finished his story.

"We do want a little girl," she said. "We have lost our little girl and our little boy, too, and we are very lonely. You and Alice must stay here until your father returns and then we will see what can be done."

And so Jamie found a home for himself as well as Alice, for when their father came home he was never sent away again by the judge, who also decided that their father was not the sort of a man to have the care of two such good children as Jamie and Alice.

CLUBS FOR BOYS AND GIRLS

Objects and Methods of Movement to Make Rural Life Fuller and More Appealing to Youth.

The primary object of the boys' and girls' clubs which are being organized throughout the country with the assistance of the United States department of agriculture, but in co-operation with the state colleges of agriculture, is to aid young people to become more efficient and more contented farmers and home-builders. By cultivating in boys and girls habits of industry and thrift, the possibilities of farm and country life are realized not only to them but to their elders. The best methods of handling farm products and preventing waste are demonstrated, the spirit of co-operation in family and community life is developed, and the dignity of the farmer's vocation, enhanced by presenting it as a skilled occupation, capable of returning adequate rewards to the competent. Finally, the school life and the home life of boys and girls are brought into closer relationship, and a fuller rural school teacher added in the task of making agricultural instruction a vital thing.

The clubs may be organized under the direction of the county superintendent of schools or any of the teachers under him. If the county school authorities of the county are not yet alive to the possibilities of these clubs, the county demonstration agent may take charge of the movement, or if there is no demonstration

Getting a Good Start—Ducks Afford Good Playmates for Growing Lads —Many Poultry Partnerships Have Been Started in This Way.

agent in the county such organizations as local chambers of commerce, the women's clubs, etc., may assume the leadership. The names of the members of the boys and girls included in the clubs are collected and sent to the county agent, who will furnish organization and cultural instructions upon request.

Experience has shown, however, that the difficulty is not in organizing a club with a large enrollment of members, but in inducing these members to complete their work and to report on their results. The test of efficiency is not so much the organization of new clubs as continuing interest in those already formed. The county agent therefore is to keep in touch with the members of the club, encourage those who need encouragement, and to see that once a project has been started it is carried on to completion.

They Have for Spring

An examination was being held in little Emma's school, and one of the questions asked was:

"On what do hibernating animals subsist during the winter?"

Emma thought for several minutes and then wrote:

"On the hope of a coming spring."

Stays on Longer.

A mother said to her daughter, Edna, look at your dirty hands, and your face is as black as a coal heaver's."

"Yes, mamma," answered Edna, "I just can't understand it, but my face always stays on ever so much longer than mine does."

Not Ready for Kisses.

Small Bobby had hurt his finger and was crying thinkly.

"Come here," said his mother, "and I will kiss the tears away."

"W-wait a minute," sobbed the little fellow. "I ain't done cryin' yet."

Little Calico-Colored Cow.

Small Dorothy was visiting in the country and spied a red and white calf.

"Oh, mamma," she exclaimed, "look at the little calico colored cow!"

Children Like Bees.

Children in their teens can care for bees and will enjoy doing it.

WOMAN REFUSES OPERATION

Tells How She Was Saved by Taking Lydia E. Pinkham's Vegetable Compound.

Louisville, Ky.—"I think if more suffering women would take Lydia E. Pinkham's Vegetable Compound they would enjoy better health. I suffered from a female trouble, and the doctors decided I had a tumorous growth and would have to be operated upon, but I refused as I do not believe in operations. I had fainting spells, bloated, and could hardly stand the pain in my left side. My husband insisted that I try Lydia E. Pinkham's Vegetable Compound, and I am so thankful I did, for I am now a well woman. I sleep better, do all my housework and take long walks. I never fail to praise Lydia E. Pinkham's Vegetable Compound for good health."—Mrs. J. M. Rieger, 1910 West Broadway, Louisville, Ky.

The signature of Lydia E. Pinkham is on file for the genuineness of which we publish this testimonial. Such testimonials which we publish are genuine, and not fair to suppose that if Lydia E. Pinkham's Vegetable Compound has the virtues to help these women it will help any other woman who is suffering in a like manner?

If you are ill do not drag along until an operation is necessary, but at once take Lydia E. Pinkham's Vegetable Compound.

Write to Lydia E. Pinkham Medicine Co., confidentially, Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

For Varicose Veins and Ulcers, Bunches, Inflammations, Swellings, Abscesses, Sores, Etc., use

MOONE'S

Emerald Oil

The famous and unexcelled antiseptic and germicide, only a few drops required at an application. So powerfully powerful that Enlarged Glands, Wens and Varicose disappear with its use. Price $1.00 sent anywhere charged paid on receipt of price.

Ask your Druggist or Write for Booklet. **The Cutter Laboratory, Berkeley, Cal., or Chicago, Ill.**

MUCH OF AN ABBREVIATION

Youngster's Name Considerably Shortened From the One That Was Given Him at Christening.

A northern man who was visiting in Baltimore stepped on the street one day to have his shoes polished. A bright-eyed little black boy stepped forward to give the desired shine. Discovering interested in the little chap, the Northerner asked the name. He which the boy promptly replied:

"Gus, sah!"

After a few moments of silence, the Northerner said, "I suppose that is an abbreviation for General?"

"No, sah!" the boy replied, "dat little fellow passes however, he was equal to the occasion and recovered himself. "No, sah," he said, "dat's nasty dat; ma shore tough name am Augustus. Ma pa sho' was righteous mad when he was born and he wanted to give me a name that would be a man's word and no other woman had ever attempted it before. The first thing he contrived for a name was to call me Gus for short."—Youth's Companion.

Painful Contrast.

Mrs. Newlyweds—Eliminating against American bankers for being too cautious, I think they have anything to do, and having decided to go into the thing proceeded to see it through or quit.

The result was that they had built a four-room structure, which, while it did not make any pretensions to Hoffman Palace, was quite fond to defy the elements under the most distressing conditions. With very few forbearance, gained by knowledge of their life in the mountains, they located the cabin under the lee of a bluff, where it would be least exposed to the fury northwest winds and would at the same time afford an unobstructed view of a magnificent panorama of ridges and valleys stretching away to a line of snow-capped peaks more than a hundred miles distant.

It should be understood that when Miss Carmalt and Miss Norwood came to possess the mine it was more a likely "prospect" than an assured money-maker. Evidences of gold were plentiful, but the problem was to strike the rich veins which would yield ore in paying quantities and warrant the erection of a mill to treat it.

Consequently the first period of their stay in the mountains was devoted to a search for these veins, which they never doubted existed somewhere back in the mountains. Day after day, through the summer and early fall, dressed in overalls and with a pick and shovel in their knapsacks, they borrowed farther and farther back into the mountains, frequently being forced to leave the main shaft to follow a new lead.

Much of this work, in the hard soil and earth, was done with pick and shovel, but now and then they found their way barred by a wall of solid rock, which could only be removed by blasting with dynamite. With the details of this work the two girls were already acquainted, however, so the drilling of holes and the placing and setting off of the explosive caused them no concern. Then in the work, sometimes the charge had to be timbered and cleared of the broken stone and dirt. For the latter purpose a small

THE CABIN

RAILROAD LEADING FROM MINE TO MILL

MISS CARMALT AND MISS NORWOOD

THE SAND-BATTERY

ore car running on wooden rails, with a metal sheath on top, was employed, the tracks being extended back as fast as the opening was made.

During the summer months, while this preliminary work was in progress, Miss Carmalt and Miss Norwood were practically alone in their mountain home, except for an occasional week-end visit from some of their solicitous friends in Baker. But in spite of the fact that almost the first question asked by every visitor was, "Don't you get lonesome out here?" they declare that never for a moment, after the first half hour following the departure of the wagon which had brought them and their supplies, when they had a chance to look around, did they feel the slightest inclination to retrace their steps.

"There were many things, aside from their work, to keep us from thinking of our lonely hands. In the first place there was always the great sun spread out at their feet to study by new lights and shadows. Then bird and animal life were plentiful, filling the air with songs and chatter, coming to the doorstep for food, and often invading the cabin itself. Frequently a timid chipmunk would venture some distance to realize that they had nothing to fear from the intruders, and occasionally a bear or two would pass along seemingly very friendly and caused no more concern than a passing cow, except to find a way into the cabin and eat us out.

"Down by a spring, where they set their water cooler, they found the tracks of larger ones on the trail. They also heard the cries of a panther one night, but they were never molested by any of these animals, although they were well armed to do battle on occasion demanded.

"During the summer they cultivated a small garden and raised chickens. These things added to their plentiful supply of canned goods, to say nothing of the mountain trout which they caught almost at their doorstep, and made a varied menu. Then they were always certain of a supply of eggs whenever they felt the timely journeys up from Baker.

"So the summer months passed, their life a busy and a joyous one, with the lure of hidden riches to urge them on in their work. Then one day, in the fall, the expected vein was uncovered—and the two girls celebrated the discovery by opening their last case of chocolate into fudge.

"The finding of the vein necessitated a trip to Baker, to make arrangements for the construction of a mill and the installation of a stamp battery for crushing the ore. As they locked up the cabin and started on the 18-mile trip afoot.

"The mill was erected that fall, and while the two girls did not actually lay the foundations they took an active part in its construction and superintending the work of the mountaineers. They also helped build a little railroad for the ore cars from the mine to the mill.

"The following spring the stamp battery was put in place and then the real work of digging and crushing the ore began. But as the work was quite beyond the efforts of even two such industrious and ambitious young women, they engaged a foreman and a number of men to assist in those operations. There is never any question, however, as to who are the real bosses of the job. All of the men seem to recognize intuitively in these two energetic girls the moving power and the guiding hands behind the whole project. Quickly and unerringly their eyes single out any fault in the work. Then in low-pitched, modulated voices, which nevertheless have in them a ring of command, they give their orders, and the men, with the air of those who bow to superior knowledge of the subject, are quick to obey.

The development of the mine is now proceeding rapidly, and while it is too early to predict what material fortune the young women eventually will enjoy, they seem to be confident that their efforts will be sufficiently rewarded. At any rate, they count their experience a valuable one, and they have built up a fund of rugged health and contentment of spirit upon which they can draw freely throughout the rest of their lives.

SCIENCE TO CONTROL THE EGG

Well-Known Theatrical Missile Can Be Regulated From Debut to Old Age.

Eggs, those mysterious oval jewels within the shells of which lie secrets that stagger the brain and threaten the protoscis, are practically exposed in a paper issued out by the New York State College of Agriculture at Cornell, says the New York Herald. The article shows how to color the yolk, regulate the consistency of the albumen, offset evil spirits and protect the Ann-ven breakfast table.

To begin with, a hen should be fed just so in order to have eggs that are dependable and upright. A hen which deliberately sets an order usually knows in her heart that some day in the future there is to be something in contest which might have been equal to any omelet ever served. Still, that hen will eat that coline with no more thought of the chance consumer than a farmer usually has. Hens are a mighty treacherous flock of cackers at best, it seems, according to the late bulletins from Cornell.

On the other hand, a hen that has been shown its place in the coop can be made to lay eggs that are of a certain color, size, odor and condition. Fresh eggs are forced for a cake by a mixture of one part of molasses to three parts of water, and buckwheat produces a pallid yolk.

Even the season of the year, which has remained above suspicion in storage circles until now, may be a factor that upon the future conduct of a week-chinned egg. A winter egg is stately and sweet in comparison with almost any one laid in the good old summer time. They act better in cold storage, producing practically no discovery during preservation.

The matter of cold storage, incidentally, is more than touched upon. After an egg has arrived on earth its treatment by those who can prove their right to it is a great subject determine what sort of an egg it will be and remain. Evaporation of water through the pores of an egg shell cannot be prevented always, and a proper temperature and degree of moisture should be provided. Rough handling is peculiarly warned against, for, after all, even an egg has some small rights.

The best way to preserve the integrity of an egg, according to the voluminous bulletin, is by lime water and salt solution and by water-glass solution. Either method is much better than cold storage, which has become somewhat notorious in recent years and is, as they say at the egg candling resorts, bad odor.

An unusual feature of the bulletin is its color plates, of which there are seven, showing the shading, gradations and opaque appearance of the eggs of different quality and at various stages. These illustrations were made from actual specimens and some of them were probably taken, for obvious reasons, from quite a distance.

GETTING HIS.

"Had a most enjoyable time at the dentist's this afternoon."

"Did it hurt?"

"Yes. When I went to another dentist was filling my dentist's teeth."

THE MATERIAL.

"So you are going to build a castle in Spain. I know what the material will consist of."

"What will it be?"

"Cold bricks."

TOLD AS TRUTHS

It is the man who has no right who generally comforts a woman who has wrong.

Useful women are the monopoly of the kitchen while the ornamental women have the monopoly of the supper table.

The most dressy people are certainly the most undressy just now.

The women who are the oldest to win are always the most difficult to lose.

SNAP SHOTS

Some men are afraid other men will steal their wives, and others are afraid they won't.

Fortunately, the man with a hard lot is never so miserable as he is trying to swing it.

Speaking of capacity to assimilate punishments, John Mellon has driven a hack for 37 years.

Easy Way.

Hyker—Which is the easiest way to have a hard time in carrying elections?

Yyker—Why at seaside cities especially? Because there are always such a lot of floaters there.

Skinner's Surprise.

Hyker—What's Skinner doing now?

Pyker—He's in the pail business.

Hyker—Pail business?

Pyker—Yes; he's running a bucket shop.

Rare Tribute.

"Gargoyle's jokes must be above the ordinary."

"Why do you think so?"

"I was at his house recently and I noticed they got a laugh in the family circle."

His Specialty.

"The Rose—you want a job, do you?" Applicant—Nothing in particular—but work is not an object at good wages.

WESTERN GIRLS SUCCESSFULLY WORK MINING CLAIM

By ROBERT H. MOULTON

HELD OUT $21,000 ON HIS MONARCH

Eskimo Fugitive Decides His Majesty's Rake-Off Is Too Heavy.

LEAVES THE COUNTRY

Is Now an Expert Workman in Detroit Automobile Plant—Noises and Distances of City Make Life Miserable for Him.

Detroit.—Arthur Zerbelien, a full-blooded Eskimo of the Holburn avenue, did not get any sleep that night three months ago when he fled from Pike's Peak lake in Greenland and he has not enjoyed a night's good rest since.

Zerbelien's rather distraught condition is in a measure explained by the fact that it is not officially considered good form to leave some parts of Greenland without saying anything to the king about the intended departure.

Zerbelien, who is twenty-eight years old, lives with his uncle, Jacob Lapoto. The influence of intense civilization threatens to wreck his nervous system.

There are innumerable elements that make for the general Loneless bewilderment of the fugitive Greenlander. He never saw the earth—that is, actual earth—until he came to this country; even such a commonplace phenomenon of civilized life as a chair was a novelty to him; horses and cattle were to him strange beasts of the strangest land that imagination ever conceived; a question as to how he regards street cars, automobiles, electric lights and other modern wonders renders him sputtaringly speechless.

His Own Rake-Off.

But what are fear of kings, sleepless nights, a craving stomach and a generally upset mind to a man still in his twenties who has $21,000 in the bank?

That's Arthur Zerbelien, who is now employed in an automobile plant. It was this that made up the "burden of a language" that he "uniteed" the night he started his flight from Greenland. During his years of service he had "held out" that amount on the Eskimo king.

When Zerbelien finally joined his uncle in Detroit, after a hard journey, he applied at once for work in the automobile plant. He was put to work, and although he never had seen machinery or any implements civilization these made from the bones of animals, he has shown the aptness of a natural-born mechanic.

"I left Greenland," said Zerbelien, "when I finally realized that my life

Were to Him Strange Beasts.

there would be spent in hard work for which I should get nothing but a living while I should get all I earned."

Big and Blue Eyed.

Zerbelien, who is tall and straight and broad of shoulder, with light hair and blue eyes, speaks good English. He said many of his people do, having picked it up from explorers and traders.

"The king," Zerbelien continued, "took good care of me, but I began to wonder if he did not get too much. We were supposed to give him all the gold we got in exchange for furs and hides. He settled all our disputes and did lots of other things for us—see?"

The young man opened wide his mouth, displayed a tooth neatly filled with gold. He explained that the king with melted gold and fashione instruments, had done this work.

"What did you have to do for the job?" the Eskimo was asked.

"I worked five months for him," Zerbelien replied.

WIFE ACTS AS BARKEEPER

Husband in Divorce Suit, Declares He Was Grossly Overcharged for Drinks.

Nashville, Ind.—What is believed to be the highest price ever paid for one drink of whiskey was paid here by August Eshman and his wife. The drink cost him $15, according to the testimony he offered in his divorce suit.

Eshman said he usually bought three or four quarts of whiskey at one time, but that as soon as he entered the house his wife took charge of his supply and became the official barkeeper.

Most of his drinks cost $5, he said, but $10 and $15 for a drink he often paid without protest.

Lightning Freaks.

Steele, N. D.—In a thunderstorm recently the farmhouse of Ed Hoesser, about five miles north of here, was struck by lightning and seriously damaged by fire.

Jake Bennett, a traction engineer, was knocked unconscious and Hoesser was shocked, but his wife and three children escaped unhurt. All the hair was burned from a bird dog in an adjoining shed.

HIS LAST TRIP IN SEARCH OF MINE

Venerable Prospector Says If He Doesn't Find It This Time He Will Give It Up.

New Westminster, B. C.—Wilbur Armstrong, a Washington prospector of seventy-two, planned to start the plains of the Pitt range recently on his tenth trip in search of Shamah's mine. For ten years Armstrong has made this pilgrimage every summer, but this, he says, will be the last if it proves as barren as the others.

Armstrong is not the only man who has headed search parties in the attempt to locate this hidden treasure, whose location is asserted to be within twenty miles of the head of Pitt lake, yet which has been discovered by but one man, who is now dead.

Tenth Trip in Search of Mine.

since Shamah, the Indian after whom it is named, was hanged in the jail yard at New Westminster in 1891.

Walter Jackson, the second discoverer, passed out thousands of dollars' worth of gold in a few days when he located it in 1901. Burying the greater part of his treasure he came out with dust and nuggets to the value of $4,000, intending to return and stake claims at his leisure. But he fell sick and, being about to die, bequeath him of Andrew Hall, who had grubstaked him at Quesnel many years before, his secret to Hall and drew a Court. Hall finding himself in need of money in the Yukon sold the letter and chart to a cousin of Armstrong, to whom the documents finally came.

Jackson's description of his find, which is in a creek in a canyon in which there is no outlet except by an underground channel, says in part:

"In going upstream I found a place where the bedrock was bare, and you will hardly believe me when I tell you the bedrock was yellow with gold. In a few days I gathered thousands, and there was thousands more in sight. Some of the nuggets were as big as walnuts. . . . I saw there were millions practically on the surface. I buried part of the gold under a tree, wrapped rock with a mark cut on the face."

DREAMER CUTS OFF CURLS

Missing Locks Are Found in Suit Case Girl Dreamed She Was Packing.

Brasbear, Mo.—The mystery of what become of pretty Dora Lee's curls of Miss Corda Loft, who lost them while she slept in her home, has been solved. The curls were found in a suit case under her bed, and because of a dream which she had in having that night she is convinced she cut them off herself while walking in her sleep.

The loss of the young woman's hair occasioned her great consternation when she met her lodge friends for the first time. Some of the nuggets were as big as walnuts. . . . I saw there were millions practically on the surface. I buried part of the gold under a tree, wrapped rock with a mark cut on the face."

A Patriot's Prayer

By REV. JAMES M. GRAY
Dean of Moody Bible Institute of Chicago.

TEXT—I . . . prayed.—Nehemiah 1:4.

Nehemiah was a great man, a great statesman, a great administrator, a great leader of men. But he was great in the spiritual realm as well, he had great power with God.

Although a Jew, yet he dwelt in Persia and occupied a position of peculiar influence at court; he was the king's cupbearer.

It was some time after the return of his countrymen from that land of their captivity to their beloved Palestine, but they were not prospering very well since their return. Some of them on a visit to Persia had been telling him about it, and he tried to cheer affliction they said, and in great reproach from their enemies round about. The walls of Jerusalem had never been replaced since they had been burned down by Nebuchadnezzar years before, and the result was they had no protection against their enemies.

Man Deeply Affected.

This deeply affected Nehemiah, so that he sat down and actually wept. When patriotism moves us to weep for our country it looks like the real thing, especially when it is followed by something else as it was here.

The weeping was accompanied by fasting also, so different from the modern way of showing patriotism, which not infrequently takes the form of a banquet with speeches. This fasting lasted for days, he must have been alone in it, but at length it came to a head in prayer. Oh, if our statesmen, and politicians and reformers only knew the secret! How much more they could accomplish at the Throne of Grace than by legislation, and conferences, and harangues, and newspaper articles!

A Wonderful Prayer.

It was a wonderful prayer this. First, it was so unselfish. He was not praying for himself but for people, who, for the most part he did not know and had never seen. They were his countrymen, that was all, and they were in sore need. How much do we ever pray for our southern negroes, or the mountain whites, or the deprived Indians on our western plains, or our dependents in the Philippines? What real interest have we in other their material or spiritual condition?

Second, it was such a humble prayer. Somehow or other he felt a sense of personal responsibility for the condition of his countrymen afar off though they were. He confessed to sin in the plurals, and included his father's house in his confession. If he and his ancestors had acted differently things would not have been as they were. What do we know of that?

Third, the prayer was helpful nevertheless. Hopeful

NO CHANCE FOR COUNTERFEITER TO BEAT UNCLE SAM

Some Little Detail Overlooked Inevitably Leads to Detection of Criminal.

EACH ISSUE IS DISTINCTIVE

No Individual Engraver Completes Plate for Any Series of Notes—Interesting Cases Which Prove Impossibility of Success in Counterfeiting.

New York.—The government is an organization. It has organized forces and means for making currency. These forms and means are fashioned on the scientific plan that there can be no exact duplicates possible in nature or in the manufacturing of a product. No two bullfrogs are exactly alike, any more than are two roses that grow in the same garden.

As an example in the making of our money, let us say that an engraver in the government service can make one plate, and only one plate, from which a given series of bills are printed, says the chief of the secret service in the New York Telegraph. That engraver may nearly duplicate it, but never will he able to reproduce it exactly, or even approach the original work by reproduction in such a degree that there will not be a difference that is detectable. So with the dies for stamping the government copper, silver and gold coins.

Then, too, it is not so remarkable that duplicates are impossible, when you consider that there are thousands, in some instances tens of thousands, of delicate strokes by a very fine tool necessary in the making of a single plate for the manufacture of a series of notes. Perhaps a scratch is too heavy, or maybe too lightly made. Such an error would be fatal. Consider, too, that only one plate is used by the government in printing a given series of notes, and only one die is used in making a given issue of coins.

Plate Work of Many.

It may be interesting for the reader to keep in mind that no individual engraver completes a plate for any series of notes. One man engraves the vignette, another does the script work; a third man the square lettering, and yet another takes care of the mechanical lathe work, etc.

In the light of common reason there is only one course possible—government money cannot be imitated successfully for any sustained period unless the secret service agents cease their tireless watchfulness. And yet, in the face of all those organized obstacles, individuals and small groups of men have risked their freedom, and no doubt will continue to do so, in an effort to cheat Uncle Sam out of his spurious coins and notes on the public.

There is the case of a German artist who noticed an oil painting, a representation of a ten dollar bill, painted in the panel on the wall of a restaurant where he had been accustomed to dine. He tried, at first, "just to imitate the painting." His imitation was in pen and ink, and so well done that he felt a curiosity to know whether he could deceive any person with the product. He tried and succeeded in the deceit.

Then for 14 years he devoted himself mostly to sketching on bond paper of the proper size a number of bills including ten, twenty, fifty and even hundred-dollar notes, in imitation of the United States currency. It would require his continuous efforts for two weeks at a time to complete a hundred-dollar note. And yet again he would take vacations for six months at a time from his counterfeiting labors, in the meantime devoting himself to legitimate art.

Goes Once Too Often.

His method of "showing" or disposing of the notes was to get rid of them in liquor stores near the New Jersey ferries on the New York side. He would choose a rush-hour crowd in which to expound the bar, order a quart of whisky, and a drink which he would swallow at the bar while engaging the bartender in conversation. He would at the same time lay down his counterfeit bill, get it exchanged hurriedly and hasten to New Jersey, where he had built himself and family a house.

For the most part the bartender did not notice the counterfeit note, not even when counting up, and it went to a bank or financial institution before it was detected. All trace of the distributor of the bill was, of course, lost by this time.

However, the pitcher went to the well once too often. One evening about eve o'clock our German artist went into a Hoboken saloon, bought a quart of whisky, as usual, and a cigarette, drink and cigarette twenty-dollar bill on the bar. It so happened that the bar was moist with whisky spilled from an overturned glass. When the bartender picked up the bill from the moistened bar, the ink on the note dampened by the alcohol, soiled his fingers and he gave the alarm.

Had the artist used what is termed waterproof ink, he would not have been detected in that instance.

The most dangerous coin counterfeiter with which the government has had to deal was Mr. Dallas Jewelle in New York city. He made a ten-dollar gold piece of fine fineness in the body of the article. (The government maintains a 900 fine.) Yet the imitation was very accurate, and in order to have the weight correct he made the coin a wee larger than the government measure required. Then, too, he made a rim, commonly called the reeding, on the coin. This rim was of the exact fineness of the government ten-dollar gold piece.

The jeweler's object in making the rim, which he soldered on to the body of the coin, was, of course, to throw the secret service men off the trail when they made an assay of the rim of the counterfeit coin and found the gold thereon to be of the standard fineness.

The jeweler's coin had a rounded rim, and not one that rose at right angles from the surface of the body of the coin, as in the genuine article.

He sent his little daughter out to pass the coins in different shops in the East side of New York. When she was apprehended the news filtered around to the jeweler in time for him to destroy evidence which, had we obtained, would have resulted in his conviction. A federal jury decided that we had failed to present sufficient evidence upon which to convict him of making the counterfeit money, and the jeweler was discharged. The rounded reeding or rim was the most pronounced defect in his work. The jeweler laughed a hearty Italian laugh as he left the courtroom. His kinsmen and friends were there in goodly number, and joined in the laugh.

That was all in the day's work. Still, the future events that brought the jeweler and his counterfeit again in the same courtroom serve as an answer to the oft-repeated question, Can you distinguish certain coins or notes as the particular work of certain individuals?

Turns to Silver—Caught.

About a year after the acquittal of the jeweler the secret service men were supplied with information that a great quantity of counterfeit half-dollar pieces were in circulation in and around New York city, Long Island, and Jersey city. A peculiar feature of the case was that the coins were such an accurate duplicate of the government article that subsequent officials could not detect the defect in them; they were of the same fineness, weight and size as the government coin; in a number of other ways they answered the requirements of the government standard.

Yet the inevitable detail was there to prove the imitation. When the secret service men examined the coins it was found that the rims were rounded, exactly in the same fashion as the ten-dollar gold piece of the Italian jeweler. We called on the latter in Elizabeth, New Jersey, suspect in the manufacture of coins. When we entered the rear of his jewelry store we found a number of the spurious thirty-cent pieces and the material and tools for the making of many thousands of them.

Then there was the well-known Philadelphia-Lancaster case, in which the scheme was to print $10,000 and unload it simultaneously through exchange at the different subtreasuries throughout the country. There were imperfect checkbones on President Monroe on the $100 notes of this particular enterprise. The deficiency gave an entirely different expression to the face of the counterfeit as compared with the genuine bill. Another detail, and an important one, that the principals in this enterprise overlooked was to properly manage the engravers employed by them. The men backing the scheme were not sufficiently in with their funds. Consequently two of the engravers took $10,000 in the counterfeit money and went to the races with the money to make a "killing." They did the spurious notes at the track. This was prior to the date set for the grand coup. The notes at the track, however, were sufficient to set the secret service at work in time to frustrate the conspiracy.

Big Plot Nipped.

And so many other cases there are to illustrate the point, that the one which particularly appeals to me is that of John Davis, who recently pleaded guilty in New Haven, Conn., to making plates for counterfeit five dollar notes. Davis is an old officer, and the illustrious character which, in mind was one in which he was the central figure exactly. He was known as the Bank of England plot. Davis had manufactured in London and had planned there to lay down counterfeit Bank of England notes representing a value in excess of $500,000. His scheme was to have his confederates in each of the great money centers—London, Paris, Berlin, Vienna, St. Petersburg and New York, simultaneously exchange the notes at foreign money exchange brokers' offices.

The workmanship of the product was almost perfect. The notes were the closest imitation to the Bank of England notes that have ever been discovered.

Soon everything was in readiness for the grand unloading—except one detail. The conspirators had not tried out the money to learn how readily it might be accepted. Accordingly two of the men assigned to the New York end of the plot went over to the State bank on Grand street and offered counterfeit notes representing a value of $100. The conspirators cried in pressing so much foreign money for exchange at one time to a bank in that neighborhood. The officials of the institution compared the offered notes with genuine notes of the Bank of England, but could find no difference. Still the officials were suspicious, hold the conspirators wait a few minutes and called up the secret service office, which hurried men to the bank.

Inevitable Detail Overlooked.

Close examination of the offered notes by the government agents showed the color of the printing to be off the colonial ply and size of the paper to measure accurately with the bill of England requirements, and the strong main features of the etching represented in the print were true to a shading.

Yet, as always, the detail was there to prove the counterfeit work. The watermark of the spurious notes was more pronounced than the genuine. Further, and to me more wonderful still, a tiny guard, carefully placed on the genuine note, was lacking in the counterfeit. It was a little thoroughfare extending from a certain letter in the word denominating the value of the note. The tiny little routinel could be observed only with the aid of a fine magnifying glass. It would be found only accidentally except by one knowing exactly where to look for it.

The New York members of the conspiracy were arrested, but released when they stood on the assertion that they had found the notes in the street.

However, that was not all for the conspirators. Later, Davis was arrested in London. He turned king's evidence, received a suspended sentence and a reward, and came to this country to try his hand. His confession resulted in 17 of the conspirators going to prison.

SAILS FOR EUROPE

Miss Lillian Birney, who last winter was one of the season's prominent debutantes, has just sailed for Europe. Miss Birney has been spending the summer with her sisters, Mrs. Harold Walker and Miss Catherine Birney, at their cottage at Southampton, L. I.

"WILD MAN" IN POOR FARM

After Traveling for Years as Circus Freak He Now Becomes County Charge.

Evansville, Ind.—After traveling all over the United States as the "wild man" in seven circuses and carnival companies, Joseph Redding, age seventy-eve, has been admitted to the Vanderburg county infirmary.

He is broken in health and penniless, although he has made good money in his day. Reddig told the township trustee, Sam Worm, that while he was acting the part of a "wild man" with a circus for several years, the manager, in the presence of the "roughs, would feed him great quantities of raw meat.

"I can eat more raw meat," said he, "than the biggest lion that ever lived."

Turkey's Prince.

The Turkish empire reached its greatest glory in the person of Soleiman the Magnificent, who ruled the throne from 1520 until 1566. Besides his North African possessions his territories extended from Lake what is now its border of Germany to Persia. There was at that time no other state that approached the Turkish in extent or wealth.

Cheap and Bigger Baking Powders do not have your health in view. Calumet does—it's Pure and far superior to your milk and eggs.

Few May Transact Business.

The British house of lords may contain certain illustrious names, but are only three members present, not conveniently including the lord chancellor.

No Argument Coming.

"Did you speak to father about me, Arthur?" "Yes, I did, dear, and he agreed with me perfectly." "Then he said I was very cute." "Why—no—no, I didn't quite get to the point of saying him that. I just said you were a fine girl."—Birmingham Age-Herald.

Arthur Ilerin Call, executive director of the Washington branch of the American Peace society, says the American Peace society has never recommended disarmament of this country. Mr. Call is in active charge of a gigantic peace campaign. The plan is to call on men and women of this country to contribute to a movement for the establishment of an international legislature and an international judiciary, which the society proclaims is the only substitute for war.

"WAHB" THE BEAR IS DEAD

Grizzly Made Famous in Stories Is Killed on a Ranch in Wyoming.

Cody, Wyo.—"Wahb," the big bear made famous in stories by Ernest Ingersoll, died in Cody, Wyo., recently. His long career was ended a few days ago by A. A. Anderson, who owns the ranch on which the animal lived. It was from Mr. Anderson's ranch that Mayor Mitchel of New York hunted bear this spring.

Mr. Anderson has killed four bears during the summer, all on his own ranch. Since it has been the desire of Mr. Anderson to kill Wahb, he at last always succeeded in outwitting the hunters.

COMPLEXION BLEMISH!

Yes, that sluggish liver often causes it. Dr. King's New Life Pills clear the complexion, throw off impurities, tone the liver, tonically and mildly. Follow the laxative move freely and regularly and the power in the world will not permanently cover what muddy complexion." This laxative is only yet effective. Yet does not gripe or sicken as the effects. You will not dispute the merits of Dr. King's New Life Pills. Start a treatment today. 25c.

MORTGAGE SALE

Default having been made in the conditions of a certain Mortgage, whereby the undersigned Lucy Ann Bennett, of Charlevoix, Michigan, Mortgagee, executed a mortgage to Hiram Bennett, of Charlevoix, Michigan, Mortgagee, dated the 1st day of April, A. D. 1910, and recorded in the office of the Register of Deeds for Charlevoix County, Michigan, on the 2nd day of April, A. D. 1910, in Liber 60 of Mortgages on Page 100, on which Mortgage there is claimed to be due at the date hereof the sum of Three Hundred Twenty-Five Dollars and Twenty-Five Cents ($325.25) Dollars, and no proceeding having been had at law or otherwise for the recovery of the debt secured by said mortgage, or any part thereof; and the undersigned Mortgagee, by reason of such default, hereby elects to declare the whole of said mortgage debt due and payable, and the said mortgage is subject to foreclosure under the statute of the State of Michigan, and the said Mortgagee, by virtue of the power of sale contained in said mortgage, will sell at public auction, to the highest bidder, at the Circuit Court House in the City of Charlevoix, Michigan, on the 6th day of December, A. D. 1915, at 10 o'clock in the forenoon, the premises described in said mortgage, or so much thereof as may be necessary to satisfy the amount due and payable on said mortgage, together with the costs and expenses of foreclosure and sale, including the attorney fee provided for in said mortgage, which said premises are described as follows, to wit: Lot 1 of Section one (1), containing 36.00 acres; Lot 2 of Section one (1), containing 36.00 acres; Lot 3 of Section one (1), containing 36.00 acres; Lot 4 of Section one (1), containing 36.00 acres; Lot

LOVE in a HURRY

by GELETT BURGESS

ILLUSTRATED by RAY WALTERS

CONVERTED BY GELETT BURGESS

CHAPTER XIII—Continued.

—16—

Now she turned on him with scorn. "Oh, that's why you're in such a hurry, is it? I thought so. Talk one of those three women you have proposed to—they'll do for your purposes. They'll help you out, and be of them. You have only to say the word. Whistle and they'll come to you. There's Mrs. Royalton, now! Marry her! You've got ten minutes left—go ahead. I don't care! She's coming in the threshold! I'll send her in. She'll make you a good wife—she's had a lot more experience than I have! Good luck!"

Hall left alone, walked to and down the studio nervily. He was so embarrassed with his thoughts that he did not see Mrs. Royalton, who had entered a moment after Phoebe left, until, turning suddenly, he all but ran into her. Rosa, beaming, effusive, held out both her hands, caught his and laid her dark head against his shoulder.

"Oh, Hallie!" she breathed.

Hall recoil unmercifully to free himself. "What's the matter now?" he asked.

She looked fondly up into his face. "Oh, Hall, didn't you understand what I said over the telephone?"

A sudden thought came to him, a German expression—"Wenn ich in das Haus gehe, dann bin ich Bräutigam!" Is it a dog with, any excuse, however prodigious, would do for a fiancée? He must get rid of her. So, quick as a flash, he caught up her words and plunged into a diplomatic rage.

"Oh, I understand it right enough. That's the trouble. I understand it too well. Well, you've put me out of my misery, all right. Thank God, you did it while there was time for me to escape worse!"

"But I don't mean that, Hall, real—"

"No, you mean you only wanted to fire me—get me to propose, and then throw me down. I know! All a woman cares for is to fool some man—any man will do. I suppose, so long as her vanity is satisfied, and she can have his scalp to wear at her belt! Huh! It shamed! what a woman can do, just for the moment's cruel pleasure! You have no sympathy, no tenderness, no heart—you're nothing but a mass of insane female conceit, that's what you are! Thank God I found it out in time, I say! Oh, I did think I loved you, Rosa, I admit, but I was a fool to believe in you. Now, it's all over!"

He stood before her, shaking his fist savagely. "It's all over, and I'm glad of it! I'm well rid of you, Rosa Royalton, and it will teach me a lesson! I'll just like to tell you what I think of you, but you're my guest in my house, and unfortunately I'm a gentleman, and so I can't do it. But there's one thing I can say, and that's 'Good evening!' Mrs. Royalton, and you'll have to excuse me for I have my guests to attend to!"

Almost stunned with this extraordinary fury, he turned to make his exit as speedily as possible, but she was too quick for him, seizing his arm, she looked him straight in the face, her eyes filled with tears.

"Why, Hall Bonistelle!" she exclaimed. "You're crazy! Why, I'm going to accept you!"

He dropped like a log upon a chair, in amazement. She had demolished his whole towering pose at a word. He a moment he was unable to speak.

"Then she looked at him very archly, "And, of course, I don't you think I'm prettier than usual tonight? Or did I imagine it because I'm so awfully happy?"

The question stricken him into life. He looked at her coldly, and in the operation made another attempt to good her little prey.

"By jove, I didn't think a woman could—well, a woman will do anything to get what she wants, then, won't she? She'll pay any price, and suffer any indignity! Good Lord, haven't you any pride, Rosa, for heaven's sake? Haven't you any sense of shame? Tell me, is there anything you wouldn't do for money, Rosa Royalton? Let's have it!"

"Why, Hall, dear!" she replied, with big innocent eyes, "I don't know what in the world you're talking about; but I'll tell you one thing that I wouldn't do—I wouldn't give you one for all the money in the world!"

"Well, can you beat it?" he gasped, addressing a Spanish chair.

"Ah, Hall," she continued, "when I once consent, I go fast. Really, I'd like to be married to you this very night, if you only had a marriage license."

"A what?" he cried, thunderstruck.

"A marriage license, you know. Of course that's always necessary before—

"By Jimmy Christmas!" he thundered, staring in front of him. Rosa's plan forgotten, everything was forgotten except that, through his stupidity all, now, was lost. A marriage license! Not once had it occurred to him—the whole sublime comedy had been played out in vain. The four millions—Jonas Hassingbury had won, after all!

He gave another look at the clock. It was four minutes to twelve. With out another word he stalked impetuously out of the room.

Mrs. Royalton, smiling, self-satisfied, stood for a moment in triumph. Her eyes were suddenly attracted by a shining object upon the rug, and crossing toward it, she saw a gold locket. Picked at its presence there, she stooped and picked it up, examined it carefully, frowning, and then slowly placed it upon her finger. As she did so, Carolyn Dailey burst into the room. Mrs. Royalton hastily turned the ruby inside and dropped her hand carelessly.

Carolyn came up to her, very eager. "Well, did you see Hall?" Mrs. Royalton nodded, smiling.

"Why! Didn't I say I would? You're a wonder! Carolyn gazed at her, as if trying to penetrate her mind. She seemed as yet unconvinced. "You refused him, Rena?"

"Certainly!" Mrs. Royalton tossed her head.

Still Carolyn seemed incredulous. "Well, how did he take it?"

"Oh, I said I liked him, of course, but I couldn't think of marrying him, and all that—he took on awfully, really, Carolyn, he begged me to have him, and said his life would be ruined, and all that rubbish—you know, the thing they always do."

"Did his life would be ruined, eh? What nonsense! You didn't say anything about—about me, or Hassingbury Gale, did you? I mean about why you refused him, exactly?"

"Oh, no!" Mrs Royalton's tone was for the first time, clear and honest and she now took her turn. "What did you say to him, Carolyn?"

Carolyn smiled. "Oh, we had a little little time—no fuss, no hysterics at all. It was really very amusing.

"Did he seem—well, how did he take it, Carolyn?"

"Oh, of course he pretended it was all a joke, you know. I wouldn't permit him to make a scene, he! if the poor I could just that underneath it all he was pretty badly broken up.

"Well, he didn't show it much when he came to me, then. He seemed quite cheerful.

"At this moment there was a peal of laughter outside the door, and a gay voice ending a passage of arms in the village. Rosamund sailed anything in the room. She held her head proudly, she seemed immensely superior as she gazed about triumphantly. The two women sprang at her. "What did you say to Hall Bonistelle?" exclaimed Carolyn.

Rosamund waited a moment, proudly superior. Then she answered calmly, "No, I accepted him."

"Rosamund, you accepted him!" the two broke out.

"Do you mean to say you went back on your promise?" Carolyn demanded, furious.

Mrs. Royalton caught her by the arm. "Are you feeling, Miss Gale, as you do, pray?" Rosamund asked. "What a question! Why, I found out that Hall felt a good deal different from what I had ever thought. Why, he's a dear, really, and he never cared a snap for you two—

"Oh, cut the!" cried Carolyn.

"Why, the fact is, I didn't have the heart to reject him really. I felt so sure that there was some misunderstanding somewhere and he had got it all wrong. Hall's simply crazy about me, and it was perfectly absurd to let that stand in the way of our happiness—and his, that's all!

"And do you mean to say you said yes?" cried Mrs. Royalton.

"Certainly I did. Hall Bonistelle and I are formally engaged, now, and we're going to be married—

"That's about all you know, cried Carolyn, now beside herself. "Hall Bonistelle is engaged to me!

Mrs. Royalton gasped. Rosamund raved. "It's no such a thing! It can't be!

"Then you lied to me, Carolyn!" Mrs. Royalton asked frigidly.

"Well, I couldn't violate a confidence, could I?"

"Then it's that's all there is about that!" Rosamund exclaimed. "It's perfectly absurd on the face of it. I guess I ought to know!

"Oh, you don't have to believe it, but it's a fact, nevertheless," said Carolyn to Rosamund, and then turning to Mrs. Royalton, she added: "You see, Rena, Hall explained it all to me, and I couldn't really blame him for the way he's acted. He was in an awful mess, and had led you and Miss Gale on, and he felt you and Miss Gale were so rich, and he felt so sorry for you, and he felt so—well, I don't know what he felt, but he felt he ought to do all he could to make it up to you. He felt that he owed you all he could, and that he owed it to his mother to do the best he could for her, too, and he felt that he owed it to his mother to do the best he could for her, too, and he felt that he owed it to his mother to do the best he could for her, too, and he felt

SENTINEL

Job Printing-Best

Local and Personal Notes

Special ad. for Crane in this issue. Read it.

George Walt, of Carson City, is here visiting relatives.

At the home of Lee Smith, a fine feminine addition to the British tribe.

Dr. Armstrong attended the big football game at Ann Arbor last Saturday.

Forrest Coulter and wife returned Monday from their southern Michigan auto tour.

Wm. Finucan, Jr., now holding a Booth position at Cheboygan, was here three days the past week.

Richard Lewis, A. L. Fitch, L. E. Benton, J. H. Milford and Bert Olney left Monday for the north affir deer.

The concrete foundation walls of the new Blanchard block will be completed this week and brick laying is about to be commenced.

Albert Holmes will leave in about ten days for Florida, where he has brick-laying work awaiting him. He will remain there all winter.

Mrs. L. D. Bartholomew presented the Shakespeare Study Club with a book of Shakespeare prints from the Forrest Blanchard library.

George W. Smith has the foundation laid for a well appointed residence on Lewis street, which he expects to have ready for occupancy by next summer.

D. F. Meech, E. R. Harris, C. Von Skiver, Geo. Sanford and Harry Mobius constitute a party that left for the upper peninsula deer country Monday.

"No mere stage production of 'The Melting Pot' could drive home the lesson of the evils of race prejudices as did the film."—Fardy in the Morning Telegram.

Capt. Sam Rose, who has been in the Lake Superior region for some time for the New York State Fish Commission, is back home and at work for the U. S. Commission here in the spawn catch.

THE SENTINEL'S circulation is steadily increasing. As an evidence that Charlevoix business men appreciate its value as an advertising medium, we refer our readers to its advertising columns this week.

Our old friend and fellow townsman, Byron Sias, writes in from Belvedere, Ill., where he is stopping with his sister Mrs. Byron Glass. "Billy" says his health is improved, and is feeling fairly well.

Miss Helen Armstrong, of this city, has accepted a position as physical director of the Eleanor Club, of Chicago, one of the leading young ladies' clubs of that city, the membership of which is largely composed of college girls.

In anticipation of the coming holiday season the Ladies' Aid Society of the Congregational church will hold a bag and apron sale in the dining hall of the church Wednesday afternoon, Dec. 1st. A tea-cent tea will also be a pleasant feature of the occasion.

Mrs. Mary Allison and Mrs. L. A. Henry left for Detroit Tuesday to spend Thanksgiving. Mrs. Allison to visit her old home and Mrs. Henry to be with her son, A. G. Henry. They plan to return together after the holidays.

November 12th, at the Majestic, Walker Whiteside, the eminent Shakspeare actor in the moving pictures from "The Melting Pot," one of the greatest films now on circuit. This is decidedly one of the greatest attractions Manager Miles has presented this year.

This afternoon, (Thursday) at two o'clock Workers' Conference at the Baptist church, conducted by S. S. and B. Y. P. U. State President, Magnus Burgess, of Detroit, and District Supt. Rev. Lettell, of Cadillac. Dr. Robinson, of Hangcho, China, lecturer on Foreign Missions at night. The public is invited to each of these meetings.

The Telephone Co's manager's assistant reports the loss of his auto crank. Some wag referred him to the SENTINEL office as crank headquarters. Great Scott! Don't stop business for the want of a crank. They may be picked up on the street anywhere. The main consideration is to get a right-hand crank; that is the only kind that can be found around the SENTINEL office.

The sugar beet harvest is now on vigorously. Up at the old factory site are immense piles of beets awaiting cars for shipment to the Holland-St. Louis factory. At six dollars per ton the farmers are fairly satisfied with the profit of the crop, and we may confidently expect that the product will increase from year to year. Its immunity from frosts and drought make it a certain crop under any unfavorable climatic conditions.

Booth's big fishing tug, E. M. B. A. lies on her side partially submerged near Gaikin's dock. The boat has been out of commission for a year, but was being made ready for fall and winter fishing. Her stern was hoisted out on Oscar Smith's ways to receive a new wheel, which had been shipped. About one-third of her hull was in the water, and it was supposed that she was well secured by strong lines. It is thought she took in water forward, which put such heavy strain upon her lines that they parted. A high wind helped to finish the trouble, as she left the stays tipping over on her side. The work of raising her will be commenced at once.

Albert Sharkey, of Big City, has joined the Beutel Fish Co. force here for the winter.

Dr. G. W. King has purchased the Young residence at 122 State street, and has occupied it.

The excavation for the basement of the new Blanchard block was completed Monday and the concrete foundation walls are being laid.

The Charlevoix W. R. C. entertained the Petoskey corps last Thursday, at the Odd Fellows hall. A good dinner and lots of social enjoyment.

"The Melting Pot" breathes a spirit of the best Americanism in the traditions of our history."—W. Stephen Bush in the Moving Picture World. At the Majestic, Friday, Nov. 12th.

Chas. M. Heald, who will be remembered as the president of the "Wet Mich." R. R. when it was built in here, has been elected one of the three municipal commissioners at Buffalo.

Frank Glassford has a force of men at work making quite extensive repairs to the Chicago Club House, and Warden Miller has a crew at work making gravel walks and other outside improvements on the Belvedere grounds.

Archie Miller, of Detroit, is building a fine residence on south State street. It is already enclosed, and will be completed and ready for occupancy this winter. Mr. Miller's family is already here, and he will join them soon for permanent residence here.

The trout spawn harvest is well started, indications promising being already shipped to the Northville hatchery. Superintendent Stewart says prospects are good for a very successful campaign. The work is being prosecuted both at Charlevoix and St. James.

The Gleaners have the foundation laid for their warehouse on the corner lot across the railroad track from the sugar factory building, recently purchased from E. O. Cram. The location is across the city limits in Charlevoix township, but, so far as city interests are concerned, as favorable as if it were within the city limits.

Manager Allen, of the Blanchard Hardware Co., has a show window that is attracting much attention. In very artistic draping is shown the front elevation of the new block, in colors, the work of the architect, F. L. Bartholomew. The building will have one of the finest street fronts in the city—red brick with terra cotta trimmings.

Following the scow will next come the paving of State street, which is the widest street in the city. Undoubtedly next summer will see the work done. The late L. D. Bartholomew, who was the author of the plans for State street improvement that provided for a ten or twelve foot park in each block with driveways on either side. This plan would provide an ornament not only to the street but to the city. All but one of the churches and the library, are located on this street, and give the street an importance that we think would warrant the extra outlay.

OUR SAILOR MARRIED

On Monday, November 8th, at eleven o'clock a. m. in Washington D. C. occurred the marriage of Miss Mildred Elizabeth Martin, daughter of Mr. and Mrs. Edwin A. Martin, to Ensign Hubert Estergy Paddock, U. S. N.

It was a quiet wedding at which only relatives and intimate friends of the contracting parties were present.

Mrs. Paddock is a born and bred Washingtonian her family have lived there for several generations. Ensign Paddock will bring his bride to Charlevoix for a few days before heading in Newport News, Va., the winter quarters of the U. S. S. New Hamshire, the ship on which he is signal officer.

KEEP YOUR EYE ON CHARLEVOIX

Charlevoix never claimed a "boom." The town never had a boom. Booms sometimes kick back.

But the fact remains that for an extended period of steady, healthy growth, keep your eye on Charlevoix. There is not a town in Northern Michigan at this present identical moment, that has greater industrial activity in the way of improvements than Charlevoix.

Everybody is busy, and will continue to be busy well into the winter.

Keep your eye on Charlevoix.

Common Council

At the council Monday night Alderman Gelken filled the chair in the absence of the mayor and president of the council.

Henry Marshall was awarded the contract of laying the South Bridge street sewer, same to be completed in sixty days.

Permission was granted the Charlevoix Coal & Wood Co. to erect a wooden warehouse on Belvedere avenue.

Chief of Police instructed to punch Hurlbut avenue clock on the town house and the Dixon and Michigan avenue clock on the old house.

Water works department instructed to see that water meters are installed where now not in use, and that water be shut off from all water takers who refuse to permit installation of meters.

The Frazier Shoe Store is now in the South Store of old Blanchard Hardware establishment.

FULL STOCK AT SATISFACTORY PRICES.

FRAZIER

Give your Child Dr. King's New Discovery for Coughs and Colds.

Dr. King's New Discovery is a Doctor's Prescription used for over 45 years. It is pleasant and children like it.

You cannot use anything better for your child's cough and cold than Dr. King's New Discovery. It is prepared from the purest and most healing and soothing balsams. It does not contain anything harmful and is slightly laxative, just enough to expel the poisons from the system. Dr. King's New Discovery is antiseptic—kills the cold germs causing the irritation—stops the cough and soothes the irritation.

Mrs. Geo. Wood writes: "I used Dr. King's New Discovery for the past three years and use it continually in my family. My children are very fond of it for it keeps them free from cold. I can't say too much for it, and take pleasure in recommending it to my friends." Mrs. A. S. Hansen, Pinconning, N. H.

Don't put off treatment. Coughs and colds often lead to serious complications and other serious lung troubles. It is also good for adults and the aged. Get a bottle to-day. All druggists.

BRYAN'S MOUTH AGAIN

From a republican standpoint no more desirable democrat candidate for the presidency could be thought of than William Jennings Bryan.

Since the president unloaded this blatant demagog from his cabinet the "great commoner" has been out sitter the scalp of Wilson. Such a democrat standpoint it must be gratifying to know that Bryan's influence is daily waning.

It is clearly manifest that the recent speech of the president in New York was meant as the opening gun of his campaign for re-nomination, and republicans must concede that he met the immediate and pressing issues involving foreign relations, and home hyphenated conditions growing out of these relations in a manner that appeals to the good sense and patriotism of all American regardless of party. Adequate military preparedness was the key-note of his speech. There are voters enough aside from these momentous questions why the republican party should be returned to power—reasons that were emphasized in the recent elections.

Now Bryan, with his usual display of sophistry and specious pleadings, attacks the president's appeal to the country for reasonable means of defense. It is difficult to determine whether it is the howl of the wolf in the forest of oblivion, or the snarl of the wounded jackal from the tall grass.

SUDDEN MUSCULAR ACHES AND PAINS—NEED NO BE!

Thousands find pain the right remedy. Sloan's liniment is a real necessity in every home—for young and old. Its merit is praised in dozens of letters. A stiff neck from colds, children's sprains, those aching muscles, that sharp neuralgic pain—these find quick, assured relief in Sloan's Liniment. Every home needs it with sudden aches and accidents. Your home needs a bottle, 25c., 50c. and $1.00.

President Wilson

The auto accident in New York in which the president's car broke down a small boy, shows the necessity of being insured. Fourteen hundred of the most careful men in the small towns and country districts of Michigan have personal injury liability and sickness among them Ex. Gov. John T. Rich, Congressman Cramton, Speaker Chas. W. Smith, W. J. Danser, and Ex-Prosecuting Attorney George Burke, of Ann Arbor, Otto Davis, of Owosso. All feel the need of insurance against the auto thief and the large damage cases, Rates $1.00 for policy and 25c a H. P., making $6.50 on a Ford car, $7.25 on a Dodge; other cars in proportion.

Write Citizens' Mutual Automobile Insurance Co., Howell, Mich.

CIRCUIT COURT TERMS

In the matter of appointing the times for holding circuit court in the 13th judicial circuit of Michigan:

Under the provisions of law I hereby fix and designate as follows:

Antrim County:

The fourth Monday in February
The second Monday in May
The second Monday in August
The second Monday in October

Charlevoix County:

The first Monday in February
The fourth Monday in May
The third Monday in August
The first Monday in December

Grand Traverse County:

The first Monday in March
The second Monday in June
The fourth Monday in September
The second Monday in December

Leelanau County:

The third Tuesday in February
The first Tuesday in May
The first Tuesday in August
The third Tuesday in October

Dated this first day of November, A. D. 1915.

FREDERICK W. MAYER,
Circuit Judge.

11-4-5

NOTICE!

I will close my place of business Saturday, Nov. 20, 1915, to go south for the winter. Thanking you all for your liberal patronage and hope to see you in the spring. Will open about May 1st, 1916.

BRYAN'S MOUTH AGAIN

From a republican standpoint no more desirable democrat candidate for the presidency could be thought of than William Jennings Bryan.

Since the president unloaded this blatant demagog from his cabinet the "great commoner" has been out sitter the scalp of Wilson. Such a democrat standpoint it must be gratifying to know that Bryan's influence is daily waning.

It is clearly manifest that the recent speech of the president in New York was meant as the opening gun of his campaign for re-nomination, and republicans must concede that he met the immediate and pressing issues involving foreign relations, and home hyphenated conditions growing out of these relations in a manner that appeals to the good sense and patriotism of all American regardless of party. Adequate military preparedness was the key-note of his speech. There are voters enough aside from these momentous questions why the republican party should be returned to power—reasons that were emphasized in the recent elections.

Now Bryan, with his usual display of sophistry and specious pleadings, attacks the president's appeal to the country for reasonable means of defense. It is difficult to determine whether it is the howl of the wolf in the forest of oblivion, or the snarl of the wounded jackal from the tall grass.

School Commissioner's Column

May L. Stewart, Commissioner

Six thousand teachers enrolled at the Saginaw meeting, a program that was worth while and is enthusiasm that will spread throughout the state.

The Walker school is the latest on the list of those adopting the Palmer method of penmanship.

Ex-president Taft believes in strict obedience to the law because it is the law, in respect to authority because it is the authority, in doing away with fads in education and in making children work for what they learn. The sugar coated education is of little or no value.

When your regular potato vacation is over, your children should be in school at once and be there every day. Prolonged family vacations hurt your county and hurt your school.

School buildings with ideal light have windows at one side only to the north and left of the pupils. Eye specialists will tell you it pays.

Rock Elm is working faithfully for a "Standard School" plate. Many schools have more in their favor to begin with but it looks as if Rock Elm were going to be a leader. They have moved their school house to a splendid new location, have two acres of ground, newly ploughed and graded by volunteers from the district, the best basement in the county and a spirit that works with zares. Improvements of the near future are new windows to the north, a new furnace and ventilating system.

Four reading circle classes are being organized. The Charlevoix class meet Saturday the 20th under the leadership of Miss Hinns. Every teacher welcome.

The Commissioner is making final corrections on director's reports as required by the state department. If your report has been returned from Lansing you will receive word to that effect and can make arrangements for correcting the same this month. First Saturday in Boyne Falls at Hotel Marsh, second Saturday at the Central school in Boyne City, third Saturday, 10-12 a. m. at the Central school in Charlevoix.

Many inquiries are coming in as to just how the state inspector knows when a school house and its equipment may be endorsed by the state. The score card and possible points to be gained will be printed in this column next week.

CITY OF TRAVERSE

Steamer Now Used as Dry Dock at St. Joe, Michigan—Once a Gamblers' Palace

Once the Monte Carlo of the great lakes, and notorious as the gambling resort of the passenger boats operating on those great inland seas, the steamer City of Traverse, built forty-five years ago, dismantled and with but the hull left, is now nothing more than a dry dock, on the St. Joe river. With the exception of the drydock at Manistee, it is the only drydock on the east shore of Lake Michigan.

Hannah Lay & Co. of Traverse City, in 1870, built the boat which has just been dismantled and remodeled into a drydock. It was then considered the best of all passenger boats running on the great lakes. Sold to the Lake Michigan Transportation company, it covered the run from Chicago to Duluth for a number of years, and in 1900 a syndicate of Chicago gamblers bought the boat. Here the "Monte Carlo of the great lakes," stationed just off the Chicago harbor, began operations, until the federal authorities halted its operations after the backers had profited to the extent of several fortunes, it is reported.

The Graham & Morton line, now bankrupt, bought the City of Traverse in 1907, being used in the freight trade between Benton Harbor and Chicago. In 1911 it was used on its last trips for the Graham & Morton Co. Sold to H. W. Warner, a marine man of St. Joseph, Mich. the boat has been dismantled, now being remodeled into a very fair drydock, and easily accessible to boats making the port of the twin cities, Benton Harbor and St. Joe.

Pleasant Custom.

Kissing formerly was an official part of the English marriage service.

Paw Killed by Lightning.

Fewer than one person in every 350,000 in Great Britain is killed by lightning.

HARDWARE NEWS

THE Response to our Stove Advertisements has been very pleasing to us and we trust the many purchasers of stoves are also well pleased with the bargains we have been giving them.

We still have a few desirable Heating Stoves left that will be sold at a big reduction to save moving them to the new store building.

CALL AND RESERVE YOURS BEFORE ALL ARE SOLD

DON'T WAIT TOO LONG.

Blanchard Hardware Co. Phone 45.

Northern Michigan

Traverse City Record: The executive committee of the Western Michigan Development bureau met here yesterday afternoon and devoted most of the time to arranging for the various exhibits next winter. The matter that received greatest but interest was the reported possibility that the main office might be moved to another city. The people of Grand Traverse supervisors have not yet made an appropriation toward the support of the bureau was promptly seired upon by live organizations in other cities and propositions made to locate the headquarters in their city. The proposition came up for discussion yesterday, but final action was deferred.

Harbor Springs Republican: Sunday night there was a fire at Cross Villages which destroyed the old LaCroix building, owned by A. L. Doud, and several nearby buildings, and it was with great difficulty that a general fire was prevented from destroying the Shortliff home and several other buildings which were in great danger on account of the high wind. The building where the fire originated was unoccupied, and had been for some time, so it looks as though it was of incendiary origin. The people had been congratulating themselves with more or less fire water and this may account for the fire, which cannot be accounted for in any natural way.

CABBAGE SEED

A seed growing proposition for Czarvoix is being footed out that will, if experiments prove successful, add to agricultural results.

The D. M. Ferry Seed Co., which grows about every sort of seed that the earth produces, has been getting cabbage seed from Long Island. For the past few years a root disease has seriously affected the cabbage crop there. Therefore that company is looking about for more favorable territory in which to secure the seed.

It has been decided to try Northern Michigan; and Mr. Wm. Kramer, the superintendent of the Ferry growing department, has decided to try the first experiment at Charlevoix. To this end 7,000 plants will be shipp..l here this fall to be "heeled in" for spring planting on the farm of Coulter Brothers. If the experiment is successful, cabbage seed will be a profitable crop in this section.

Convention That Counts.

This impartiable conviction, that it is a thing to visit it will have to be, is the underlying rock on which all great character is built; and it carries to it a truer instinct if not exactness in the moral government of the world.—J. Martineau.

SEVEN and one-half acres, close by, will sell at a bargain; well located. Call on or telephone, H. S. HARSHA.

WANTED—A DRY DOCK

An Enterprise Greatly Needed in Charlevoix—Logical Location for Boat Repairing Plant.

In the laudible work of stimulating industrial activity in Charlevoix there is no more conspicuous necessity exists than that of increasing our facilities for marine work.

Dry dock, as that term is generally understood, is, of course, beyond our reach; but a set of lifting boxes or a marine railway comes to us within our limit of effort. And yet, in all our spasmodic campaigns for industrial progress less attention has been given to this proposition than to any other, notwithstanding the fact that every condition favors such an enterprise.

Charlevoix harbor, located as it is, about midway between the straits and Manistee, with the islands at our door, in a marine sense, is the center of a marine field that would make such an enterprise a profitable investment. Every season there goes from this region, from Manistee, or the two bays, to Manitowoc of Sturgeon Bay, work that could just as well be done here. And there is no question but that steady development of the shipwright industry would follow.

Vine-clad cottages, golf links and garages, are all very fine, and there is no denying the fact that they represent industrial progress of large proportions covering the greater part of the year. People who meet at what they are pleased to call the transient benefits of a summer resort make a mistake. The present building activity in Charlevoix is a sufficient answer. The substantial growth of Charlevoix does not lag.

But there is a crying need for us to divert our progress to some extent from the beaten path into which a marvelously successful resort career has led us, into fields of action that will enhance our prosperity without in any way retarding our resort growth.

LECTURE COURSE

The Ricardi Faletties, is the next number of the lecture course. This orchestra composed of eight women and is one of the best numbers of the course. Each lady is an artist in her own line, and together they make up a music.

From the soprano to the percussion artist they will hold your undivided attention, and lift you from this world of care, and carry you to the realms above, where joy shall reign supreme.

The leader Miss Ricardi-Lewis enjoys an enviable reputation from coast to coast. She has studied under some of the greatest artists, and in the choice of this group has exercised great care.

Everylover of good music should plan to reserve Monday Nov. 15th for this good attraction at the Opera House.

Reserve seat sale at the Central Drug Store, Friday, Nov. 12th at noon.

Lecture Committee.

County Normal Notes

CATHERINE LA LONDE

Miss Mildred Eckinger and Beth Thomas made a short visit in the normal one day last week.

Miss Bertha Blanchard is again at school and reports that her mother is much better.

Miss Florence Milner was absent from school a few days last week.

Miss Whiting is taking up the method of primary reading with the class. Much interest is shown in the work by every member of the class.

A very interesting account was given by Ruth Chollis of the conditions of the normal at Mancelona.

Some of the class are helping the children of the training room who are behind with their numbers.

Three penmanship papers have been sent to the Palmer headquarters for examination. Every member of the class is practicing with great enthusiasm and it is almost certain that in June every student will be the proud possessor of a Palmer's Teacher's Certificate of Penmanship.

The class is practicing a very lively temperance song, to the tune of "Temperary," which they will sing at a reception to be given by the Woman's Christian Temperance Union to which they are invited.

Miss May L. Stewart, county school commissioner, visited the normal room Monday morning and led an interesting discussion concerning discipline in the rural schools.

Miss Whiting and Miss Himes told the class about many interesting topics which were discussed at the State Teachers' Association at Saginaw.

Adolph Mirandette, lookout for the Mackinac Transportation company at the Straits of Mackinac, between the two Michigan peninsulas, has held his position thirty-three years and never in that time has he worked in the daytime. He has traveled a distance equal to twenty-three times around the earth, but never saw much of the world, his travels being limited to trips across the straits. He never saw an electric railway and doesn't even know where the postoffice is located. St. Ignace, a port which he makes several times each night. He was in Chicago many years ago and that constitutes his away-from-home travels. He has never missed a night except for sickness or death in his family.

IRRITABLE CHILDREN OFTEN NEED KICKAPOO WORM KILLER

There is a reason for the disagreeable and fretful nature of many children. Think of the unrest when the child's body is possessed by tiny worms sapping its vitality and disorder the functions. Whatever may be the reason "that children have worms is a fact." Your child's peevishness and irritability may be a cause. Give Kickapoo Worm Killer a chance and if worms are there this humanity harmless remedy will eliminate the annoying parasites. 25c. a box.

Beaver Island News

Mrs. John McCann and daughters, Marguerite and Katherine spent a few days at Charlevoix last week.

Rollie Lewis of Charlevoix was here on business Wednesday.

Patrol boat No. 4 spent several days here last week.

Mrs. Frank Left and daughter visited friends at Charlevoix last week.

R. W. Kane spent several days here last week on business.

Barney Mooney went to Manistique to work.

A. Powers and wife of Charlevoix spent a week here, Mr. Powers working on Father Hayes' cottage.

Mike Coll made a business trip to Manistique last week.

Frank D. O'Donnell and James H. O'Donnell went to Crooks, Michigan for the winter.

Dr. Armstrong spent several days at Garden Island last week hunting.

Peter Burns visited friends at Manistique last week.

Mrs. Leo McGinnes went to Escanaba last Wednesday.

Chas. Roe drove piles at the McCann dock last week.

Mrs. John King went to East Jordan on business Thursday.

Mrs. T. Leonard and Mrs. Lyndick returned to their home in Chicago, Monday.

Chas. Edgar is here on business.

A. T. Stewart of the U. S. Fish Hatchery of Northville spent several days here, putting men to work gathering trout eggs.

E. L. Stack of Cheboygan spent several days last week making contract for two million feet of logs to be put on the beach.

Thomas Swift of Harbor Springs is here buying cattle and pine lumber.

E. B. Northcutt went to Petoskey on business.

Mrs. Geo. Beuriel and family returned home after spending a month at Pentwater.

May L. Stewart county school commissioner, is here visiting the schools.

Mr. and Mrs. Patrick Bonner went to Charlevoix Tuesday on business.

BOY SCOUT PROGRAM

The following program will be given Friday, Nov. 12th, 1915:

National Anthem.
Divine Service.
Music.
Address.....Capt. Willard A. Smith
Tenderfoot Drill.
Concordrums and Jokes.
Paper, Report of Dr. Robinson's lecture on "Foreign Missions" ....O. B. Weed
Business.
Adjournment.

K. B. Widdifield,
Scout Scribe.

FOR SALE— at less than first cost, three (3) Fine Lots in Crouter's Addition. Parties interested, apply to H. S. HARSHA

Barnard Doings.

Mrs. Earl Shuttleworth, of Lansing, is the guest of Mrs. James Block.

New phones have been installed in the Hiram Potter and John Hotsma residences.

Mrs. John Cook, of Mancelona, is visiting her daughter, Mrs. James Block.

Miss Ethel Shanton is spending a few weeks at the home of her aunt, Mrs. Geo. Anderson, of Charlevoix.

Mr. and Mrs. Lawrence Ross and family spent Sunday with Mrs. Ross' father, H. De Groot, of Ellsworth.

Word and Joe Trimble, formerly Barnard boys, have sold their large dairy farm at Eaton Rapids and are moving to Lansing.

Mr. Sim Baker left Thursday morning for Charlevoix where he will join his son and family, and accompany them to Florida for the winter.

"A boy for each knee," that's what Clyde Smith is smiling over. The "new boy" arrived Sunday evening. Mother and child are doing nicely.

Rain or shine, don't miss the Sunday School next Sunday. Classes for everybody. The Men's Class is coming out nicely. We need you and you need us.

Mrs. Ernest Dawson, recently of Mancelona, visited her sister, Mrs. James Block, last week. Mr. Dawson is moving to Charlevoix and is entering the grocery business with Mr. Henry Jakobs.

The Quarterly Conference will be held in the Barnard M. E. Church next Sunday, Presiding Elder, W. Kindrick, will address the people at three p. m. You will enjoy hearing this very able and genial speaker. Communion at the service.

A Thanksgiving dinner will be served this year in the church. Every one is invited to come with their family and enjoy a genuine old time dinner together. No charge will be made. In the afternoon a program appropriate for the occasion will be given. Plan to be there.

Miss Gertrude Shapton will accompany the delegates elected by the M. E. Sunday School, at Charlevoix, to the State S. S. Association to be held at Battle Creek, Nov. 10-11-12. The trip will be made in the Wm. Shapton car. Miss Shapton will visit her sister Maude at Albion College before returning.

The Ladies' Aid enjoyed a very pleasant day at the home of Mrs. Wm. Shapton on Wednesday. About thirty members and friends enjoyed a most sumptuous dinner. The usual opening exercises and business came before the society. The ladies voting to finish paying for the furnace and repair of furniture, also $10 to apply on pastor's salary. The Misses Ethel Shapton and Louise Lewis favored the society with a piano duet. A feature of the afternoon was an exchange of which was much enjoyed, as the ladies unwrapped the parcels, "finding just what they had always longed for." The December meeting will be held with Mrs. Geo. Gger.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, also 14 acres close to city. Apply to H. S. Harsha.

MASON'S DEPT. STORE

Stolen Plans, and Others

By JACK CURTISS

(Copyright, 1914, by W. G. Chapman.)

Branwell, the general manager of the Loftus corporation, stared with a white face at Levia, the treasurer. In front of him lay an open safe.

"It's gone!" he said.

Lewis was shaking as if stricken with ague. "What—do you make of it?" he stammered.

"I tell you what I make of it!" shouted Branwell. "The Nestfoot company has stolen the plans for our new engine. It means a difference of about twelve million dollars. They've been after it for a year. And to us it means bankruptcy!"

Lewis closed the safe before answering. "After all, it's up to Fergie," he said. "He put the plans in the safe. He went off on a sudden jaunt to his ranch without leaving any address. He's the president, not you or I."

"But how did it get out of the safe?" demanded Branwell, when they were alone together in the manager's office. "At least we'll trace the thief. Somebody knew the combination."

"Ever hear of the man who opens safes by catching the sound?" asked Lewis quietly. "I don't think that it's an easy trick, I understand. Some combination."

Later that day he told her some thing that amazed her. His invest ment had been of a little longer—a few hundred dollars only, but a flip from a broker had enabled him to real ize five thousand on it. He had the money safe in the bank. Would she marry him now?

And the girl's eager joy was dampened by the sudden fearful suspicion that came to her. She thrust it aside—but it returned. John a thief? John, whom she adored with all her mind and sympathy? She waited with a crushing burden at her heart.

And day by day they felt the suspicion rise and hang over them like a dark cloud.

O'Day, the mail sorter, had been discharged the week before. The new man, Fallon, a surly, vindictive looking fellow, had his post opposite the window facing Nancy's desk. When ever she looked up she found her Fallon's eyes fixed on them. He seemed to be watching her. And it was not long before she began to see Fallon lurking behind her when she went out to lunch, when she went home. The man was a spy. She was under suspicion, then. Those wretched days in the office, when John, absorbed, hardly spoke to her, were breaking down the girl's nerves.

John was guilty! The impression had grown into certainty. The story of the legacy was preposterous. In Nancy's brain an idea was born. Quietly and unsuspiciously she went from her lunch one day into the office building of the Nestfoot company, emerging through the other door.

Entering back as she passed out, she saw Fallon waiting for her. There was a look of satisfaction on his dark face. He followed her to the office almost openly.

Two days Nancy performed this feat. Each time she saw Fallon behind her. At noonedge, in the mysterious way of offices, that story got known too. Nancy read it in the looks of all the girls in the office. He knew!

And by now their intimacy had developed in a shadow of friendliness. John no longer called for her, alleging the pressure of work in the office. He stayed late nightly, after Nancy had gone home.

Branwell wishes to see you, Miss Graham."

With beating heart Nancy followed the boy into the general manager's room. Lewis was there with Branwell.

"Sit down, Miss Graham," Branwell said. "You know Mr. Fergie will be back today and before he comes—he was very much on his heart—I think you had better confess that you stole that plan of the engine."

They stared, watching her face like hawks.

"What do you mean?" she stammered. Lewis theatrically. "You'd better tell us. We have been trailed to the Nestfoot office."

"Yes, I confess," said Nancy calmly. "I was trailed to steal that engine plan."

Before the triumph on their faces had risen to the full the door opened and John came hurrying in.

"You can cut that out!" he shouted. "I stole the engine plans, and I'm sorry you lost all the time I's taking about Miss Graham being implicated. It's a lie, and I'm responsible."

The look of triumph turned to amazement. Then Lewis leaped for joy.

"You both stole them!" he shouted. "I have suspected you from the beginning. This will be a jail sentence—"

"Hear me, what will be a jail sentence? What is this trouble about?" demanded a pleasant voice. An gentleman, entering the office, umbrella in hand.

"Mr. Fergie!" exclaimed Branwell. "Why, the engine plans have been stolen, sold to the Nestfoot company, and these persons are the guilty pair. We took the plans from his safe."

"What are you talking about?" demanded Fergie. "Levia, I'm amazed at your allowing such a thing! Why, I have left the plans in the safe for a year. And to us it means bankruptcy!"

Lewis closed the safe before answering. "After all, it's up to Fergie," he said. "He put the plans in the safe. He went off on a sudden jaunt to his ranch without leaving any address. He's the president, not you or I."

"But how did it get out of the safe?" demanded Branwell, when they were alone together in the manager's office. "At least we'll trace the thief. Somebody knew the combination."

"Ever hear of the man who opens safes by catching the sound?" asked Lewis quietly. "I don't think that it's an easy trick, I understand. Some combination."

"What—Do You Make of It?" He Stammered.

CHAPMAN

federate in the office introduced the man—probably his son in the ladies' department around five o'clock, where he could hear the safe being opened. After that—

"Who works at night besides Peters?"

"Miss Graham."

"Where?" said Branwell. "Engaged, aren't they?"

They stared at each other and then covered their faces with their hands. Covering the plans, but at least it seemed to them that they were on the trail.

John Peters, President Fergie's secretary, and Nancy Graham, stenographer, had practically the run of the office during the president's absence. The inquiries had narrowed itself down to them. Nobody else could possibly have been guilty. Peters had entered the president's employ in his present capacity five years before Miss Graham seven. She had worked up to her present position at thirty dollars a week, and their mutual growing feeling against her, not only on the part of the girls who were her subordinates, but among Branwell and Lewis, who resented the fact that John and Peters occupied a practically independent position during the president's absence.

In spite of the heads' precautions the story of the theft leaked out. Inevitably the suspicion of the office force was directed toward the occupants of the mahogany-furnished room where Peters and Nancy worked together. And inevitably it fixed that chilling suspicion enter her own heart.

There was, in reality, little room for private talk between them, since if they had been so minded. The president's office, fitted with transparent windows that looked directly upon the general office, allowed both occupants to be seen at all times. Often Nancy would look up from her work to see a dozen pairs of eyes watching her.

They used to have been married that spring. The marriage had been postponed when the crisis crowded the cutting down of salaries. John was making only forty-five a week now, a sum ample for their needs, only Nancy, with memories of a life of poverty behind her, did not intend to start life, giving up her position at her husband's, without a substantial bank account. And she would not work when she was married. She and John were clandestinely people, and neither believed in that.

"Nancy," John had pleaded, "give up your work and marry me. I shall be getting that raise next year, and after that a substantial raise at some time. Don't let us spend our years together here when we might be so happy."

The girl had steadfastly refused. John had taken it hard at first. Sometimes she felt resentful, but her principle kept her to her decision. He would be glad when the time came.

"Nancy," he had said one day, "if I could get some money, several thousand dollars, would you marry me at once?"

"How would you get it?" she parried.

"I have an investment," John had laughed.

And his words came back to her as she sat within the office near John. Once she raised her eyes and looked at him steadfastly. His own eyes had been fixed scrutinizingly on hers. He dropped them.

"Dressed Up for High Occasions"

A rich but simple coat for the small girl to wear upon occasions that allow it, and to be dressy is shown in the picture appearing here. It is a pretty pattern, which may be used for the child from four to seven years old, and it is not difficult for the home dressmaker to manage, a matter which will be appreciated.

The coat is made of a light-colored fur white moire. The body is plain and cut shorter at the waist in front than in the back. It has long shoulder seams and full coat sleeves. It is lined with a pure soft silk and may be interlined, for greater warmth, or worn over a knitted jacket when cold weather demands extra warmth in the clothing.

The plain skirt is accordion-plaited and sewed to the body. It is finished at the bottom with a two-inch hem put in by hand. Before the hem is applied.

The rolling collar, deep cuffs and wide belt are covered with a braided pattern in soutache which may match the coat in color or be of a contrary color. The coat fastens with small high buttons of glass. Small crocheted buttons would look as well.

The pretty hat is a shape covered with light silk plush and having a narrow ribbon band about the crown. A short upstanding fancy cockade, further, usually in gay light colors, bows as if designed to please the eyes of the little wearer, and is therefore pleasing to everyone else.

Fancy shoes finish the details of the toilette and complete her readiness to be seen among other "dressed up" little ones.

Poor Arabella's Face Was Changed.

For Those Who Like Embroidery

For those who like white embroidery some new flouncings have been made in which the pattern is both fine and pretty and both the material and the work durable. Here is one of them showing a flouncing with the surface not too much covered with embroidery, and a scallop and strong border along the scalloped edge. It is woven with a wide beading along the straight edge, set between rows of hemstitching which is made by machinery in the top of the flouncing.

Beadings play an essential part in the embellishment of edges, flouncings and insertions. Even the least expensive underwear is designed with reference to lingerie ribbons, which add much to its attractiveness. Since the light-weight muslins have come into general use for underwear, many garments are cut on the simplest lines and adjusted to the figure by means of ribbon run through beading. This simplifies both making and laundering.

Many of the new flouncings have a dotted surface with a small dainty conventionalized pattern along the well-finished scalloped edge. They are in better taste than the large patterns in lighter workmanship. There is a demand, too, for narrow durable laces to be used with the embroideries. Allover patterns with small floral designs and eyelet work scattered over the surface of the fabric are cut into strips and used with narrow torchon or crochet laces for flouncings. They are not so expensive as the embroidery and chemise by narrow beadings that carry ribbon purely for its ornamental value.

JULIA BOTTOMLEY.

If You Are Too Thin.

If you are dreadfully thin, nervous and unhappy, this bath will set you up considerably. Sulphate of potash, one ounce; bicarbonate of soda, 100 grains; gentain, 60 grains. Dissolve the potash in a quart of boiling water and add it and the salts to a hot bath. If you cannot get the herbs and do not feel that you can spend money on anything else, put two pounds of common oatmeal or bran in a cheesecloth bag and agitate this in the hot bath water till it looks milky. Either of these simple things will make you feel as fresh, clean, energetic and smoothes the skin like magic.

Imported Coats.

There are some interesting import coats made of big shawls or stamped rugs, with fringes around the bottom and edging the cape section that falls over the sleeves, or sometimes edging the wide collar instead.

Pretty Fancies.

Brooches are again very fashionable. Stones in rings are cut in designs varying and even the major laces are narrow and tight with jewelled ornaments under the chin. Bracelets in narrow styles are set with diamonds and enamelettes. Some for evening wear elbow styles are favored. Watches are worn in bracelets and set also long pendant from the neck, the main ornament in the chain being set in the watch. Gold ball buckle mounted on leather or the material like the dress are smart. Sleeve links are made of loose links and short connections.

Fun. A Damp Room.

When mending a damp room the following hint will be useful. Take two cloths and soak and half a pint of glue-size. Dissolve each together in a pint of boiling water. Brush off the old paper and wash the wall once or twice with the solution, when one is on the second. No damp will ever show through the solution.

THE SANDMAN STORY

By Mrs. F. A. WALKER

Author of "Cooking Without Fire," "Mendy Bible Institute of Chicago"

ARABELLA

Arabella was a beautiful wax doll. In her day, and was given the best of care by her mother who was very fond of her, and when the mother was too old to play with dolls she wrapped Arabella in a soft cloth and put her in a drawer, where she remained for many years.

Then one day she took her out, and Arabella heard her say to a little girl who stood beside her:

"This was my best doll when I was a little girl. Now I am going to give her to you. Her name is Arabella, and you must be very careful of her, for she is wax and cannot be dropped without breaking, as your other dolls."

"Not mother," the little girl said, "can't she be mended if I break her?"

"No," said her mother, "it will spoil poor Arabella if you drop her, as her head is very soft."

Arabella was very carefully handled for a few days. She was put in a pretty carriage and wheeled about, then she was undressed at night and put into a nice little bed, and she had a new dress and a stylish bonnet, and a number of little girls came to see her. Her new mother told them that Arabella was very old and that her mother played with her when she was a little girl. But Arabella thought she looked well, she did not feel old, and she knew if her mother gave her good care she would always look young and feel young.

There came a day, however, when her new mother became tired of her, and she was left all day without being dressed, and sometimes she would have to lie in bed for days at a time with her eyes closed. At other times she would be left in her carriage all night, and then, in the morning, she would be left in her carriage out into the darkness, and she would wish her new mother would put her in her bed and close her eyes.

One night Arabella was left in her carriage on the piazza all night.

"Oh, dear!" thought Arabella. "I will never see the light of day more."

And a big dog came up to her carriage and sniffed at her.

"Oh, dear!" thought she cried. "What will I do? I am so afraid!"

Then the dog lifted his head and took off some of the red. Poor Arabella almost fainted, but she sat quite still and looked at the dog, and the dog walked away.

Arabella was glad when the day light came, but the sun came also, and her new mother did not come to her. Then she was very hungry and cold, and she was busy making mud pies on the sandy side of the piazza, when she heard her coming to Arabella's carriage and then to her feet, and she said:

"Oh, dear, thought Arabella, "will no one save me? I will never be good if I can get out of this dreadful place."

Then her mother came and turned around to the front of the house to meet her father, and then she ran out of her carriage and said: "Oh, you never saw! Her new mother looked at her, and ran into the house and told her mother to come quick and see what had happened to Arabella. Poor Arabella's face was changed, indeed. The wax had melted and run down her cheeks, she looked old and sad.

"I told you not to leave her in the sun," said the mother to the little girl.

"But can't her face be put in shape again?" asked the little girl.

"No," said Arabella's first mother, "she is spoiled, and to think I played with her years and she was as good as new when I gave her to you."

She took Arabella out of the carriage. "You poor old doll," she said, and Arabella leaned lovingly against her. The children nowadays do not like their dolls as I did when I was a little girl. I thought as much of my doll as a mother does of her child. I'll put you back in the attic, for I am carrying my things into the house. "for I cannot put you in the carriage. Even if your face is spoiled I will see that Arabella to me, no matter how you look."

So Arabella went back to the soft cloth and the drawer, where she was glad to be, for she was tired, and she closed her eyes for a long sleep.

Pretty Tommy.

Tommy's father had been giving him lessons in boxing.

One day, hearing noise coming from the nursery, he investigated and found Tommy pounding his little brother.

"I'm surprised, Tommy," said his father, sternly, "that you should hurt your little brother. Don't you know that it is cowardly to strike one who is smaller than yourself?"

"Yes," replied the cherub, meekly, "but when you spanked me yesterday I was too polite to mention it."—Ladies' Home Journal.

GIRLS ALWAYS GETTING HURT

Small Boy Gives Reasons for Objecting to Sister as Playmate—Observation of Child Life.

In the Woman's Home Companion Mary Heaton Verse writes a story entitled "The Independence of Sarah." It is full of wise observation of child life. In the following extract, Alice, the mother of a family, learns why her small son Robert does not want his sister Sarah as a playmate.

"Her name of Justice made Alice feel that Robert should let Sarah into his out-of-doors games. She had a theory that little boys and girls play the same games if they are brought up naturally together. For the most part Sarah shared this opinion of her mother; she shared it strongly; she shared it vociferously. Robert differed.

"He put it this way: 'Fellows don't want a girl forever tagging around and always yelling.'

"I should think," responded his mother, that you want your little sister to play with you.

"Thus driven into a corner he said: "I want her to play with me, all right; but it she's going to play why don't she play? She always gets hurt with the least thing and comes home bawling.

"To this Alice responded: 'It's her feelings that get hurt.'

"I don't care what part of her gets hurt,' said the downright Robert, 'it gets hurt—and she yells, and the boys say to me: 'Oh, gee! Here comes your sister again. Run!'

"I can run just as fast as lots of you," said Sarah. 'I can run faster than Skinny Allen.' I can run faster than Mud Morse.

"I know you can,' responded her brother gloomily, 'that's what makes it so fierce. We'd get away lots oftener if you couldn't.'

TOKENS OF HIGH CHARTER

Good Manners Recommend, Prepare and Draw People Together—Make Fortune of Ambitious Youth.

We are told much of utilities, but it's our manners that associate us. In hours of business we go to do who know, or take, or does this or that which we want, and we do not let our taste or feeling stand in the way. But, this activity over, we return to the world and wish for those who can be at ease with: those who will go, where we go, whom manners do not offend us, whose social time chimes in. When we reflect upon their personative and cheerful force, how they recommend, prepare and draw people together; how, in all clubs, manners make the members; how manners make the fortune of the ambitious youth; that, for the most part, he marries manners; when we think what they are, and to what secrets, what high lessons and inspiring tones, they have conveyed, and what this fine telegraph—we see what respect we owe to manners, how they blended them. The fortress was built on the model of the Constantinople walls.

Star Is Lost.

In a recent communication to Astronomie, M. Raymond of Antibes reported that he was at a loss also to see the companion of Alpha Canicri, which he had previously observed, on account of the observation verified at institutions equipped with more powerful means. The object has been sought in vain with the 31.5 refractor of the observatory of Marseilles. It will be interesting to learn whether still more powerful telescopes succeed in it. The companion in question has heretofore been described as a star of the eleventh or twelfth magnitude, distant about eleven seconds from the primary. M. Raymond adds one an apparent change of color between the time the binary was first observed by Herschel in 1833 and his own observations of 1909 and 1910.—Scientific American.

China Awaking.

The Chinese business men of Hankow, in the Shanghai district, have organized the United Association for Advising the Nation to Use Native Goods. At the initial meeting six persons of advancing the usefulness of the association were pointed out: Kill the symptoms of all schools and colleges throughout the country, print short sermons in the daily press, deploy men to go around and give public addresses to the people, distribute handbills giving names and short descriptions of native goods, keep in touch by letter and otherwise with the chamber of commerce and dealers in foreign goods and call upon the nation to use native goods.

Italian Lemon Gardens.

The Italian lemon gardens vary in size, being commonly extremely small in comparison with California's groves. In Palermo, however, there are gardens having as many as 2,000 acres. Fertilizers are used, but there is no irrigation, as rain gives a sufficient amount.

Answer to Puzzle.

your pencil and try to trace out their various routes.

The routes taken by the night drivers are shown in the illustration, where the dotted line roads are omitted to make the paths clear to the eye.

A Great Secret.

Gertie is only four, but she can keep a secret very well indeed. The other day she almost told about a nice surprise, but remembered in time not to mention it. It happened like this: Mamma was writing a letter all by herself and was hard at work upon it when Gertie came in.

"Why, what a beautiful letter! said mother. "Who is it for?"

"Oh," said Gertie, "I'm the little maiden answered hastily, "because it's a secret and a surprise, but—but—you know when you get it."

No Way to Stop the Sun.

Charlie and Nancy had quarreled. Their elder sister, Ethel, tried to reconcile them. "Children, I'm ashamed of you. Why, I'm sure, I'm not the sun, go down upon your wrath."

"Well, Charlie," she pleaded, "are you going to let the sun go down on your wrath?"

"Of course not!" he said, promptly.

Would Take Her Up.

"Now, Earlie, once for all, will you wash your face and hands?"

"Sure thing, if it's once for all."

ANCIENT SERBIAN CITY

SEMENDRIA HAS LONG BEEN KNOWN IN HISTORY.

Its Trade, Chiefly With Vienna and Budapest, Has Specialties That Have Made It Noted—At One Time Strongly Fortified.

"Semendria, where the shells from Austro-German batteries fell in preparation for the Teutonic drive toward the Golden Horn, is one of the first commercial towns of Serbia," says a war primer issued by the National Geographic society. "Serbia is an agricultural country. Pigs and grains are its banking aspect, and the greater part of the Serbian export is pigs, and almost all of its export in cereals, passed through Semendria in peace times. Its trade has been done chiefly with Vienna and Budapest. Among its exports are a superior white grape and a delicious wine.

"There is an interesting tradition connected with the grapes of Semendria. It is told that the Serbian Prince George Brankovich brought cuttings of the grape vines of Semendria and planted them upon his sunny estates in Hungary, when he became the lord of Tokay there. This transplanted of the Semendria grapes took place in the fifteenth century, and it is from these imported vines that Hungary's famous, spicy white wine, Tokay, came. This, the little Serbian city is the food administ of the Magyars' best-known product, the fiery, aromatic grape brandy, known as Tokay, and a favorite of connoisseurs the world around.

"Semendria lies upon the Danube, between Belgrade and the Iron Gates. It is distant about 70 miles southeast from the Serbian capital. It is said to stand upon the site of the Roman town Mons Aureus, and legend has it that its famous grape vines were planted by the Roman Emperor Probus. Therefore, it may be seen that the royal wine has had a perfect product of today can boast a long and glorious ancestry.

"At one time a powerful fortress guarded the Serbian town. It was a thick-walled, triangular structure, said to have been built in 1458, and for a long time it was the distinguishing feature of the small place of any importance to be seated in Turkish cities sprang up everywhere, and there followed an era of great prosperity. How long these different cities lived at peace with one another we are not told, but in time dissensions arose, and quarrels became so frequent that the different lords of the country found it necessary to take concerted action in order to suppress violence and to restore order and peace. It was then decided to build a joint capital, where all those in authority should reside, and from which each one agreed to administer the affairs of his own particular domain. Without loss of time these plans were carried out. A joint capital was built in a new and picturesque region, and was called "Mayapan," meaning "the standard of the Mayas." Thither all the lords assembled and so the final step in the formation of the new confederacy, an overlord, one Cocom, was elected and duly installed in the new capital as the supreme ruler. These results laid the foundation for an era of prosperity, which endured for many years. Later after an interval not specified by Landa in his history, there entered the country from the south an alien people under the leadership of their chief, Tutul Xiu. The newcomers, previous to their arrival, had wandered for 40 years in the wilderness without water other than that which had fallen from the skies. This incidence of a 40-years' wandering in the wilderness is sufficiently striking to arouse the suspicion that the early history of the people, as their narrative, has been at some pains to force a plous coincidence with a similar episode in the Old Testament. Immediately after their arrival the wanderers began building in the mountains not 50 miles distant from the capital a new home for themselves, which they called Uxmal. Far from being angered, however, at the assumption of his territory so near at hand, Cocom, the ruler of the Mayapan, welcomed Tutul Xiu and his people, and entered into an alliance with them. Landa thus describes the event:

"The people of Mayapan conceived a great friendship with the Tutul Xiu, rejoicing to see that they continued the Mayapan laws, and that whenever the Tutul Xiu became subject to the laws of Mayapan, and allied themselves with the other inhabitants of the country, and their lord was highly esteemed by all."

Judging from its size and magnificence the Xiu capital must have become a very important city in the history of Yucatan before the Spanish conquest. Indeed, Landa says as much.

After a time, we are told, the supreme power held by the Cocoms family seems to have turned their heads. They became successively more and more oppressive, outrivaling the worst predecessors in acts of tyranny and violence. However, there came a day at last when the chiefs of the confederacy could no longer endure this despotic rule, and a conspiracy was hatched to overthrow the oppressor. With one accord, the conspirators turned to the then lord of Uxmal, a descendant of the original Tutul Xiu, who had founded the city, as the natural leader in this movement for liberty, in spite of the fact that he was of foreign descent. He is described as having been a true friend of the public weal, as an ancestor before him, all of whom had held resolutely aloof from the tyrannies of the Cocoms family. On an appointed day the conspirators entering the palace of Cocom, slew him and all his progeny, save one son only, who happened to be absent from the city at the time on a mission to a distant province. After this sanguinary reprisal, which avenged at one blow the oppressions of many years, the surviving Cocom fled to Chichen Itza, which was divided among his murderers, and the capital was destroyed. Whereupon each lord departed from his own country more and more and the confederacy was dissolved. After the destruction of Mayapan, the Tutul Xiu also closed Uxmal and founded a new capital some 30 miles distant which they called "Maxal," meaning "It is passed," emphasizing by this name that the old order was over. Nor is there occurred about the middle of the fifteenth century.

UXMAL, THE CITY OF THE XIUS

WEST FACADE OF GOVERNOR'S PALACE

FACADE OF THE NUNNERY

PORTION OF FACADE OF THE NUNNERY, WEST SIDE

GATEWAY OF THE HOUSE OF THE DWARF

THE second city in point of size and importance in ancient Yucatan was Uxmal, the capital of the Xiu or Tutul Xiu family, who ruled there almost down to the time of the Spanish conquest. This city is located in the midst of a low range of hills, which crosses the state of Yucatan from east to west, and is about 100 miles from Chichen Itza.

Sylvanus G. Morley in Pan American Union. The derivation of the name Uxmal or Oxmal, as some of the early historians wrote it, is rather obscure. "Ox" is the Maya word for three, and "Mal" in the same language means to pass." So pass thrice, therefore, would seem to be the meaning of the word, though why the Tutul Xiu should have applied this name to their capital is unknown.

Concerning the foundation of Uxmal, the following tradition is related by Diego de Landa, the second bishop of Yucatan, who wrote in the first generation after the conquest, and who claims to have gathered his information from native well versed in the former history of their country. After the discovery and occupation of Chichen Itza, which seems to have been the first place of any importance to be settled in Yucatan cities sprang up everywhere, and there followed an era of great prosperity. How long these different cities lived at peace with one another we are not told, but in time dissensions arose, and quarrels became so frequent that the different lords of the country found it necessary to take concerted action in order to suppress violence and to restore order and peace. It was then decided to build a joint capital, where all those in authority should reside, and from which each one agreed to administer the affairs of his own particular domain. Without loss of time these plans were carried out. A joint capital was built in a new and picturesque region, and was called "Mayapan," meaning "the standard of the Mayas." Thither all the lords assembled and so the final step in the formation of the new confederacy, an overlord, one Cocom, was elected and duly installed in the new capital as the supreme ruler. These results laid the foundation for an era of prosperity, which endured for many years. Later after an interval not specified by Landa in his history, there entered the country from the south an alien people under the leadership of their chief, Tutul Xiu. The newcomers, previous to their arrival, had wandered for 40 years in the wilderness without water other than that which had fallen from the skies. This incidence of a 40-years' wandering in the wilderness is sufficiently striking to arouse the suspicion that the early history of the people, as their narrative, has been at some pains to force a pious coincidence with a similar episode in the Old Testament. Immediately after their arrival the wanderers began building in the mountains not 50 miles distant from the capital a new home for themselves, which they called Uxmal. Far from being angered however, at the assumption of his territory so near at hand, Cocom, the ruler of the Mayapan, welcomed Tutul Xiu and his people, and entered into an alliance with them. Landa thus describes the event:

"The people of Mayapan conceived a great friendship with the Tutul Xiu, rejoicing to see that they continued the laws of Mayapan, and that whenever the Tutul Xiu became subject to the laws of Mayapan, and allied themselves with the other inhabitants of the country, and their lord was highly esteemed by all."

Judging from its size and magnificence the Xiu capital must have become a very important city in the history of Yucatan before the Spanish conquest. Indeed, Landa says as much.

After a time, we are told, the supreme power held by the Cocoms family seems to have turned their heads. They became successively more and more oppressive, outrivaling the worst predecessors in acts of tyranny and violence. However, there came a day at last when the chiefs of the confederacy could no longer endure this despotic rule, and a conspiracy was hatched to overthrow the oppressor. With one accord, the conspirators turned to the then lord of Uxmal, a descendant of the original Tutul Xiu, who had founded the city, as the natural leader in this movement for liberty, in spite of the fact that he was of foreign descent. He is described as having been a true friend of the public weal, as an ancestor before him, all of whom had held resolutely aloof from the tyrannies of the Cocoms family. On an appointed day the conspirators entering the palace of Cocom, slew him and all his progeny, save one son only, who happened to be absent from the city at the time on a mission to a distant province. After this sanguinary reprisal, which avenged at one blow the oppressions of many years, the surviving Cocom fled to Chichen Itza, which was divided among his murderers, and the capital was destroyed. Whereupon each lord departed from his own country more and more, and the confederacy was dissolved. After the destruction of Mayapan, the Tutul Xiu also closed Uxmal and founded a new capital some 30 miles distant which they called "Maxal," meaning "It is passed," emphasizing by this name that the old order was over. Nor is there occurred about the middle of the fifteenth century.

Platform to the salt we sprinkle on the tail of variety.

Of two evils we are apt to choose the one we enjoy most.

Daily Thought.

As slips none at sea, a moment together, when words of greeting must be spoken, and they take the leaders, so men meet in this world; and I think we should be careful of saying him, and, if he needs, giving him supplies.—Henry Ward Beecher.

the first. The close companionship between the two types so different and yet so complementary indicates that the priests, who officiated in the service of the gods, were chosen from the Dwarf was consecrated, lived in the rooms of the Monjas quadrangle, the two groups, the lofty pyramid temple and the low multicelled monastery together form a well-balanced architecture.

Passing out through the arcade of the South house and leaving the Monjas quadrangle behind, one descends by three terraces, partly artificial and partly natural, to the level of the plain, a few paces to the south may be seen two large parallel walls, 70 feet apart, each 125 feet long, 30 feet thick, and about 20 feet high. These two constructions are the sides of the Uxmal ball court—the only one known to have been oriented directly opposite there had been fastened originally a great stone ring four feet in diameter. Both of these rings have now broken, and lie in fragments at the base of their respective walls.

Beyond the ball court there is a high terrace or platform, covering over three acres in extent, and rising 35 feet above the plain. This supports a second and smaller terrace, 19 feet high, from which rises the graceful ruins of a palace—the now magnificent example of ancient American architecture extant today.

Behind the governor's palace, and on the line of its two terraces, is the so-called House of the Pigeons.

Another very important building at Uxmal is the House of the Governor, so named because of the fancied resemblance of its roof crest to a dovecote.

The structures described above are by no means all that remains of this ancient city. Truly Uxmal is a great city, for for miles in this distance hides the wreaks of once imposing hollow tops, their presence now only to be detected by clumps of vegetation rising slightly higher than the general level of the plain. These buildings and their subordinates have been literally torn asunder by trees which have driven their roots down into the ground beneath the masonry. Creepers, vines, and bushes have so overgrown these sides that they look like wooded hillocks. Only on close examination does their real character appear, and it remains for the imagination to reconstruct their former glory. But all this ancient life, this great city once teeming with its toiling thousands, is gone. Palaces and temples stretch in the sunlight, with never the trend of sandalled foot echoing through their empty courts nor chant of white-robed priests sacrificing to offended gods. Parchance a bird may flutter through some ruined doorway, chirping for its mate, or bunnies may chirp high near above prosperity gray. Save these all else is silent, dead, the ancient power and glory forever departed, and gods and men alike forgotten in the onward sweep of time.

REALLY PLEASED, THEN.

"Mrs. Gadders is a woman who always wears an artificial smile."

"Not always. I'm sure."

"What makes you think so?"

"You seen her smile quite naturally when her sarcasm made some other woman wilt.

COMMENTS

Even the fellow with a family tree may prefer to branch out for himself.

Women are naturally generous. When one woman will wear a second-hand, she will give it away.

The telephone girl isn't always a belle. A lot of wrong nos. go to her.

Some people are so unfortunate that they couldn't even tumble into luck without hurting themselves.

SAGE THOUGHTS

The man who eats with his knife reveals himself in some localities. The man who eats with his fork reveals himself everywhere.

Crude oil has advanced in price but only a few mill behind by the time it reaches the market. Perhaps it is as gasoline "pifflic."

The Mississippian may no longer have his reasonably safe in the art of swimming. You never see any artists bites there.

Candor.

"Mrs. Nettles prides herself on being very candid."

"Yes," replied Miss Cayenne; "she can always be depended on to speak the truth, if it will hurt somebody's feelings."

Quite True.

"I'd like to know what chance a pedestrian has in a city?"

"Oh, he's reasonably safe in the art of swimming. You never see any artists bites there."

MISER DIES LEAVING FORTUNE OF $15,000

Bagged Day Before He Died and Had $1,000 in Cash When Found.

Toledo, Ore.—Face downward in a heap between pieces of his crude homemade furniture, the body of Torgen O. Svendsen, aged seventy-four, a Norwegian miner, was found in his lonely house on Qiala slough a few days ago by Jundel Olson, a neighbor.

Dr. H. D. Burgess, county physician, and Sheriff Geer found the house locked and barred and the windows nailed with heavy spikes, making it necessary to break in a door.

In the bottom of Svendsen's trunk were two tobacco sacks containing $1,000 in gold, on his person was a $20 gold piece and some small change.

Faced Downward in a Heap.

He had ordered $1 worth of cough medicine charged at a Toledo drug store last Saturday, saying he had no money with which to pay for it.

His estate includes property worth more than $1,000, and he has been known to have lent some money. It is said he also has property in Oregon City and in Salem. His friends estimate his wealth at $15,000.

Little is known of Svendsen here except that he came from Gudbrandsdalen, Norway, that he lived for a long time at Horton, Ore.

GETS ANGRY BULLFROG HERD

Girl Wearing Red Bathing Suit, Attacked in Water, Afterward Using Cannon for Decoy.

Winsted, Conn.—Frog parties are likely to become popular with bathers at other inland water resorts when the experience of a girl clad in a bright red bathing suit becomes generally known.

The girl in scarlet was bathing in shallow water at Highland Park when she felt something strike her repeatedly. She wondered what it could be, but a quick glance into the lake explained all—she saw frogs of all sizes chasing and jumping at her scarlet suit.

Being a great lover of that delicate dish, frogs' legs, the girl turned her experience to good account. She repaired to a cottage, saved by attacking frogs in the bright red bathing suit, and then remedied the lake. When she emerged from the water nearly every hook held a bullfrog.

SHOT A COON? HERE'S ALIBI

Two Men Fired at It All Night, but It Was a Crow's Nest Instead

Ashtabula, O.—Hale Britton of Bridgewood Center started down his pasture lane a few night ago, when his dog struck a coon trail and soon had the coon up a tree.

Britton went to the house for a shotgun, and when he returned he could see the coon high up in the top of the tree. He shot at it several several times, then decided the shotgun was too short range to reach him. After telling his dog to keep a close watch, Britton went over to D. Thatcher's house, and the two returned with Thatcham's rifle. From then on until one o'clock they took turns firing at the coon.

Finally they built a fire and waited until daylight. Then they learned the coon they had been shooting at all night was a crow's nest.

ARM SEVERED; DRIVES AUTO

Chauffeur, Injured on Farm, Guides His Vehicle Two Miles to Surgeon's Office.

Danbury, Conn.—With his right arm severed near the elbow and the flesh torn from the shoulder, Cesare Cavagna, twenty-four years old, a chauffeur, drove his automobile with his remaining hand two miles to get surgical aid.

Calkins is employed by John F. Slater, a New York silk manufacturer, and while assisting in operating an ensilage cutter on Mr. Slater's farm near Lake Waranaug, caught his right hand in the knives and the arm was drawn into the machine. Farm employees improvised a tourniquet which prevented him from bleeding to death before his ride to the surgeon ended. Calkins was weak from loss of blood that he barely was able to finish the journey. He is in a hospital here and will recover.

Is Called "Meanest Man."

Portland, Ore.—Portland's meanest man, according to the notes, is John M. Mahoney, manager of a drug store, who was charged with stealing clothing and throwing pins from Irene Tom Long's stand.

Daily thrills for over six months have cost him a loss of more than $100 for the blind man.

USES PHONE TO TO WIN HIS BRIDE

Pennsylvania Young Man Causes Girl to Jilt Man She Was Engaged To.

MAKES QUICK RESOLVE

When Young Woman Asks Him to Wish Her Happiness He Decides He Alone Can Give It to Her.

Bridgeport, Conn.—Paul J. Barber is a prominent young business man of Wilkes-Barre, Pa. With his friend and classmate of old University of Pennsylvania days, Edward Peil, he came here recently for a visit.

The special attraction which Bridgeport held for Peil was a young woman who was then visiting Miss Ruth B. Alling, the attractive daughter of Noyes B. Alling, who conducts several rubber stores. Naturally Peil and Barber were frequent visitors at the Alling home during their stay.

Some days ago Barber, in opening his mail, found a postal from Miss Alling. She had "just dropped him a line" to let him know she was to be married to John M. Wright, manager of the Bridgeport Compressed Paper Box company. She hoped he would wish her happiness" in her engagement and subsequent marriage.

Barber did wish her happiness—all the happiness in the world—but he felt that he was not the man to be the one who would bring her this bountiful happiness.

Puts in Long-Distance Call.

The young man hastened to the nearest long-distance telephone. He called the Alling home, got Miss Alling on the wire, having prearranged with the Wilkes-Barre operator that no matter who answered he should be not to be interrupted.

There is little likelihood of anyone ever knowing, including Barber himself, just what was said in that conversation or how long it took, but it was eminently satisfactory and effective.

Barber, in consequence, took the next train for Bridgeport. He did not announce his arrival here, but he and Miss Alling, a few hours later, might have been observed on a train bound for New York. Their destination there was the city hall. A license was procured, it was no aldermanic holiday and—but what's the use? You know the rest.

This is not the end, however. Mr. Wright, happy in the part of Miss

He Called Up the Alling Home.

Alling's accepted sweetheart, knocked at her door, not once, but twice, and she and Barber had left for New York on aldermanic business. Mrs. Alling opened the door.

"Where is Ruth?" asked the aldermanic.

And then he had to be sorry.

RIDE WITH DOG ONLY GUIDE

Three Brothers, All Sightless, Travel Alone and Go Where They Please.

Marshall, Ark.—Riding on horseback 36 miles from Doyle, Stone county, to Marshall, by way of Big Flat, Arkansas Albert Burke, who has been blind since he was five years old, arrived at Frank Hamblin's near Marshall a few days ago. He came all the way with no one to guide him except his fa

Mercerized Damask Napkins, 22 x 22 in. Large Size, $2.00 value. These are splendid values, doz. **$1.50**

J. L. CRANE.

'HOMES' AND 'HOUSES'

TERMS THAT ARE NOT BY ANY MEANS SYNONYMOUS.

Mort Women Understand the Difference and Know It Is Their Task to Create Atmosphere Making for Happiness.

Homemaking is an exquisite art. Let us hope that we are not in danger of losing it. When people live in a flat for eight months of the year; in a shack or a cramped boarding house for four; change their legal residence every few years, and spend most of their hours of recreation in getting as far away from home as possible in motor automobile, home seems like a vanishing memory.

Apparently some people do not even understand what "home" means. They come into your living room and say, "What a beautiful home you have!" They mean what a beautiful house you have; they know nothing about your home.

A home is not merely a house; it is an atmosphere, a feeling. It is a place full of beloved associations, where you can wear old clothes, and think old thoughts, and hear familiar voices without hearing them. You can be happy there, and be comfortably unhappy, be thoroughly ugly-tempered even, and know that those you love will think no worse of you than they do already.

Luxury cannot make a home, but can books, or pictures, or rugs, or bric-a-brac. A cat, a canary, two geraniums, a Bible, and an old rocking chair may make one of the loveliest homes in the world at the same time, a home is not necessarily happy because it is the house of poverty, as some would have us believe.

The art of creating home atmosphere is wholly the art of woman, and she has none more charming. Men care will not do it, or more mannishness (idiness; indeed, those things sometimes work the other way. The love of pettiness will not do it, good cooking will not do it, although it is a mighty help. Even being gay and merry and kindly yourself is not quite enough, although it takes even more than the cooking.

Success in home-making, as in everything else, requires that you shall feel equal for in your work. If it is a drag, if it is an irksome duty, if your mind is on 1,000 outside things that are not home, you cannot make home what it should be.

Not that the home-maker should think of nothing else. That is neither desirable nor possible. But the woman whose free pleasure is to create that beautiful thing, home, will be a precious and permanent influence not only to her own family, but to all her household, to all her guests, to the whole community in which she lives.—Youth's Companion.

Child Interprets Fierce Battle.

During a battle fought on a hilltop in France the attacks of the Germans became so fierce that little grenade remained between the two armies. The French finally were compelled to retire and sought refuge in a small, boring village. From a small house a little girl came out with a cat clasped in her small arms. With surprised eyes she looked at the soldiers. When the Germans entered the village a captain, observing the child, carried her safely to the other side of the road. The French had hidden behind a fence and noticed that the Germans were surrounding the child. Suddenly a shot was fired. A German fell. His comrades rushed to the fight continued. Two days later the German captain wrote to his wife: "The guns of the French, the heroism of the enemy did not stop us, but an innocent child I believe that if men could retain the innocence of a child we all would be best protected."

Work for Women.

Necessity is forcing women into all kinds of occupations.

There is hardly an occupation listed in 1910 census for the United States in which women is not represented. Woman's presence in some cases with the effect of a shock to those who fondly dream that every woman has a home and her place is in it. Twelve are, for instance, 77 woman lumbermen (raftsmen and woodchoppers) in the United States. There are 2,669 woman stock herders and raisers, 45 quarry operators, 31 blacksmiths, 18 brick and stone masons and 44 boilermen. Many women have travelled up the road to success in their work. Ten women head iron foundries. There are 321 woman bankers and 1,247 bank cashiers. Nearly a thousand women are wholesale dealers. One woman is listed as a railroad official. Three are proprietors of grain elevators.

Lightning Steals Wrench.

During a thunderstorm in South Eremont, Mass., lightning stole a monkey wrench from C. E. Chase, proprietor of a garage, and it cannot be found. Mr. Chase picked up the wrench to tinker with an automobile. When along came a terrific bolt and, quick as a flash, took it from his hand. While the bolt was "monkeying" around in the garage it looked over Frank A. Chase, son of the proprietor. The father and son, neither of whom was seriously hurt, have searched the garage from cellar to roof for the wrench without avail. A house and several trees in the center of the town also were struck.

All Dress Can Vote.

Danish women have received equal rights with men and Danish men with each other. The recent constitutional change which enfranchises women and makes them eligible to all offices also abolishes the property qualifications which have helped to keep the Danes melancholy. Everybody can vote in Denmark now, even the king. Twenty-nine years is the voting age to get with, but as time rolls over the little kingdom it is to be gradually reduced until it reaches twenty-five. Thus the older of the Dane grows the younger he can begin to vote.—The New Republic.

No. No.

"Doctor Wiley said a man can be a food taper as well as a drink taper. Do you believe it?"

"Not at our boarding house he didn't."

NO DEMAND FOR SUFFRAGE

Peasant Women on the Northern Coast of France Are Acknowledged Rulers of Community.

On the northern coast of France the peasant women are more remarkable than the men, and they are far better educated.

It is they who drag the boats in and out of the little harbors, and who sell the fish in the markets. They are thus brought into contact with the people and civilizations of all countries, and no class of women in Europe is so emancipated.

They are strong and robust, and their outdoor life and masculine habits—for they belong to the sea as much as do their menfolk—harden their bodies, at the same time giving them a taste for all masculine pursuits and pleasures.

They rarely quarrel with their husbands; indeed, the latter would hardly did they attempt coercion or illtreatment in any shape or form, for the women are taller than they are and quite as strong, so the "mere mme" of the French coast prefer to keep their skins whole, and treat their wives as "jolly good fellows," which is exactly what they are.

They sing their songs and enjoy their glass of cider with the best of their menfolk.

Feminine Haste.

"Oh, let us learn to wait," writes Margaret Deland anent the change in the feminine ideal. "It does not follow that we must be idle because we refuse to be precipitate; it may only mean that we have a faith that is large in Time, and in that which shapes it to some perfect end.

"Instead, there seems to me a certain unhumorous arrogance in this hunting, feminine haste to make over the world—it is as if we thought ourselves so important that nothing could go right without us.

"It is the same sort of hurrying anxiety to do which every housekeeper of us knows so well in her little daily affairs, an anxiety that adds so successfully to the discomfort of our families.

"Yet, when you come to think of it—it may not be flattering—but when an illness sweeps us off our feet, some duty calls us upon a journey, how well our families do get along without us!"

COMPLEXION BLEMISH!

Yes, that sluggish liver often causes it. Dr. King's New Life Pills clears the complexion, throws off impurities and relieves bile naturally and easily. Unless the bowels move freely and regularly all the power in the world will not permanently cover "that muddy complexion." This laxative is mild yet effective. It does not gripe or sicken in its effects. You will just dispute the merits of Dr. King's New Life Pills. Start a treatment today. 25c.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said court, held at the Probate Office, in the City of Charlevoix, in said County, on the 16th day of October, A. D. 1915.

Present: Hon. Sereniah A. Correll, Judge of Probate.

In the matter of the estate of Mary Elizabeth Hallagher, deceased.

Lucy Hallagher Flood having filed in said court her petition praying that a certain instrument now on file in the Probate Office of said County, purporting to be the last will and testament of said deceased, be admitted to probate and that the executor therein named be appointed or some other suitable person be appointed to administer the estate of said deceased.

It is ordered that the 22nd day of November A. D. 1915 at ten o'clock in the forenoon, at said Probate Office, be assigned for examining and allowing said petition.

It is further ordered that public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said time of hearing, in the Charlevoix County Sentinel, a newspaper printed and circulated in said county.

SERENIAH A. CORRELL,
Judge of Probate.

SERENIAH A. CORRELL, Judge of Probate.

(First Publication Aug. 12, 1915)

MORTGAGE SALE.

Whereas, William Mears and Colonia I. Mears, late of the Village of Boyne Falls, Montmorency County, Michigan, executed their mortgage to the Boyne City State Bank, dated the 1st day of July, A. D. 1913, to Edwin Farmer, which said mortgage was recorded in the office of the Register of Deeds for the County of Charlevoix, on the 5th day of August, A. D. 1913, in Liber 3 of Mortgages, on page 75, to secure the payment of a certain promissory note, of the same date, for the sum of Three Hundred Dollars, payable on demand, with interest at the rate of 6 per cent per annum, and which said mortgage was duly assigned by said mortgagee, for value received, to the undersigned, by assignment dated the 1st day of July, A. D. 1913, and recorded in said office of the Register of Deeds, in said Charlevoix County, on the 15th day of August, A. D. 1913, in Liber 3 of Mortgages, on page 76;

And, Whereas, the amount claimed to be due upon said mortgage and the notes secured thereby, and outstanding in the hands of the undersigned, at the date of this notice, is the sum of Four Hundred Twenty-seven Dollars and 50-100 (427.50) Dollars, and no proceedings have been taken to recover the debt secured thereby, or any part thereof, or to enforce the power of sale contained in said mortgage;

Now, Therefore, Notice is hereby given that the undersigned will foreclose the said mortgage by sale of the premises described in said mortgage, or some part thereof, at public vendue to the highest bidder at the front door of the Court House in the City of Charlevoix, in said County of Charlevoix, on the 1st day of December, A. D. 1915, at one o'clock in the afternoon of said day, to pay the said sum of money so then and there due, with costs and charges of foreclosure and attorney fee allowed by law.

Situated in the Township of Boyne Valley, County of Charlevoix, and State of Michigan, to wit:

The east one-half (½) of the southeast quarter (¼) of Section Twenty (20), and the north half of the northeast quarter of the northwest quarter of Section Twenty-nine (29), in Township Thirty (30) North, Range Eight (8) West.

Dated, Boyne City, Michigan, Oct. 29, 1915.

EDWIN FARMER,
Mortgagee.

William E. Robb, Attorney for Mortgagee.
Business Address: Hersey, Mich.

ALL FACTIONS IN FRANCE UNITED

Sure Continuance of War Seen In Briand Cabinet.

ALL PARTIES REPRESENTED

France Acclaims New Ministry Greatest in Its History—Insures War to the Bitter End—New Premier Will Rule With Iron Hand—Colleagues Include Prominent Men of the Past.

Aristide Briand, who completed the formation of his third French cabinet, which contains several former premiers, will rule with an iron hand if he lives up to his reputation.

His political record is studded with masterly achievements.

He pushed through the law which separated church and state.

He smashed the railroad strike, the greatest labor disturbance France ever knew, without shedding a drop of blood.

He placed M. Poincare in the presidential chair.

Now he enters upon the titanic task of uniting France to victory with the assistance of the strongest cabinet of the Third republic and the support of every party in France.

Every shade of republican thought is represented in the ministry. The holy union, proclaimed by President Poincare at the outbreak of the war, is to be renewed when the Clerical leader, Denys Cochin, sits side by side with the Socialist leader, Marcel Sembat.

Gallieni Has Fine Record.

General Gallieni is a grim disciplinarian who will take a strong grip on the army. His greatest achievement before the war was the pacification of the rebellious colony of Madagascar, to which task General Joffre served under him.

The war minister was made military governor of Paris when the government was removed to Bordeaux. General Gallieni's nerves helped to defend Paris to the last if the Germans besieged the capital. He is a splendid organizer, whose greatest feat in this war has been to preserve Paris from Zeppelins.

The first action of the new ministry will be to modify materially the censorship, allowing greater liberty in the publication of war and diplomatic news and complete freedom to discuss political questions.

Universal opinion is that the constitution of this strongest possible cabinet is a plain warning to Germany that France intends to continue the war to the bitter end.

First Real Coalition Cabinet.

This is the first time in the history of the French republic that there is a coalition ministry of all the opposing parties and factions. It follows closely on the recent innovation of forming a British coalition cabinet of Conservatives and Liberals.

The action in forming the cabinet was the outcome of deep popular sentiment that at the supreme crisis of the war party division should give way to united action by all the parties to overwhelm support of the government.

As the cabinet of Viviani was representative of only a few political groups, the ministry presented divided collective resignations, and President Poincare immediately charged Aristide Briand with the formation of a new organization, combining all elements.

MEATLESS DAYS FOR TEUTONS

German Party Leaders to Discuss the Food Problem.

The Berlin Morgenpost says the chancellor, Dr. von Bethmann-Hollweg, has invited the party leaders in the Prussian diet to confer on the foodstuffs problem.

German papers show that the proposal to fix certain days on which no meat is to be eaten is being universally discussed. It is predicted that the people will adapt themselves to the restriction without protest. The government's ordinance has not yet been issued, but specific restriction days are being speculated upon.

The Vossische Zeitung notes the "beneficial suggestion" of the best schedule:

No meat on Monday and Friday.
Not fat on Tuesday and Saturday.
No pork on Wednesday.
Still redeem on Sunday and Thursday.

KEEP FOOD FOR ARMY HOT.

Italian Devise Is Used to Supply Mountain Camps.

One difficulty of the Italian commissariat is to get food from the valleys to the camps in the mountains. The difficulty has, however, been solved, and twice a day hot food is carried to the backs of mules by "cooking cases" designed by an Italian.

The food is contained in a huge pan of aluminum with a circular opening, which can be closed hermetically by screws. The pan is inclosed in a case lined with cotton and cork, and the food keeps hot for more than ten hours.

Where Apples Are Plentiful.

Too many apples, Brazil (Ind.) man "set 'em up" to white town by placing barrels of fruit on street corners so all could help themselves.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or telephone, H. S. HARSHA.

WANTED—Live girls willing to work and experienced in general housework. Miss Marie Mortensen.

A COMPLIMENTARY RECEPTION

Mr. and Mrs. H. W. Paddock gave a reception Thursday night in honor of their son, Hubert Paddock, Ensign U. S. Navy, and his bride.

The gathering was by invitation, and the house was filled by a large number of our people who share with Mr. and Mrs. Paddock a very justifiable pride in the professional success of "our sailor boy" in his chosen profession. It is indeed a distinction for a high school boy to a company town to be selected as one of the chief from a school that ranks as one of the most exacting in the world, a naval college that is acknowledged by European authorities to be the most thorough of any of its kind in the world, is another example of a Charlevoix boy making good.

Ensign Paddock is now signal officer of the dreadnought battleship New Hampshire, which was one of the squadron lately at Vera Cruz, and which weathered the terrible storm that swept over Galveston. The New Hampshire is quartered at Newport News, to which rendezvous Ensign and Mrs. Paddock left Saturday.

The reception Thursday night was one of the most notable social events of the season. We would like very much to live long enough to see the eagle and anchor on the shoulder of this very deserving Charlevoix boy.

CHASE S. OSBORN AS A DARK HORSE

From the Detroit (Cod.) News

If the Republicans next year should pick a dark horse candidate from another state, they would have hard work to find a man of presidential caliber more acceptable to the Progressive than Chase S. Osborn, formerly governor of Michigan. Mr. Osborn was born, reared and educated in Indiana. He was engaged in newspaper work in that state before he went to Chicago and Milwaukee and afterward to Michigan, where he has had a career to which his friends take justifiable pride.

Mr. Osborn, if he were the choice of his party, would appeal much more widely than some who have been mentioned as Republican possibilities. He made an enviable record as governor of his state. He has fought machine politics, stood consistently for efficiency and economy in public business. While his sympathies were with Colonel Roosevelt and against those in charge of the steam roller at the Chicago convention, he remained in the Republican party.

It is likely that the Michigan delegation next year would give its favorite son indorsement, on preliminary ballots. Senator William Alden Smith and Mr. Osborn would do nothing to interfere with the interest of the senator's friend. But, as a second choice, he might become formidable in the convention and certainly would be thrust the country if he were elected to head the ticket. He has energy, initiative and a record that would appeal alike to those who are strong for Republican regularity and those who place principle above party. He is of the type of man who could rally to the G. O. P. standard those who were alienated in 1912, who could rescue it from the slough of standpattism.

HOME MISSIONS

A Synopsis of the Lesson Presented at the Last Meeting of The Mission Circle of the Baptist Church

Every since the landing of the Pilgrim Fathers, Home Missions has been one of the great national forces that has helped shape and mould the thought and life of this country. It has been the part of the Christian Church in America that has reached places in our land beyond the surroundings of the local church. The founders of this nation were also the originators of Home Missions, as it is now known. For they were truly children of a country in which the human spirit had a new birth in energy of imagination, and in faith in its powers to dare greatly and to achieve greatly.

Of this spirit were born such men as Roger Williams and John Eliot, who amidst many dangers, privations, and much hardship carried the gospel to the Indians.

Home Missions has manifested its reclaiming power from sin, throughout the length and breadth of this great continent; for its message has reached from the darkest corner of Alaska, into the most remote fastness of our southern mountains.

However, much land is still to be possessed, for 40,000 Indians have yet to hear of Christ, a large number of Mexicans in the southwest have not had the gospel preached unto them, and from our great cities comes the bitter cry of our submerged women and girls and boys to come over and help them. Shall we not respond by going ourselves or by sending others to the aid of our sisters in great need?

DEATH OF EARLY SETTLER

John O'Neill, Pioneer Marion Settler Drops Dead at His Home Sunday Evening—Had a Notable Record

John O'Neill, one of the best known of the early pioneers of this section, dropped dead at his Marion farm home Sunday evening, evidently of heart failure, at an advanced age.

Mr. O'Neill was a pioneer of the pioneers, having taken up the homestead where he died in 1867. For many years he was the supervisor of Marion, and was considered one the ablest members of the many boards upon which he served. He was born in Ireland and came from excellent Irish stock. His father, the late Richard O'Neill, whom we well knew, held high office in his native country. He was a conspicuous type of the "fine old Irish gentleman," possessing rare intelligence and the ready wit for which his race is noted. He died at his son's home in Marion nearly forty years ago.

John, the subject of this article, inherited in a marked degree all the rare qualities of his father. Liberally educated as a boy in his native town, he was "slated" by his parents for the priesthood, and sent to a Catholic college in Brussels, Belgium, (lately devastated by the Germans,) where he studied for three years, but, thwarting the hopes of his parents, he returned to his Irish home, soon after this coming with his parents to this country, burying his exceptionally brilliant talents in the precarious life of a pioneer homesteader. He was one of the most companionable and intelligent conversationalists upon any subject that we have ever known.

Besides a wife, he leaves two sons and three daughters.

THE NEW SEAMAN'S LAW

Old Time Methods of Dealing With Sailors is Done Away With and Fair Treatment Must Be Given Them

Here is just what the new LaFollette Seamens act provides for owners, sailors and public, with the Commerce department's rulings on certain sections of the law incorporated. The law applies to the great lakes as well as salt water.

Section 1 compels a ship captain, short-handed during a voyage, to fill vacancies with men of the same or higher rating before proceeding. Section 2 makes 9 hours a day's work in port. Section 3 provides that for every day's delay in collecting his wages, a man gets double pay.

Section 4 provides that in any port a sailor on any ship may collect half his pay or complain to U. S. officers and get full pay and the right to quit.

Section 5 rules that a majority of the common crew may have the ship examined for seaworthiness, or its supplies for quality, by U. S. agents. Section 6 bids goodby to the forecastle fiction. There must be a berth for each man in a clean room drained and ventilated and with shower bath. There must be a ship's hospital.

When a sailor quits, says Section 7, he cannot be imprisoned or forced to work. For insubordination he may be placed in irons and for assaulting an officer, imprisoned two days.

Section 9 prohibits flogging sailors. If the master of a vessel fails to deliver such an offender, he and the vessel owners are liable for damages. Section 10 gives two ounces of butter and five quarts of water to each sailor, daily.

Section 11 prohibits sailors assigning wages to employment offices or saloons. Wages can be assigned to near relatives. Section 12 prohibits garnishment of wages except by courts acting for near relatives.

Section 13 requires 75 per cent of each crew to understand officers' orders; but orders in all they need understand. Forty per cent of the crew must be able seamen. This will gradually rise to 65 per cent in 1920. An able seaman must have had three years service on the seas or great lakes.

Each lifeboat shall be in charge of an able seaman. Since more than 30 miles from shore must have lifeboats and liferafts for all, except from May 15 to Sept. 15, when there must be boats and rafts for 70 per cent. On the great lakes, boats for 20 per cent and rafts for 50 per cent are required. Section 15 requires and barge losing a passenger or sailor to report it.

Shortened Length of Lands.

The war name of the middle ages was sweet sixteen feet long, the present-day lance rarely exceeds eleven feet.

Thymol.

The value of thymol in medicine and sanitation depends on its powerful germicidal properties, combined with an absence of toxic qualities. It can be used as an antiseptic with the same confidence as boric acid or carbolic acid, but, unlike the latter, is non-poisonous.

CHARLEVOIX COUNTY BANK

NICHOLLS

COZUMEL
A MEXICAN ISLAND

FROM PAN-AMERICAN UNION

A STREET SCENE IN SAN MIGUEL

THE CHURCH AT EL CEDRAL

TEQUILA PLANTATION, JALISCO

IN the Caribbean sea, about twelve miles from Yucatan across the channel of that name, lies Mexico's most easterly outpost, the island of Cozumel. The name comes from the ancient Mayan and means "The Isle of Swallows." It is included in the northern division of the territory of Quintana Roo, the capital of which is Santa Cruz de Bravo, named for the famous soldier and warrior who, during the Díaz regime, administered all that part of Mexico, main land and islands, which lies to the east of Yucatan. The foreign port nearest to Cozumel is Belize, British Honduras, distant about 166 miles southwest. Off to the northeast, some 210 miles away, lies Cuba. From extreme points north to south the island, which is rhomboidal in form, measures a little under 50 miles, and from east to west about 15 miles.

Cozumel occupies a very prominent place in Mexican history. It was the first land sighted by Hernando Cortes when, in 1519, he sailed westward from Cuba on that famous voyage which had for its object the quest of gold and for its result the conquest of an empire. Cortes, however, was not the first Spaniard to set foot on Cozumel's shores. The year before he landed it was visited by Grijalva, the discoverer of Tabasco; and Bancroft, the historian, mentions others who touched there during the earlier cruises of the Castilians among the Antilles.

It is a matter of record that from the deck of his "flagship"—a little vessel of less than 100 tons burden—Cortes counted 14 towers on the north and northwest coasts of the island. These he found, when he landed, surrounded as many temples, erected for idolatrous worship. When he disembarked with half of his followers (all told, the expedition numbered only 617 men), leaving the others on board his small fleet to repel possible attack, Cortes' first act was to dismantle these temples. Fired with religious zeal, he pushed his way through the crowd of Indians who had come down to the beach to receive him, and mounting the steps of the principal place of worship, where the high priest and his attendants were grouped, he harangued the natives on the sinfulness of their idolatry, using malives on the sinfulness of their idolatry, using malives on the sinfulness of their idolatry, using mal

Local and Personal Notes

NEW ADVERTISEMENTS

J. L. Crane
Jacobs & Dawson
M. A. Levinson & Co.
Mason's Department Store
Charlevoix Hardware Co.
C. Danto & Son
Blanchard Hardware Co.

Potato market 40 cents, and buyers are beginning to take them in.

Jeff Wilkel and wife, who spent the summer in Grand Rapids, have returned to Charlevoix for the winter.

Another addition to the Smith tribe Thursday. It is at the home of Geo. W. Smith, and it is a boy.

"Jack Chanty," a master film at the Majestic Wednesday, Nov. 24th, manager Miles has succeeded in booking.

The old reliable schooner Alice, Capt. Joe Hansen, of Milwaukee, is in port, loading his regular cargo of potatoes at Horton's Bay.

The roller rink will be open to skaters Thanksgiving afternoon, and in the evening there will be a grand masquerade ball, with prizes for best costumes.

The fire department will give a Thanksgiving ball, at the Bank Hall on Thanksgiving eve., Nov. 28th. Help out the boys; they deserve it. Buy a ticket, even if you don't dance.

Will H. See and wife, of Portland, Oregon, arrived Friday for a month's stay with Mr. See's mother, Mrs. D. M. See and other relatives. Mr. and Mrs. See's last visit was three years ago.

Christian Science Society, Van Pelt Hall, will hold a Thanksgiving service, Thursday morning, Nov. 21st at 10:45. This service will include testimonies by Christian Scientists appropriate for the occasion. The public is cordially invited to attend.

The Jacobs & Dawson's grocery first opens up in the Paddock building Saturday of this week. The premises have been thoroughly overhauled for this new enterprise including a splendid basement with new cement floor, a splendid plate glass front, and excellent interior furnishings. See announcement in this issue.

Everything in Charlevoix progressing, thank you. The foundations of the new Blanchard block are completed and the iron girders of the ground floor are placed. Brick-laying on the front is well along, and a large force of men are at work to complete the building on schedule time—January 1st. Industrial conditions all about town continue good. Everybody busy.

Very much concern has been felt for some time concerning the safety of Allie Moore and his wife and a man who went as an assistant, in a small motor boat about a month ago. On Friday Mrs. Ian Hamilton received a telegram from Grindstone City, near Harbor Beach, that the expedition was wind-bound there. The boat was bound for Detroit, where Moore had a winter skating engagement. There is no question but that they will reach Detroit safely.

THE CITY BEAUTIFUL

THIRD NUMBER ON THE LECTURE COURSE TO BE GIVEN AT THE OPERA HOUSE ON TUESDAY NOVEMBER 23RD

The first two numbers of the Lecture Course have been a great success, but the committee has a further treat in store for the people of Charlevoix. Herve M. Rose assistant secretary of the senate will deliver his interesting lecture on "The City Beautiful."

This illustrated lecture has been given in all the large cities of Michigan and the Central states. It has been well received and spoken of in the press as the finest possible representation of the beauties of our National Capital, that has ever been produced.

It is of equal interest to those who have never had the pleasure to visit one of the most beautiful cities in the United States if not in the world.

The committee want the people of Charlevoix to use this opportunity to become acquainted with Mr. Rose and to profit by his knowledge of the condition of this country.

Reserve seat sale at the Central Drug Store Saturday Nov. 20 at 7:00 p. m.

Reserved seats 35c. Unreserved 25c.

NEARLY A BAD FIRE

A mysterious fire in the store of the Charlevoix Hardware Co., at midnight Monday came very near being a disaster, which was prevented and promptly extinguished by the chemical engine.

Some one across the street saw the blaze through the glass of the door and gave the alarm, which was promptly responded to by the department. When entrance was gained the blaze was in some barrels and boxes, including an unpacked box of guns, which were badly damaged, some of them ruined. The fire was so well started that the wall and ceiling was badly scorched, and the fire would very soon have burned the veneered wall.

Damage fully covered by insurance. The cause of the fire is still a mystery.

FOR SALE—at less than first cost, three (3) Pine Lake in Courtesy Addition. Parties interested, apply to H. S. HARSHA. ADV.

Mrs. T. J. Martin, of Owosso, is here, as the guest of her aunt, Mrs. J. J. Gaskin Sr.

Keep "Jack Chanty" in your mind. It will appear in films at the Majestic Thanksgiving eve., the 24th.

Superintendent Thayer, of the U. S. Northville fish hatchery, was in the city Saturday looking over the local plant.

Egbert Carpenter left Tuesday for his winter home in Florida. He was accompanied by his daughter, Mrs. Hines.

High Brady & Son have sold their fishing business, with retail market, to William Doby. Mr. Brady and family will remove to Detroit.

The Booth fishing tug E. M. B. A. was successfully raised from her recent partial submerging, and is again in shape for business.

At the Chicago Flower Show held in the Coliseum last week, Miss Helen Armstrong appeared on Saturday's program in two interpretive solo dances.

Miss Eldred, W. U. manager, left Saturday for a two week's vacation at her former home in Jackson. The office is in charge of the former manager.

The Methodist District Ministerial Convention is in session at the Methodist church since Tuesday morning until this (Thursday) morning, with about all of the pastors of the district in attendance.

The Ladies' Aid Society, of the Congregational church, will hold a bag and apron sale in the dining hall of the church, Wednesday afternoon, December 1st, in connection with a ten cent tea. The public is cordially invited.

The Methodist male quartet, which went to Battle Creek last week in Geo. Block's car as delegates to the State Sunday School Convention, returned home Tuesday. The boys assert that they don't remember of any towns that were skipped on the tour. They report a splendid time.

Reggie McRoberts, wife and son, who have been visiting relatives at Duluth for three weeks, returned home Monday. While at Duluth Mr. McRoberts joined an expedition on a moose hunt in the north. They saw two of the big wild game but did not succeed in bagging one.

The weather the past week has been pretty hard to beat for boisterous comfort. It has howled out of the north or west in a full gale with now and then a let-up to get a better hold. The steamers J. H. Wade and Philetus Sawyer were storm-bound here four days last week, and fishing was practically suspended.

At three o'clock Friday morning the fine new residence of Wm. H. Cook, on Pelton street, this city, was destroyed by fire with all its contents. The house was built for resort rental, and was occupied the past summer by the Seniors. Mr. Cook and moved into the house from his temporary residence, but was alone in the house, his family being away. When Mr. Cook awoke the room was full of smoke and he was just barely able to escape. Loss about $6,000, insurance $5,000.

SOLVING THE PROBLEM

December 20, 1915, The Charlevoix State Savings Bank, Charlevoix, Mich. Will Inaugurate and Establish The Landis Christmas Savings Club

The problem of saving money and getting ahead is one that faces everyone alike and it is a problem that everyone is capable of solving.

The Charlevoix State Savings Bank, has the key to the situation.

On December 20th, 1915 the bank will install the Landis Christmas Savings Club, which is a systematic plan for saving money. Payments to this Club can be made weekly or by the month and the various amounts that can be deposited are arranged as to meet the needs of the smallest depositor to the larger ones. The bank feels that by installing this "System for Savings" it is doing a real service for the community at large.

Watch for further information in this paper the coming week, and inquire of the officers and directors of the bank who will be glad to explain it to you.

The Christmas Savings Clubs are very popular in other towns and cities and the Charlevoix State Savings Bank is to be congratulated in installing this system.

Aids and Abets Disease.

Doctors have learned that worry means insomnia, nervous dyspepsia, hysteria, that it weakens the bodily defenses and aids the attack of diseases of microbic origin. It is the presence or predisposing cause of many bodily ills. It is the one thing which saps the patient's vitality which, broadly speaking, is his power to will to get well.

Easy Way to Fame.

"It is easy to get a reputation as a sage. Just refrain from talking when you have nothing to say.—Cincinnati Enquirer.

YOU CAN'T GO WRONG

LEMIEUR & COMPANY

A MODEL FARM

The Waller Plantation in Charlevoix Township Under Scientific Cultures—Fruit and Reforestration

About a mile northeast of this city, and a mile city limits, without doubt lies the best cultivated and best managed farm in Charlevoix county. But a few years ago it was, to all appearances, an area of tangled waste, just about such land as we go through far north after you cross the railroad. But underneath the scrub and half burned useless timber was soil. E. C. Waller, a wealthy resident of Chicago, and a member of the Chicago Club of Charlevoix, knew it all the time. Therefore, with the acumen that all Chicago people are supposed to possess, he "froze" to 1500 acres of it and began business. He utilized fire to complete the work that it began, yanked out the stumps, drove wells in several places, and fenced in the estate.

He has, up to date, 350 acres under the plow, 90 acres of which was prepared this year. Eighty acres of this is orchard, planted with geometrical precision, and from three year old trees they this fall sold 100 barrels of the very finest varieties of hand-picked apples. There are 5500 apple trees growing every minute, that are being wrapped for extra scientific attention, and to figure up the dollahs that they will bereafter yield to the owner will tax your pomological mathematics.

The buildings which house the human and the enterprise are on the ones are alike impervious to both ends of the thermometer. The barns have every modern comfort and convenience, and every ounce of fodder for man and beast is rained on the place. The house has no silo but the barn has.

Looking far ahead into the future when what seems prime to Melvin Waller forestration is one of the industries of the place, and 30,000 white pine and Norway spruce seedlings have been planted, to say nothing of 200 butternut and walnut seedlings that will in the sweet by-and-by add to the increment of the investment.

There are 40 well bred cows, many young stock, 20 horses and 250 sheep on the place, besides hogs and chickens. It would do your heart good to discover that way for an example of what money will do when expended with discretion and intelligence. Even his theory of the earth moon system he derived an estimate or more than 56,000,000 years, which for a long time stood between groups of higher and lower figures. I. Joy was the first to have estimates of the age of the earth, in 1893, on the sodium contained in the ocean. Adopting his hypothesis that the sodium content of the ocean is derived at a constant rate from that of the rocks, he arrived at an age of 100,000,000 or 90,000,000 years, and increased this by 10,000,000 in 1906. In 1909 Mr. Sollas made a searching inquiry into this subject and placed the age of the ocean at between 80,000,000 and 150,000,000 years.

Hog May Not Trespass.

Chief Justice Clifole of the supreme court of Idaho makes the following comment in Full Creek Sheep company vs. Walton on the effect of a statute relative to trespassing hogs:

"The man who drafted this amendment made some an exception in the laws of Idaho from all other kinds of trespassing animals. So now when that downtrodden quadruped of ancient notoriety goes foraging beyond the protecting care of the swineherd he at once loses his character as a domestic animal and becomes feros naturae, subject to capture by anyone who may premises he may at any indicreet moment find himself. Of course the law doesn't care much about his character; he would ordinarily just as soon be treated as a wild animal as to be treated as if he had been domesticated for centuries. But his fate is generally about the same either way."

SUDDEN MUSCULAR AGCHES AND PAINS—NEED NOT BE.

That life—if from the right remedy, Sloan's Liniment is a real necessity in every home—for young and old. Its merit is praised in dozens of letters. A staff man from middle, Indiana writes, those aching muscles, that always interfere years—then at last entered relief in Sloan's Liniment. Sprains, those aching muscles, that and accidents. Your home needs a bottle. 25c, 50c and $1.00.

Took Name From Town.

Landau were originally made in towns named Landau, in Germany.

ESTIMATING AGE OF EARTH

Geologists Have Differed Greatly as to the Time It Has Been in Existence.

As long ago as 1860 John Phillips, the geologist, estimated that the time required for the deposition of the stratified rocks lay between 38,000,000 and 96,000,000 years. This was probably the only estimate prior to Kelvin's epoch-making paper of 1862. Since that time many estimates have been made, varying all the way from 17,000,000 years to 400,000,000 years. Kelvin was the first to discuss the age of the earth considered as a cooling body. In 1895 Clarence King introduced the important criterion of tidal stability and reached the conclusion that 24,000,000 represented the conditions. This result was adopted by Kelvin in 1897, and then he placed the limits at 20,000,000 and 40,000,000 years. Only Sir George Darwin has discussed the age of the earth from a purely astronomical point of view. Even his theory of the earth moon system he derived an estimate or more than 56,000,000 years, which for a long time stood between groups of higher and lower figures. I. Joy was the first to have estimates of the age of the earth, in 1893, on the sodium contained in the ocean. Adopting his hypothesis that the sodium content of the ocean is derived at a constant rate from that of the rocks, he arrived at an age of 100,000,000 or 90,000,000 years, and increased this by 10,000,000 in 1906. In 1909 Mr. Sollas made a searching inquiry into this subject and placed the age of the ocean at between 80,000,000 and 150,000,000 years.

LIST OF JURORS

Following is the list of jurors drawn for the December term of circuit court for the County of Charlevoix, to be held in Charlevoix on Monday, December 6th, 1915:

Sunday afternoon at Burgess— Sermon in Bible Study.

Worth Knowing.

Every housekeeper knows that in a small household where only one or two servants are kept, several guests over Sunday mean a great deal of work—manual labor for the domestics and head work and responsibility for the hostess. If things are to go smoothly and hospitality is to be perfectly expressed, somebody has got to do a deal of thinking and preparing beforehand that this sunshiny, natural, unstudied, unselfish, unobtrusive, unwearying, the housekeeper and hostess.

Uncle Eben.

"Don't get discouraged, son," said Uncle Eben, "If you find you don't do what you're tryin' to. Maybe it's jestin' you is trainin' to do somethin' that you aim.

School Commissioner's Column

May L. Stewart, Commissioner

SCORE CARD FOR RURAL SCHOOLS

The first "Standard School" requirements put out by the state department were rather vague and indefinite. They have since then adopted a point score card by means of which the inspector may decide just where a school stands. A first class "Standard School" should be worth over 800 points and should be striving to reach the 1000 mark. By filling out the score card for your school you can tell what you still need and along what lines to improve. Score cards can be had by applying to the Commissioner.

A number of teachers find it almost impossible to do the work expected of them because their predecessors have made promotions in cases where pupils have not come up to the standard set by the state course of study. Some of these pupils are really bright but are passed on year by year not realizing that their work is one or two years behind the real state standard. They awaken with the sad experience of failing in the state eighth examination. Too, in many cases they are not to blame for this, neither is their present teacher. To protect these pupils and to help these teachers as well as to raise the standard of work done in our county, bringing it closer to the state course of study, the commissioner has decided to introduce a system of county examinations. The questions will be based on the state course of study and be mimeographed tests as indicated in the directory.

Mid-year examination questions will be sent to every teacher in January, covering all subjects taught in the 4th, 5th, 6th, 7th, and 8th grades. The papers must be written in ink, signed by the pupil and handed in. The teacher will then mail the papers back to them, even to the standings and then mail or express the papers to the commissioner to be O. K. 'd and put on file for future reference.

We have just as conscientious teachers and just as bright boys and girls in our county as can be found anywhere, and we want our county to have the lowest possible failures when the state compares us with our neighboring schools. This will mean an immense amount of work for the commissioner but it will protect teachers and boys and girls who really try, the work will be worth while.

Fun in the Class.

The late Professor Kerr, when headmaster of a large London school, was one of the most genial gentlemen that ever filled that position. He was fond of encouraging fun in his boys and was not averse to recounting occasionally during class time, when anything prompted it, the manners and customs of countries he had visited. On one occasion he was telling his class about Spain, and said:

"Do you know, boys, that when a man attains a prominent place he is called 'dir,' but is given the title of 'don?'"

One of the boys here called out:

"Then, I suppose, sir, they would call you Don-Key?"

The gravity of the class was completely lost for the remainder of the afternoon.

Invention of Photography.

The earliest experiments in the direction of photography were made by Wedgewood and Day, but the first photograph was actually produced in a camera made by Daguerre and a partner about 1839. In 1840 the first photographic portrait was made by Professor John W. Draper, an American. Progress was made in the work of Fox Talbot, 1841, and Scott Archer, 1851, with the glass plate. The gelatino-bromide dry plate was invented in 1871 by Maddox, and greatly improved by Bennett in 1878. As in many other inventions, it is practically impossible to say one's its or on one man and one date for the specific "invention" of photography. It has been so largely a process of experiment and improvement.

Conscience Fund Grows.

The United States treasury conscience fund is growing. It now exceeds $200,000, received from smugglers, tax dodgers and others.

Petoskey News: Lieutenant Ormond Fallthorp, United States ship Saratoga, flagship of the Asiatic fleet, arrived at Kobe, Japan, Tuesday, with his ship which participated in the salute for the coronation of the Emperor of Japan. Lieutenant Fallthorp, who is a well known Petoskey boy and son of Judge C. J. Fallthorp of this city, is the only known Petoskey boy to be in the ancient city of Kioto Japan, during the coronation. The expense of the coronation was somewhere near five million dollars.

East Jordan Enterprise: Tuesday night Capt. Wells U. S. A. and Capt. Conboy of the 33rd inf. inspected Co. I. Promptly at 8 o'clock Top Sergt. Gidley formed the Company, and on appearance of Capt. Winters and the inspecting officers, the ceremony of inspection was carried on. The company dressed in their new O. D. wool uniforms made a fine appearance, and certainly not only did credit to themselves and officers, but also to East Jordan. Co. I has come to stay and they should be encouraged in every way possible by the citizens of East Jordan.

Boyne Citizen: Geo. S. McAfee, of Hudson Township was arraigned in Justice Nurko's court yesterday on a charge of assault and battery preferred by Frank Wilson of the same township. The complaint and claims the defendant struck her over the head with a stick, knocked her down and kicked her while she was down for sometime. The defendant told a different story but he was convicted and sentenced by Justice Nurko to two weeks at Charlevoix, and fined $50 and costs. In default of payment he will be sentenced to thirty days. Prosecutor Lewis conducted the case against the defendant.

"The commercial organizations of Alpena and Grand Rapids have been urging the Michigan Trust Co., who are receivers for W. H. White & Co., and for this concern have charge of defunct Boyne City, Gaylord & Alpena Railroad, to build the coming season the twenty-mile road necessary to connect the two ends of the road and make a through line from Boyne City to Alpena. The Trust Co. took the matter under advisement and last week answered that the outlook and interests of the creditors whom they are acting for will not warrant it. It is a fact that under present laws and the trend of legislation, a capitalist must be an "easy mark" who would invest real money in building new railroads.

East Jordan Herald: Miss Emma Sorenson, who had been ill for some time passed away at her home in this city at an early hour last Saturday morning. Nov. 6th. Deceased was born at Northville, Mich., Nov. 7th, 1842, being seventy-three years of age, lacking one day, at the time of her demise. Following her early school day, she took a course of instruction at the Valparaiso, Ind., college, and then took up her life's work as school instructor. She followed this vocation for over thirty years, nineteen of which she was affiliated with the East Jordan Public Schools. About five years ago her hearing became affected and she withdrew from the work. She has since resided at her home near the high school. [Miss Sorenson was a Charlevoix teacher about twenty-five years ago.]

The death by poisoning of the Rev. Francis Little of Northport, Mich., a missionary stationed at Corfu, Asiatic Turkey, was announced by the State can board of commissioners for foreign missions. Ambassador Morgenthau at Constantinople, who notified the state department at Washington of the death stated that he was making a thorough investigation to determine the responsibility, and that pending the result of this inquiry he had formed no opinion of the case. Mr. Leslie had been the only missionary since 1912 at Corfu, which is a remote station in north Mesopotamia, on the Arabian border. The station included an extensive industrial plant employing several thousand persons. Francis Leslie was a member of one of the most prominent families of Northport. Although he left several years ago to become a missionary in the east, he was well known there and his death came as a shock to his relatives and many friends in Northport. When last heard from, several months [ago], Rev. Leslie stated that conditions in that region were rather turbulent and that trouble might be expected.

Traverse City Record: There is a man in the Grand Traverse region who refuses to let the old settlers die. His name is W. S. Anderson, and he is secretary of the region's Old Settlers' association. The earthly remains of the early pioneers will all be laid away in the course of a very few years, but the record of their achievements will endure as long as the annals of the country's development are chronicled. About five years ago Mr. Anderson set about compiling a history of early settlers and their efforts toward making the surrounding country what it is, and also making a collection of the pioneers' photographs. Tireless he has toiled, and consequently he has endeavored to impress upon the rising generation the value of an authentic account of early activities heretofore. His efforts have met with a large degree of success, if being safe to say that, as far as being well-versed in the lore of their home neighborhood, the people of this section are not surpassed anywhere. Mr. Anderson in carrying on his work, utilizes the modern vehicle, publicity in a manner which exploits the proposition fair and wide. At the Grand Traverse region fair this fall, he arranged an exhibit which was evidently both attractive and instructive, for over 15,000 persons made it a point to visit the booth and inspect the hundreds of interesting articles which made up the display. Every visitor received "Bill" Anderson's personal attention, and was gladly afforded any information which he desired to impress upon the reader's memory information which should never be forgotten.

GARLAND HOTEL BURNED FRIDAY

The Garland hotel in Boyne City, the only other hotel there besides the Wolverine, was burned early Friday morning in a fire which started in the kitchen. The house had a large number of regular boarders and eight or ten traveling men were sleeping in their rooms when the fire broke out. Will Ingalls, of Petoskey, was one of these and came near being burned. When discovered the fire had a good start and the halls were filled with smoke. Mr. Ingalls arrived home Friday afternoon and he says he grabbed his clothing and made for the street when he was awakened by the smoke and fire.

The Garland hotel was erected some eighteen years ago by Mr. Garland who was a blacksmith at that time. The building was in two separate rooms, one utilized for a bowling alley, the other for a pool room and restaurant. The upstairs was fitted with a stage and many of the plays then visiting this city appeared there. It was also used for a dance hall and later a roller rink.

IVORY GOODS

Persian Ivory Toilet Goods are the thing in toilet goods. The Rexall Store has a good line. All prices. See our display this week. ADV.

Poisoned Seeds Make Odd Plants.

Observations on plant variation from poisoning of seeds have been reported in France by Prof. A. Jungel son. After being placed for one to twenty-four hours in a dilute solution of sulphate of copper seeds of maize were planted, and a considerable proportion yielded abnormal ears, the percentage of the abnormal plants being greatest among those from seeds that had been deprived of their seed coat or otherwise mutilated before exposure to the copper solution.

The mutation alone produced no change in the character of the plants. The more intimate the contact of the poison the greater was the tendency of the plant to take on new forms.

Appropriately Named.

"I tripped over something in the darkness and nearly broke my leg!" carped the Kansas City drummer who was assigned to Smith's overnight inn and ventured out to a moving show. "Why in torment do you people brag of your White Way when there isn't a street light going in town?"

"Because it is foltable white when they are going," replied the landlord of the tavern. "When they sin't, which I am compelled to say is every now and again, you turn white yourself for fear you'll break your neck every step you take."—Kansas City Star.

Quite Likely.

"You're a swindler," exclaimed Mrs. Gabb as she entered the bird store. "You're worse than a burglar or robber. You ought to be ashamed of yourself to cheat a poor innocent woman the way you did. That parrot I bought of you last week is a fraud. You said it was a finest talker and you charged me a big price for him, too, and that bird hasn't said a single word since I got him. Not one word. Do you hear me? Not—one—single—word!"

"Perhaps," suggested the bird fanciar mildly, "you didn't give him a chance."

New Features.

"Well make a night of it," declared the Bostonian.

"We'll have a feast of reason and a flow of soul."

"All right," assented the New Yorker: "I never heard of them cabaret features, but they sound good."—Judge.

IRRITABLE CHILDREN OFTEN NEED VERMOX PICKS KILLER

There is a reason for the disagreeable and irritable nature of many children. Children are cross when the child's body is poisoned by tiny worms sapping its vitality and changing its functions. Whatever may be the cause—whatever have worms to do with it—Your child's peevishness and irritability has a cause. Give Pickapoo Worm Killer a chance and if worms are there this humanly harmless remedy will eliminate the annoying parasites. 25c. a box.

Barnard Doings.

Jerome Cole, recently of Barnard has purchased a Ford car.

Mrs. Fennie Smith of Charlevoix is spending the week at the parental home.

Mrs. Geo. Trimble of Cheboygan was the week-end guest of her sister-in-law, Mrs. Wm. Burns.

Mrs. Joseph Clarke left Tuesday morning to attend the sessions of the religious institute.

Mrs. W. N. Lewis attended the religious institute in Charlevoix Tuesday and Wednesday.

Mr. Earl Shapton and sister Gertrude are expected home Wednesday from Battle Creek and Albion.

Mrs. John Walker has been seriously ill with quinsy. Her daughter Merle was called home to care for her.

Mr. and Mrs. Will Burns and their guest Mrs. Trierble motored to Ironton Monday, calling at the home of Mrs. Burns's mother.

Mrs. Joseph Clarke entertained the Ladies Aid society Thursday afternoon. The ladies brought their sewing and enjoyed a pleasant "chat" together. Refreshments were served.

Don't forget the Thanksgiving dinner at the church. Bring well filled baskets and enjoy a community dinner. A program in the afternoon. No charge for the dinner a thank offering will be made.

An appreciative audience listened to a helpful and comforting sermon, Sunday afternoon at the Barnard M. E. Church by the Presiding Elder, W. F. Kendrick. Communion was observed at the close of the service.

In spite of the storm Sunday, we had a fine session of S. S. Good classes and much interest shown. Ten in the Men's Class. Make it twenty next Sunday. "What kind of a S. S. would our S. S. be if every member were just like me?"

Beaver Island News

Capt. Tim Roddy, of Chicago, is home on a visit.

John Gillespie went to Charlevoix Monday on a visit.

Doctor Poe, of Chicago, made a visit here to see about building a cottage at Widewood.

Daniel J. Gallagher, of Petoskey, is visiting his mother, Mrs. Dan C. Gallagher.

Miss Teresa O'Donnell went to Charlevoix Monday on a visit.

James W. Gallagher Jr. entertained a number of his friends Nov. 12, it being his seventh birthday.

Miss Mary O'Donnell, of Petoskey, was home on a visit, returning on Monday's boat.

Mrs. B. Scheid, of Chicago, was visited from Holy Cross church Tuesday.

W. E. Stephens, of Frecsil, is here on business.

H. K. Balch, agent for the American Net and Twine Co., is here calling on the trade.

John Turner, of Ludington, is here looking up land.

J. W. Cruze, of the Citizen's Realty Co., is surveying out lots.

Ed. Main and Doctor C. E. Elliott, of Chicago, are here looking over some real estate.

A. J. Lanway, of East Jordan, is here looking after bees.

Lisle Shanahan, of Charlevoix, spent several days here on business.

M. J. McCann went to Green Bay on business.

Charles Bradley and Will Kerns of Chicago returned home after spending a month here visiting friends.

Ben Boyle went to Charlevoix Monday.

Joseph Burke went to Green Bay, Wis. on the City of Boyne Sunday.

A party of 19 played five hundred at Donkey's the other evening. Lisle Shanahan, of Charlevoix, won the booby prize, Mrs. Shield got swatted and Jim had the pissimous knocked off from his train by Mellann, Mrs. Donkey and Bowery.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, also 14 acres close to city. Apply to H. S. Harsha.

CHILDHOOD HABITS

Best to Aid Youngsters to Form Habit of Obeying Above Everything Else

Parents frequently complain, says the Petoskey News, that children do not come to meals on time, that they do not get out of bed when they should, that they are habitually late at school, and so on. Parents themselves are often responsible for these shortcomings in their children.

For instance, three brothers attend a school which opens at 8:30, three-fourths of a mile distant. They ought to be out of bed at 6:00, and such is the rule; but all sorts of conditions are permitted to interfere. One night a caller will keep the boys up late. Next morning the mother will let them sleep late "because boys must have their full amount of sleep anyway."

Every Friday night they go to a party and on Saturday morning mother dislikes to "drag the boys out" and so they stick to their beds an hour longer than the rest of the family. They are so late Sunday morning that they are often tardy at church. It is just as hard, the mother says, to get them up at half past eight on Sunday as at half past six on Monday. No matter when the invitation comes to get up, whether late or early, they decline it and resist exhortation as long as they think it is wise to do so.

When a household rule is always obeyed without exceptions, obedience is comparatively easy. Indecision and doubt create a mental struggle which brings discomfort in performing any action. Most of the difficulties connected with such matters as arising in the morning, being at meals on time, being present at school, is due to mental conflict arising out of lack of certainty as to whether these rules have to be followed or whether some liberty can be taken with them.

Each act should be performed regularly under given conditions, and there must be no exceptions. No doubt so to this should be left to the child's mind. It is a cruelty to a child to debate with him every morning whether he should get up or not. There should be no room for debate. But there are certain activities that must be performed by young or old every day, and they ought to be performed with regularity and without exception. Then the lively mind will work out a certain program and get running on this program and friction and wear and tear will be reduced to a minimum; otherwise most of the energy will be spent in overcoming resistance of one kind or another.

COPYRIGHT BY GELETT BURGESS

CHAPTER XIV—Continued.

—17—

"Mr. Doremus!" she ejaculated. "I heard something about Hall's losing money—his uncle's will, you know—that was a mistake, wasn't it?"

"How a mistake, Miss Dallys! I wasn't aware that you were interested in the subject, and hardly know to whom you refer."

"Why, it was all in the papers this afternoon wasn't it? Everybody knows about it!"

"Ah," said the lawyer, "I would advise you not to pay too much faith in the papers, Miss Dallys."

"But it said that Hall would get his uncle's money—"

Rosamund, who had joined her, broke in—"If he was married on or before twenty-eighth birthday—"

Mrs. Royalston was also in, excitedly—"And he's twenty-eight tomorrow—so, it's today?"

Mr. Doremus stood with his hands behind his back, watching them impassively. "Ah, my dear ladies, the just shows how little one can depend upon the daily press. Oh, and after, sarcastic love such expressions. They positively seem to think that no document is complete without that particular clause."

"But isn't it 'on or before'?" they demanded.

"Not at all. Not at all. The phrase is, to the best of my recollection, 'before he has attained his twenty-eighth birthday.' In the interpretation of the law, one's birthday begins at midnight preceding such date. Mr. Rouleaux's chances for inheriting, therefore, lapse at twelve o'clock."

One and all turned to gaze at the clock. "And now, it's ten minutes past!" cried Carolyn.

"So I assume!" said Mr. Doremus. "And now, ladies, is there anything else I can do for you? If not, I must rejoin Mr. Rassingbury and discuss his legal arrangements." With a low bow he passed at once out of the room.

For a moment the three ladies, nonplused, were dumb. Then, slowly, Rosamund turned to Carolyn, all her rancor gone. "Well," she said, "don't that beat anything you ever heard in your life?"

It was evident by Carolyn's ironic smile that she considered the remark inadequate, but even she could do no better. Mrs. Royalston was more effective. She burst into tears.

Rosamund began to storm. "Why, it's no better than stealing! That's the only word for it!"

"Lord, don't be a fool," said Carolyn flatly. "We got the wrong tip, that's all. But I seem to see, now, why Mr. Hall was in so much of a hurry."

"I'm going home!" wailed Mrs. Royalston, dabbing her eyes.

"I'm not, till I give him a piece of my mind!" cried Rosamund.

"Hush! Wait a minute!" Carolyn whispered. "Is that he out in the office, there with Miss Fisher? You wait here, girls. I'm going to call him up!"

Like a flash she lifted her head, her face still dripping tears. "That's the idea. Now there's some sense in that! The answer is 'Yes!'" she exclaimed, and burst into laughter almost hysterically. Then she turned and gave a glance at the clock.

"Thank God!" said Hall fervently. "Flodie, isn't it great to be in love—really in love?" He hugged her tight. "Flodie, you're going to be my wife, did you know it? My wife, Flodie! You're going to be Mrs. Hall C. Bonifstelle! I'm going to marry you up as quick as ever I can—before I lose you again!"

"Oh, you'll never lose me, Hall, never, never, never!" She paused and added archly, "and I'm awfully sorry now I threw away that ring!"

"Love, I forgot the ring. Of course." He fished it out of his pocket, and looked at her queerly.

"Why, you didn't throw it away, did you?—it was—"

"Of course I did. Don't you remember? You put it on. There! I'm so glad you didn't get a diamond!"

"My pow, Flodie," Hall pulled up ecstatically, holding another ring in his hand—a plain gold band. "Here's the other one. Say, now we've got those women out of the way, and you've said 'yes'—Lord, I feel like celebrating. Say! Let's get married tonight! What d'you say?"

He sat up excitedly. "Oh, Hall, let's! Right away!"

"By Jupiter, we will!" he exclaimed. Then suddenly the smile on his face faded, and he gave a gesture of disgust. "Oh, Lord!" he exclaimed disappointedly.

"What, Hall?"

"No use, Flodie, we can't do it!"

"Why not, Hall? Can't Mr. Doremus marry us? He's a justice of the peace. Didn't he say he'd marry you if you wanted?"

"Oh, it isn't that—d—n it all, I'm such a fool I forgot all about the license! Confound it. It's a shame! Ain't my luck bad? We'll have to wait till tomorrow, Flodie."

Flodie suddenly disengaged herself from his arm. "You wait a minute. She ran to the door, looked into the office and called "Allan!" In another minute she was joined by the janitor. Hall sat in perplexity and wonder.

Alfred's grave face was turned, he stood in the full glory of his evening suit, still spotless. Alfred was pale—pale as a ghost, and his eyes were big and wild. His lips were working nervously, as if he were repeating something to himself. Flodie, her head in his arm, walked down to Hall Bonifstelle.

"Now, Alfred," she said encouragingly, "you tell Mr. Bonifstelle what we did this afternoon."

"Alfred!" exclaimed Hall, "what has he got to do with it?"

"I hope you won't be offended, Mr. Bonifstelle," Alfred began timidly, clasping his hands tightly in front of him, "it was a great liberty to take, I know, but Miss Fisher asked me to and I knew it would be all right. And if it hadn't been—it right, Mr. Bonifstelle I'd advise it just the same if Miss Fisher asked me to. Mr. Bonifstelle! I told her I would and I did. I asked her would she ask me something hard to do, Mr. Bonifstelle, but I didn't believe that nothing could be so hard as what she asked me. Mr. Bonifstelle, and it was the hardest thing that she could ask!"

"Flodie, can you translate?" Hall asked, puzzled.

(TO BE CONTINUED.)

American False Limb Boom.

American artificial limbs have an excellent reputation in Europe. Doctor Biesalski recently presented before the Imperial Society of Austrian Doctors a man who had lost legs and arms in an electrical explosion in the United States. He had been provided with American artificial limbs and on returning to Austria, due to his great energy, is able to do all kinds of work. The man is now being sent to the various Austrian hospitals in order to show the soldiers who have lost limbs what they can do with the use of artificial ones.

Fusible Tin Boiler Plugs.

The investigation of fusible tin boiler plugs has been completed at the bureau of standards and presented for publication. It is believed that there can now be no excuse for boiler explosions from imperfect plugs if the seven findings are followed, namely, to use tin to 99.9 per cent purity and free from zinc, a requirement easily met, but which has not been the actual practice in many cases.

Tailored Suit for All Weathers

A model in a tailored gown of serge, suitable for all weathers, makes an entry into the race for favor, evidences the combination of two ideas. Loath to part with the trim fitting and shapely coat that has held its own so long, the designer clung to the semi-fitted body, the revers and plain coat sleeves, the waistcoat line now falls in the matter of the coat skirt. This, instead of being plain and shaped, is straight and plaited, allowing a moderate flare. Even so, the plating is cleverly managed to preserve the severely tailored appearance of a style near to the hearts of American women and with very good reasons for being a long time favorite.

The skirt is cut to fit at the normal waist line and about the hips. Thence downward it shows a gradual flare, as a concession to the mode. It is a fitted skirt, but not a tight one, and is ideal model for a tailored walking skirt. Lapped seams and machine stitching, as in north of tailored gowns, give the required neatness of finish.

A leather belt in the color of the gown, piped with white is a survival also of the preceding season. It might be made of the same material as the gown, and piped in self color.

This model is especially well suited to the heavier materials used in tailored suits. Homespuns, cheviots and the mannish worsteds might be chosen for it. In this case the lapped seams in the coat would be made with the raw edge of the lapped side showing and two or three parallel lines of machine stitching following the seam line with beautiful accuracy.

Pique or duplskin or heavy washable gloves, tan-colored gaiters and a tailored hat are to be worn with this suit for all weathers.

Featuring Fur in Matched Sets

Perhaps it is because we are learning the value of unity in apparel that hats and neckpieces to match have been produced by milliners in greater numbers than ever. Or it may be that the force *for for everywhere* in everything has brought it about. At all events, hats with neckpieces to match make a feature not to be overlooked in the spring season.

Turban shapes are usually chosen to use in these sets. When wide-brimmed hats are used the fur appears in a band about the crown, or in bands set at outer intervals about it. Furbelows, especially those of opossum skins, are among the prettiest of trimming novelties. These and coney fur tails will be at the back, front and sides of small velvet toques. A single large ball of opossum makes a pretty trim for a small velvet hat.

In the picture above a turban of black velvet appears, having the corner faced with Krimmer. A steel and velvet woodbine leaf is poised against the crown at the right front, where it crosses a band.

The neckpiece is a band of velvet edged with Krimmer, to which a pleat is added in front. This band is laid close up about the neck with a bow of satin ribbon on one side. A small rose and leaf nestles just back of the bow against the neck.

A short cape of velvet bordered with fur and velvet ruff, trimmed in points and lined with satin, composes the cape neckpiece. Pointed tabs of velvet fall from the cape at the front. It assumes under a small ornament hay two tassels of opossum tails.

Velvet cut in points appears about the turban brim and a fur band and tassels ornament it. The trim, the trimming features of the neckpiece.

Julia Bottomley

Ornament for Table.

Sew a coarse flannel over the bowl of a broken goblet. Wet the flannel and sprinkle as much flaxseed or canary seed as will stick. Set this in a saucer and keep it well moistened. As the water soaks into the flannel and moss, in two weeks you will have a beautiful center ornament for the table.

How to Tint Lace.

It may not be generally known that the beautiful parchment shade of lace which has been kept for any length of time can be obtained accurately by carefully dipping in a mixture of fullers earth, to which is added a pinch of saffron; but very little of the latter must be used.

One-Piece Wash Dress.

A neat composite calico or gingham dress with short sleeves and low neck is the most practical for stirring one, now better than some "jackets." with flat skirt and are forever getting into indoors and infinitely nearer and more attractive than the old-fashioned "wrapper."

Daily Thought.

Curiosity is a gift, a capacity of pleasure in learning, which if you destroy it you make yourself cold and dull. —Ruskin.

"You're a Cad, Hall Bonifstelle."

Like a flash she lifted her head, her face still dripping tears. "That's the idea. Now there's some sense in that! The answer is 'Yes!'" she exclaimed, and burst into laughter almost hysterically. Then she turned and gave a glance at the clock.

"Thank God!" said Hall fervently. "Flodie, isn't it great to be in love—really in love?" He hugged her tight. "Flodie, you're going to be my wife, did you know it? My wife, Flodie! You're going to be Mrs. Hall C. Bonifstelle! I'm going to marry you up as quick as ever I can—before I lose you again!"

"Oh, you'll never lose me, Hall, never, never, never!" She paused and added archly, "and I'm awfully sorry now I threw away that ring!"

"Love, I forgot the ring. Of course." He fished it out of his pocket, and looked at her queerly.

"Why, you didn't throw it away, did you?—it was—"

"Of course I did. Don't you remember? You put it on. There! I'm so glad you didn't get a diamond!"

"My pow, Flodie," Hall pulled up ecstatically, holding another ring in his hand—a plain gold band. "Here's the other one. Say, now we've got those women out of the way, and you've said 'yes'—Lord, I feel like celebrating. Say! Let's get married tonight! What d'you say?"

He sat up excitedly. "Oh, Hall, let's! Right away!"

"By Jupiter, we will!" he exclaimed. Then suddenly the smile on his face faded, and he gave a gesture of disgust. "Oh, Lord!" he exclaimed disappointedly.

"What, Hall?"

"No use, Flodie, we can't do it!"

"Why not, Hall? Can't Mr. Doremus marry us? He's a justice of the peace. Didn't he say he'd marry you if you wanted?"

"Oh, it isn't that—d—n it all, I'm such a fool I forgot all about the license! Confound it. It's a shame! Ain't my luck bad? We'll have to wait till tomorrow, Flodie."

Flodie suddenly disengaged herself from his arm. "You wait a minute." She ran to the door, looked into the office and called "Allan!" In another minute she was joined by the janitor. Hall sat in perplexity and wonder.

Alfred's grave face was turned, he stood in the full glory of his evening suit, still spotless. Alfred was pale—pale as a ghost, and his eyes were big and wild. His lips were working nervously, as if he were repeating something to himself. Flodie, her head in his arm, walked down to Hall Bonifstelle.

"Now, Alfred," she said encouragingly, "you tell Mr. Bonifstelle what we did this afternoon."

"Alfred!" exclaimed Hall, "what has he got to do with it?"

"I hope you won't be offended, Mr. Bonifstelle," Alfred began timidly, clasping his hands tightly in front of him, "it was a great liberty to take, I know, but Miss Fisher asked me to and I knew it would be all right. And if it hadn't been—it right, Mr. Bonifstelle I'd advise it just the same if Miss Fisher asked me to. Mr. Bonifstelle! I told her I would and I did. IN THE SAILING DAYS

MEN WHO WORKED SHIPS HAD HARD, LABORIOUS LIVES.

"Rule of the Strongest" Was the Only Law Known, and Shanghaiing Was Accepted as a Matter of Course.

A great deal of sentiment is misplaced in the wasted on the passing of the sailing ship and the age of sail navigation if there is truth in many of the old chronicles of the sea. The condition of the men who go down to the sea in ships has mightily changed to be seen in the eyes of the cripple, mitigated with the incredulity of one who had never known what it was to walk without crutches. The spinal injury, at seven, has left her a helpless invalid for eleven years. Fortunately the Clavering girls—Bertha and Madge—were comparatively well-to-do. After their parents died they had lived with relatives relatives, but a year before Madge, on reaching her majority, insisted on returning to the old home in town, where they had resided ever since.

Doctor Forman must have been nearly fifty. He had an air of distinction, and people learned that he had been attached to the famous hospital on the Bogota in the metropolis until his health broke down under the strain of work. He had bought a house in town and announced that he meant to spend the rest of his life there.

There was some question at first on the part of the local doctors, especially as the newcomer won a great clientele of fashionable and wealthy patients away from them. In a few months Doctor Forman had conquered the town. Even his rivals united in praising him.

People began to talk of his frequent visits to the Clavering house were not entirely on Elsie's account. Madge, who loved her sister dearly, was easily the belle of the town. The doctor had

System Full of Uric Acid

THE GREAT KIDNEY REMEDY AGAIN

"Two years ago I was very sick and after being treated by several of the best physicians came to Clinton. I did not seem to get any better. I was confined to my bed. Seeing Dr. Kilmer's Swamp-Root advertised, I resolved to give it a trial. After using it for three weeks, I found I was gaining nicely, so I continued until I had taken a number of bottles. I am now restored to health and have continued my labors. My system was full of Uric acid, but Swamp-Root cured me entirely. I am sixty years old.

Yours very truly,

W. C. COOK.

1203 English Ave., Clinton, Iowa.

State of Iowa }
Clinton County } ss.

On this 13th day of July, A. D. 1906, W. C. Cook to me personally known appeared before me and in my presence acknowledged and swore to the above and foregoing statement.

DALE H. SHEPPARD,
Notary Public.

In and for Clinton County.

Prove What Swamp-Root Will Do For You

Send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample size bottle. It will convince any sufferer. You will also receive a booklet of valuable information telling about the kidneys and bladder. When writing, be sure and mention this paper. Regular size and price of dollar size bottles for sale at all drug stores.—Adv.

A man that weighs 180 pounds contains enough grease to make 75 candles and a pound of soap.

Write "Rx-Uric Eye Remedy Co., Chicago for Illustrated Book of the Eye Free.

Emulation.

"Mrs. Comesby has got a spaniel water dog."

"She has, has she? Then I'm going to make your pa get me one of those air ocean greyhounds."

LADIES! LOOK HOME

How Thousands Have Restored Health at Color. Dandruff Removed.

Only hopeless old persons will be interested in the reports of druggists in town regarding the sensational results from the use of Herbalene. This unique preparation causes the organs to act as they should, and the results are so positive and thorough that it is sold on a five days' absolutely guarantee. Remove dandruff, clear the complexion, improve the appetite, and you will feel like a new person. 50c, $1.00 and $1.00 bottles at drug stores or direct, if price and dealer's name is sent, by Herbalene Specialties Co., Newark, N. J. Prices reduced if all is taken.

Good Reason.

"Does the autumn make you melancholy?"

"Yes, indeed.

"Why don't look like a man of poetic ideas."

"I'm not. For ten years my wife has been trying to get me to buy her a scarlett coat and the struggle has almost worn me to the grave about September 1."

the Byplay Ministrels.

"Mr. Interlocutor, can you tell me what class of people are fondest of bad conversation?"

"No, Mr. Tones, I cannot. Will you tell us what class of people are fondest of bad company?"

"Why, doctors, Mr. Interlocutor."

"And why doctors, Mr. Tones?"

"Because the worse people are the oftener they visit them."

"As soon as the police have restored order and the bricks and tomato cans have been removed from the stage, Mr. O. Suffyn Mackerel will render his pathetic ballad, 'When I'm Dreaming of Garlic I'm Dreaming of You.'"

What Came Up.

"London's a dreary sort of place, and the smoke's something awful! I've lost many friends since taking his awed village friends. "It's so thick, you can't see a hand before you, and grows there, I planted some corn in a box on my window sill, to remind me of the green fields, and do you think I came up?"

The suggested wheat, white another thought cuts more likely. But the "Londoner" looked at them looking at their venturesome friend with reproof.

"Madge," he said, taking her by the hands, "afterward—afterward, may I speak to your father?"

"Yes," the girl whispered, and, turning, ran out of the room.

Ever since later Elsie was operated on and—cured. The operation was simple—but it was wonderful to the hope. It was merely a splint of transferred from the spinal column, the spinal cord. But the function of the nerves had to be established, and the limbs and their muscles accustomed to their task. It would be three months before she could do without crutches.

During the days that followed setback after setback occurred. Elsie was anxious, and Madge, who adored at her bedside, wondered whether she would ever pull through many physicians, but no permanent relief came.

"I used to read the Postum advertisements in our paper. At first I gave but little attention to them, but finally something in one of the advertisements made me conclude to try Postum.

"I was very particular to have it prepared strictly according to directions, and used good, rich cream. It was very nice indeed, and about both times I had to be careful to be certain that I believed I felt better. One of them laughed and said, 'that's another of mother's notions,' but the notion has not left me yet.

"I continued to improve right along after leaving off coffee and taking Postum, and now after three years' use I feel so well that I am almost young again. I know Postum was the cause of the change to my health and I cannot say too much in its favor. I loved to one else, but she knew that she did not love him. It was reason, not love, that made her accept him that time. The doctor never chided her, never said anything.

At last the day came when Kate could walk. For the first time since childhood she walked without crutches. And Madge knew that the time had arrived when her promise must be redeemed.

She came into the room. Elsie had just gone out into the sunlight. She basked in it, she seemed to absorb its golden tints into her cheeks. Tears crew wistfully. They were yet outside the window.

"Robert, when do you want me?" Madge asked.

The doctor looked at her gravely. "I'm sure, my dear" he asked.

She nodded and kissed his cheek. "Next month, Robert" she asked.

He took her in his arms and looked gravely into her face. "Next month, Madge," he answered.

But that evening she sobbed out her sorrow in her sister's arms.

"I don't love him, Elsie," she wept. "I love no one. I don't feel able to love. It was his strength, his goodness that fascinated me. And now I must pay the price.

"For me?" asked Elsie, with quiver in her lips.

"Yes, dear, and I would pay it a hundred times.

"But he must know. It would break his heart if he married you when you did not care for him."

"No, he shall never know," said Madge, and, rising, she passed softly out of the room.

On the next afternoon Elsie and Doctor Forman were seated together in the invalid's room.

"We are to be married next month," said Robert Forman. "Madge has told you?"

"Yes," answered the girl.

She looked at Forman, and then she knew that she must strike to inflict the blow.

"Robert," she said, laying her hand on his, "are you sure you love Madge?"

The doctor's grave eyes were fixed on her. "Why, do you ask that?" he asked in turn.

"Because—oh, Robert, she does not love you. There, oh! I have told you!" She is willing to marry you so that you shall never be hurt. She could never have let you know. But she does not love you."

The doctor looked at her very queerly. "I have suspected it," he answered.

"But, Robert—oh, what will you do? Is it too late?"

"I think she is honorable and good," he answered gently. "I shall release her."

"And you will be friends still? Oh, I know you will."

"That is more than I can promise," he answered.

"But you must, Robert, you must. I can't live happy unless you come. You are a brother to me—more than a brother—" She stretched out her hands to him.

Amazement showed itself on the doctor's face. "Elsie," he cried eagerly, "do you mean—you mean—"

"Yes, I have always loved you. There!" cried the girl, with flaming cheeks. "Now you can go, then—"

He took her hands gently in his. "Elsie," he said, "after—after you became my patient I knew what a mistake I had made. Honor held me mute as it held your sister, Elsie. I have loved you and not her all these months of your illness. You have been dearer to me than anyone on earth. And so," he added smiling, "I am still going to marry into the family."

MAY ENCOURAGE THE OTHERS

Story Printed Here Has a Definite Purpose That Must Will Be Quick to Understand.

Once upon a time there was a wag who wandered away from home because he was not properly appreciated in his own town. In his journeying he rambled far, and because he was a fool he experienced the luck which often attends fools, and finally came upon a country where, because the exploits of his ancestors, long ago, an ancient and mildewed joke were brand new to the inhabitants.

"There, surrounded by audiences of people who had never heard even the oldest and tamest of his wheezes, he told his tales to thunders of applause. He speedily became the most popular man in that queer land, and presently wedded the beautiful princess, who had not only never heard anything quite hearing, but had also been attending worth looking at for twelve dealts there today, thoroughly appreciated and enjoying all the sentiments that come to him who achieves success in his chosen field of labor.

His story is here given. In the hope that it may encourage others of his kind.

"Mr. Postum, I want to thank you for the Postum advertisement you put in our paper. I was a fool to experiment with Postum, but finally came to my senses and tried it. The first time I made it I was careless and let it boil 15 minutes, but I thought it was good, so I made it right the next time and found it was the best thing I ever drank. My wife and I have been using it ever since, because the expense is no more than tea or coffee, and we feel much better than we did when we used coffee. We have recommended it to our friends, and they say they will not use anything else when they once try it. Yours very truly, W. C. COOK."

Name given by Postum Co., Battle Creek, Mich.

Postum comes in two forms:

Postum Cereal—the original form—must be well boiled, 15c and 25c packages.

Instant Postum—a soluble powder—dissolves quickly in a cup of hot water, add, with cream and sugar, makes a delicious beverage instantly. 30c and 50c tins.

Both kinds are equally delicious and cost about the same per cup.

"There's a Reason" for Postum.

The Doctor's Dilemma

By ADELA GRAY

(Copyright, 1905, by W. G. Chapman.)

When Doctor Forman said he thought Kate (Saverlin could be cured by a simple operation Elsie looked at him with the wistfulness always to be seen in the eyes of the cripple, mitigated with the incredulity of one who had never known what it was to walk without crutches. The spinal injury, at seven, has left her a helpless invalid for eleven years. Fortunately the Clavering girls—Bertha and Madge—were comparatively well-to-do. After their parents died they had lived with various relatives, but a year before Madge, on reaching her majority, insisted on returning to the old home in town, where they had resided ever since.

Doctor Forman must have been nearly fifty. He had an air of distinction, and people learned that he had been attached to the famous hospital on the Bogota in the metropolis until his health broke down under the strain of work. He had bought a house in town and announced that he meant to spend the rest of his life there.

There was some question at first on the part of the local doctors, especially as the newcomer won a great clientele of fashionable and wealthy patients away from them. In a few months Doctor Forman had conquered the town. Even his rivals united in praising him.

People began to talk of his frequent visits to the Clavering house were not entirely on Elsie's account. Madge, who loved her sister dearly, was easily the belle of the town. The doctor had never married. There was an old love affair, people whispered. Anyway, Madge, accustomed to the somewhat simple society of little places, was at first flattered and then interested by the doctor's attention.

"I think I can cure your sister," said Doctor Forman, one day, when the two stood together in the garden. And I shall try with a dual intention—to do good to Elsie and my desire to please you."

Madge was very much touched. She turned and looked at the doctor, and she saw in his eyes—she saw looking at her look told him that his love was answered.

"Madge," he said, taking her by the hands, "afterward—afterward, may I speak to your father?"

"Yes," the girl whispered, and, turning, ran out of the room.

Ever since later Elsie was operated on and—cured. The operation was simple—but it was wonderful to the hope. It was merely a splint of transferred from the spinal column, the spinal cord. But the function of the nerves had to be established, and the limbs and their muscles accustomed to their task. It would be three months before she could do without crutches.

During the days that followed setback after setback occurred. Elsie was anxious, and Madge, who adored at her bedside, wondered whether she would ever pull through many physicians, but no permanent relief came.

"I used to read the Postum advertisements in our paper. At first I gave but little attention to them, but finally something in one of the advertisements made me conclude to try Postum.

"I was very particular to have it prepared strictly according to directions, and used good, rich cream. It was very nice indeed, and about both times I had to be careful to be certain that I believed I felt better. One of them laughed and said, 'that's another of mother's notions,' but the notion has not left me yet.

I know Postum was the cause of the change to my health and I cannot say too much in its favor. I loved to one else, but she knew that she did not love him. It was reason, not love, that made her accept him that time. The doctor never chided her, never said anything.

At last the day came when Kate could walk. For the first time since childhood she walked without crutches. And Madge knew that the time had arrived when her promise must be redeemed.

She came into the room. Elsie had just gone out into the sunlight. She basked in it, she seemed to absorb its golden tints into her cheeks. Tears crew wistfully. They were yet outside the window.

"I Think I Can Cure Your Sister."

HANDICRAFT FOR BOYS AND GIRLS

By A. NEELY HALL and DOROTHY PERKINS

BACKYARD CAMP STOVES.

The place for a boy to learn the building of campfires and camp cooking is at home, and the back yard is as good a location as any for the home made camp stove.

The fireplace in Fig. 1 is started by building a space about 18 inches in diameter, enough on one side, with tomato cans or cans of that size, filled with earth, for the fire-pot (Fig. 2).

Stand ten cans in the fire-pot, as shown in Fig. 3, and place a piece of iron or a grate on top of the cans. Place the cooking utensils on the grate. If the fire-pot is made of tomato cans the utensils will be about two inches above the ground. If a larger box is used, the utensils will be about three inches above the ground. If a larger box is used, the utensils will be about three inches above the ground. If a larger box is used, the utensils will be about three

LOVE in a HURRY

CHAPTER XIV—Continued.

—17—

"Mr. Doreman!" she ejaculated. "I heard something about Hall's losing money—his uncle's will, you know—that was a mistake, wasn't it?"

"How a mistake, Miss Dallys! I wasn't aware that you were interested in the subject, and hardly know to what you refer."

"Why, it was all in the papers this afternoon wasn't it? Everybody knows about it."

"Ah," said the lawyer, "I would advise you not to pay too much faith in the papers, Miss Dallys."

"But it said that Hall would get his uncle's money—"

Rosamund, who had joined her, spoke in—"If we wanted—no, no! before his twenty-eighth birthday."

Mrs. Royalston was also in it, excited—"And he's twenty-eight tomorrow—no, it's today!"

Mr. Doreman stood, with his hands behind his back, watching them impassively. "Ah, my dear ladies, that just shows how little one can depend upon the daily press. Oh, and after, re-porters love such expressions. They positively seem to think that no document is complete without that particular term—"

"But isn't it 'on or before'?" they demanded.

"Not at all. Not at all. The phrase is, to the best of my recollection, 'before he has attained his twenty-eighth birthday.' In the interpretation of the law, one's birthday begins at midnight preceding such date. Mr. Hollistale's chances for inheriting, therefore, lapse at twelve o'clock."

One and all turned to gaze at the clock. "And now, it's ten minutes past!" cried Carolyn.

"So it seems!" said Mr. Doreman. "And now, ladies, is there anything else I can do for you? If not, I must rejoin Mr. Hassingbury and discuss his legal arrangements." With a low bow he passed at once out of the room.

For a moment the three ladies stupefied, were dumb. Then, slowly, Rosamund turned to Carolyn, all her rancor gone. "Well, she said, 'don't that beat anything you ever heard in your life?'"

It was evident by Carolyn's ironic smile that she considered the remark inadequate, but even she could do no better. Mrs. Royalston was more effective. Jerk back into action!

Rosamund began to storm. "Why, it's no better than stealing! That's the only word for it!"

"Lord, don't be a fool," said Carolyn finally, "we got the wrong tip, that's all. But I seem to see, now, why Mr. Hall was so much of a hurry."

"I'm going home!" wailed Mrs. Royalston, dabbing her eyes.

"I'm not, till I give him a piece of my mind!" cried Rosamund.

"Hush! Wait a minute!" Carolyn whispered. "Is that he out in the office, there, with Miss Fisher? You wait here, girls. I'm going to call him in." Leaving them, she tiptoed across to the door.

"Hall! Oh, Hall!" she called softly. She smiled as if upon an angel. "Come in here a minute, will you? I've got a little scrapes to confide in you." darted back, and took her place with the others, like a lion.

He came in smiling, saw the three outraged ladies, and stopped, with an embarrassed gesture. "What is it? he managed to say.

"Oh, Hall, Hall, you've broken my heart!" Mrs. Royalston wept again.

"Hush up, Rosamund!" she hissed aside. "Miss Gale, will your I'd like to hear just what this particular sort of cur has done to you, Rosamund—"

"Guilty!" said Hall, seeing the usefulness of protest. "Now go ahead!"

"Have you not any face to stand there and calmly acknowledge—"

"Carolyn dear!" he interrupted reproachfully, "Why, surely you ought to be the one to—"

"Don't call me your dear! I'm right back to where I was this morning—before my driving and quite head over heels in debt."

Phoebe giggled hilariously. "Do you want your eggs boiled two minutes, this morning, Mr. Hollistale, or three?"

He smiled and shook his head. "Yes, it's all over!" he mused to the little Jackie-Lady-Killer, are you? Three is a charm, eh?" sang to himself. "You're a cad, Hall Bonistelle, you're a liar and a cheat!" Poor Rosa could do no more than stare with reproachful eyes. She was dissolved in her woe. He went, spitting, pounding and shoulder-jig—he ought to be horsewhipped, exclaimed a father or somebody's brother should thrash him! It was an outrage and a disgrace. What if they called in the coroner to inquire his rascality? They were glad, glad, glad he had lost his money; it was good enough for him!

It was then that Hall saw a great light. He gave a lamp and extinguished them.

"Oho! The money! So that's why you were all suddenly so keen to marry me, was it? Why, I don't see how you women have the nerve to look me in the face! Why, a woman will do anything for money, then, will she? She'll cheat, and lie and cut her best friends cheat behind her backs—by Jove, you're the coldest-blooded set of female vampires I ever saw in my life! It's a revelation to me! So that's all you wanted, eh? That's why you all hung fire this morning, and got me into this confounded mess—oh, you wanted time! Yes, time to totally gale my finances, of course—and then, when you do get wind of this devilish old legacy, then you're all after me as the gallop, like a pack of Siberian wolves—falling over one another to use who can get to the telephone first! Well, thank God I found it out in time. Thank God I'm free of all three of you lying, jack-lining, mercenary, two-faced hypocrites! Well, it's all over, now. I advise you to train your guns on Cousin Jonas!

There was a disagreeable pause. When the pot calls the kettle black it is uncomfortable for both. The six three women, their rage and disappointment still unappeased, left the of the studio and left him alone. Hoarse, and out of breath, he fumed—"Why, Carolyn sarcastic to the last, with a bitter smile upon her lips. Mrs. Royalston actively weeping, with her handkerchiefs with a lessening sniff. She turned at the door to give a ruby ring from her hand, and, with all of Phoebe's disinfection, if with less of Phoebe's justification, throw it at him. He drew a long breath, and dropped into a chair. "Well, I had been a very live minutes; it was a relief to have it over. What next?" The music hour continued, but it would soon be time for his guests to be leaving. He knew he ought to go out into the other rooms and clap the host—but he could not. It was impossible for him to see again the three ladies who must just now be making their scornful exit. As soon as they were out of the way, he would do his best with the others.

He knelt down on the floor and began to search for the ring.

"Are you in there, Mr. Bonistelle?" came Phoebe's gentle voice at the door.

He jumped up and faced her. "Yes, Phoebe."

She came in timidly and gave a glance at the clock. "Did it all over, the money's gone?" he said calmly. "Have they left yet?"

She nodded, smiling. "They're all making up to Jonas with all their might. It's the way they talk, I guess, must have had a pretty lively time with them." Phoebe sat down demurely.

"I should say so, Phoebe! Three ladies have had one tonight rather on pivots! I'm a cad, Phoebe. What do you think?"

"You're not!" she cried. Phoebe sat up indignantly, her eyes flaming.

He gave a quick surprised look, and his face lighted with hope. "Do you mean it, Phoebe? Do you feel that way in perfect accord. It was the first real thrill.

"Then—" he hardly dared to say it—"have you forgiven me, Flo?"

"You! For what?" he asked.

"For what I did that day."

Phoebe cast down her eyes a second, then raised them boldly. "For pretending."

"Pretending what?"

"Pretending that I didn't care." Phoebe, suddenly embarrassed, jumped up and walked away from him. He made a leap for her. He caught her in his arms.

"Oh, do you care, Flodie? Do you? Do you? Even after all this?"

"Yes, I do, Hall Bonistelle!" Phoebe lifted herself from his grasp. "Isn't it—of course it's very nice, Hall—it was a surprise to me—it—just a little—well, premature." She brought it out timidly, but her face showed her rapture.

He dropped his arms and stood, and Phoebe looked at him laughed overpoudly. "Why, surely you ought to be happy now, Phoebe? I'm right back to where I was this morning—before my driving and quite head over heels in debt."

Phoebe giggled hilariously. "Do you want your eggs boiled two minutes, this morning, Mr. Bonistelle, or three?"

He smiled and shook his head. "Yes, it's all over!" he mused to the little Jackie-Lady-Killer, are you? Just a poor devil of a photographer. Don't you believe me now?" he repeated anxiously.

Phoebe was trembling. "Believe what, Hall?" she hung her head. "You haven't said it, yet!"

For a moment he stood looking at her, puzzled, then a broad grin spread into a big red face. "Oh!" he cried. "Oh! I guess! Is that it!" Jubilant, now he appreciated her with playful, mock-romantic airs, knelt and put his arms around her. "Will you marry me, Flodie?"

CHAPTER XV.

Flodie inexplicably burst into tears. Hall was amazed, but he managed to comfort her, saying, with, "Quick, Flodie, for heaven's sake! Tell me what's good coming! Will you?"

"Oh!" Hall, Hall, you've broken my heart!" Mrs. Royalston wept again.

"Hush up, Rosamund!" she hissed aside. "Miss Gale, will your I'd like to hear just what this particular sort of cur has done to you, Rosamund—"

"Guilty!" said Hall, seeing the usefulness of protest. "Now go ahead!"

"Have you not any face to stand there and calmly acknowledge—"

"Carolyn dear!" he interrupted reproachfully, "Why, surely you ought to be the one to—"

"Don't call me your dear! I'm right back to where I was this morning—before my driving and quite head over heels in debt."

Phoebe giggled hilariously. "Do you want your eggs boiled two minutes, this morning, Mr. Bonistelle, or three?"

He smiled and shook his head. "Yes, it's all over!" he mused to the little Jackie-Lady-Killer, are you? Just a poor devil of a photographer. Don't you believe me now?" he repeated anxiously.

Phoebe was trembling. "Believe what, Hall?" she hung her head. "You haven't said it, yet!"

For a moment he stood looking at her, puzzled, then a broad grin spread into a big red face. "Oh!" he cried. "Oh! I guess! Is that it!" Jubilant, now he appreciated her with playful, mock-romantic airs, knelt and put his arms around her. "Will you marry me, Flodie?"

CHAPTER XV.

Flodie inexplicably burst into tears. Hall was amazed, but he managed to comfort her, saying, with, "Quick, Flodie, for heaven's sake! Tell me what's good coming! Will you?"

"You're a Cad, Hall Bonistelle!" sob, still spitfire. Alfred was paleyou're a cad, and his eyes were big and sad. His lips were working nervously, as if he were repeating something to himself. Flodie, her head in his arm, walked down to Hall Bonistelle.

"Now, Alfred," she said encouraging, "you tell Mr. Bonistelle what we did this afternoon."

"Alfred!" exclaimed Hall, "what has gone to you with—"

"I hope you won't be offended, Mr. Bonistelle," Alfred began timidly, clinging to hands tightly in front of him, "it was a great liberty to take, I know, but Miss Fisher asked me to and I knew it would be all right. And if it hadn't been—I'd right, Mr. Bonistelle. I'd adone it just the same. If Miss Fisher asked me to. Mr. Bonistelle! I told her I would and I did. I asked her would she ask me some-thing hard to do, Mr. Bonistelle, but I didn't believe that nothing could be so hard as what she asked me. Mr. Bonistelle, and it was the hardest thing that she could ask!"

"Flodie, can you translate?" Hall asked, puzzled.

(TO BE CONTINUED.)

American Fakes Limb Boom.

American artificial limbs have an excellent reputation in Europe. Doctor Rissdorf recently presented before the Imperial Society of Austrian Factors a man who had lost legs and arms in an electrical explosion in the United States. He had been provided with American artificial limbs, and on returning to Austria, due to his great energy, is able to do all kinds of work. The man is now being sent to the various Austrian hospitals in order to show the soldiers who have lost limbs what they can do with the use of artificial ones.

Fusible Tin Boiler Plugs.

The investigation of fusible tin boiler plugs has been completed at the Bureau of Standards and presented for publication. It is believed that there will now be no cause for boiler explosions from imperfect plugs if the seven findings are followed, namely, to use tin to 99.9 per cent purity and free from zinc, a requirement easily met, but which has not been the actual practice in many cases.

LEFT MAIL IN HOLLOW STUMP

"Post Office" Used by Pioneer Easily the Oldest Building Used for That Purpose in America.

The pioneers of the Northwest often made use of logs from hollowed out by fire or decay. Some of these "tree houses" have occupied a temporary residence. Others they used as shelters for stock or as primitive ice-houses. Only, however, ever had the distinction of being a United States post office. That stump is in Clallam county, in the state of Washington.

Nearly days in the settlement were widely scattered, and it was a long journey over rough trails to the near office, Port Townsend. So no more than twice a year, at most, did the mail at some central point. The big cedar stump, 12 feet in diameter and reported to a shell by fire, was a base from which a number of trails radiated. By common consent it became the post office for a wide region. The settlers put on a roof of cedar shake and nailed boxes round its interior, which they marked with their names. There was a large box for the outgoing mail. There were no locks, but the mails were never tampered with.

This primitive post office was used for more than a year. It has been carefully preserved, and is usually visited by hundreds of interested sightseers. The stump is believed to be over 2,000 years old, which clearly establishes its right to the distinction of being the oldest post office building in America.—Youth's Companion.

Tailored Suit for All Weathers

A model in a tailored gown of serge, with a coat that is so comfortable, pretty into the eye, so far favor, evidences the combination of two ideas. Loath to part with the trim fitting and shapely coat that has held its own so long, the designer clung to the semi-fitted body, the revers and plain coat sleeves, people learned dark new folds in the matter of the coat skirt. This, instead of being plain and shaped, is straight and plaited, allowing a modcrate flare. Even so, the plaiting is cleverly managed to preserve the severely tailored appearance of a style dear to the hearts of American women and with very good reasons for being a long time favorite.

The skirt is cut to fit at the normal waist line and about the hips. Thence downward it shows a gradual flare, as a concession to the mode. It is a fit to shorter than twice length, and an ideal model for a tailored walking skirt. Lapped seams and machine stitching, as in nearly all tailored gowns, give the required neatness of finish.

A leather belt in the color of the gown, piped with white is a survival also of the preceding season. It might be made of the same material as the gown, and piped in self color.

This model is especially well suited to the heavier materials used in tailored suits. Homespuns, cheviots and the mannish worsteds might be chosen for it, in this case the lapped seams in the coat would be made with the raw edge of the lapped side showing and two or three parallel lines of machine stitching following the seam line with beautiful accuracy.

Pique or duvetin or heavy washable gloves, tan-colored gaiters and a tailored hat are to be worn with this suit for all weathers.

Featuring Fur in Matched Sets

Perhaps it is because we are learning the value of unity in apparel that furs and neckpieces to match have been produced by milliners in greater numbers than ever. Or it may be that the furors for fur everywhere on everything has brought it about. At all events, furs with matching neckpieces make a feature not to be overlooked by the season's styles.

Turban shapes are usually chosen to use in these sets. Where wide-brimmed hats are used the fur appears in a band about the crown, or in balls set at close intervals about it. Fur balls, especially those of opossum skin, are among the prettiest of trimming novelties. These and other fur balls all set at the back, front and sides of small velvet toques. A single large ball of opossum makes a pretty trim for a brimmed street hat.

In the picture above a turban of black velvet appears, having the crown laced with Krimmer. A steel and velvet woodhide leaf is poised against the crown at the right front, where the opossum is cut away.

The neckpiece is a band of velvet edged with Krimmer, to which a pleating of velvet is added, to be worn close up about the neck with a bow of satin ribbon at one side. A small one and lent neckties just back of the bow again in satin.

A short cape of velvet bordered with fur and velvet ruff, trimmed in points and lined with satin, composes the other neckpiece. Pointed tabs of velvet fall from the cape at the front, it fastens under a small ornament hung from two hanging tassels of chenille.

Velvet cut in points appears about the turban brim and a fur band and tassled ornament repeat the trimming features of the neckpiece.

Jane Bottomley

Ornament for Table.

Sew a coarse flannel over the bowl of a broken goblet. Wet the flannel and sprinkle as much flannel as canary seed as will stick. Set this in a glass dish of water in a warm room. As the water soaks into the flannel and moist, in two weeks you will have a beautiful center ornament for the table.

How to Tint Lace.

It may not be generally known that the beautiful parchment shade of lace which has been kept for any length of time can be obtained accurately by carefully dipping in a mixture of fuller's earth, to which has been added a pinch of saffron; but very little of the latter must be used.

One-Piece Wash Dress.

A neat one-piece calico or gingham dress with short sleeves and low neck is the most practical for kitchen use, much better than loose "jackets" which flop about and are forever getting into things and infinitely nearer and more attractive than the old-fashioned "wrapper."

Daily Thought.

Curiosity is a gift, a capacity or pleasure to knowledge, which if you decline you will soon yourself cold and dull. —Ruskin.

No Wonder.

There were two browns in the village, both Zaberman. One lost his wife and the other his boat at about the same time. The vicar's wife called, as she supposed, on the widow, but really upon the brown whose boat had gone to sea.

"I am sorry to hear of your great loss," she said.

"Oh, it isn't much matter" was the philosophical reply; "she wasn't up much."

"Indeed!" said the surprised lady.

"Yes," continued brown, "she was a rickety old thing. I offered her to my mate, but he wouldn't have her; he had my wife on board at the time."

And then the scandalized lady fled.

Leather Coats.

One of the most original ideas launched in that of the three-quarter coats in leather which are shown by Pinyon.

One of these models which had great success was in oyster-colored leather, made with loose box back and front, and having a high facing beginning with points of black lamb. The long loose sleeves were drawn at the wrist with a band of the latter leather and another band of heavier. A similar beaver and leather trimming edged the pelerine.

IN THE SAILING DAYS

MEN WHO RORGED SHIPS HAD HARD, LABORIOUS LIVES.

"Rule of the Strongest" Was the Only Law Known, and Shanghaiing Was Accepted as a Matter of Course.

A great deal of sentiment is mixed in regard to the passing of the sailing ship and the age of sail navigation if there is truth in many of the old chronicles of the sea. The condition of the men who go down to the sea in ships has mitigated greatly for the better within two or three generations. There was a time when "strong-arm" methods were commonly employed in getting work out of the crews and in operating a ship from port to port. Brutality was not exceptional. It was common, and according to the lights of the time it was not looked on as brutality.

The practices which were then considered necessary and proper could not be countenanced today. Even church there has been a marked reversion to barbarous practices both on land and water. An old writer has said that the principle on which most ships were worked was that "sailors men were brutes, and must be treated as such." The law of the fist and the belaying pin was the only one they knew. Their crews seldom shipped willingly. The "shanghai" system invariably gave them their men. On the eve of sailing, in the dark alleyways of the sight, boats would draw alongside the wharf, and their carcass of insensible men, breathing stertorously as one does who has been "doped."

Next morning, out at sea, moccilous tars awoke, rubbing their "aches and eyes" and monkey-wrenches played a prominent part, brought the buckles fellow round to a better understanding. They might complain, who would, but the skipper had their receipt, signed with a cross, their receipt for a month's advance of pay. It was no wonder, strange was met with an iron fist.

One of the consequences of the brutal practices was that, being so long and often resorted to, they seemed to become necessary in the working of the ship. A moment's relaxation would have meant red mutiny. In the event of the vessel having to be abandoned, it was not unusual for the officers and crew to take to the boats at the point of the revolver, leaving the crew to drown like rats. That was quite a precaution against a possible shortage of supplies.

The "Yankee ship, and especially the "Frisco hooker," had an unenviable reputation among the men of the sea. An old authority on the condition of sailors has written that the work aboard these ships was slavery. The men were required to work all day on deck, and keep four-hour watches throughout the night. Tasks were invented for them. They were sent to overhaul sizeable before breakfast "to give them an appetite." Thor had to take to the rigging barefoot, and was bridle the lagged. This was the Yankee skipper's motto: "Aboard my ship you mustn't walk and you mustn't run; you must blame well fly!" The chance has been made that all the officers of the officers were directed to making life unbearable for the men, you must blame well fly!" The chance has been made that, all the officers of the officers were directed to making life unbearable, so that the men would leave the first port, leaving their back pay in the hands of the skipper. It was a profitable way of getting labor.

Every now and then there would be a mutiny against these practices, and a couple of generations ago such practices were matter-of-course. The system was to provide a woman with board and lodging pending his signing on, in return for his month's advance of pay. It was to be a boon to the seafaring man to get rid of that man as soon as possible, and if he would not go willingly, shanghaiing was the "lightning mate" and the "dope." When there was a shortage of men the "Tools" went out, shadowed likely looking saloonmen and lent their opportunity of drugging their drinks.

The usual price of "blood money" which shipping boards for a long time paid for a man was $50; and the brutalizing measures were not general, where those men came from nor their country when they were shipped. It has been recorded that once an American admiral was "shanghaied" in Tahoma, and that when he recovered he forced the skipper to put back into port.

Brazil Corn Exposition.

The first national exposition of corn in Brazil was held recently in Sao Paulo. It was modeled on those which have met with such success in the United States. It was held under the patronage of the state minister of agriculture. The exposition was visited by prominent planters from many states, who took advantage of the occasion to supply samples of the high grade seed for the coming crops. It is the intention of the organizers to form "corn clubs" throughout the country, to be conducted in the same manner as in the United States.

Sweden Short of Rubber.

One of the rubber companies of Sweden has issued a statement to the effect that, because of the scarcity of raw rubber, the shortage of tires throughout Sweden, so long as the war lasts, cannot be overcome. Many cars in Stockholm are out of use. It is estimated that about 160 cars will be able to continue to run until December, but not longer, unless the tire shortage is relieved.

Baffled.

"How many times has the Moon Lion been taken from one place to another?"

"I wouldn't attempt to say. I never could manage to keep up with the moving pictures."

Teachers Granted Privileges.

School teachers who serve in the British navy or army during the war may remain the rights of war across as equivalent to service in a public elementary school for pension purposes.

System Full of Uric Acid

THE GREAT KIDNEY REMEDY AGAIN

Two years ago I was very sick and after being treated by several of the best physicians in Clinton, I did not seem to get any better. I was confined to my bed. Seeing Dr. Kilmer's Swamp-Root advertised, I resolved to give it a trial. After using it for three weeks, I found I was gaining nicely, so I continued until I had taken a number of bottles. I am now restored to health and have continued my labors. My system was full of Uric acid, but Swamp-Root cured me entirely. I am sixty years old.

Yours very truly,

W. C. COOK.

1253 Eighth Ave., Clinton, Iowa.

State of Iowa }
Clinton County } ss.

On this 13th day of July, A. D. 1909, W. C. Cook to me personally known appeared before me and in my presence subscribed and swore to the above and foregoing statement.

DALE H. SHEPPARD,
Notary Public.

In and for Clinton County.

Prove What Swamp-Root Will Do For You. Send two cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample size bottle. It will convince anyone. You will also receive a booklet of valuable information telling about the kidneys and bladder. When writing be sure and mention this paper. Regular size and price, fifty cents and dollar, bottles for sale at all drug stores.—Adv.

A man that weighs 150 pounds contains enough grease to make 15 candles and a pound of soap.

Write Burton Eye Remedy Co., Chicago for Illustrated Book of the Eye Free.

Emulation.

"Mrs. Comedy has got a spaniel water dog."

"She has, has she? Then I'm going to make your pa get me one from their all ocean greyhounds."

LADIES! LOOK YOUNG

How Thousands Have Restored Natural Color. Dandruff Removed.

Gray hair is no evidence of age, as thousands of druggists in town testify regarding the wonderful results from using Wyeth's Sage and Sulphur. Prepared in the form of a delightful tonic, it is not a dye, but a tonic that leaves the hair natural, gradually darkening it so that even the most skeptic can not detect it. Dandruff, itching scalp and scalp troubles are also relieved by this famous tonic. Obtainable at any drug store, $1.00 and $0.50 bottles at drug stores or direct. If prefer to send dealer's name and 50c in stamps to Wyeth Chemical Co., Newark, N. J. Price refunded if it fails to please.

Good Reason.

"Does the autumn make you melancholy?"

"Yes, indeed.

"Does look like a man of poetic ideas."

"I'm not. For five years my wife has been trying to get me to buy her a sealskin coat and the struggle begins every year about September 1."

The Dyspay Minstrels.

"Mr. Bonestomp, can you tell me what class of people are fondest of bad company?"

"No, Mr. Jones, I cannot. Will you tell us what class of people are fondest of bad company?"

"Why, doctors, Mr. Interlocutor."

"And why doctors, Mr. Bones?"

"Because the worse people are the oftener they visit them."

"As soon as the police have restored order and the bricks and tomato cans have been removed from the stage, Mr. O. Suffyrn Macaweel will render his pathetic ballad, "When I'm Dreaming of Garlic I'm Dreaming of You."

What Came Up.

"London's a dreary sort of place, and the smoke's something awful!"

"I think I can cure your sister," said Doctor Forman, one bright morning, when the two stood together in the garden. "And I shall try without medicine—but how do you cure a dull disease?"

"Love," said Elsie, with quivering lips.

"Yes, dear, and I would pay it a hundred times."

"But he must know. It would break his heart if he married you when you did not care for him."

"No, he shall never know," said Madge, sad, rising, as he passed softly out of the room.

On the next afternoon Elsie and Doctor Forman were seated together in the installed room.

"We are to be married next month," said Robert Forman. "Madge has told you?"

"Yes," answered the girl.

She looked at Forman, and then she knew that she must strike to inflict the blow.

"Robert," she said, laying her hand on his, "are you sure you love Madge?"

"The doctor's grave eyes were fixed on her. "Why, do you ask that?" he asked in turn.

"Because—oh, Robert, she does not love you. There, now I have told you!" She is willing to marry you so that you shall never be hurt. She could never have let you know. But she does not love you."

The doctor looked at her very queerly. "I have suspected it," he answered.

"But, Robert—oh, what will you do?"

"I think she is honorable and good," he answered gently. "I shall release her."

"And you will be friends still! Oh, I know you will!"

"That is more than I can promise," he answered.

"But you must, Robert, you must. I can't live happy unless you come back to me." Then, in a low voice that a brother—" She stretched out her little hands to him.

Amazement showed itself on the doctor's face. "I don't understand by, 'do you mean—you mean—'"

"Yes, I have always loved you. There!" cried the girl, with flaming cheeks. "Now you can go, then—"

The doctor took her hands gently in his. "Elsie," he said, "after—after you became my patient I knew what a mistake I had made. Honor held me mute as it held your sister. Elsie, I have loved you and not her all these months of your illness. You have been dearer to me than anyone on earth. And so," he added, smiling, "I am still going to marry into the family."

Story Printed Here Has a Definite Purpose That Most Will Be Quick to Understand.

Once upon a time there was a wag who wandered away from home because he was not properly appreciated in his own town. In his journeying he rambled far, and because he was a fool he experienced the luck which befalls those who wander afield and upon a country where, because the explorers had never found it, all his ancient and mildewed jokes were brand new to the inhabitants.

There surrounded by audiences of people who had never heard even the oldest and lamest of his wheezes, he told his tales to thunders of applause. He quickly became the most popular man in that queer land, and presently wedded the beautiful princess, who had not only never heard anything worth hearing, but had also never seen anything worth looking at. The fewells there today, thoroughly appreciated his witticisms, and he experiments that come to him who achieves greatness in a strange land.

His story is here given, in the hope that it may encourage others of his kind to emigrate from home on the Chautauqua platform.—Judge.

Busy French Port.

The most important commercial port outside of France is Saizon, which ranks with Boulogne and Bordeaux among the ports of the mother country. It is the natural collecting and distributing center for the vast commerce between Indo-China of the Mekong Domain, and other rivers, and is the port of departure for all the other ports of Indo-China. Saigon is located on the right bank of the Saigon river, about fifty miles from the sea and about ten miles above the point where the river empties into the Donnai, a short coastal river parallel to the Mekong and also one hundred miles east of it.

High Explosives.

Almost without exception, high explosives are composed of some organic substance, which means some form of carbon, treated with nitric acid. With out nitrogen, which is the chief ingredient, it would not burn, and it is said that there can be no explosive. Yet, a paradox of chemistry is one of the most inert gases known and the chief ingredient of the air we breathe. Nitrogen, in combination with carbon from this very inertness, it confiscates the energy of the atoms, ready for the slightest provocation the compound breaks up into gas, giving the enormous expansion needed for explosive effect.

The Reason.

The disconsolate wife of most household tasks a that they are done only to be undone almost immediately. I room is dusted in the morning, and the next morning the same process has to be gone through again. The dishes are washed only to be soiled again in a few hours. It is this lack of enduring results which sometimes makes household duties so wearying. It is only when the housewife remembers that the result is the family health and happiness is new every time that she finds the repetition interesting.

"Robert, when do you want me?" Madge asked.

The doctor looked at her gravely. "Are you sure, my dear?" he asked.

She nodded and kissed his cheek. "Next month, Robert!" she asked.

He took her in his arms and looked gravely into her face. "Next month, then," he answered.

But that evening she sobbed out her sorrow in her sister's arms.

"I don't love him, Elsie," she wept. "I love no one. I don't feel like it love. It was his strength, his good sense that fascinated me. And now I must pay the price."

"For me?" asked Elsie, with quivering lip.

"Yes, dear, and I would pay it a hundred times."

"But he must know. It would break his heart. If he married you when you did not care for him."

"No, he shall never know," said Madge, sad, rising, as he passed softly out of the room.

On the next afternoon Elsie and Doctor Forman were seated together in the installed room.

"We are to be married next month," said Robert Forman. "Madge has told you?"

"Yes," answered the girl.

She looked at Forman, and then she knew that she must strike to inflict the blow.

"Robert," she said, laying her hand on his, "are you sure you love Madge?"

"The doctor's grave eyes were fixed on her. "Why, do you ask that?" he asked in turn.

"Because—oh, Robert, she does not love you. There, now I have told you!" She is willing to marry you so that you shall never be hurt. She could never have let you know. But she does not love you."

The doctor looked at her very queerly. "I have suspected it," he answered.

"But, Robert—oh, what will you do?"

"I think she is honorable and good," he answered gently. "I shall release her."

"And you will be friends still! Oh, I know you will!"

"That is more than I can promise," he answered.

"But you must, Robert, you must. I can't live happy unless you come back to me." Then, in a low voice that a brother—" She stretched out her little hands to him.

The Doctor's Dilemma

By ADELA GRAY

(Copyright, 1915, by W. G. Chapman.)

When Doctor Forman said he thought Elsie Gaverling could be cured by a simple operation Elsie looked at him with the wistfulness always to be seen in the eyes of the cripple, mingled with the incredulity of one who had never known what it was to walk without crutches. The spinal injury, at least, had left her a helpless invalid for eleven years. Fortunately the Gaverling girls—Elsie and Madge—were comparatively well-to-do. After their parents died they had lived with wealthy relatives but a year before Madge, on reaching her majority, insisted on returning to the old home in town, where they had resided ever since.

Doctor Forman must have been nearly fifty. He had an air of distinction, and people learned that he was connected with the famous hospital on the heights in the metropolis and his health broke down under the strain of work. He had come to Bettle Town and announced that he meant to spend the rest of his life there.

There was opposition at first on the part of the local doctors, especially as the newcomer cured so many of their patients away from them. But in a few months Doctor Forman had conquered the town. Even his rivals united in praising him.

People began to say that Forman's visits to the clavering house were not solely on Elsie's account. Madge, who loved her sister dearly, was sadly in doubt of the town. The doctor had

"I Think I Can Cure Your Sister."

never married. There was an old love affair, people whispered. Anyway, Madge, accustomed to the somewhat stupid society of the little place, was at first flattered and then interested by the doctor's attention.

"I think I can cure your sister," said Doctor Forman, one bright morning, when the two stood together in the garden. "And I shall try without medicine—but how do you cure a dull disease?"

"Love," said Elsie, with quivering lip.

"Yes, dear, and I would pay it a hundred times."

"But he must know. It would break his heart. If he married you when you did not care for him."

"No, he shall never know," said Madge, sad, rising, and passed softly out of the room.

On the next afternoon Elsie and Doctor Forman were seated together in the installed room.

"We are to be married next month," said Robert Forman. "Madge has told you?"

"Yes," answered the girl.

She looked at Forman, and then she knew that she must strike to inflict the blow.

"Robert," she said, laying her hand on his, "are you sure you love Madge?"

"The doctor's grave eyes were fixed on her. "Why, do you ask that?" he asked in turn.

"Because—oh, Robert, she does not love you. There, now I have told you!" She is willing to marry you so that you shall never be hurt. She could never have let you know. But she does not love you."

The doctor looked at her very queerly. "I have suspected it," he answered.

"But, Robert—oh, what will you do?"

"I think she is honorable and good," he answered gently. "I shall release her."

"And you will be friends still! Oh, I know you will!"

"That is more than I can promise," he answered.

"But you must, Robert, you must. I can't live happy unless you come back to me." Then, in a low voice that a brother—" She stretched out her little hands to him.

Amazement showed itself on the doctor's face. "I don't understand by, 'do you mean—you mean—'"

"Yes, I have always loved you. There!" cried the girl, with flaming cheeks. "Now you can go, then—"

The doctor took her hands gently in his. "Elsie," he said, "after—after you became my patient I knew what a mistake I had made. Honor held me mute as it held your sister. Elsie, I have loved you and not her all these months of your illness. You have been dearer to me than anyone on earth. And so," he added, smiling, "I am still going to marry into the family."

HANDICRAFT FOR BOYS AND GIRLS

By A. NEELY HALL and DOROTHY PERKINS

BACKYARD CAMP STOVES.

The place for a boy to learn the building of campfires and camp cooking is at home, and the back yard is as good a location as any for the home made camp stove.

The fireplace in Fig. 1 is stained b, including a space about 18 inches in diameter, except on one side, with to-mato cans or cans of that size, filled with earth, for the fire-pot (Fig. 2).

tionk earth around and over them as shown in Fig. 1. Then, to profile for the cooking grate over the fire, drive a three-foot stick into the ground each side of the fireplace, and drive nails in the tops of the sticks with wire. Pots are to be suspended from this wire by means of notches bent out of wire (Fig. 3).

A slightly larger camp stove with sides built of earth reinforced with tin cans. The walls are straight instead of round, and they are fastened about four inches apart at one end and two inches apart at the other. It is best to provide cross wires to support the utensils on. Bend three two sticks (8, Fig. 9) to hold them together. Then at the side of sticks 1 fasten wire, as in Fig. 1, so the shelf will come ten inches below their some crossbar. Two sticks bend not by over two feet long.

The top of the oven is covered with a wooden platform made of short boards nailed to two sticks C (Fig. 10). Fasten this platform to the top of logs A. With the oven framework so made, nail boards to it back up north around the two sides and one end, and over the top, as shown in Fig. 8 and 9 where the oven is shown in back cauldy. One end of the oven must be enclosed with tin, and the other provided with a board hinged to the platform to fasten of leather or heavy rope (Figs. 7 and 11).

Shoe Deliu Scored.

Former Mistress—"I would like to give you a good recommendation, Delia, but my conscience compels me to state that you never got the cream of the cream." Delia—"Yes mayst jist ser that Oi got the meat the same as Oi got me pay."—Puck.

Caused by Overheating.

Hinges and plackets in castings are caused by overheating the metal while melting. Phinches are nothing but small blowholes.

at the ends as in Fig. 7, to extend down into the earth.

Fig. 6 shows how a similar stove can be made by omitting the cans, and fastening the cross wire supports to nails driven into the logs of stakes placed along each side of the stove. Fig 5 is a similar stove with the supports to the height of their tops, to protect them from fire, and back up the earth to enclose them, as in Fig. 6.

The bake oven in Fig. 7 is a unique homemade stove which is easily constructed. The oven shelf is made of two tins, for which the open sides of cans may be used. Tack the ends of three pieces of cans to

two sticks (8, Fig. 9) to hold them together. Then at the side of sticks 1 fasten wire, as in Fig. 1, so the shelf will come ten inches below their some crossbar. Two sticks bend not by over two feet long.

The top of the oven is covered with a wooden platform made of short boards nailed to two sticks C (Fig. 10). Fasten this platform to the top of logs A. With the oven framework so made, nail boards to it back up north around the two sides and one end, and over the top, as shown in Fig. 8 and 9 where the oven is shown in back cauldy. One end of the oven must be enclosed with tin, and the other provided with a board hinged to the platform to fasten of leather or heavy rope (Figs. 7 and 11).

Shakespeare's Legs.

There is no authority for the opinion that Shakespeare had one of his legs broken in a drunken brawl outside of a second without by Marlowe, blinded a brilliant debauchee and notorious liar. Apart from Marlowe's libertine, there is nothing to show that the great dramatist had a broken or deformed leg.

LOVE in a HURRY

by GELETT BURGESS
ILLUSTRATED by RAY WALTERS

COPYRIGHT BY GELETT BURGESS

CHAPTER XIV—Continued.

"Flodie laid an affectionate hand on poor Alfred's shoulder. 'It simply means that Alfred's true blue,' she replied soberly. 'He has the loyalty of a dog. It was cruel of me to do it, I thought. I don't know what you'll think of me, Hall, but you haven't told him, yet, Alfred. Go on! And do hurry, please!'

'Well, she asked me to go down to the city hall with her, for to get a marriage license. This afternoon, it was, and you know what I thought. Well, we went up to the desk and we got a application—a printed paper it was feller all about what we was and how old. Mike, and we sat down to a table and Miss Flisher, here, she took a pen and ink.'

'Hurry, Alfred, hurry!' cried Flodie impatiently.

'Well she went to work and wrote "Jessie" and "Jones" on the blank. And then she asked me what I thought. Well, I did, and she handed me the pen.' Suddenly Alfred turned his head, and bustled himself for a moment with his handkerchief. He returned to his narrative almost choking. 'I was just a-goin' to sign Alfred J. Smallish; that's my name, and what I always sign it, when she says to me, Miss Flisher does, 'You write down the feller name what I tell you.' Hall Cutler Bionistelle she says. 'You asked me to ask you to do something hard for you, to prove your love for me!' she says, and indeed I did, Mr. Bionistle—and so I signed the paper, and we had it swore to.'

'Well, give me the paper, Alfred; I'm hurry!' Flodie cried anxiously.

Alfred drew from his pocket the document, and handed it over to Hall.

Flodie bent over it. 'You see, Al fred had to pretend he was you, that's all. He's the same color, you know.'

Hall looked up at Alfred, and smiled. 'Well, I mean he's white,' Flodie explained anxiously.

'Yes, he certainly is rather white,' Hall remarked, and turned again to look at the document.

'Of course we did have to fix a little; that is, Alfred did—about your father and mother, you know. I didn't know what their names were, so we had to call them John and Mary—you don't mind, do you?'

'Not at all.'

'And you haven't any former wives, have you, living or dead?'

'Not one!' Hall was emphatic.

'Then it's a perfectly good license, and it fits you and there's your name and everything, and mine, too. You don't mind, do you, Hall, dear?' Flodie began to blush violently and was very confused. 'You see, I kind of thought you were going to ask me, I sort of felt it coming, and I knew you'd be too stupid to get one yourself.'

'Flodie—Flisher—bionistelle!' he exclaimed, and threw up his hands, 'you certainly are a business woman! I don't see what I should do without you, we're married! But I'm perfectly willing to let you manage me. I'm certainly have botched things when ever I've tried to run them myself.'

He turned to Alfred, who stood, looking at his shoes. 'And you compliented perfectly, Alfred, just fine!'

Alfred drew himself up proudly. 'Not at all, Mr Bonistelle. It was for Miss Flisher I done it.'

'Then you did it for me. By jove, Alfred, let me shake your hand. A man can't be blamed for a service that, at the most, can't be rewarded; but if there's anything I can do for you, just name it!'

'There's only the one thing I want now Mr Bonistelle. Would you leave me be your best man at the wedding? There was once when I thought I could be bridegroom myself, Mr. Bonistelle, but I see now that was foolish. But it would be a satisfaction to see the last of Miss Flisher, if you don't mind.'

Hall, laughing, slapped him on the back. 'Sure, Alfred! You can be the chief mourner, Alfred—that is, if this license is all right. Let's call in Mr. Doremus and tell him!' He started for the door, but Flodie had already beckoned to the attorney, who now came in with her.

'Well, we're going to have a ceremony, after all!' said Hall. 'I'm going to take you at your word and let you marry me.'

Flodie interrupted his reply. 'What is the shortest possible way you can do it, and be legal, Mr. Doremus?' she asked, nudging him anxiously.

'Oh, I'll fix that,' said the lawyer 'It won't take two minutes.'

'What's a coin of?' came a harsh voice at the door. Jonas Hassingbury was looking in.

'Come in, Jonas, come in and be 'among those present.' It's my merry marriage we're about!' cried Hall gayly.

Flodie whispered to Alfred. 'Run Alfred, bring everybody in, quick!' Alfred disappeared into the office and could be heard announcing the situation.

Jonas, however, had begun in bristle. 'So strange you'd be in cahoots belligerents by. 'Why, it ain't no use to call married now, Hall, you know that! Don't be foolish!'

'Hurry, Mr. Doremus, hurry!' Flodie was growing frantic. She pointed to the clock. It indicated twenty-eight minutes past twelve.

Hall, however, was in no haste. 'Oh, I know, Jonas, but you see Flodie and I have decided to lose no more time. You can give her away, if you want to.' He sat down, laughing at his cousin's consternation.

'What is it just twelve?' Jonas insisted, pointing to the clock.

'Oh, I know that! That proves it's a love match, Jonas!!!'

'Come here Hall, and stand up by me!' Jonas—until think you didn't want to get married!' Flodie called nervously.

By this time the company had begun to enter, and soon flooded the studio, laughing, wondering, joking with Hall!

'Up ahead!' cried Flodie. 'We're ready, Mr. Doremus, quick!' She stamped her foot angrily.

'Why, what's the matter?' Hall interposed, 'you want this thing arranged a little. It won't do to rush it!' He turned to his guests. 'Ladies and gentlemen,' he began, when Jonas broke in again.

'See here, I object to this!' He walked up to Mr. Doremus anxiously.

Mr. Doremus however, had already been informed of the situation. 'Hall would do you take this woman, Flodie Flisher, to be your wedded wife?'

'Just wait a minute!' cried Jonas, looking at his watch.

'We've!' came in a chorus from the excited guests.

'It's dry!' replied Hall. 'See here, Jonas, you mustn't interrupt the game, you know. Sit down and be quiet!'

'But I got something to say about it—'

'Flodie Flisher do you take this Hall Bionistelle to be your husband?'

'Yes, I do!'

'Hall Bionistelle do you take Flodie Flisher to be your wedded wife?'

'Yes, I do!'

'Then you did it for me. By jove, Alfred, let me shake your hand. A man can't be blamed for a service that, at the most, can't be rewarded; but if there's anything I can do for you, just name it!'

'There's only the one thing I want now Mr Bonistelle. Would you leave me be your best man at the wedding? There was once when I thought I could be bridegroom myself, Mr. Bonistelle, but I see now that was foolish. But it would be a satisfaction to see the last of Miss Flisher, if you don't mind.'

Hall, laughing, slapped him on the back. 'Sure, Alfred! You can be the chief mourner, Alfred—that is, if this license is all right. Let's call in Mr. Doremus and tell him!' He started for the door, but Flodie had already beckoned to the attorney, who now came in with her.

'Well, we're going to have a ceremony, after all!' said Hall. 'I'm going to take you at your word and let you marry me.'

Flodie interrupted his reply. 'What is the shortest possible way you can do it, and be legal, Mr. Doremus?' she asked, nudging him anxiously.

'Oh, I'll fix that,' said the lawyer 'It won't take two minutes.'

'What's a coin of?' came a harsh voice at the door. Jonas Hassingbury was looking in.

'Come in, Jonas, come in and be 'among those present.' It's my merry marriage we're about!' cried Hall gayly.

Flodie whispered to Alfred. 'Run Alfred, bring everybody in, quick!' Alfred disappeared into the office and could be heard announcing the situation.

Jonas, however, had begun in bristle. 'So strange you'd be in cahoots belligerents by. 'Why, it ain't no use to call married now, Hall, you know that! Don't be foolish!'

'Hurry, Mr. Doremus, hurry!' Flodie was growing frantic. She pointed to the clock. It indicated twenty-eight minutes past twelve.

Hall, however, was in no haste. 'Oh, I know, Jonas, but you see Flodie and I have decided to lose no more time. You can give her away, if you want to.' He sat down, laughing at his cousin's consternation.

'What is it just twelve?' Jonas insisted, pointing to the clock.

'Oh, I know that! That proves it's a love match, Jonas!!!'

'Come here Hall, and stand up by me!' Jonas—until think you didn't want to get married!' Flodie called nervously.

By this time the company had begun to enter, and soon flooded the studio, laughing, wondering, joking with Hall!

'Up ahead!' cried Flodie. 'We're ready, Mr. Doremus, quick!' She stamped her foot angrily.

'Why, what's the matter?' Hall interposed, 'you want this thing arranged a little. It won't do to rush it!' He turned to his guests. 'Ladies and gentlemen,' he began, when Jonas broke in again.

'See here, I object to this!' He walked up to Mr. Doremus anxiously.

Mr. Doremus however, had already been informed of the situation. 'Hall would do you take this woman, Flodie Flisher, to be your wedded wife?'

'Just wait a minute!' cried Jonas, looking at his watch.

'We've!' came in a chorus from the excited guests.

'It's dry!' replied Hall. 'See here, Jonas, you mustn't interrupt the game, you know. Sit down and be quiet!'

'But I got something to say about it—'

'Flodie Flisher do you take this Hall Bionistelle to be your husband?'

'Yes, I do!'

'Hall Bionistelle do you take Flodie Flisher to be your wedded wife?'

'I never said I wouldn't get him myself!' Flodie's words were smothered in Hall's kiss.

Immediately she was surrounded by the gentlemen of the company, who passed her from lip to lip, protesting, laughing, struggling to speak.

Mr. Doremus pressed Hall's hand. 'I congratulate you, Mr. Bonistelle!' he cried enthusiastically.

'Thank you, sir!' Hall answered. 'I've got a fortune in Flodie.'

'I think you have! Too!' was Mr. Doremus' reply. 'Mr. Hassingbury, would you mind telling me what time it is?'

Jonas turned white, and started hurriedly to leave without a word. 'Stolen, alert, could him as he turned, and snatched out his watch as deftly as a pickpocket. She held it up to the company. "We've won! Eleven fifty-nine!" she shouted.

The company took it up, and shouted, too. Watches were brought out from a dozen pockets, compared and the time corroborated.

'It's a lie!' Jonas protested, 'why, look at the clock! It's half past twelve! He's too late I tell you! The mayor's mine!'

'Why, that's right!' said Hall, amazed by the sudden confusion. 'I see that clock myself!'

"Put I told you what time to set it!' Flodie fatly yelled now. "And I told you half an hour ahead on purpose!'

Mr. Doremus held up his hand. 'Silence!' he thundered. 'Mr. Hassingbury,' he declared solemnly, 'there are witnesses enough present to prove that Mr. Bonistelle was married before midnight. As you are aware, I seldom take sides in any controversy, but in this case, my little friend here, Flodie—Bonistelle—completely won me over. There's no possible doubt that Mr. Bonistelle will inherit his uncle's fortune.'

Hall burst out of his trance with a whoop. "Hurrah!' he screamed. "I've won four millions of dollars!'

Flodie stretched up on tiptoe and pulled down his dramatically extended hand. 'No, sir,' she announced, "I won it myself!'

THE END.

MOST PERFECT OF PLANTS

Working of the Human Body Makes Any Invention of Man Seem Like Plaything.

The most complicated manufacturing plant that ever existed is the human body as controlled under the scientific management of the brain and nervous system. No factory ever boasted a more efficient producer plant for converting fuel into energy. No plant ever had so well designed a pumping system, nor one so perfect for the disposal of waste and sewage. Talk of up-to-date heating and ventilating, or interdepartment telephone! The best that our modern science can put into our shops is crude indeed as compared with that furnished by the Great Designer. Suppose that you went to a pump manufacturer with the following specification:

'Build me a pump with capacity of one-quarter gallon a minute, to handle thick, sticky fluid, to work for several years night and day without a shut down, at the rate of seventy strokes per minute. Must be guaranteed to operate for the full period of time without repairs or adjustments, to require no attention; must have automatic control and contain its own motive power, and must have a duty per million, foot-pounds superior to the best triple-expansion high-duty unit ever made.

Do you think the manufacturer would bid for the job? If he were a fool, he might possibly agree with you and tell you to come around next week, meanwhile edging you toward the door before your insanity took a violent form. Or if he were not afraid of lunatics he would say: 'You poor bug, such a pump as you speak of never existed nor ever will except in the brain of a perpetual-motion fresh nuts as I see before me.' Which shows how much we know about it, for both you and he carry just such a pump around with you, and each of you thinks too much of your possession to sell it for any money.—John H. Van Deventer, in the Engineering Magazine.

SAVED MASTER FROM DEATH

Small Dog Is Petted as a Hero in the Paris Hospitals, as Reward for Faithfulness.

In one of the Paris hospitals lives a dog, a brown-and-white setter, named Fend l'Air (eleven fifty), who is a real hero of the war. His master, a sergeant of zouaves, is a patient in the hospital, and he owes his life to a real hero of the war. His master, a sergeant of zouaves, is a patient in the hospital, and he owes his life to a real hero of the war. His fellows fell on life to the devotion and intelligence of Fend l'Air. When the regiment left Algeria for France the dog was left behind, but the faithful little creature leaped into the water and swam along behind the ship until the captain, taking pity on him, had him taken on board. From that time he has never left his master.

During the fighting at Roshincourt, near Arras, an exploding bomb buried the sergeant and seven other men with earth. They were badly injured, and so deeply covered that no man had the strength to fight his way out. Luckily, Fend l'Air escaped the bomb. He at once began to scratch, bark, howl and scratch until he had reached his master and dragged him out to safety. The seven other men died.

The wounded sergeant and his dog were sent home from one relief station to another until they found permanent care in this Paris hospital. Good nurse that has saved the man, but too much attention almost killed the dog, for the nurses and orderlies fed him so lavishly that promiscuous feeding had to be forbidden.

Now Fend l'Air lives in the hospital kitchen, where he has assumed the duty of guard, and growls savagely at anyone who enters the kitchen—unless the behest there. Every day a nurse takes him to the wards to visit his master, and Fend l'Air puts his nose on the sergeant's shoulder and stands contented as long as he is permitted to remain. The great affection that exists between the sergeant and his dog is very charming.—Youth's Companion.

A Strenuous Finale.

"When Professor Bragson plays the violin his very soul seems on fire," exclaimed Mrs. Prebson after the concert.

"Umph!" replied Mr. Prebson, whose favorite amusement is baseball, "I don't know about his soul, but when he was finishing up that last piece I expected at any moment to see his fiddle strings smoking."

Would Be a Soon.

Any guy who would invent something effective to take the cut out of the rotworm would be sure of everlasting fame.—Boston Globe.

HANDICRAFT FOR BOYS AND GIRLS

By A. NEELY HALL and DOROTHY PERKINS

Copyright by A. Neely Hall

A TOY SAILBOAT.

In Fig. 1 I have shown a sailboat with a broad hull of a satisfactory design that is easy to prepare. A solid block of wood of the dimensions shown in Fig. 2 is required for the hull. First mark out the curve of the deck, as indicated by dotted lines (Fig. 2), upon both top and bottom faces, then cut to these lines (Fig. 3). Next, mark off the shape of the bottom of the hull upon the bottom face of the block, as indicated by dotted lines in Fig. 3; also draw a line around the sides and bow and stern, one inch below the top (see dotted lines); and pare down the sides from the deck line to the line of the hull bottom, to make them of the form shown in Fig. 4. Be careful in marking out the hull, to get the sides exactly the proper distance apart, to allow for a fare in cutting. With the outside cutting, scoop out one-half the length of the hull, as shown in Fig. 5.

The gunwale strips A and B (Figs. 6 and 7) are lapped over and tacked to the upper edges of the hull. Cut them out of thin wood, curve the top edge of strips A, as shown in Fig. 6 (Cross strips C and D, and the corner blocks E and F (Fig. 3), are needed to brace the gunwales.

Finish the bow of the hull with strip G (Fig. 7), and the stern with strip H. The downsquared tuck in Fig. 5 is provided for the attachment of the foremast. Make the rudder as shown at I (Fig. 8), with a tiller stick (J, Fig. 3) tacked to its top. Drive a couple of tacks into the long edge of the rudder, to act as pivots, and fit hooks to fit in a pair of small screw-eyes driven into the stern strip H (Fig. 7).

Figs. 9 to 12 show the halyards and sheets. Cut the cleats (see K, Figs. 9 and 10). The wire bars L, M and N (Fig. 3) are provided for tying the halyard ends to.

A GIRLS' HANDICRAFT BOOTH FOR A FAIR.

Here is a plan for a handicraft booth where a class of girls can display one of the most attractive and best-patronized features of the church fair. Your own handicraft can be placed on sale, and you can build the booth itself, by following the plan I have work-out in Fig. 1.

Fig. 2 shows how the booth is constructed. You will need a grocery box about thirty inches long, fourteen inches wide and ten inches deep for the corner supports. These boxes must be mounted on legs (A, Figs. 4 and 5), made of pieces two inches thick, four inches wide and twenty-six inches long. The supports for the roinnys are nailed to these boxes (B, Fig. 2).

The distance apart to place the box supports will be determined, of course, by the length you want to make the booth. Seven feet square, outside measurement, is a good size. The cross bars should be twelve inches wide, and long enough to make a neat appearance when nailed in the corner to corner. This is not shown in Fig. 2, but it is indicated in the plan diagram of Fig. 1.

The canopy framework is made of four poles (C, Fig. 2). The lower ends of these are secured to the tops of uprights 2, and the upper ends are suspended from a screw eye screwed into the ceiling directly over the tops of the booth. These poles must project six inches or so over the tops of uprights B, and be long enough to run up to a peak at the center. By screwing a screw eye into the tops of uprights B, and one into the under side of poles C (Figs. 5 and 6), the poles can be joined by tying together the screw eyes with cord. Screw a screw eye into the upper end of pole C, to tie the cord to for suspending the poles from the ceiling.

Cross frames made of thin material are to the best covering material for the booth framework. Figure 1 suggests how strips of the paper used for wound around the corner uprights and canopy poles, to make a resemblance of twisted ropes of crepe paper may be secured from the sides at the top, and bow ribbons of crepe paper may be used to imitate the canopy frame work. Pretty booths made cardboard lanterns hung from the ends of the canopy poles will add a finishing touch to the roof.

Cover the sides of the booth with paper to the counter boards, and then cover this with cheesecloth of a color to harmonize with the tissue-paper trimmings. A pretty effect will be obtained by plaiting this as indicated in Fig. 1. One side of the valance must be made in part to provide an entrance into the booth.

HELPED BY BURGLAR

Family's Sense of Gratitude Fully Justified.

Whim of Predatory Individual Brought Fortune to Members of Household Which He Had Visited With Intent to Rob.

"A house in the country that I had got into by a convenient cellar window, and that I came out of by the front door," said the retired burglar, "had proved to be very disappointing.

"I had imagined from the nicely kept lawn and the general appearance of things outside that it must be the home of people of means; but in the whole of upstairs I had not found, of things that I could carry away, enough to pay me for my night's work.

"Then, as I came down from the second story into the front hall I cast my light around to see if there was anything there worth while. There was not, but on a little tray on a table in the hall I saw three letters addressed and stamped ready for mailing, and I thought I would take these letters and mail them.

"That was just foolish, I know, but then I did a deuvrift foolish thing, something that I had never done before and that I never did again—I wrote a note and left it on the little tray from which I took the letters.

"I have taken the letters. I am going right again post-office and I can mail them just as well as not.

"Well, I did mail those letters, and then I never thought of them again until about a week and a half afterwards, when I saw this advertisement in a newspaper:

"Jimmy: Thanks for mailing those letters. We want to communicate with you. Write us care of Blank, Blank, S. O.

"Now that was something of a lift, wasn't it? Of course that foolish note that I left was a clue and now they knew my name. I felt I owed them something, should I do about it? Should I communicate?

"All I could do was to trust my butch, and I trusted it I wrote, giving a fictitious name, and giving my address as the post office. Of course it would be a long time before anything in the world for them to have a man waiting the office here for me when I called for the letter, but I liked the cause and I thought I should see the people that lived in it, and I took a chance.

"In two days I got the letter, and when I opened it there dropped out of it a thousand-dollar bill. Do you fully grasp that? A thousand-dollar bill; and this is what they wrote me:

"One of those letters that you mailed for us was to a man who had lived in a town not a hundred miles from ours. I don't think that he ever noticed the address on the letter or not. A rich old man he was, not an eccentric nor a hermit, but just an old lech, who lived by himself and went his own way. He did not seek friends, and so far as we know we were his only friends. Nevertheless, for though he lived so near we had not seen him nor heard from him in—

"Then one day, the day before the letter you left on his table, he died, and we had to write Uncle William and just out of a feeling of friendliness and good cheer we sat down that day and wrote him that letter; the letter that you mailed.

"And what difference did it make, I hear you saying, who mailed the letter? Well, I will tell you.

"In the ordinary course of things that letter would not have been mailed by us until some of us went down to the center in the afternoon, and mailed then it would never have reached our for the afternoon of that very day our uncle moved from the place where he had lived so long, and left no address behind him. We could not know that, so you, it did reach him. He never answered it himself, but a week later we received a letter from a lawyer in the town to which he had moved saying that our uncle had died in that town and had left us $200,000.

"He had accumulated $200,000. He had made a will giving $200,000 of this to a hospital that had caught his fancy and $1,000 to me he believes, I'm still living." But later, clearly after receiving our letter, which he would never have got but for you, he had changed his will, giving $1,000 to the hospital and $200,000 to me now, after some six months of legal formalities, we have got the money.

"So you see your mailing that letter made all the difference in the world to us; it brought us a fortune.

"We still live in the same house, but now we have more things than I when you left it, and we have some things now that usually we do not keep in the house, but a box in the safety at the center; but if you will come over and see us again and I will show you what we have now, we will leave around the house things that like this very comfortable, and we feel that we are still much in debt to you.

"We don't never went back. Whatever they got out of it I felt as if, just for that one day, I had left my post office, a thousand dollars was all that was really coming to me."

BABY LOVES HIS BATH

Which Cuticura Soap Because So Soothing When His Skin is Hot.

These fragrant supercreamy emollients are a comfort to children. The Soap to cleanse and purify, the Ointment to soothe and heal rashes, itchings, chafings, etc. Nothing more effective. May be used from the hour of birth, with absolute confidence.

Sample each free by mail, with 32-p. Skin Book, address Cuticura, Dept. XX, Boston. Sold everywhere.—Adv.

Excellent Notion.

"These are now in existence so many societies for the prevention of so many different things, and so many more being formed all the time for the prevention of other things" said Col. D. G. Peaser, "that it would be a good idea to inaugurate a few societies for the prevention of societies for the prevention of things. Nothing could be carried and elaborated unless there be societies for the prevention of societies for the prevention of everything, somewhat on the order of torpedo boats and torpedo-boat destroyers. Then after the last society had done its duty we might, and have a period of rest for the weary."—Kansas City Star.

Poor Excuse.

Thomas Mott Osborne, warden of Sing Sing, said at a luncheon in New York:

"This laying of all one's crimes and transgressions at the door of heredity disgusts me. If we sin, we ourselves are to blame. To blame heredity is the kind fooling.

"These heredity blamers are like the chap who said to the dog.

"'You can't escape domination of early formed habits. In my infancy my parents hired a young mastiff to wheel me about in a baby-coach, and ever since that distant time, alas, I have been pushed for money."

What Did She Mean?

He—I am going to kiss you when I go.

She—Leave this house at once, sir!

What Ignorance.

"Shall we have champagne or some other wine?"

"Are there other wines?"

Stop That Backache!

There's nothing more discouraging than that persistent backache. You are home when you awake. Pains pierce you when you bend or lift. It's hard to rest and next day it's the same old story. Pain is the back is nature's warning of kidney ills. Neglect may pave the way for dropsy, gravel, or other serious kidney troubles. Don't delay—begin using Doan's Kidney Pills—the remedy that has been curing backaches and kidney troubles for over fifty years.

An Iowa Case

Mrs. M. Clinker, Albany Street, Keokuk, Iowa, says: "My back was so lame I could hardly do my housework and I had to have help to do the work. I was so dizzy I had to hold onto something to keep from falling and my kidneys did not act properly. Doan's Kidney Pills acted wonderfully and they have kept me in good health. The cure has lasted."

FOSTER-MILBURN CO., BUFFALO, N. Y.

Bigger Work Less Effort

A man well fed can accomplish more with less effort than one improperly nourished. That's just common sense.

For the best nourishment of body and brain, thousands now-a-days use

Grape-Nuts

Made of wheat and malted barley, Grape-Nuts food supplies all the rich nutriment of the grains, including their vital mineral salts necessary for building vigorous bodies and active brains.

A ration of Grape-Nuts and cream, along with other food, insures complete nourishment.

"There's a Reason"

Sold by Grocers everywhere.

OLD GREEK HAD RIGHT IDEA

Xenophon's Conception of the Dignity and Value of Agriculture is Demonstrated Anew.

Xenophon's work on agriculture lacks the divine afflatus of the Georgics and the patient comprehensive research of Varro's "De Re Rustica," its more modest scope is indicated by the name by which it is "Oeconomica," or, as Erasmus de La Boetie rendered it—"La Menagerie"—a capital word, that has gone down to life!

Xenophon treated the rule of the farm on rather general lines; he started from the principles, that is, he gain, agriculture is made up of common sense and diligence.

To critics who blame him as unscientific let it be said that in southern farming, at least, these two qualities will carry the cultivator further than the most beautiful steam plow.

The standpoint from which he viewed the agriculturist was not without elevation though it did not strike him, as it struck Virgil, that the husbandman was a sort of high priest, that farmer had the regard him as the mere servant of private and selfish ends.

The landed proprietor was the pillar of society and agriculture, the lifeblood of the state, the fields grew more than corn—they grew men. This was his point of view.—New York Telegram.

It's easier for a young man to raise a row than a mustache.

The KITCHEN CABINET

Economy is usually confined to the kitchen and dining room. But there is always an edge of economy. Scores of things may be saved by the use of whatever belongs to us.—Maria Edgeworth.

THE KITCHEN.

The Ideal situation for the kitchen is considered by popular opinion to be

on the east side, where it gets the morning sun. Now days we want a kitchen. If it is not to be used as a dining room it must be small, so that time and strength may be saved in the preparation of meals. The size and table, stove and cupboards should be within speaking distance of each other. The dining room should open directly into the kitchen or pantry between so that the unsightly part of routing would be accomplished in serving a meal.

Windows should be plentiful and so placed that plenty of light and ventilation could be secured. Artificial light should be planned to fall where it is most needed, over sink and stove and table.

If swing doors are placed between the kitchen and dining room the door need never be in view when sitting at the dining table.

Cupboards should be covered with linoleum or oil cloth, such a way that scrubbing is unnecessary.

Tables and sink as well as stove and ironing board should be at the right height to suit the person to use them.

Over the sink a rack for dish books between to hold all the much-used things like a soap shaker, measuring cups, dipper, dish mop, and dish towels may be easily placed. On top of this shelf keep your scales, and other pretty receptacles for pepper and salt and the much used condiments.

The best arranged kitchens are those with plenty of cupboard space to shut from the dust all utensils that are not washed twice or three times a day. If the cupboards are so close that the dishes may be wiped and set at once to the shelves save a small table with casters to move about. This same table will be invaluable to have near the stove when cooking, and should be covered with zinc. A wheeled tray or tea cart is another most convenient utensil to save steps as it can be loaded with food for the table and remove it and the soiled dishes after the meal, with but one or two trips.

The best quality of tea leaves must have crenes like the leathery heel of the Turner lowness, which gives the design of a mighty hobbit, unfold like a neat fining out of a richer stream like a lake bounded by a mighty, and the greatness of the mind, newly born by rain. — Lowell, a Japanese Poet.

TEA MAKING AN ART.

Every woman longs for the dainty appointments of a pretty tea table, but

she doesn't want to endure these longings, but serve the guest, and have all the equipment at hand for serving tables, linen cloth, tea cloth, tea napkins and a few pretty cups will be sufficient. The tea wagon is, of course, a wonderful assistant. On this may be placed the small cakes, creamer and sugar bowl, tea caddy and tea pot. Cups may be had that are artistic and shapely from ten cents to as many dollars, but the tea tastes as well from the cup which, if it is broken, your heart is not. Tea is served at four o'clock so that it does not disturb the night's rest, and is lighter and is not a meal in any sense.

The cosiest way of serving tea is to take the freshly drawn water at the first boil, scald the teapot, then add tea a teaspoonful for each person and one for the pot; cover with the water, then let stand five minutes, and enough water to serve, allow it to stand a minute longer.

If you desire to make the tea with a tea ball it may then be served or reserved strength in the pot, and the taste. A pretty pitcher of hot water is another requisite, as well as a bowl to empty the tea for a fresh cup. Tea served in a moderate quantity, not too strong, is a fatigue remover as well as a nerve soother. Serve cream instead of the milk as it makes a great difference in the flavor. Those who enjoy lemon in their tea, the lemon will take a clove or two. A pretty way to add flavor as well as sugar is to rub the cubes of sugar over orange or lemon rind to absorb the volatile oil.

Some Truth in This.

"I got married against my uncle Eben, dat Satan jus' helped to lay in wait for a bachelor to let people lev' dem dar checkbooks in hand an' sarcastic tongues to make dem own price for temptations."

Remedy for a Cold.

When you feel a cold coming on, take a half teaspoonful of ginger, one teaspoonful of white pepper, and thoroughly which about three tablespoonfuls of cold water and drink.

Not Cause for Satisfaction.

If you feel that it is better for an enforced idle time, rather leave save that better than the time will not be good. However, a man cannot say he has lived a real life if all he has done has been to sit down and watch other people work and spend money.

Premonitory.

Junior—"Do you don't propose to her, after all?" Wood—"No. And I am not going to. When I get to our house I mean her cooking a mouse with a broom."—Puck.

Handicap of Ignorance.

Ignorance is the greatest error—it sows a false one. The consequence is that error sows also retraces her steps, his farther to go before he can arrive at truth than ignorance.—Colton.

Happy Solution.

What a happy solution of the equal suffrage problem it would be if all the women were for no one candidate, vote in place of the men who are sick!

Look Over Obstacles.

Anyone who rides a bicycle or runs a motor car knows that the way to overcome difficulties is to look past them down the road. By looking at the obstacles one steers right into them in spite of oneself to fix, when obstacles are ahead one should now near them, keep the eye on the right road, and so will pass safely forward.

Optimistic Thought.

Hatred is the heart is a great burden to the carrier.

Poverty Is Relative.

People who are aware that they are in the world and never lose their temper.

Without Antiseptics.

Let fresh air and cold water be your antiseptics.—Harper's Bazaar.

SUPERIOR FIGS AND DATES.

Dates and figs are rich in nutriment and contain food enough to supply an excellent dessert for a light meal.

Fig Custard.—Wash a pound of figs and cover them with water to cook an hour, add the juice of a lemon, a few bits of peel, which may be removed after the figs are tender. Make a cup custards, using four eggs, a half teaspoonful of sugar and a quart of milk and a pinch of salt. Pile the custards on top of each piece two spoonfuls of the fig mixture, cover with a meringue or whipped cream and serve cold.

Chopped dates and figs, mixed with chopped nuts and a little cream to make it of spreading consistency is fine for sandwich filling. Dates on top of coffee cake, with raisins, makes a most dainty and wholesome breakfast dish.

Fig Loaf Cake.—Take two cupfuls of chopped figs, two cupfuls of sugar, a half cupful of butter, a cupful of milk, three cupfuls of flour, four eggs, three teaspoonfuls of baking powder, salt as usual and bake in a loaf.

Date Pie.—Make a plain pastry shell and bake it. Fill with the following mixture: Two eggs well beaten, add them (after removing the stones) in a quart of milk, when soft run through a sieve, add a little more egg beaten, a pinch of salt, and pour into the baked shell. Cover with whipped cream and serve cold.

Dates and figs added to a simple apple and celery salad add much of richness and flavor to it. Stuffed dates may be made with fondant for filling or cream cheese. Figs stewed in water and lemon juice with a little sugar make a most delicious sauce to serve on ice cream. In fact these fruits can hardly be out of place, they are so well liked.

SEASONABLE DISHES.

The simple curried bisco seems to be somewhat of a puzzle to many cooks. To prepare it first have it cut in very thin, but uniform slices. Put this on the dried beef cutter. Then place it on ice to chill. Have a heavy iron frying pan very hot and stir constantly while cooking. Sip the pan while it is cooking, so that it may not stew in its own grease. Bisco should always be served dry and crisp enough to eat with the fingers.

Broiled Ham.—Cut thin slices from ham and cover with sour milk and let stand over night. In the morning drain well and broil over coals or in a hot pan. In either case the cooking should be done quickly and the ham tender.

Fried Chicken With Olive Sauce.—Cut up well-dressed chicken, dip in beaten egg and bread crumbs, then cook slowly until thoroughly done. Serve with olive sauce.

Olive Sauce.—Brown two table spoonfuls each of onion and carrot in a tablespoonful of butter, add a table spoonful of flour and brown. Stir in a cupful of stock, then boil for a minute, add olives if no other is at hand, and cook until smooth. Add one table spoonful of lemon juice and serve hot. If the olives are well heated through, omit the lemon.

Pinkeye Mashed.—Heat and oil a plank made for this purpose, or a magic make suitable boards. Spread over the board lashings of cold mashed potato, put through a potato ricer, then add butter, salt and pepper and serve piping hot. Garnish the edge of the plank with mashed potato, put through a pastry bag and tube. Parsley and lemon is used to finish the decorations.

Nellie Maxwell

DEADLY ENEMIES OF BIRDS

Snakes Climb Trees and Capture Fledglings in Nest, While the Parents Are Helpless.

Some enemies of the birds are satisfied to take chances on outrunning their prey on the ground or catching them in an open pasture. The birds' war-lay substance these enemies are the hard forces and the air squadrons. Other four snake stealthy attacks on the nests in the trees, destroying the eggs and devouring the young fledlings. They are the submarines, and the most dangerous and destructive of the lot.

The snake's ability to climb trees makes him a deadly foe to birds. The reptile will crawl out on a limb and capture his prey while the parent birds flutter about powerless to prevent the attacker.

Of all the reptiles the common black-snake is the most destructive, and they will swallow a full-grown bird. The skull of a snake's head is put together loosely and will stretch to an extraordinary size. This makes it possible for the snake to swallow a bird much larger than his own head.

Before he devours his prey the snake covers it with a slimy saliva and squeezes the bird out long and lubricated so that it can be easily swallowed. Bullfrogs have been known to swallow birds, too, but these are not so destructive as the subject of this sketch. They cannot trap the birds in their homes in the trees.

Making the Child Beautiful.

Every mother desires that her child shall be beautiful; but beauty on the face is born of health on the inside. The same is true of beauty of disposition, and the means are equal to the "goodness" in the child. It is exceedingly difficult for people of mature years to overcome the effects of an ill-control, to be bright, cheerful and winsome with a body racked with ill health. How much more so for the child.

Every child may not be endowed with perfect symmetry of face and figure, but the sunny disposition, the clear complexion, the rosy cheeks, the gleaming eyes, the white pearl teeth, the plump form, together with perfect poise of body, which all may cultivate, will lend even a greater charm.

Early beginnings count for much in matters pertaining to health, as in matters pertaining to education and child culture. Upon the right treatment of the little babe during the first year depends much of its subsequent well-being.—Mrs. E. E. Kellogg, in Good Health.

Native Birds Decreasing.

An interesting statement has recently made by Robert Ridgway of the present condition of bird life in southern Illinois with those prevailing half a century ago, to perhaps representative of the changes that have occurred in other fully settled portions of the United States. With a few exceptions the native birds have greatly decreased in number. At least three species—the passenger pigeon, wild turkey and ruffed grouse have disappeared from the above-mentioned region, and many other species which have not disappeared have become rare, the black bird, the blue jay and perhaps the robin. Among the causes of this diminution in most species, besides the reduced breeding and shelter areas, the ravages of birds and chiefly the wanton destruction of orchards, the author notes the rapid spread of the European house sparrow, which, according to the farmers outnumbers all the smaller native birds combined, reducing their food supply, monopolizing their nesting sites, etc.

Celtic Revival.

The so-called Celtic revival is practically the attempt to "revive" and keep alive the Irish language. Irish is the classic Celtic language, and we are better supplied with linguistic material for its study than for any other Celtic dialect. The Irish alphabet is about 1,500 years old. The Celtic dialect. The Irish alphabet is about 1,500 years old. The Celtic dialect. The Irish alphabet is about 1,500 years old. The Celtic dialect. The Irish alphabet is about 1,

Don't fail to see "The Path Forbidden," at the Majestic Dec. 1.

W. F. Harsha, of Traverse City, was here over Sunday visiting his brother, H. S. Harsha.

Wanted, three copies of the SENTINEL of September 9th, 1915, for which we will pay 2c cents each.

Dave Howard, of the coast guard station in Muskegon, is spending a few days here with his family.

Mrs. Esther Farrar, of Fort Austin, has been spending a week here visiting her brother, Hon. A. Hattars.

We want country correspondents, to whom paper and stamped envelopes will be furnished. Call in and see us about it.

We regret to learn that Hon. John Nichols has been quite ill the past week. He is reported much better at this writing.

Christian Science Society, Van Felt Hall, will hold a Thanksgiving service Thursday morning at 10:45. The public is cordially invited to attend.

Frank Glassford has crews of his men at work rebuilding the Marsac house on Clinton street, and the Percy Brown cottage on the Belvedere grounds.

Work on the Blanchard block is progressing well, with a large force of men engaged. Architect Bartholomew says the premises will be under roof next week.

The lighthouse tender Sumac came into port Sunday night, and will for some time make this her headquarters during the buoy gathering campaign in the straits and islands.

The Ladies' Aid Society of the Congregational Church will hold a bag and apron sale at Yettaw's ice cream parlor in connection with a ten cent tea Wednesday afternoon, Dec. 1st.

"The Path Forbidden," at the Majestic, Dec. 1st., is another star attraction in time that has been secured by Manager Miles. It is a story of entrancing interest punctuated by stirring climaxes.

The fine grocery and provision store of Jacobs & Dawson was opened up Saturday, and was visited by a large number of people. There are very few more beautiful establishments of the kind in Northern Michigan.

The fire department made another long run to the southwest suburbs of the city Monday forenoon to extinguish fire in a bed at the home of Wm. Thorpe. The blaze was confined to the bed, which was uncupied.

Mr. and Mrs. Kelner, of Michigan avenue, spent Thanksgiving with friends in Grand Rapids. After a short stay in Grand Rapids they will be in Chicago a month and then go to New Orleans for the remainder of the winter.

We were favored with a pleasant call Tuesday from Henry M. Ross, assistant secretary of the U. S. Senate, who lectured here that evening. In newspaper and political gatherings in his "old days" the writer and Mr. Ross were thrown together in a way that made the call pleasant for both.

As usual, "never, within the memory of the oldest inhabitant," was there a November that could match this one for high winds. That is what a majority of the sailor men say, but "never, within the memory of the oldest inhabitant," have we failed to hear the sailors say the same thing. But it certainly has been very stormy. The island boat has missed fully half her trips, and most of the fishermen pulled out their nets, when they had a chance. The steamer City of Boyne made out to break in a trip to Green Bay with a load of St. James fish, going and coming in a gale, lying stormbound at Green Bay and St. James long enough to have made another trip. Either the Boyne or Columbia makes another Green Bay trip this week.

Charlevoix has a long-winded traffic ordinance, one clause of which prohibits the leaving of horses or teams at the curb unhitched, and positively no attention is paid to it. Nobody thinks of hitching their teams, even in the presence of the police. Every once in a while there is a runaway, and life endangered, to say nothing of store fronts. Saturday afternoon a runaway stampeded the street when a team ran away without a driver, from the express office, taking the sidewalk on Bridge street at the corner of Bridge street and Park avenue, only stopped when it got tangled up with the lumber and brick piles at the new Blanchard block. There might have been somebody hurt or a window front smashed, but there wasn't, and runaways will continue from time to time.

CARD OF THANKS

The family of the late John H. O'Neil desires to express their thanks for kindness shown during their recent bereavement.

QUESTION WITH TWO SIDES

Very much is said, and justly so, concerning the retail buyer patronizing mail order houses instead of the home merchants. It is maintained by the home merchant that obligations and benefits existing between them and the retail buyer should be reciprocal.

This phase of the question suggests another. We believe that the proposition is tripartite;—that, if trade justice is sought, the relations between the home retail dealer, the retail buyer, and the home wholesaler should be reciprocal.

Charlevoix has had a board of commerce, a retail merchants' association and committee of twenty-one, and all of these high sounding organizations now exist only in the realm of memory. Metaphorically speaking, the clods of the valley have covered the remains of the first two once lusty was a pup, and the last is, at least, too dead to skin. The ostensible primary purpose of the last especially, is to augment industrial conditions.

We hold that the work of establishing new industries is no more important than the fostering and promoting of the interests of those which we already possess.

Commercial prosperity and industrial progress go hand in hand, and between the two mutual obligations exist.

Even adjacent little four-corner towns are kicking up more dust in the highway of progress than Charlevoix, while we talk glibly of the transcendent beauties of nature.

THE END OF SUBSERVIENCY

Among Democratic Congressmen who are returning to Washington for the approaching session there is a readily discernible sentiment of growth toward the White House. Some of them are recalling the scant courtesy which they received at the President's hands during the last Congress and their private conversation indicates that they feel a new order must be instituted. In the last Congress the Democratic majority was so large that it took a big crowd of malcontents to make an effective gesture of menace against anything the President wanted. Moreover, the President had then not undergone any test before the people and any dissenting Democratic representative could readily be cowed by a reminder that it was Wilson who had put the party across, who had carried all of its candidates along with him, and whose displeasure was equivalent to a political death sentence. A list of the Democratic members were new at the game. They fell for this sort of argument, and the President, as Congress to his own liking.

Then came the election of 1914, when the Democratic majority fell to negligible proportions, when the magic of the President's name failed to work his spell, and when even the new-found horrors of an European war did not avail to carry a Democratic vote, the Tariff, or Preparedness and Stevens of New Hampshire, to success in their sensational aspirations. Some recently the election of 1915 have produced the same result. Wilson is no longer a magnet to conjure with, and since he is no longer laden with a bulging bag of patronage his power is not what it once was.

Consequently, there are some Democrats who have come back with a genuine Missouri disposition to be shown whether the White House is going to regard them as men or as political pygmies.

"There is no man in this country who is more anxious to see the Wilson Administration succeed than I am," declared a prominent Democratic figure in the house the other day. "But," he added, "I am not willing to see the Democratic majority in the next Congress led around by the nose. I am going to take the position that there are three co-ordinate branches of this government, the legislative, judicial and executive. I want to see the legislative branch assert its independence. Otherwise I can only see the establishment of a most dangerous precedent. I want to see harmony in the Democratic ranks and I shall work toward that end, but I think the time has come when a friendly rather than dictatorial attitude must prevail in the relationship of the White House toward Congress."

This feeling has been expected to find its first expression through the Tammany members of the House. But, curiously enough, it is not they who are talking. It is men who take their congressional duties more seriously than Tammany usually does. These men feel that representative government may have something at stake in a continuation of a policy whereby a President may initiate, draft and pass legislation under a gag rule.

The President evidently thinks that he has only to issue his orders and the legislation he desires will go through. Mr. Bryan's opposition to the defense plans, however, is notice to the contrary. And if Mr. Bryan can only join hands with the Democrats who feel as does the member quoted above, it is plain that the President will have hard sledding all along the line this winter.

SUDDEN MUSCULAR ACHES AND PAINS—NEED NOT BE!

That instant you use the right remedy, Sloan's Liniment is a real necessity in every home—young and old. He world's praise! in dozens of letters. A stiff neck from colds, chilliness, sprains, those aching muscles, that sharp neuralgia pain—these first symptoms call for Sloan's Liniment. Every home needs it handy when accidents happen. Your home needs a bottle. 25c., 50c. and $1.00.

whom King Solomon himself could not find. The story is tense, compact and brief, but it is so crowded, so full-blooded, so strong in its soul-moving scenes that each one is etched sharply on the reader's mind.

Don't Miss This

You'll Enjoy Every Installment of It

TREE TRIMMING

In the past there has been considerable friction between the farmers and the Traverse City Company over the matter of the trimming of trees along the highway and within the limits of cities and villages.

The farmers are gradually learning that tree trimming as it is practiced by the Telephone Company is a benefit instead of a damage. Very few farmers now are without a telephone, and they are as deeply interested in good clear telephone service as the telephone people. The farmers have discovered that the telephone company employs experts in tree trimming, and that the farmers are rendered a service that improves the appearance of the trees. If fruit trees require trimming shade trees surely do, and it is the purpose of the company to help the farmers and others in this matter.

LIST OF JURORS

Following is the list of Jurors drawn for the December term of circuit court for the County of Charlevoix, to be held in Charlevoix on Monday, December 6th, 1915:

Ed. Adams	Chandler Twp
John Martin	Charlevoix Twp
Stephen Dallard	Evangeline Twp
Fred White	Eveline Twp
Platt Webster	Hayes Twp
G. S. McAfee	Hudson Twp
Jay Adams	Marion Twp
Peter Jensen	Norwood Twp
John Webster	Norwood Twp
Frank B. O'Donnell	Peaine Twp
Lyman Miles	South Arm Twp
Herman Fishner	St. James Twp
Chas. J. Pristol	Wilson Twp
John Thornhurg	Boyne City 1st Ward
Jasper Holmes Sr	Boyne City 2d Ward
John Lewis	Boyne City 3d Ward
Sam Arbaugh	Boyne City 4th Ward
James McGough	Charlevoix 1st Ward
George Bagleton	Charlevoix 2d Ward
James Bogart	Charlevoix 3d Ward
Bert Danforth	East Jordan 1st Ward
Joseph St. John	East Jordan 2d Ward
William Stroebel	East Jordan 3d Ward
William Schneider	Bay Twp

Historical Society

The Charlevoix Historical Society will meet at the home of Mr. and Mrs. H. S. Harsha on Friday evening, Nov. 26th. Following is the program:

Instrumental Solo ... Miss Ida Levinson

Paper

Customs—Religion of South Americans ... Rev. Quinton Walker

Interrupted

Art Science ... Mrs. A. I. Coulter

A Thanksgiving Reading ... Mrs. James Wilkinson

Vocal Solo ... Mrs. James Gaskin

FOR SALE— at less than first cost, three (3) Fine Lots in Crouter's Addition. Parties interested, apply to H. S. HARSHA.

CIRCUIT COURT TERMS

In the matter of appointing the time for holding circuit court in the 13th judicial circuit of Michigan;

Under the provisions of law I hereby fix and appoint the time for holding circuit court in the 13th judicial circuit of Michigan, as follows:

Antrim County:
The fourth Monday in February
The second Monday in May
The second Monday in August
The second Monday in October

Charlevoix County:
The first Monday in February
The fourth Monday in May
The third Monday in August
The first Monday in December

Grand Traverse County:
The first Monday in March
The second Monday in June
The fourth Monday in September
The second Monday in December

Leelanau County:
The third Tuesday in February
The first Tuesday in May
The first Tuesday in August
The third Tuesday in October

Dated this first day of November, A. D. 1915.

FREDERICK W. MAYNE, Circuit Judge.

6 P. M.—B. Y. P. U. Topic—Home Missions. Conditions in Eastern States. Leader, Laura Stewart.

All the officers of the junior and senior unions will be installed by the pastor in this service.

Ready For It.

He was traveling in the South and had to put up overnight at a second-rate hotel in western Georgia. He said to the clerk when he entered, "Where shall I autograph?"

"Autograph" said the clerk.

"Yes, sign my name, you know."

"Oh, right here."

As he was signing his name in the register in came three roughly clothed, unshorn fellow immediately recognizable as Georgia "crackers." One of them advanced to the desk.

"Will you autograph?" asked the clerk his face aglow with the pleasure that comes from the conscious pride of intellectual superiority.

"Certainly," said the "cracker," his face no less radiant than that of the clerk; "mine's rye."—The Argonaut.

Game Game.

"A fake beauty doctor is pursuing the same line of business as a gardener."

"What's that?"

"Grafting peaches."

GOOD FIT GUARANTEED

MR. McLENNAN JOINS OUR STAFF

From The North-West Farmer, Winnipeg

We have pleasure in presenting herewith the portrait of Mr. C. M. McLennan, who has just joined the editorial staff of The North-West Farmer, coming direct from his farm at Rosley, Alberta.

Mr. McLennan enjoys a diversity of experience that should prove invaluable to him as an agricultural journalist. He has taken a course at the Ontario Agricultural College, he has been previously in western agricultural journalism, and, last, but by no means least, he has "made good" at farming on his own account. Though born in Mexico, Mr. McLennan is thoroughly British and Canadian in his instincts, so much so that shortly after the outbreak of the present war he offered himself for enlistment in the 20th Battery, C.E.F., but, owing to a physical injury received in youth, he was rejected by the examining physician.

After completing his technical high school course, he took the associate course at the Ontario Agricultural College, Guelph, finishing in 1910. Going west to Alberta and Montana, he "punched cows" and was foreman of a sheep ranch for two years. From 1912 till early in 1915 he was agricultural editor and staff reporter for the Lethbridge Daily Herald, and as such gained a large acquaintance with the men and affairs of that province. Leaving that position, Mr. McLennan has since been farming on his own account, and has come direct from the grain and threshing machine to our office.

[Old settlers will be interested in knowing that the subject of the above article is a son of Rev. W. E. McLennan, who went into the ministry from this place, where he was raised, being a nephew of the late A. J. McLeod.]

County Normal Notes

Miss Lottie Wright, of Ellsworth, was a visitor of the normal room Wednesday morning.

The normal class visited the high school room Wednesday morning, and listened to a talk given by Rev. Lloyd Vinyard. Mr. Vinyard gave some very good points on habit and higher ideals. The high school orchestra played several selections and everyone enjoyed it very much.

Several of the members of the class attended the evening sessions of the Sunday School Institute, and learned many good things concerning rural districts.

A party was given by the training room children in honor of Miss Whiting Friday afternoon. Refreshments were served by the normal class and the children.

Friday afternoon Miss Himes accompanied Miss Inez Stewart, county school commissioner, and Miss Isabelle Beyer, state school inspector, to several rural schools.

Miss Drusilla Richardson visited the normal room Thursday afternoon.

The rural teachers' reading circle was held Saturday afternoon in the normal room. The attendance was not very large because of the bad weather. The book discussed was "Five Messages to Teachers in Primary Reading," by Nettie Alice Sawyer. Refreshments were served by several members of the class after which several songs were sung.

Rena Carroll and Ruth Chellis substituted for Miss Whiting in the training room Monday morning.

My Hallucination.

"When I take too much quinine for my malaria I have hallucinations," confessed the Old Codger. "It affects my head and makes me think very foolish things. I remember once of getting up and heard people coming in my bread, and for nearly a whole day imagined I was an Hun, and was being shot at by many friends of mine to run for the legislature."—Kansas City Star.

Get All You Can of Fresh Air.

People who spend much of their time out of doors will never be out much money for doctor bills.

SEVEN and one-half acres, close in; will sell at a bargain; well located. Call on or address, H. S. HARSHA.

DO YOU REMEMBER HIM?

From the last number of the Pere Marquette Magazine we take the following:

"We are very sorry to announce the death of our friend and fellow workman, Richard K. Ross, who died on the 10th of October. Mr. Ross leaves many, many friends, all of whom grieve over his decease. He is survived by a widow and two daughters and a son. Bereaved we have the sincerest sympathies of every employe of Ionia shops."

Deceased was a son of the late Alex Ross, a pioneer of Hayes township. Richard left these parts many years ago to enter the employ of the railroad company as a bridge builder. Ross Sr. was a railroad bridge builder before locating in Hayes.

VICE CHARGED TO MOSQUITO

Natives of Tropics Can't Be Moral, is Argument Made by Some Missionaries.

"Those who complain of mosquitoes here ought to be thankful that conditions here are not the same as in Central America," a returned traveler said. "As soon as a man sets foot in the wilds down there he is introduced to this insatiable pest. The mosquito will cling to him in waking and sleeping hours, testing all his power of endurance and leaving him so thoroughly scarred that many a missionary acquires the appearance of one who has heavily emerged from the throes of some deadly and pernicious disease.

In the annual report of the American Bible society, which is to be published for publication, many little distributors testify to the sufferings caused by contact with mosquitoes in the hot belt countries. The insect, not satisfied to be the missionaries' worst enemy. Even the natives are engaged in constant battle with the pests. They prevent sleep, they insect the food, they carry in their trail the germs and spores of deadly infection.

Many missionaries believe that the mosquito is actually responsible for the vicious and corrupting traits of character which prevail among the natives. They can't possibly be happy or moral under the continued torture of continuous stamp by physical comfort, it is argued.

HAVE MANY FINE QUALITIES

Italian Cattle, It Is Thought, Might With Profit Be Imported Into the United States.

The white cattle which predominate in northern Italy are of the Piedmont breed, and are particularly suitable as beef animals. A yoke of them weighs of large size weigh 3,600 to 4,400 pounds. The weight of a fine white cow of the Piedmont breed is 1,310 to 1,540 pounds. Steers attain about 1,900 pounds. The Piedmont bull reaches about 2,200 to 2,420 pounds.

Another breed of white cattle is to be found in Italy, known as Roman. This breed, however, is not, strictly speaking, of northern Italian origin, but comes from the neighborhood of Rome, in central Italy. The oxen of this breed are also particularly adapted as work animals, but are not good for slaughter, their meat being not of such fine quality as that of the Piedmont variety.

There is also a breed of pure white cattle in Italy known as Chianina. These cattle are of enormous size and weight, less adapted to work, but are for slaughter. There are oxen of the Chianina breed weighing from 3,300 to 3,520 pounds each.

It is the opinion of breeders and farmers in this district that some of the above breeds of cattle have been exported to North America. There are many breeders in Italy of the several classes of white cattle, but there are none who raise them especially for export.

Bite of Scorpions.

The bite of a scorpion less than two inches in length is no more irritating than a bee sting. Large ones may may carry a dose of poison capable of producing a good deal of local irritation and causing some alarmness of the system. Strong soda water should be applied locally, ammonia spirits of ammonia may be given internally if the face is pale.

Majestic Theatre Dec. 1st.

FATHER TIME NEVER BLUFFED

Sooner or Later the Old Gentleman Gets Even With Those Who Practice Deception.

Once upon a time there was a lady who wished to have her real age kept a secret. In order to get away with it she instructed her son, in case anyone asked how old he was, to knock off about 50 per cent.

Sth that people the boy was large for his age and explained the grief cons of his voice by saying that his tonsils needed attention.

One day the rector of the church called, and while waiting in the drawing room for the lady to put the finishing touches to her face he talked with the boy, who was pretending to read "Little Lord Fauntleroy" for the seventeenth time. The boy volunteered the information that tomorrow would be his birthday.

"Ah," said the rector, "and how old will you be then?"

"Ten years old," replied the boy, as per instructions.

"Indeed!" said the rector. "I dare say you haven't any idea what your mother is going to get you for a birthday gift."

"Oh, yes, I have," was the unexpected answer. "She promised to give me a safety razor."

When the rector rushed into the hall to see what had caused the loud crash he had hard to find the boy's mother lying on the floor in a dead faint.

Moral: Old Father Time calls all bluffs.

Tobacco Long Known.

It is worthy of remark that although the common clay pipe of England is entirely different in material and form from our original American pipe, it is certain that the former is almost as the first introduction of tobacco, as the latter, and yoke of three of oxen, also.

Clay pipes, supposed to be of a date anterior to this period, have occasionally been found in Irish bogs. An engraving of a dolmen, which was dug up at Brannockstown, sticking between the teeth of a human skull, was found in the "Anthologia Hibernica," together with a paper which, on the authority of Herodotus, Strabo and other ancient writers, would prove that the northern nations of Europe long before the discovery of America, were acquainted with tobacco, or an herb of similar properties, and that they smoked it through small tubes.

What He Didn't Understand.

The soldier was telling the work that about a battle that he had once been in that had lasted from eight o'clock in the morning until seven o'clock at night. His description was most graphic, and he became very enthusiastic as he lived through the stirring scenes again.

"There's one thing I can't understand about the story," said the workman, slowly, when he had finished. "You say that the battle began at eight o'clock in the morning and lasted until seven o'clock at night?"

"Yes, that's so," was the reply.

"Then," returned the workman with a puzzled air, "what I can't make out is how did you manage about your dinner hour?"

Concentration.

It is concentration that counts. The theme of a cent" applied direct is more uncomfortable than the diffused heat of a blast furnace.—Bellotte.

CHARLEVOIX COUNTY POMONA GRANGE

The Charlevoix County Pomona Grange met with the Peninsula Grange Nov. 18th. Worthy Master J. E. Chew called the meeting to order at 10:30 a. m., and business session was held before noon. Appointment of committees etc.

After business session recess was declared for dinner which was partaken of by nearly one hundred Grangers.

Election of officers was held and the following officers were elected for the ensuing two years—1916—1917:

Master—E. E. Stroud.
Overseer—J. Knudsen.
Lecturer—Mrs. S. J. McNeal.
Secretary—Emil Nassen.
Steward—F. V. Liskum.
Chaplain—Mrs. Viola Heiler.
Assistant Steward—Ira Olney.
Gate Keeper—Charles Brooks.
Ceres—Mrs. Claud Bowen.
Pomona—Mrs. Grant Hammond.
Flora—Mrs. Platt Webster.
Lady Assist. Steward—Miss Worden.
Past Master J. E. Chew installed the newly elected officers, assisted by Mrs. Walter Black.

Election was held for Pomona delegates to the State Grange Convention to be held at Ann Arbor December 7. Mr. and Mrs. Terry Barber were elected and Mr. and Mrs. Grant Hammond were appointed as alternates.

Evening session was called to order by Worthy Master E. E. Stroud. Past Lecturer, E. H. Clark took charge of the program.

Hon. J. Holcomb, agricultural lecturer of U. J. H. S. gave a very interesting talk of his work in high school.

Miss Becker, assistant of State Board of Public Instruction spoke on improvements in the rural schools.

A short talk by our County School Commissioner closed the evening program.

Seven members were obligated and instructed in the mysteries of the fifth degree by Worthy Master E. E. Stroud.

An invitation was accepted to have next Pomona meeting with Wilson Grange.

EMIL NASSON, Sec.

Board of Education

Charlevoix, Nov. 16, 1915

Regular meeting of the Board was called to order by vice-president Bridge. Trustees present, Bridge, Glassford and Hiller. Absent, Hampton, Nordman.

The treasurer's report showed a balance on hand of $15.61.

The following bills were presented and read:

General Fund

537 A. E. Mason, lab. supplies	$ 4.10
538 Underwood Typ. Co., ptrs	1.50
539 Cook Light	6.00
540 Charlevoix Hardware & Sewer	1.50
541 Charlevoix Pub. Co., ptg.	2.50
542 Charlevoix Supply Co., ins.	16.00
543 Jedlicka & Hegerman, ins.	5.00
544 Jedlicka & Hegerman, ins.	5.00
545 Jedlicka & Hegerman, ins.	5.00
546 Mackinac Pub. Co., ptg.	2.50
547 Northern Tel. Co., tolls	1.20
548 Perry Picture Co., pictures	6.00
549 Jedlicka & Hegerman, ins.	5.00
550 Mackinac Pub. Co., ptg.	2.50
551 Mich. Tel. Co., tolls	1.00
552 Northern Tel. Co., tolls	1.00
553 Perry Picture Co., pictures	6.00
554 Jedlicka & Hegerman, ins.	5.00
555 A. E. Mason, lab. supplies	1.00
556 Mich. Tel. Co., tolls	1.00
557 A. E. Mason, lab. supplies	1.00
558 Ann Arbor, Library	2.00
Teachers' Fund	
7 Teachers, at $4.00	28.00

Moved and supported that the bills be read, allowed and the secretary be instructed to draw orders on the various funds for the amount of each respective bill. Motion carried.

Moved by Hiller and supported by Bridge that the treasurer be authorized to borrow $1500 on the best terms obtainable. Motion carried.

These minutes were read and approved and on motion the Board adjourned.

E. J. HILLER, Sec'y.

FOR SALE—Resort cottages well located. Houses and lots in any part of the city, also 14 acres close to city. Apply to H. S. Harsha.

Beaver Island News

Mrs. Ed. B. Gallagher and Mrs. Jas. Burns returned home Thursday after attending the funeral of their brother, John Barry, at Saginaw.

Miss Sylvia Sembenbargh is spending a few week at Charlevoix visiting friends.

Mr. and Mrs. Harry Hartwig returned home Thursday after spending a few days at Charlevoix.

Miss Rose Green returned home from Charlevoix where she was the past month.

Mr. J. McGann returned home Thursday from Green Bay.

Ed. Main and J. W. Cruse, of Chicago, returned home Monday after spending a couple of weeks at Windwood.

Fred Nackerman returned home Monday from Manistique.

Rev. E. J. Jewell went to Petoskey Monday to attend the Jubilee at St. Francis church.

Glenn Warden J. B. Eddy is here on business.

Lafreniere's lath mill is running now.

Mike Coll went to Charlevoix Monday on business.

H. K. Balch returned home Monday after spending a week here calling on his trade.

Stephen Ulman and family, of Minneapolis, are here buying a farm.

Fr. Martin Gallagher and Jane McDonough were up from High Island Sunday.

George La Blance went to Charlevoix Monday on business.

Peter McCauley returned home Tuesday from Sleeping Bear where he was visiting his son Patsy.

Miss Ruth Gatliff, of Big Rapids, is here visiting her mother, Mrs. Annie Gatliff.

Frank Floyd returned home Monday from Charlevoix where he was on business.

Hugh H. Boyle spent several days at Charlevoix on business.

Dominick Gallagher, of Fountain, arrived Tuesday to visit his brother Chas.

Barney Mooney and Glen McCafferty returned home Wednesday from Manistique.

Barnard Doings.

Mr. Clarence Beattie had a barn raising last week.

Mr. D. Spade and son Will are hunting in the upper peninsula.

Mrs. Charles Townsend left Tuesday for an extended visit at St. Johns.

George Willis and Clifford Mayhew are working at Pellston, Mich.

Mr. Isaac Mills is making a religious canvass for the Barnard Sunday School.

George Agar and Louis Shapton have secured employment at Mackinaw City.

Mr. and Mrs. H. Potter Sr. have returned from a visit in the southern part of the state.

A meeting of the S. S. board is called for Friday night at seven o'clock at the home of Mr. Will Burns.

Mrs. Sim Baker entertained with a "ten cent tea" at her home Thursday afternoon. Eight ladies enjoyed a thimble party and light refreshments were served.

Mrs. D. Spade was hostess to a small company of friends at her home Thursday afternoon. A good time is reported and another dollar for the Ladies' Aid treasury.

At the regular church hour on Sunday the meeting was in charge of the delegates who attended the convention at Battle Creek and those who attended the Institute at Charlevoix.

The school children under the direction of Miss Cora Driggett will give a Thanksiving play in the church on Wednesday evening. Proceeds to be used toward making our school a Standard School.

Mrs. Reed's little daughter was seriously burned on Tuesday of last week when a teapot at the table upset, scalding the child's face, arm and body. The burns are healing rapidly and it is thought no permanent scars will result.

Who's afraid of the storm? Another fine session of Sunday School. Good attendance and fine collection. Forget your rheumatism and join our umbrella brigade. Be out next Sunday and bring one.

Rev. D. A. Rood, Mr. and Mrs. Will Burns, Mr. M. Larber, Mrs. Wm. Shapton, Mr. and Mrs. A. B. Clarke, Mrs. A. Clarke, Miss Shapton, Earl Shapton, Mrs. W. N. Lewis and Mr. John Smith attended sessions of the Religious Institute at Charlevoix last Tuesday and Wednesday.

When the cats away the mice will play"—the Potter boys acted as hosts to about twenty-five young people on Tuesday evening. Two auto busses gathered the young people from Charlevoix and vicinity. The evening was spent in a jolly way with games and games and the boys "met the queen." About midnight refreshments were served and in the "wee small hours" the guests were taken home. All reported the best time ever.

Petoskey News: The first robbery Petoskey has had in some time occurred early Thursday morning when between the hours of 2:30 and 4 o'clock someone entered the Petoskey Transportation, ransacked the ticket office, scattered tickets everywhere, knocked the heads off the safe, went through the cash tills, but failed to get anything but a few pennies and what pennies there were in the gum machines and weighing machine, the keys of which he found in the office. Night Operator Malcolm was asleep in his room on the second floor of the building and was awakened by the burglar in the office below, but not having a gun or anything with which to defend himself or attack the burglar he wisely remained where he was. He says he heard the man in the office and then go to the basement. In the basement he turned and had a heavy iron bar used for breaking up coal and with this tried to open the safe.

IRRITABLE CHILDREN OFTEN NEED KICKAPOO WORM KILLER

There is a reason for the disagreeable and fretful nature of many children. Think of the unrest when the child's body is possessed by tiny worms sapping the vitality and clogging the functions. Whatever may be the causes, vital children have worms is a fact. Your child's peevishness and irritability has a cause. Give Kickapoo Worm Killer a chance and if worms are there this humanly harmless remedy will eliminate the annoying parasites. 25c. a box.

SWEATERS For WOMEN

"V" neck or Shawl Collar, sale price from $1.69 to $4.99

MASON'S DEPT. STORE

TURKEY is the GREAT AMERICAN BIRD

THE turkey is truly an American bird. It existed on this continent with the Indians before Columbus landed. Only a few years ago among the caves of Arizona the mummified remains of a turkey were found. Practically every cave once occupied by the cliff dwellers of that region contained the bones or feathers of the turkey, but this specimen is intact. Its age is a matter of speculation among the scientists of the Smithsonian museum, where he repose in an exhibition.

Another interesting fact in this same connection resulted from a scientific expedition which Dr. C. Hart Merriam made among the mountains of Arizona; he came across a living species of bird identical with the one found mummified and which is now known to the scientific world by his name.

Another recent discovery in connection with the turkey was a Maya hieroglyphic. This piece of parchment shows a grower—woman in wampum mentioned, with other things, ten turkey hens and five turkey cocks. This is thought to be the first record of the turkey in this country and antedates the expedition of Cortez to Mexico in 1519.

But the turkey goes back farther among the Indians than even the probable date at which the specimen found in the cave existed. Among the Zunis, for instance, there exist many legends, handed down from time immemorial, which have for their subject the turkey.

The turkey plays a more important part in the life of the Indian than in his legends alone. Not only is it regarded as a choice article of food, but in many tribes it is held sacred. In the parts of the country where the turkey was worshipped—with that curious devotion to animals which characterizes different stages in the development from savagery to civilization—it was never eaten except when other food was unobtainable. And even then separate portions were divided among various tribes so that the religious custom would not be violated.

Turkey feathers rank next in importance to those of the eagle with all tribes, while the Apaches, the Pamunkey and Cheyennes chose the turkey's feathers for all ceremonial head-dresses and ornaments. The Pamunkey tribe also used turkey feathers for decorative purposes on their clothing, as well as for their headgear. To this day they dye their feathers for costumes, the turkey feather is preferred as ornament.

If Benjamin Franklin's words had been heeded the turkey would have been the national bird of the United States. The eagle is a first cousin to the species known of old in the eastern hemisphere. Furthermore, it has appeared upon the banners of many nations. It was a symbol of the Roman empire. It was known in China for ages, and today it appears on the banners of Russia.

"Contrary to popular opinion," he wrote, "the turkey, however, is indigenous to America. When the early European adventurers and settlers arrived they beheld great flocks of turkeys, and it soon became known that they were a favorite food among the Indians. After a while turkeys were profitably sent home, as trophies of the chase. In this way the turkey became practically a world-favorite as a food.

When Cortez, in 1519, ascended to the plateau of Mexico, he found a social life developed to a high degree of refinement. He was entertained with oriental magnificence. All the delicacies to be found within the empire were set before him; and though game was abundant, the turkey held the place of honor among the fowl. This was the first time that the Spaniards had eaten turkey, and the experience proved a most satisfying one.

They also saw the great tame flocks of the birds. In fact, since prehistoric times the turkey has been domesticated and raised for market. Today, in Mexico, many of the quaint customs that have begun and ended ages ago still live. And as it is that the purchaser of today may select his choice of a fowl in the village street, Or, if he prefers, the vendor will offer it alive to his door for inspection, fresh from the farm.

North of the Indian domain the turkey was equally well known, and treasured. The celebrated expedition of Coronado, between 1527 and 1537, pointed this unexplored region west of the Mississippi. His explorations were chiefly in what is today Texas, Arizona and New Mexico, the home of the cliff-dwelling Indians of the Southwest, in and the Indian villages, according to those early explorers, turkeys were to be found, both wild and domesticated.

From America the turkey has spread to be a world favorite. But the fact that today the turkey is considered a delicacy is so many lands is due to human agencies, and not to the turkey itself. Slow of movement and deliberate only in beginning flight and in the choice of its alighting, the turkey amazed would-never have become known outside its native habitat.

Cortez, in one of his famous letters written to Spain, mentions the turkey. He carried specimens of the bird to Spain in 1520, where they came into immediate popularity, and the breeding of turkeys soon became established. It was then that the turkey became known as "pavo," or peacock, from its resemblance to the peacock, which was then called "pavo real"—the peacock of kings.

It was a long time before the turkey reached France, as far as can be learned from history, for the first turkey eaten there was at the wedding of Charles IX and Elizabeth of Austria, June 27, 1570, or 50 years after Spain had first tasted the bird. The turkey supplied for the wedding came from "somewhere in the American wilderness."

Its introduction into England seems to have been in 1524. But, whenever it was, it soon came into popular favor and was given such local names as Black Norfolk and Large Cambridge.

It is an interesting fact that these descendants of the parent stock were carried back again across the Atlantic ocean to New England, where, crossed with the original turkey already there, they began the breed that has spread from one end of the country to the other.

As in this country, the turkey has come to be looked upon elsewhere as a holiday feast attraction.

In the early colonial days turkeys were still abundant in Massachusetts, the rest of New England, Maryland, Virginia, the Carolinas and Florida, while in the last named states the turkey is still found as a native wild fowl, although in greatly decreased numbers.

But a short distance from Richmond is a small island inhabited by a tribe of Indians, the Pamunkeys. They are part of the Powhatans, and under a old colonial treaty they pay no taxes and have their own government. They must, however, send to the governor of Virginia each year a gift of game or fowl; and very often this gift takes the form of several large, plump turkeys.

Many have been the explanations made as to how the bird now so popular at Thanksgiving came to be called the turkey, most of which, to the true scientist, are nothing but tasteful. One such is the explanation that it comes from the East Indian word "toka," which, in Hebrew, takes the form "tukki," the peacock. As the Jews in South Europe were acquainted with this fowl, which is related, it is assumed that they naturally applied the word to the turkey wherever it was introduced into Spain, and that thereafter it was so called.

Such a roundabout way explanation, say those who know, is entirely unnecessary. The bird was called turkey because it was supposed to come from Turkey, where it was known as an Egyptian bird. This, it is claimed, is merely in accordance with a habit very general in the Christendom century, whenever new and strange things were presented to an ignorant public, knowledge spread slowly, but superstition was quick and universal. Thus, when the first packets of North Europe received this fowl as coming from South Europe, directly or indirectly from Turkey.

In France, however, the bird was called "dindon," or in the feminine "dinde," as though it were the fowl of India—from India. The Mexican name for the bird, "guajolote," which Sahagun claims, indicates the old Aztec knowledge of the turkey.

But whatever dispute has arisen as to the name of the turkey, the fact remains that the turkey is indigenous to America. Although scientists believe it is possible that there was a species, the original of the present turkey, indigenous to the West Indian islands, it is generally conceded that all turkeys have descended in some way or other from the three forms known today as the North American, the Mexican and the Honduras the southern variety.

The Mexican turkey is found wild throughout the republic. It is short in shank, with bare skin on the body of a metallic black shaded only slightly with bronze, while all its feathers are tipped with white. This appears to be the species first taken to Spain and other European countries. It is thought that the white variety of the various of domestic turkey known today as the "Narragansett" come from this species.

The Honduras turkey today is scattered all over most of Central America and is extremely wild. It has a freer flight than its cousins of the North. The head and neck of this bird are naked. The ground color of the plumage is a beautiful bronze green, banded with bold bronze, blue and red, with bands of brilliant black. This bird, however, cannot be bred successfully nor domesticated away from its native habitat, while even there it can hardly be successfully domesticated.

The bronze turkey, that variety which today holds the place of honor in the North American group of turkeys, is outdone by none when it comes to beauty or size.

In the United States there are six standard varieties recognized and grown. They are the bronze, Narragansett, buff, slate, white and black. The chief differences are in size and color of plumage. The bronze and Narragansett are the largest, the buff and slate medium, while the white and black are the smallest. Within late years, however, the white variety has reached such a point of popularity that it has increased in size until with some dealers it contests for first place.

Whatever the turkey may have missed through failing to secure that place of honor suggested for it by Benjamin Franklin—as the national bird—it has nevertheless found a place in the regard of the American people which is held by no other fowl.

POSTSCRIPTS

Japan will build at Tokyo an astronomical observatory the equal in size and completeness of anything in the United States or Europe.

An attachment has been invented to be snapped over skate runners to per mit a person to walk over the ground without removing his skates.

Electric locomotives have been built for a German railroad having heavy grades that draw loads of 230 tons at a speed of 45 miles an hour.

For retail dealers there has been invented a machine that will take cream from a pile and pour it into bags for bottling at the rate of 35 tons an hour.

Scarlet Fever and Milk.

Scarlet fever is practically unknown in the tropics and doctors say this is because so little fresh milk is drunk there. The streptococcus, which occurs in large quantities in most raw milk is always present in scarlet fever and experts see in that a cause and effect.

ON UNCHARTED RIVER

VESSELS' CAPTAINS HAVE TO TRUST A LOT TO LUCK.

Navigation on the Skeena, in Northwestern Canada, Is by Means a Matter of Skill—Man Tells of Experience.

The frontier is the place for makeships and stop-gaps. Beneath lands that will serve must be made to do. Thus when you take a steamboat on the Skeena river in northwestern Canada you must expect neither the comfort nor the safety you take for granted on the Hudson. The author of "The New Garden of Canada" writes.

The bronzed captain standing on his brine-sodden his head significantly at the waterway boiling and rushing at our feet.

"We don't navigate this river; we juggle our way down it!" he said.

"And if you don't do the trick neatly, what then?"

"Oh, we just go to the bottom, that's all. We manage as a rule to pump her nose into the bank and give the passengers a chance to get off."

"What happens if you lose the boat?"

"They give us another in double-quick time. We have no board of trade inquiries out here. What's the use? No one has a chart of this river; it never even was two days alike; remains are few and far between. If you lose the boat, it's just hard luck. That's all there is to it."

Such is the Skeena river steamship captain's happy-go-lucky philosophy. It is typical of those who have to cope their way up and down this freely moving channel of water. These men have to learn from experience where the innumerable dangers lurk, unseen, and knowledge of the position of a great many rocks has been gained in the Irish pilot's manner, by scraping the boat's hull over them, generally with no benefit to the boat. Numberless boats have gone down. Why, in one year the Indian traffic between Hazelton and the coast was tied up just because every boat had bit hard luck, and was either a rusting, shattered hulk at the bottom or lying a wreck on the bank. The Indian canoe was for months the only available vehicle of transportation.

We soon came to close grips with the foe. We had cast off the last rope, and the speeding waters picked up our little vessel and hurried her away. Instantly we found ourselves in the river bubbled and frothed, with fringe of whining foam indicating the presence of sharp rocks just below the surface ready to give a savage snap at the boat if she ventured too close. The captain's telegraph rang continuously the engineer never left his station for an instant. Clang followed as bell after clang that it was strange that the engineer could interpret the instructions correctly and without hesitation.

In this upper stretch the worst place is the "Hornets' Nest." Certainly no band of yellow jackets was ever readier to sting the interloper than are those jagged rocks. The surface is merely an expanse of short, choppy, milky waves tumbling and foaming in all directions. The steamer passes through strange contortions to steer clear of this, that, and some other rock. It is a fearsome performance for the passengers that the boat, scraped shallow deep too often there is only an inch or two between a granite tooth and the bottom of the boat, sometimes, it is said, it is so when the water is low.

A few seasons ago one boat was pulled warily up, hand over hand, by means of a line, when there was a jar and a scrape. Half the hull had gone, and the captain just managed to run her ashore. Another boat, another craft, lower down, heard of her sister's fate and hurried to her assistance. But she had not gone far when there was another greedy snap and she, too, was pulled down to some way or other from the three forms known today as the North American, the Mexican and the Honduras the southern variety.

The Mexican turkey is found wild throughout the republic. It is short in shank, with bare skin on the body of a metallic black shaded only slightly with bronze, while all its feathers are tipped with white. This appears to be the species first taken to Spain and other European countries. It is thought that the white variety of the variety of domestic turkey known today as the "Narragansett" come from this species.

The Honduras turkey today is scattered all over most of Central America and is extremely wild. It has a freer flight than its cousins of the North. The head and neck of this bird are naked. The ground color of the plumage is a beautiful bronze green, banded with bold bronze, blue and red, with bands of brilliant black. This bird, however, cannot be bred successfully nor domesticated away from its native habitat, while even there it can hardly be successfully domesticated.

The bronze turkey, that variety which holds today the place of honor in the North American group of turkeys, is outdone by none when it comes to beauty or size.

In the United States there are six standard varieties recognized and grown. They are the bronze, Narragansett, buff, slate, white and black. The chief differences are in size and color of plumage. The bronze and Narragansett are the largest, the buff and slate medium, while the white and black are the smallest. Within late years, however, the white variety has reached such a point of popularity that it has increased in size, until with some dealers it contests for first place.

Whatever the turkey may have missed through failing to secure that place of honor suggested for it by Benjamin Franklin—as the national bird—it has nevertheless found a place in the regard of the American people which is held by no other fowl.

GATHERED-UP FACTS

Under British rule alone there are more than 20,000,000 dwellers in the tropics.

Experiments have shown that paper pulp can be economically made from the stalks of the millet that grows profitably in Manchuria.

Investigation in Germany has shown that the partridge eats the seeds of many noxious weeds and insects destructive to plant life, therefore deserves protection.

Vice-Consul Caspar L. Dreier of Singapore notes that American plaster ing is rapidly coming into prominence as a staple rather than a subsidiary industry throughout British North Borneo.

To Clean Ceiling.

When the ceiling above the gas jet has become darkened from lost or smoke, apply a layer of starch and water with a piece of flannel. Let it dry and then brush off lightly with a brush. No mark will remain.

DIDN'T IMPRESS HIM MUCH

But Listener Was Ready to Admit That He Heard the Sermon Under Difficulties.

A new minister in a rural district who wished to make the acquaintance of the members of his congregation, and also to discover whether they were pleased with his discourses, met an old farmer whose face he recognized as one who had attended the church the previous Sunday, and, stopping him, said:

"Mr. Brown, how did you like my sermon last Sunday?"

"Well, parson," replied the old man, "you see, I didn't have a fair chance to judge. Might in front of me was old Man Smith and the rest of that gang with their mouths wide open just a swallerin' down all the best of your sermon; so what reached me, parson, was purty poor stuff, purty poor stuff."

When all others fail to please
Try Dennison's Collet.

An ordinary bookkeeper's hand travels about 10,000 miles a year over ledger pages.

Familiar to him.

Judge Clayton of Alabama tells of a case in a court of that state in which the first witness called was an aged colored man.

Before he was sworn the presiding magistrate directed that the usual question be put to the fellow, "Do you know the nature of an oath?"

The old colored man shifted himself from one foot to the other before replying. A sly grin crept into his face. "Yah, Judge," said he. "I can't say how its sold most folks; but, yo' bomeh, I reckon it's sorter secon' nature wid me."

More Important.

"Has your son passed out a career for himself yet?"

"Heavens, no! It takes all that boy's time picking out socks and neckties."

Not Gray Hairs but Tired Eyes

Out of Sorts

THAT IS, something is wrong with baby, but we can't tell you what it is. All mothers recognize this form by the lassitude, weakness, loss of appetite, inclination to sleep, heavy breathing, and lack of interest shown by baby. These are the symptoms of sickness. It may be fever, congestion, worms, croup, diphtheria, or scarlatina. Do not lose a minute. Give the child Castoria. It will start the digestive organs into operation, will drive the poisons off the foetid matter, and drive away the threatened sickness.

Genuine Castoria always bears the signature of Chas. H. Fletcher.

Warner's Safe Remedies

Warner's Safe Remedies have proven their worth as superior to others for more than thirty-five years' world-wide use. They have given remarkable results in the treatment of numberless severe and almost hopeless cases.

The world is glad to know this; the many who have been benefitted by their use know their great value.

Warner's Safe Remedies are carefully prepared, each for the relief of a separate and distinct ailment.

Each for a Purpose

Warner's Safe Diabetes Remedy, in vials $1.00
Warner's Safe Rheumatic Remedy $1.25
WARNER'S SAFE DIABETES REMEDY $1.25
Warner's Safe Asthma Remedy 75c
Warner's Safe Nervine 50c and $1
Warner's Safe Pills (Compounded) 25c

All druggists, or we will prepay postage on receipt of price. Free Sample of any one remedy, giveaway the paper you read. Address WARNER'S SAFE REMEDIES CO., Rochester, New York

Every once in a while one hears of a frank baseball manager who admits that his team has a chance to win.

Nearly two-thirds of the farmers in New York state buy butter instead of making it.

Stock Farming Profitable in the Panhandle

Millions of acres of fertile Texas land along Rock Island Lines available for settlement to actual farmers.

One wheat crop in a good year often pays for the whole farm.

J. C. Eable of Groom, Texas, had 600 acres in wheat this season averaging 25 bushels per acre. A total of 15,000 bushels which sold at about $1.00 per bushel.

Stock raising and dairying pay a good profit every year. Ten dollar land produces the feed for fattening beef or pork.

Rock Island Lines have no lands for sale, but we have issued reliable, up-to-date information relative to farming opportunities in territory we serve and can give prospective settlers impartial, trustworthy data as to agricultural possibilities in Rock Island State Southwest. Homeseekers tickets on sale first and third Tuesdays of each month.

Write me for full particulars at once.

Jim's Decision

By H. M. EGBERT

Jim Bennett sat on the sand of Tantan Island and looked out across the sea, as he had done each day for more than a year. Everybody in Tantan knew Jim Bennett, and the rugged-seat beachcomber sneered when his name was mentioned. It was not so much the depths to which he had fallen as the fact that he had fallen so far.

Three years ago he had left San Francisco to make his fortune in the South seas and come back to marry Elsie Dale. But her father was many times a millionaire, and had other ideas for Elsie's future. Everything depended, then, on Jim's making good fine clothes, cigars, all the physical luxuries which he had been denied so long. And—he would marry Elsie at the first opportunity, to keep his hold on her.

He got up and dressed. He was just about to leave the room when the young man entered. He surveyed Jim with a grimmer smile than before.

"You haven't shaved off your beard," he said.

"No," said Jim thoughtfully. "It looks—more manly, I think."

The other looked at Jim in contempt. It penetrated the mild skin. Jim winced. It was the first moment of self-realization in many a year.

"Why have you done all this for me?" he asked, looking at the other curiously. "Do you know, I believe I believe you are in love with Elsie yourself."

"Miss Dale from you, please," replied the other. "Yes, I am in love with her, if you wish to know it. And if I hadn't found you I think she would have married me."

"Then why did you find me?" muttered Jim.

The other choked down an expletive. "If you're ready," he said coldly, "we'll start right away."

Jim went out with him. And now, surveyed by the curious inhabitants of the island, he, the target of their sneering glances, Jim felt another emotion than he had ever felt before in all his life. And for the first time he realized the understood the depths of his degradation.

He had been a wanderer beachcomber, while she had waited for him, believed in him. He was utterly worthless. He could not decide that he ever had lived in the life of his own. He had thought of nothing but the Dale millions, nothing at all of the love that had been true to him.

Unconsciously he held his head higher and flung back the scornful contempt, the hatred, the disgust heaped on him which would kindle the old fire?

He knew that his past was utterly dead. And so, walking at the side of the young man, he spoke to him.

"Bennett, I'm sorry for you. Elsie is coming down in one of the island schooners. Wait for her. Tell her I'm sorry, but that I can't see her. Tell her I'm going to make good. Do you think you can get washed and cleaned and have a new suit and good linen on your back, ready to sail on the ship tomorrow?"

Jim pocketed the money mechanically. "I suppose so," he muttered. "What's your hurry?"

"Because," said the other gravely, "Miss Dale is on board. That's why I'm going to make good. I don't deserve your luck."

Somehow the new clothes, the luxury of a bath, had put new manhood into Jim. He lay in bed early in the morning in the hotel and speculated what he would do with the Dale millions. He would go to San Francisco, of course. He would build a palace there. He would have automobiles, fine clothes, cigars, all the physical luxuries which he had been denied so long. And—he would marry Elsie at the first opportunity, to keep his hold on her.

He got up and dressed. He was just about to leave the room when the young man entered. He surveyed Jim with a grimmer smile than before.

"You haven't shaved off your beard," he said.

"No," said Jim thoughtfully. "It looks—more manly, I think."

The other looked at Jim in contempt. It penetrated the mild skin. Jim winced. It was the first moment of self-realization in many a year.

"Why have you done all this for me?" he asked, looking at the other curiously. "Do you know, I believe I believe you are in love with Elsie yourself."

"Miss Dale from you, please," replied the other. "Yes, I am in love with her, if you wish to know it. And if I hadn't found you I think she would have married me."

"Then why did you find me?" muttered Jim.

The other choked down an expletive. "If you're ready," he said coldly, "we'll start right away."

Jim went out with him. And now, surveyed by the curious inhabitants of the island, the target of their sneering glances, Jim felt another emotion than he had ever felt before in all his life. And for the first time he realized the understood the depths of his degradation.

He had been a wanderer beachcomber, while she had waited for him, believed in him. He was utterly worthless. He could not decide that he ever

DOINGS OF THE VAN LOONS

You can't blame Father for what the folks imagine

INSURING LIVES OF OTHERS

Practice That is Largely Prevalent, Though it is Illegal—How It Is Done in the Trenches.

A recent case before the courts threw considerable light upon the penchant some people have for speculating in other people's lives. One women held life insurance on her parents her children, her motherin-law, her brothers and several friends. Of course that sort of thing is illegal, but it seems to be a flourishing business nevertheless.

But hose detayed maketh the heart sick and after the fourteen have kept the premiums paid up to pretty well the amount they would gain from the insurance company, they are their profit melting away and call the law to free them from their incestuous claiming their premiums back on all sorts of ingenious defenses.

Rather a rotten business but we are assured that it is much more prevalent than we have an idea of. There must be a tremendous temptation to assist fate at times, and in any case, when relatives form the chief investment on these lines, it must be rather exasperating to have them politely informs us that they are "quite well, thank you."

Can results that scandalous "comic" song that had such a vogue a while back wherein an irritated hobby sang that he was story book with a wad of death staring him in the face?

Some of the stories of the "scamp stakes" in the trenches are equally disturbing. The name of each man in the regiment going into action is put into a hat and every man puts up a franc. The money is divided between those who drew the name of a man who is still alive or unwounded at the end of the day! A soldier can spite a chap holding his name by deliberately courting the attentions of a bullet. On the other hand, it tends to make them tenderly considerate of each others lives and urgent admonitions to "take care!" are not necessarily disinterested.

What's a Boy Made For?

How different a Satwa dwarf boy from the American boy mentioned in the following paragraph from a Detroit exchange: "There was a big icicle hanging in the corner just over a store door on Michigan avenue, and as the weather softened up, and people became afraid to enter the building, the proprietor came out to a crowd on the sidewalk to see what could be done. 'Somebody might hit it from the roof,' suggested one. 'Or you might get one of the long fire ladders,' observed a second. 'I think a charge of buckshot would bring it down,' said a third man, as he closed his left eye and took a long sculint. A boy about twelve years old came along just then, and when he understood the situation, he inquired of the crowd: 'Will you give us fellers a nickel to get her down? Yes, five of 'em.' 'Gimme a tater!' A good-sized potato was handed him, and he stepped back into the street, peeled off his coat, and sent the taber whizzing. It struck the icicle at the butt, and brought it down with a great crash and in the crowd dispersed, the boy pocketed his quarter, and humbly observed: 'Wonder what they thought a boy was made for, anyhow?'

For Another Euripides.

If some poet or dramatist as great as Euripides were to rise from the wreck of this war and write of what he had seen he could not better the denunciation in "The Trojan Women" which runs, in part, "How are you blind, ye leaders down of cities, . . . recreatives so soon to die." Those lines were spoken when this play was presented in the new stadium of the City college. They brought home to all who heard them the shameful realization that Europe has sloughed a venear of civilization and is back where it was six centuries before the birth of Christ, when ancient Greece, too, believed that she had escaped from barbarism and did not see the writs then impending. In France, in Belgium, in northern Italy and on the windy plains of ancient Troy those shade of Euripides might again denounce those "that cast temples to desolation lay waste cities, and the untrodden sanctuaries where lie the ancient dead." In Lorraine and half the fair Europe has reverted to the days of the cave man.

Keeping Out of It.

"If I were you I'd see a clairvoyant before buying this $50 set of 'Famous Prohibition Speeches' on the installment plan."

"The idea! I don't believe in clairvoyants."

"Neither do I, but she would probably charge you $5 for advice and then you wouldn't have spent the money to make the first payment on the books."

Gets Along Without It.

Hudson Maxim, the inventor, has an artificial left arm. He lost his real arm experimenting with explosives, but he can manage the steering wheel of his automobile better than half the people who own cars. He had to give a demonstration of this before the authorities would grant him a license.

"To the Gallows' Foot—and After!"

Would You Go There?

Would you stand by your lover's side in the shadow of the gallows and try to protect him in the face of overwhelming evidence of guilt?

The

Thousandth Woman

did, and never for a moment lost her loyalty to her lover and friend though all the evidence in the world seemed dead against him.

This is the story of the one woman in a thousand. It is a great mystery story. It is more—a character story so strong that the reader hangs breathless on the fate of the man and woman he knows and likes.

By Ernest W. Hornung

Author of "Raffles," "The Amateur Cracksman," Etc.

It is the new serial we have secured and the first installment will appear in an early issue.

You Must Be Sure To Read It

HAS EARNED ITS POPULARITY

Turkey Welcomed in Every Country Where the People Appreciate Good Things to Eat.

In every corner of the globe almost, or least, where civilization has spread its epicurean tastes, may be found the domesticated turkey—not, however, of his own volition. Never would he, in his wild state, have sought to cross the stormy seas to find green fields and pastures new.

He is not so constructed. He is not bold or adventurous of disposition. On the contrary, he is timid and mighty afraid of things he does not understand, and when undertaxed is prone to let well enough alone and get along with his accustomed feeding grounds.

Again, as a flier the turkey is not a pronounced success. He flies ponderously, almost painfully, and with great effort and only when much frightened. His flight can be accomplished for only a short distance, but what the wild turkey lacks as an aviator he fully makes up as a sprinter.

He can outrun a race horse, especially in his own native forest, where undergrowth and bushes seem but to add to his speed. But he could not have flown over the ocean even if he had had that unnatural desire.

He was taken over by the band of man, first to Spain, then to other Mediterranean countries, to northern Europe, to the far East, until now he is wellnigh omnipresent. And this spreading out of his kind even unto the ends of the earth is all due to the entrancing qualities his meat takes on when properly baked or roasted.

Ate Meat at Death's Door.

Ruskin, when at death's door, enjoyed food with high indigestible. During a visit to Matlock in 1871 he was seized with an attack of internal inflammation, which nearly carried him off. Mrs. Arthur Severn, who nursed him, records that at the crisis of his illness, "he hungered—to our horror—for a slice of cold roast beef. It was late at night, there was none in the hotel, and Albert Goodwin went off to get some anywhere he could.

"At last, at an eating house in Matlock bath, he discovered some, and came back triumphant with it, wrapped in paper. Mr. Ruskin enjoyed his late supper thoroughly. Though we anxiously waited till the morning for a result, he had done no harm, and to everybody's surprise, he recovered."

Two Sorts.

One man burns his house for the insurance. Another applies the torch to his home because he has been promised a nice long visit from the following relatives, to-wit: His second cousin, Mrs. Oliver Mallinga Sporgewage, who possesses more double calias than the laws of physical property permit; her five children, all of whom have musical, elocutionary or historic talent, except the third one, who steals everything he can lay his hands on; and her old maid sister, who has been nursing to the grave for 18 years from a mysterious malady, which makes it necessary for all her whims to be catered to promptly or she will have one of her spells and probably burst something—Kansas City Star.

How to Cure Colds.
Avoid Exposure and Drafts.
Eat Right. Take
Dr. King's New Discovery.
Your Cough and Cold begin to get better as soon as you take Dr. King's New Discovery. It is prepared from Pine Tar, healing balsams and mild laxatives. Dr. King's New Discovery kills and expels the cold germs, soothes the irritated throat and allays inflammation. It heals the mucous membrane. Search as you will, you cannot find a better cough and cold remedy than Dr. King's New Discovery. Its use over 45 years is a guarantee of satisfaction.
"From exposure I had a cough and cold contracted that nearly put a stop to me. While looking for something to ease the irritation that bothered my throat and lungs, a friend advised "Dr. King's New Discovery." I bought a bottle, the first dose helped and before the first bottle was gone my cold was well."—J. Spoons, Guthrie, Ark. At all druggists.

CALLS NEW FRUIT EGGATOM
Truck Farmer in Indiana Grows New Vegetable From Tomato and Egg Plant.
In a Marion, Ind.—P. Dan George, a truck farmer of this place, has succeeded in producing a new vegetable by grafting the tomato upon the egg plant. He calls it the "eggatom."
The yield of the new plant is enormous. The fruit is of deep purple color on the outside, but on the inside is red. It is almost free of seed and is much larger than the tomato.

COMPLEXION BLEMISH?
Yes, that sluggish liver often causes it. Dr. King's New Life Pills clears the complexion, throws off impurities and relieves late naturally and easily. Unless the bowels move freely and regularly all the power in the world will not permanently cover "that muddy complexion." Use laxative in mild, yet effective Dr. King's New Life Pills. You will not dispute the merits of Dr. King's New Life Pills. Start a treatment today. At druggists.

Sudan Grass.

Sudan grass yields from one to eight tons of cured hay an acre.

Great Ruler's Subterfuge.

In order to hide his ignorance of the art of writing Charlemagne was wont to use a monogram stamped on a seal as his signature.

Care of Goldfish.

A globe of two or three goldfish with a bit of green seaweed makes a pretty centerpiece, and they are inexpensive and easily cared for. They should be placed at some distance from stove and register and not in the rays of the sun. They endure extremes of cold rather than heat. In the bottom of the globe place some small stones a bit of sand, a little charcoal and a sprig of cabomba, a fine water plant. Feed them a little at a time. Once in two weeks remove them to a pail of muddy water for an hour, clean the globe, replace the shells, stones, etc., and refill with clear, cold water.

First publication Nov. 25.

ORDER FOR PUBLICATION

STATE OF MICHIGAN, The Probate Court for the County of Charlevoix.

At a session of said Court held at the Probate Office in the City of Charlevoix in said County, on the 23rd day of November A.D. 1915.

Present, Hon. Nathan V. A. Dougherty, Judge of Probate.

In the matter of the estate of Joshua E. Hyde, Deceased.

Henry Allen having filed in said court his final administration account, and his petition praying for a final order of distribution of said estate, therefor.

It is ordered, That the 6th day of December A.D. 1915, at ten o'clock in the forenoon, at said Probate Office, be appointed for examining such accounts and hearing said petition and that all persons interested in said estate appear before said Judge of Probate, at the time and place of hearing said petition, to show cause why the prayer of said petitioner should not be granted.

It is further ordered that notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel, a newspaper printed and circulated in said County.

NATHAN V. A. DOUGHERTY, Judge of Probate.

A true copy. Sylvester A. Cornell, Judge of Probate.

First publication Oct. 21.

MORTGAGE SALE

Default having been made in the conditions of a certain Real Estate Mortgage covering the premises of said Grover Cleveland, Ina Lemmon Hosford and Edward A. Hosford, to Mortgagee, to Clara Bell Wells, of Charlevoix, Michigan, dated November 1st, 1909, and recorded in the Register's office, Charlevoix County, Michigan, in Liber 50 of Mortgages on page 60 on the 3rd day of November, 1909, upon which said Mortgage there is claimed to be due at the date hereof the sum of Three Hundred Twenty-five Dollars and 00-100 (325.00) Dollars and no proceedings having been taken at law or otherwise to recover the money secured by said mortgage, and the undersigned, the assignee of said mortgage, pursuant to the statute of Michigan, on the 16th day of January, 1915, at one o'clock in the forenoon, at the Circuit Court House in the City of Charlevoix, that being the place of holding the Circuit Court in the County of Charlevoix, State of Michigan, do hereby give notice that I will sell at public vendue to the highest bidder, at the place of holding said Circuit Court in said County, the premises described in said mortgage, or so much thereof as may be necessary to satisfy the amount then due thereon, of principal and interest, together with the costs and expenses of foreclosure and an attorney fee of Twenty-five (25.00) Dollars, provided therein, which said premises are described as follows: All that piece or parcel of land situated and being in the Township of Boyne Valley, County of Charlevoix, State of Michigan, and described as follows, to-wit: The south-west quarter (1), and the south half of the south-east quarter (2) of section thirty-two (32) township thirty-four (34) north, range eight (8) west, containing one hundred sixty (160) acres, more or less, according to the United States Survey.

Dated, Charlevoix, Michigan, October 29, 1915.

First publication Nov. 11.

MORTGAGE SALE

WHEREAS, William Mears and Celestia I. Mears, his wife, of the Village of Boyne Falls, Charlevoix County, Michigan, made and executed a mortgage on the 1st day of April, A.D. 1911, to Edwin Parker, of Hackettsville, Michigan, which was recorded in the Register's office, Charlevoix County, Michigan, on the 3rd day of April, A.D. 1911, at one o'clock in the forenoon, in Liber 47 of mortgages on page 66. And whereas the amount claimed to be due upon said mortgage at the date hereof is the sum of Twenty-five Hundred Dollars ($2,500) dollars ($2,500) of principal and accrued interest as shown by the mortgage, and no suit or proceeding has been instituted to collect the same. And whereas default has been made in the payment of said mortgage, and the undersigned, the assignee of said mortgage, pursuant to the statute of Michigan, on the 16th day of January, A.D. 1915, at one o'clock in the forenoon, at the Circuit Court House in the City of Charlevoix, that being the place of holding the Circuit Court in the County of Charlevoix, State of Michigan, do hereby give notice that I will sell at public vendue to the highest bidder at the place of holding said Circuit Court in said County, the premises described in said mortgage, or so much thereof as may be necessary to satisfy the amount then due thereon, of principal and interest, together with the costs and expenses of foreclosure and an attorney fee of Twenty-five (25.00) Dollars, provided therein, which said premises are described as follows: All that piece or parcel of land situated and being in the Township of Boyne Valley, County of Charlevoix, State of Michigan, and described as follows, to-wit: The south-west quarter (1) of section ten. And the north one-half of the north-east quarter of the north-west quarter of section fourteen. The North Horse River runs through the above described land, containing forty acres, more or less. The above described lands being in Township thirty-two North, range five West.

Dated, Boyne City, Michigan, November 11th, 1915.

WILLIAM E. MEARS, EDWIN PARKER, Assignee of said Mortgage.

GREAT ISSUES IN DARDANELLES

Germany's Dream of Empire In Mesopotamia.

THAT the expulsion of the allies to the Dardanelles has been a failure seems to be a foregone conclusion. The recent speech of Winston Churchill, formerly first lord of the admiralty, before the house of commons, declaring that he alone was not responsible for the campaign in the Dardanelles, emphasized the fact that the campaign was a failure. Churchill maintained that he did not receive clear guidance from Admiral Fisher, then first sea lord, before the expedition was decided on, nor did he get the subsequent firm support to which he said he was entitled. He also declared that if any operation in the history of the world were worth carrying through with sustained fury and utter disregard of life this operation was worth it.

That the allies have been fighting for great stakes in the Dardanelles goes without saying, and the biggest bone at stake is not the one that is generally supposed, not the opening of the passages so western munitions may be poured into belaguered Russia, and so Russian grain may be transported by the Mediterranean route to the czar's allies on the Atlantic. Nor is the main object the poetic one of expelling the crescent and reestablishing the cross on the dome of St. Sophia. The greatest stake is a potential empire which Germany has marked out for herself in the ancient land of Mesopotamia. The aim of the allies is to choke German expansion toward the east, the direction in which it is feasible, and forever reinstate Germany in the position of a second rate power.

It was with this explanation in view that the German kaiser induced the sultan of Turkey to grant the Germans a concession for a railway to Bagdad. The potential empire thus opened up is a grand prize for which the powers have been struggling at the doors of Constantinople. The capture of Constantinople by the allies would mean the shattering of a great German dream.

In the many months that the allied forces, backed by their great fleets, have been endeavoring to open the famous strait they have made practically no headway against the splendid defense of the Turks. The English have lost over 100,000 men in killed, wounded and missing, some of the colonial and Irish regiments having been practically annihilated. Admiral Bartlett, an English correspondent, tells of one regiment now operating there whose personnel has been entirely changed since the first landing. It is said that the French losses have been even heavier than the British.

The excuse for failure in opening up communications with Turkey through Serbia and Bulgaria is abundant doubts, and its generally detrimental effects on nearly all crops, the agricultural and horticultural, is a man, a praying for a severe winter. The winter of 19-15 was a cold one. Only on a very few days did the thermometer register zero, and on only two or three occasions did the mercury fall below the point at which thermometer graduation begins.

The spring of 1915 was an early and a balmy one. A continually warm two weeks in February brought out of the tree buds, so prematurely that it required only a night or two of frightly to ruin fully half of the fruit. In the same way that nearly all varieties of fruit were affected, so were the vegetables.

That is the reason why farmers and fruit-growers now pray for severity in the winter, and look with dismay on another prospective February or March balminess. Next year's crops should be bumpers, if there is any stock to be taken in the law of compensation; and the thing that can possibly prevent record-breaking results is a series of temperature inconsistencies.

OSBORN BACK IN LIMELIGHT

HE IS TAKING PRESIDENTIAL NOTICE SERIOUSLY—IS GRATIFIED OVER MENTION

(By United Press)

Lansing, Nov. 22.—From Deerfoot lodge, his hunting preserve in upper Michigan, Chase S. Osborn, ex-governor, today wired the United Press that he was "surprised, gratified and sobered" by having his name connected with the Republican presidential nomination. Osborn's comment was occasioned by the Indianapolis Star's editorial endorsement of him for the Republican nomination. He declared he could not state positively yet whether he would be a candidate.

Following the virtual abandonment of his presidential boom by William Alden Smith, senior senator from Michigan, Republican politicians about the capital are watching their ears over a report that the Michigan delegation to the Republican national convention may, after all, get an opportunity to support a "favorite son" candidate.

Chase S. Osborn is the man mentioned. The former governor is buried in the wilds of the upper peninsula on his hunting preserve at Deerfoot lodge, where he is spending a vacation. Messages to his lines, inquiring as to the possibility of his becoming a candidate for nomination were answered by his secretary at the Soo, who reported that "Mr. Osborn is away and is not accessible, either by wire or by mail."

Reports of the former governor's possible candidacy were circulated following an editorial endorsement of him printed recently in the Indianapolis Star.

"If the Republicans should next year pick a dark horse candidate, they would have hard work to find a man of presidential caliber more acceptable in Indiana than would be Chase S. Osborn, formerly governor of Michigan," said the Star.

"Mr. Osborn, if he were the choice of his party, would appeal much more widely than some who have been mentioned as Republican possibilities. He made an enviable record as governor of his state. He has fought machine politics, stood consistently for efficiency and economy in public business. * * * He has energy, initiative, and a record that would appeal alike to those who are strong for party regularity and those who place principle above party. He is the type of a man who could carry to the G. O. P. standard those who were alienated in 1912, and one who could rescue it from the slough of standpatism."

The Chicago Evening Post also, recently suggested, editorially, the possibility of Osborn becoming the leader of the Republican forces in 1916.

Commenting on Senator Smith's withdrawal as a presidential candidate, and his endorsement of Supreme Court Justice Hughes for the Republican nomination, the Post said:

"When the senior senator thus sets the Michigan delegation free, the thought of once arises of the man whom many Michiganders have all along held as their first choice. How about Michigan and ex-governor Chase S. Osborn, the Progressive Republican? Is Osborn the man to be brought out as Michigan's gift of a candidate upon whom midwestern Progressives and Republicans can agree?"

Since Osborn's defeat by Governor Ferris in 1914, the Soo man has not participated actively in politics. His friends profess to be doubtful whether he would consent to try for the nomination for president.

FRUIT MEN WANT SEVERE WINTER

Ruined Their Crops and Made Summer Season a Poor One in Michigan

Following a year notorious for its unexpected frosts its inadvertent droughts, and its generally detrimental effects on nearly all crops, the agricultural and horticultural, is a man, a praying for a severe winter. The winter of 19-15 was a cold one. Only on a very few days did the thermometer register zero, and on only two or three occasions did the mercury fall below the point at which thermometer graduation begins.

The spring of 1915 was an early and a balmy one. A continually warm two weeks in February brought out of the tree buds, so prematurely that it required only a night or two of frightly to ruin fully half of the fruit. In the same way that nearly all varieties of fruit were affected, so were the vegetables.

That is the reason why farmers and fruit-growers now pray for severity in the winter, and look with dismay on another prospective February or March balminess. Next year's crops should be bumpers, if there is any stock to be taken in the law of compensation; and the thing that can possibly prevent record-breaking results is a series of temperature inconsistencies.

AN OPPRESSIVE LAW

Not Only Cripples Merchant Salt Water Marine But Hurts Great Lakes Shipping

Captain Ava Smith, master of the steamer City of Boyne, received orders Saturday that put his steamer out of commission.

The new Seaman's Law did the business. Under this law the City of Boyne is compelled to carry a crew as follows:

Master.
Mate.
Engineer.
Assistant Engineer.
Two Watchman.
Two Wheelsman.
Five Deck-hands.
Three Firemen.

If the boat runs more than twelve hours of the 24, she is compelled to carry a double crew. In equipment, besides her life boats and life preservers she must have 12 ring buoys, six aluminum buoys and three children's life preservers. When the last item is considered the utter foolishness of the new regulations suggests itself. The City of Boyne has frequently six or more children as passengers.

But this is not all. She must install a shower-bath. Of course these regulations permanently retire the City of Boyne from service. She is a sound and seaworthy boat, and her owners have already bargained for a triple-expansion engine to be installed this winter. The only hope for this boat and hundreds others of her class is that the utter inconsistency of the law may be shown up at Washington this winter.

The general application of the Seaman's Law has driven the American flag from the merchant marine of the Pacific, and will do the same on the Atlantic. Scores of American-built ships are changing their registry. On the great lakes the operation of the law is very little less damaging.

The J. H. Wade, which has been in the iron ore trade between Escanaba and Pine Lake, was last month sold to Canadian parties on account of this oppressive law.

ONLY A SUBJECT OF RIDICULE

Andrew Carnegie built a peace palace at The Hague to house the arbiters of international questions and prevent war. The palace is empty and war rages.

Henry Ford, of Detroit, another man of many millions, is trying to climb to a pedestal in the hall of fame along side of Andrew. The enthusiasts and critics of this eccentric genius make the world laugh.

Ford has chartered a ship and proposes to take a large number of peace propagandists of the Bryan school, including himself, to Europe where an armistice will be urged upon the warring nations and peace arranged.

The probability is that Henry Ford will be royally and imperially snubbed, as he should be. Mr. Ford has much money, but that is all he possesses. Common horse sense is not one of his assets.

ALPENA WOMEN STAND BY DYING GIRL

Shower Flowers and Dainties on Victim of Bichloride Poisoning

Alpena, Mich., Nov. 25.—Margaret McCauley, who swallowed five bichloride of mercury tablets, will die at the police headquarters. Efforts of the various local women' societies to have the girl removed to some home have proved unavailing. She told Chief Clifford today that she wanted to die at police headquarters.

It is five days since the girl, in a fit of remorse, took the poison. The man who caused the girl to take the deadly tablets was jesting that he told her that he knew she was dead before she went wrong.

The parents of the girl, who reside on Beaver Island, Lake Michigan, have been notified. It was the thought of the mother finding her daughter at police headquarters that impelled the women of the city to have her removed.

Beautiful floral wreaths have been sent to the sick room and delicacies of various kinds have been sent.

Love Doubly Blind

By Doubleday

Esther S. Proudfoot

(Copyright, 1915, by W. G. Chapman.)

"That's your decision, is it?"

"It's got to be."

"Then I can tell you that you are selling Milly into heartbreak and misery! Man, reflect—you are doing a terrible thing."

Kirk Howard, bachelor, aged thirty-five, spoke with fervent and indignation. Rarely had he been so wrought up. Clean hearted, temperately prosaic Kirk, his soul was stirred to its depths, and the note of appeal, of direct prophecy in his voice would have commanded more than ordinary attention from a person less sordid than old John Daveral.

"There is something under this I do not understand," resumed Howard. "I have been your neighbor for two years, day neighbor, Walter and your daughter Milly have been like brother and sister. Neighbor, don't you think I am entitled to your confidence in this matter?"

It was plain that old Daveral blurted out the truth. It shocked Howard. Daveral had got into the clutches of Daniel Weegs, the village lawyer. He had been led into unwise investments and will be owed the attorney a large amount of money.

"As it is," declared Daveral, and his tones were fairly desperate, "Weegs can seize everything I own and leave Milly a pauper when I am gone. He says he really then Milly and he will force to cancel the debt and settle the estate on her if she will marry him. He's given me two days to decide."

"Can you think of bestowing that lovely wife flower could upon a man

What Did It Mean?

twice married, once divorced, a selfish hard-minded skinflint. Oh, neighbor, neighbor, this must not be!"

"Then it's ruin for me and for her," pointed out that man who had spent pine and fade like a blighted flower. No, no, there is no arms way out of it. Can I see Milly?"

"She has agreed to see you, Mr. Sheridan," said Howard, in her final devotion, but she must never wed Daniel Weegs! Why, man, she is in the garden. I must speak to her," and although Daveral anxiously feared an upset of his selfish plans, Howard walked toward a form he saw in the a bunch-backed seat. It was Milly. She sat in a sad, wearied pose. Her eyes were closed and there were traces of dried tears upon her wan face.

"Poor, poor child!" murmured Howard, and she started and looked up with a frightened look in her dark eyes of his approaching footsteps.

"Oh, it is you, Mr. Howard," she stammered in confusion, and then, as he sat down beside her, despite his grave manner, she nestled toward him, the shadows on her face lightening as if he infused her with a sense of protection.

"Milly," he spoke outright, "your father has told me. You are to marry Mr. Weegs."

"I—I must."

Her lips drew tight, her face was a mask of pathetic misery.

"As an old friend" pursued Howard, "let me ask you one question. Does is someone else?"

Her eyes were downcast, her face covered with a quick flush.

"Yes," she barely whispered, her tones a trembling, her face half hidden.

Howard gave a great start. A sudden thought, a startling conjecture, had illumined his mind. In a flash he saw it all—his nephew, Walter. Why, of course! Had not Milly for months before the departure of Walter run in upon them, happy and free as a member of the family, for weeks and weeks? Had not Walter written that he could be but Walter? And had not "the boy" written, far away in the West with a surveying party, that "only for you he loved the exile would be a lonesome experience. They might never have plighted their troth, but Milly loved Walter, whom she? and Walter—why, they were mated in temperament and taste, and above all in youth.

A great new thought came to Kirk Howard. His home was cheerless, no son. It would take fully a month to reach him and get his back home. Daniel Weegs had set a limit of two days. What was there in life for himself, reflected Howard—and a mighty reserve throbbed and then faintness. Milly." he spoke steadily as he could, "your father seeks this situation only in your sacrifice. I can prevent Milly. I am said in getting him out of the power of Daniel Weegs. Will you help me to do it? Milly, will you marry—me? I am old, I know, but I will not be a—a burden to you. It is only to save you. I—I—"

In amazement at the rushed the incoherent torrent of words which he sought in vain to conceal his real intentions Milly had uttered a strange cry. She had turned upon him. It seemed as if a great gladness showed in her relieved face, the flashing glimpse he had of it, then, burying her face in his arm, she clung to him like to a strong storm-beaten child seeking and finding security and peace.

"Yes—yes!" she murmured. "Oh, my best, my dearest of friends!" and then, sobbing, she darted from the spot, for her father had intruded.

Plainly, bluntly Kirk Howard stated his position to Mr. Daveral. The latter had refused money but between Weegs and Howard there could be no choice. Yet, let the marriage take place at once, the money provided to pay off Weegs before the hour would contrive some scheme to defeat their plans and harass them. It was strange how grave, how pale was Howard through that hurried, confused ceremony. Milly acted like one in a dream. No one was present at the marriage except father, daughter, Howard and the minister.

"Have some important business up at my home," spoke Howard in a strained, unnatural voice, as the clergyman went away.

Milly regarded him tremulously. There was a wistful, pleading look in her eyes, but he, tonnlike, continued to be passing gracious to his bride, now bidding her a bride to a man she abhorred.

"I may not return until tomorrow," he voiced unidiotally. "I have some very important papers to make out, to provide for your future, Milly," he added, and then he was gone, leaving Daveral astounded and Milly puzzled.

"What did it mean? What did it mean?" For a long time she stood leaving at this strange abandonment, bewildered, but at last she turned, bestowed upon her troubled her, hand, and led the way into the house. It seemed to express some idea, indefinite, indirect, yet it also appeared to bid her hope. Her father absent, she followed her bride, Milly, to the window and glanced out.

Over at the Howard home a single light glowed brightly. She knew its location, the ground floor room. It was Mr. Howard's library. It seemed to beckon to her. Her soul was in flame. Her lips quivered, and ten minutes later she stood just outside the open window and was not away writing. Her startled eyes made out the words:

"—and so, dear nephew, I shall be home as if I were a natural death, and all I have is yours and Milly's. Never tell her the truth, for what are the few years I may live to your long happiness and hers? Dear boy! I was blind not to guess the love offered and her many visits to us, that I did not pursue this at the time. Neighbor spoke of in your letter. And so I have saved her by marrying her. As an injured bride, a widow, all her love will be yours—"

Author Milly read the intent of the writer. She sauntered around to the front door, she flitted back to the library. As she sank to her knees by his side, the astounded Howard looked up.

"Milly, my child!" he spoke.

"Mr. Howard—dearest—that letter! What would you do?" she panted.

"For Walter's sake—" he began.

"What is Walter to me?" she cried in a waiting tone. "He is now another Oh, blind! blind! double blind! Must I tell you the very visits to your home were influenced by devotion, love for the grandest man I ever met?"

She was sobbing in his arms. His face grew glorified as he realized the truth, and in the other room she seemed smiling and sweet at last.

The Peacock and Juno.

The peacock made complaint to Juno that while the nightingale pleased every ear with his song, he was condemned to silence. Juno has became a laughing stock to all who heard his voice. Juno comforted him said, "But you far excel in beauty and in size. The splendor of the emerald shines in your neck, and you unfold a tail gorgeous with painted eyes." "What is the use of my beauty have I?" asked the bird. "This dumb beauty so long as I am condemned to song?" "The lot of each," replied Juno, "has been assigned by the will of the fates—to them beauty to the eagle, strength to the nightingale, song to the raven, swiftness and to the crow, unfavorable auguries. These are all contented with their endowments, and I am almost to them."—From Aesop's Fables.

Brain Amputation.

One of the wonders of surgical art once was performed in a French military hospital where a wounded soldier had and a sixth of his brain amputated without missing it. The patient was carried in with a penetrating wound in the occipital region of the cranium. Splinters of bone had caused an abscess to form in the left cerebral hemisphere. These were removed by Dr. A. Quegin, surgeon in chief to the hospital, but a fresh abscess formed, and Doctor Quegin was obliged on two occasions to amputate portions of the brain which protruded from the wound. The patient thus lost at least a third of the left hemisphere, but shows no special signs of trouble, other of motivity, sensibility, or ideation.

Agricultural Advice.

Nothing should be allowed to go to waste on the farm. A considerable saving can be made in the matter of medicine, for example. Such portions of remedies as may be left over after a long spell of illness, the contents of various bottles in the cupboard from which the labels have been lost, and the sample remedies agents that are left at the house from time to time, should be poured into a jug and the hired man dosed with the mixture whenever he complains of being so run down that he must take a day off to go to town. One dose will probably not kill him and too same hired man has never been known to death a second dose.—Kansas City Star.

THE SANDMAN Tell a Story By Mrs. F. A. Walker

Copyright, 1915, by W. G. Chapman

TWO BRAVE BOYS.

When the firebells rang in the city and you know that a house is on fire, it does not frighten you, because you know that the brave firemen will be there soon and put out the fire.

But in the country there are no firemen, or engines, and the people have cause to be alarmed when a fire breaks out.

Thomas and William lived on a farm. Thomas was fourteen and William twelve, but they were sturdy lads and knew how to work.

One morning their father and mother went to the city to be gone all day, and after the boys finished their work they went into the woods for berries.

They had filled their pails and were returning home when William said: "Father and mother must have come back early. I can see the smoke from the chimney."

Thomas did not answer for a minute, and then he said, "That smoke is not coming from the chimney; it looks as though one of the buildings is on fire."

Both boys ran as fast as they could and then when they were nearer William said: "It's the barn, and we must get the horses out."

The poor animals were kicking about in their stalls and frantically clawing at their halters.

"We must wet our handkerchiefs and tie them over our mouths," said William, and he ran to the pump. It takes more time to tell about it than it took the boys to do this. Then they ran into the barn and untied the two horses and led them out.

Thinking that they would look out for themselves, the boys began pumping water to pour on the flames.

They wet their heads again and went into the barn with pails of water when the horses came running in and acting in the most frantic manner. One of them knocked William to the floor, and in the smoke Thomas did not see him, and supposing that he would catch one of the horses, Thomas caught the other, and led him out and tied him to a tree.

When William did not appear he began to be frightened, for the flames were coming up through the floor, but Thomas did not stop to think of that. He knew William was in the burning barn.

Wetting his face and head again, he ran into the barn. His feet struck something as he felt to see what it

"I Can See the Smoke."

was. It was William, who had struck his head in falling, but he soon came to, made him faint.

Thomas dragged him out and laid him on the ground and went back for the other horse that happened to be near the door just then. The flames had singed his tail and mane, and he was a sorry-looking animal. Thomas tied him to a tree, and then went to William.

He wet his face, and after a while he opened his eyes. "What is the matter?" he asked.

Thomas told him. "And now we must save the house and other buildings," he said, "by putting out the fire. You get the dinner horn. I told William," and how loudly as you can.

The pump was near enough to the barn, so that he did not have to run far, and Thomas pumped and carried pails of water and threw on the burning floor. His poor arms ached and his back smarted, but he did not stop and by the time the horn was heard by the farmer down the road, Thomas had succeeded in nearly extinguishing the flames. The lower part of the barn was damaged, but by his hard work Thomas had kept the fire from spreading and saved the house. He had saved his brother, also, for if Thomas had been here he would have gone into the smoking barn William would have been burned.

When their father and mother came home that night, they saw from the road that the barn was burned, and when the boys told them all that happened they thought they had two brave boys.

When their mother kissed them good night she said, "I am proud of my heroes, but we must not forget the one who watched over and protected you, and thank him in our prayers.

Making Her Happy.

"I told you last sabbath, children," said the Sunday school teacher, "that you should all try to make someone happy during the week. How many of you have?"

"I did," answered a boy, promptly.

"That's nice, Johnny. What did you do?"

"I went to see my aunt, and she's always happy when I go home again.

Keep Something in Reserve.

Don't let all you know. Maintain some reserve. There is nothing more useless than a dry well.

TWO ODD OPTICAL ILLUSIONS

Three Circles Seem to Chase Each Other in Same Direction—Wire Hoops Are Quite Puzzling.

There are some tricks that can be played on a person's eyes which are pure illusions. Hold this paper a foot or more from your eyes and turn it gently round to the right or left in small circles, keeping your eyes fixed on the three lines.

As you move the paper round like the hands of a watch you will find that the right hand circles seem to chase each other in the same direction, and the longer and more intently you look at it the faster they go.

Circles can be made with spokes in them which to some persons seem to

Circles Chase Each Other.

be going in the opposite direction to that in which the paper is turned, but this illusion is not so perfect unless the circles are much broader than the space between the spokes.

Here is another curious optical illusion that has puzzled a great many persons who have tried to account for it.

If we suppose these to represent wire hoops, which of them is nearest to us, A or B? The answer is that it is the one you first make up your mind is nearest you. Hold one of the hoops steadily at it for a few moments your eyes will get tired and that idea will suddenly shift that hoop to the farthest away from you, in spite of your willing to keep it as it was, and

Wire Hoop Illusion.

after you have looked at it in its new position for a space it will go back again.

If you do not decide which is the nearest to you at first, but just look at the middle loop steadily, you will see them one way, perhaps with A in front and toward you, and then A will suddenly go back and B will be in front.

THE SAW ESAU SAW

"Esau sawed wood. Esau Wood would saw wood. All the wood was Esaws wood before Esaws Wood would saw. In other words, all the wood Esau saw to saw Esau sought to saw was All the wood Wood would saw. And, the wood he sawed with which Esau sawed wood was not the wood Wood would saw. If Wood's woodsaw would saw wood. Now Wood's woodsaw was Esau's woodsaw that would saw wood. Now if Esau's woodsaw would saw wood, so would Wood's woodsaw saw wood. Now if Esau's woodsaw would saw wood, so would Wood's woodsaw saw wood. Now if Esau's woodsaw would saw wood and so I saw Esau Wood saw wood with Esau's woodsaw Wood saw saw wood."

TEACH BOYS MILITARY DRILL

Australian Youths Enter Ranks of "Junior Cadets" at Age of Twelve —Must Be a Soldier.

Australian boys begin their military career at the age of twelve years, when they enter the ranks of the "Junior Cadets" and drill under the instruction of their schoolteachers. Their target practice is limited to shooting what is popularly known as the "twenty-two" rifle.

At the age of fourteen the schoolboy is graduated into the "Senior Cadets" and here his military training begins in dead earnest. He learns to care for his rifle which this government furnishes to him. The state also gives him an office drab military uniform. He learns the formations of squad and company formations and learns to deploy as skirmisher.

The Australian schoolboy becomes a soldier irrespective of his own wishes in the matter, or those of his parents. Truancy officers, such as in this country enforce the attendance at school, in Australia hale into court and punish the boys who are absent from their military drill, and it is not an infrequent occurrence for the fathers to be letted on parents who are indifferent to their sons military education.—The Sentinel.

The Common Practice.

"Johnson," said the teacher, "if coal is selling for $5 a ton and you pay your dealer $21, how many tons will he bring you?"

"A little over three tons, ma'am," returned Johnny promptly.

"Why, Johnny, that is not right," corrected the teacher.

"No, ma'am, I know it ain't," said Johnny, "but they all do it."

Be Good to Mother.

The days now are full and busy, but don't let them be so full that you forget to take time to bring in the wood for mother, or to show in other ways that she is very dear to you. Every body likes a boy who is good to his mother.

BURGLAR WASN'T TAKING CHANCES

Captured by a Spinster He Begs the Neighbors to Help Him.

GLAD TO GO TO JAIL

One Barrel of Woman's Shotgun Goes Off, and the Thief in Panic Cries Lustily for Help.

New Monmouth, N. J.—The report of a shotgun, discharged shortly after one o'clock in the morning, aroused the whole neighborhood in the vicinity of the house occupied by Miss Nettie Walling and two maiden sisters whose ages range from fifty to seventy years. The sound had come from the Walling home, and it it rushed men from all the nearby houses and most of the women and families as well.

Upstairs in the Walling home the sisters were screaming shrilly and in chorus.

"We've got a burglar. Help. We've got a burglar."

And, audibly, only when the women paused briefly for breath, came the cries of a man in great fear, calling:

"Yes, come and get me. Yes, come and get me. They've got a gun. Come and get me."

Some down and let us in," shouted the men outside.

Neighbors Break In.

"We can't. We've got a burglar. Help! Help!" came from the house in the voices of the sisters, punctuated at intervals with deeper tones, calling: "William, come and get me. Hurry. They've got a gun."

Outside the men called again and again. Inside the women shrieked and the burglar called for help. At last they broke down the door and a dozen men rushed inside. There, crouched beside the stock of a window in the hall, was the burglar. Opposite him stood Miss Nettie, the mistress of a shotgun, which she held, wavering and wobbling, but pointing in the general direction of the frightened man.

"Thank heaven!" murmured the burglar, as someone grabbed the gun

The Burglar Called for Help.

and others grabbed him. Then, re proachfully.

"She shot at me with one barrel and it's a mercy she didn't kill me. The charge went through that window right over my head. And I wasn't doin' anything only stealing until this she told me."

Didn't Aim to Shoot Man.

Miss Nettie acknowledged the charge. She said she and her sisters had been aroused from sleep by the sound of the burglar made entering a window, and she had rushed for a shotgun which the sisters have always kept in the house. She was retreating to her room with the weapon when she surprised the burglar in the hall, and ordered him to throw up his hands. He did so at once, and Miss Nettie kept the gun pointed at him while she and her sisters screamed for help, the others too frightened to leave their bedrooms.

"I didn't aim to shoot the man, declared Miss Nettie. "This peaky thing I just sort of went off by itself, and anyway it didn't hurt him."

The burglar looked unbelieving, however, even when Constable Elmer Brown came in to take his hands. Later he was committed to the county jail in Freehold to answer to Edward Wise to await the action of the grand jury. He said he was Clarence Miller, twenty-four years old, and had no home. He seemed relieved to reach the jail safely.

BULL AMUCK IN STREET

Girl and Five Men Are Hurt in Wild Stampede Among Many Shoppers.

Louisville, Ky.—A seventeen-year-old girl and five men were seriously injured when an infuriated bull escaped from the Bourbon stockyards and ran down Market, the heart of the shopping section. Stockyards attendants pursued the bull.

The beast was roped with a "rusty" and tied to a fire hydrant. It was left there until its antics had so tired it that the men were able to lead it back to the pen.

Youngest Hunter Is Eleven.

St. Paul.—The youngest mineral to apply for a hunting license this year has been granted his "papers" He is A. B. Hull, eleven years old, and lives at No. 2145 Carter avenue. His man, Blade, No. 135 Summit avenue, son of George T. Blade, vice-president of the Northern Pacific, takes second honors in the list of juvenile hunters. His age is thirteen.

WOMAN KILLS BIG BEAR

While She Trailed Hugs Animal and Shot It Husband Watched

Spokane, Wash.—Mrs. Charles W. Sanders shot and killed a big black bear when she and her husband were motoring to Colville, Mr. and Mrs. Sanders left Spokane at daylight on a week's trip to Stevens county. The bear was seen in the timber several yards from the road.

While her husband remained in their machine Mrs. Sanders followed the bear until at close range and killed him with one shot, which struck the bear just behind the ear.

A hunting party encountered the bear last week, and in a fierce struggle with the dogs the bear came off victor, after wounding one dog severely. The bear weighed 200 pounds.

THIRTEEN EXPLAINS DEFEAT

Persistence of Unlucky Number Was Also Aided by Killing Black Cat.

California, Pa.—T. J. Underwood, comptroller of Washington county, ascribes to "thirteens" his defeat as candidate for sheriff in the primaries.

In the first place, his name, Tom L. Underwood, contains thirteen letters. The license number of his yellow campaign car was 1313. On Friday, August 13, while riding in his car with another candidate now numbered among the aleceased, he ran over and killed a black cat. The number of signers on Mr. Underwood's petition was 1313.

$3,000 IN GEMS IN SLIPPER

Forgetful Woman Sends Secret "Vault" to Cobbler—Follows Old Adage.

Chicago.—Adam Schultz, a cobbler, believes thoroughly in the old age, "Honesty is the best policy."

Mrs. Leopold Fellinger has a habit of concealing her jewels, valued at $3,000, in her slipper. One slipper she put them in a new slipper the other night and then forgot the fact when she sent the slipper to the cobbler to be stretched. The cobbler found the gems. They were restored to the owner and he was rewarded with $5.

RATTLER'S FANGS MISS HIM

Snake Strikes Negro's Overalls and is Unable to Disengage Itself From Black.

Jefferson City.—A negro farm hand cutting corn felt several sharp taps at his overalls and thought he had become caught in briers. Glancing over his shoulder he saw a rattlesnake five feet long. Reaching round with his corn knife he manage to scare the snake just back of the head.

The blow knocked off its curved fangs nearly an inch in length, in the slack of the negro's overalls and could not disengage them.

WOMEN ENVIOUS OF THRESHER'S COOKIES

Wisconsin Man Wins Prizes for Dainties That Set Mouths Watering at Festival.

Madison, Wis.—"Cooking for the threshers" has been the stock expression for all that is wearisome in farmdom for generations. This year it meant extra help in the kitchen—hustle and worry and some take and scroll and free from 5 a. m. until after eight o'clock at night.

But in Dane county the farmers' wives have no need to worry. That county can boast of one threshman who is such an exceedingly skillful and resourceful cook that he can beat the best of woman competitors.

C. A. Bailey of Do Forest is the man. At the Windsor fall festival he carried off one first prize on devil's food cake, another first prize on cocoanut cookies, first prize on baking-powder biscuits, an extra prize on the same and siings at his work. He his occupation what it may, is he equal to any of those who follow the same pursuit in silent substance. He does more in the same time; he will do it better—he is perhaps longer.—Thomas Carlyle.

Told the Gaping Group His Best Recipes.

der biscuits, second prize on lemon pie and sweepstakes on canned peaches.

"It's a shame I couldn't have spared more time from the harvest with the gang or I would have entered some things in every class in the outfit," smilingly declared Bailey to a group of people who were admiring his dainties.

He then leaned back complacently against the show case and, hitting his thumbs in the armholes of his vest, told the gaping group his best recipes. His defeated rivals kicked their backs and began examining the rare quilts and tatting.

Bailey bids fair to rival the famous Baker Bunn of Baraboo.

Weak Kidneys Often the Result of Overwork

On several occasions I have been unable to work and suffered severe pains in the back, due to my kidneys. I called on a doctor, of Tipon, Wis., but received no relief.

I tried Dr. Kilmer's Swamp-Root which gave me instant relief. I was then able to work. Swamp-Root is the only remedy that I can find that has done me any good. I am telling this testimony for my health. My kidneys are now in good shape. I am free will that sufferers of kidney and bladder disease will receive the wonderful merits of Swamp-Root. I recommend Dr. Kilmer's Swamp-Root wherever I can and always have a bottle of Swamp-Root in my home.

I purchased Swamp-Root of Mr. C. J. Burnside, Druggist, of 302 Main Street, Bipon, Wis.

Very truly yours,
THOMAS J. LYNCH.

525 Newbury Street, Bipon, Wis.

I have read the above statement that Thomas J. Lynch bought Dr. Kilmer's Swamp-Root at my store and made oath that the statement is true in substance and fact.

E. J. Burnside.

Subscribed and sworn to before me this 15th day of November, 1915.

F. A. PRESTON,
Justice of the Peace.

Prove What Swamp-Root Will Do For You through a test of 6 days free. Dr. Kilmer & Co., Binghamton, N. Y., will gladly do this for you. It will convince anyone. You will also receive a booklet of valuable information telling about the kidneys and bladder. Mention this paper. Regular fifty-cent and one-dollar size bottles for sale at all drug stores.—Adv.

A man isn't necessarily polished just because you see his finish.

When all others fail to please Try Denison's Coffee.

External vigilance is only another name for a woman whose unmarried daughter is beginning to take on flesh.

Dr. Pierce's Pleasant Pellets are the original little liver pills put up 40 years ago. Sugar coated, easy to take.—Adv.

If a woman would have the neighbors respect her husband she must set an example.

If we had no troubles but real ones this would be such a troublesome old world.

Dyspepsia.

"Pa, what is dyspepsia?"

"It is a combination of a guilty stomach, my son."—Puck.

Worse Yet.

"Can't you think of any worse pest than the seven-year locusts?"

"I should say so! Just think of a ten-year installment purchase!"

Unnatural.

"Hello, Bill! How do you like caddying for the Ladies' Golf club?"

"Oh, it ain't such a bad job, only I can't get used to hearin' you say 'caddie' instead of 'caddy' when they toole."

Circumstantial Evidence.

The kiddie chanced to sit near a plate containing apple parings. After a long wait, during which no offer was made of hospitality, the child finally blurted out.

"I smell apples."

"Yes," said the lady of the house, "smell those parings."

"Parings nothing!" exclaimed the kiddie, "I smell whole apples!"

The Making of the Pup.

Ted and James M. Barrie live some distance from the city, have a young dog of doubtful training. The dog is by nature ferocious, so the training is not difficult.

A short time ago a tramp was about to enter their front gate, when he spied the dog and changed his mind, not soon enough, however, to avert disaster.

"Sic 'em, Kid, sic 'em!" cried the boys in delight.

Kid immediately began to play with the tramp's trousers and he was soon gave cause for alarm.

"Call your dog off, or I'll kill him," yelled the victim, trying to carry out his threat.

The boy grinned. "Stand it if you can, mister. It's hard on the dog."

"Call your dog off, I say, you fool!" called Ted.—Indianapolis News.

CHANGE
Quit Coffee and Got Well.

A woman's coffee experience is interesting. For two weeks at a time I have taken no food but skim milk, for solid food would ferment and cause such distress that I could hardly breathe at times, also excruciating pain and heart palpitation and all the time I was so nervous and restless.

"Even childhood up I had been a coffee and tea drinker and for the past 30 years I had been trying different physicians but could get only temporary relief. Then I read an article telling how some one had been helped by leaving off coffee and drinking Postum and it seemed so pleasant just to try such good health I decided to try Postum.

"I made the change from coffee to Postum and there is such a difference in my health and I don't feel like the same person. We all found Postum delicious and like it better than coffee. My health now is wonderful indeed.

"As soon as I made the change my troubles ceased, no palpitation, no dizzy spells, no more stomach trouble and my headaches are gone. Remember I did not use medicines at all—just left off coffee and used Postum steadily." Name given by Postum Co., Battle Creek, Mich.

"There comes in two forms:

Postum Cereal—the original form—must be well boiled. 15c and 25c packages.

Instant Postum—a soluble powder—dissolves quickly in a cup of hot water, and, with cream and sugar, makes a beverage delicious instantly. 30c and 50c tins.

Both kinds are equally delicious and cost about the same per cup.

"There's a Reason" for Postum.—sold by Grocers

The KITCHEN CABINET

"A stone fit for the wall will not be left by the roadside," Danish Proverb.

"Whatever you are feeling blue, Something for someone else go do.

AUTUMN HINTS.

This is the season when we toss over the household furnishings wear-

ing and tear and decide what must be renovated. Old clothing which is out of style but good, playthings and ornaments which our household has outgrown, which will be appreciated in some other house and will lessen the burden of things to care for in our own homes.

The modern home of the efficient housekeeper is attractive, for she realizes she cares more for the things worth while than to spend her time in dusting useless ornaments and cumbered furniture. Woodwork in the home should be plain, so that there is no place for dust to lodge. This need not sacrifice luxury, for the lines may be just as beautiful if simple.

When making new curtains the wool batting is much warmer and lighter and makes an altogether more satisfactory curtain than the cotton batting. The cost is an item to be considered, however, as an ordinary comforter takes two pounds of the wool and only half of it costs a pound. The wool batting should be covered with a thin cheesecloth which keeps the batting in place and holds the cover and also protects it as the outside may then be removed and washed or a new cover put on.

Light, washable draperies for bedrooms, small rugs and floors so finished that an oil mop will keep them clean and dustless, are the sensible and practical as well as the most economical furnishings.

Furs and underwear should be brought out, well brushed and aired before wearing, even if moth balls are not objectionable to you. There are others.—Use odor of moth balls in a crowded car or heated room, is something too stunning to mention, no wonder any self-respecting moth would refuse to occupy the same apartment. Clothing that is aired and worn occasionally is not apt to become a haven for moths. Furs wrapped in ordinary newspaper, using care to cover securely, is one of the best ways of keeping furs from moths.

Not to the swift the race, not to the strong the fight,
Not to the rich the good food, nor yet the skill to the wise the light.

GOOD THINGS FOR THE TABLE.

Fry 12 onions in butter slowly, covering during the first half of the cooking, then let them brown until tender. Mash six hard-cooked eggs with a fork, add a cupful of milk gradually. Pour this over the onions, season with salt and pepper, add the whites of the eggs, coarsely chopped, and a good flavor

mer for three minutes and serve with toast or baked potatoes.

Cinnamon Toast.—Toast bread quickly, spread generously with butter and sprinkle mixture of cinnamon sugar, well mixed; put in pans and set in oven. Place in a hot oven for a minute or two, then serve on a folded napkin or on a plate.

Orange Biscuits.—Orange rich biscuit dough in small biscuit. Grate the rind and squeeze the juice from the oranges. Dip as many lumps of sugar in the juice as others are needed. Plunge one lump in each biscuit, sprinkle with the rind and bake in a moderate oven. Serve hot.

Walnut Bakes in Milk.—Take a teaspoonful of lard, place in a deep baking dish or fireproof platter, season with salt, pepper and parsley, dredge with flour and dot with bits of butter. Add milk to the depth of one inch. Bake in moderate oven for a few minutes, then place a few walnut meats in each biscuit, and bake for about 30 minutes, or until browned all over, reduce the heat and bake for about 30 minutes more. Serve hot.

Pineapple Cream.—Boil a pint of a pound of granulated sugar, juice and pulp, to the soft ball stage, then pour to a few cream on an egg, beaten stiff. When cold fold in a cup of beaten cream. A tablespoonful of lemon juice may be added to intensify the flavor of the pineapple.

Pear Salad.—A most dainty and appetizing salad is one of canned pears cut in half and placed on white leaves of lettuce, with a dressing made up of the pear arrange a tablespoonful of the syrup of canned pears, add a little cut in half, and a spoonful of mayonnaise. Serve.

Stuffed Tomatoes.—Select eight smooth, small sized tomatoes; chill, remove the skin, cut a small piece around the stem and remove the center with a spoon. Have ready three fourths of a cupful of shredded cabbage, one green pepper chopped fine, the pulp taken from the tomatoes, a tablespoonful of scraped onion, and a teaspoonful of salt and a dash of paprika. Mix all together and fill the tomatoes. Set them on crisp heart lettuce leaves and dispose a teaspoonful of mayonnaise above the filling in each tomato.

SEASONABLE DISHES.

Good cooking will make almost any meat tender and bad cooking will make it tough. Cheap cuts of meats. Lean meat is more upset than fat. Stuffed meat, fillets, filled with bread, fillets, filled with meat, fillets, filled with oysters, fillets, like the white of an egg. If meat lies in cold water the juices are dissolved, if cooked at too high a temperature the fibers become hard. The object of cooking meat is to make it both palatable and more digestible. If meat is put into boiling water it will harden and sear it over, then the heat reduced to simmer, it will tender, the meat will be juicy, tender and of good flavor.

Venison will soon be in season and browned rice is delicious as a meat dish. Wipe the meat with a damp cloth. Place on a meat board and with a knife and a little salt and sugar, well mixed, put in pains and cut in triangles. Place in a hot oven for a minute or two, then serve on a folded napkin or on a plate.

Orange Biscuits.—Orange rich biscuit dough in small biscuit. Grate the rind and squeeze the juice from the oranges. Dip as many lumps of sugar in the juice as others are needed. Plunge one lump in each biscuit, sprinkle with the rind and bake in a moderate oven. Serve hot.

Walnut Bakes in Milk.—Take a teaspoonful of lard, place in a deep baking dish or fireproof platter, season with salt, pepper and parsley, dredge with flour and dot with bits of butter. Add milk to the depth of one inch. Bake in moderate oven for a few minutes, then place a few walnut meats in each biscuit, and bake for about 30 minutes, or until browned all over, reduce the heat and bake for about 30 minutes more. Serve hot.

Pineapple Cream.—Boil a pint of a pound of granulated sugar, juice and pulp, to the soft ball stage, then pour to a few cream on an egg, beaten stiff. When cold fold in a cup of beaten cream. A tablespoonful of lemon juice may be added to intensify the flavor of the pineapple.

Pear Salad.—A most dainty and appetizing salad is one of canned pears cut in half and placed on white leaves of lettuce, with a dressing made up of the pear arrange a tablespoonful of the syrup of canned pears, add a little cut in half, and a spoonful of mayonnaise. Serve.

Stuffed Tomatoes.—Select eight smooth, small sized tomatoes; chill, remove the skin, cut a small piece around the stem and remove the center with a spoon. Have ready three fourths of a cupful of shredded cabbage, one green pepper chopped fine, the pulp taken from the tomatoes, a tablespoonful of scraped onion, and a teaspoonful of salt and a dash of paprika. Mix all together and fill the tomatoes. Set them on crisp heart lettuce leaves and dispose a teaspoonful of mayonnaise above the filling in each tomato.

Gas from Sawdust.

Engineers have taught that wood less than four to six inches diameter could not be distilled in gas making because of its tendency to burn up rapidly when the temperature reaches 375 degrees centigrade. It has now been shown that even sawdust can be distilled in the form of briquettes if heated very slowly up to 100 degrees Centigrade, and then tapping the expulsion of all gas, my bowels are regular, have no more stomach trouble and my headaches are gone. Remember I did not use medicines at all—just left off coffee and used Postum steadily." Name given by Postum Co., Battle Creek, Mich.

"There's a Reason" for Postum.

Athleticism in China.

The following from Chinese journal would indicate an increasing fondness in China for athletics: "To the superintendent of the ministry of interior the temple of agriculture is being converted into a beautiful park. In the forest of evergreen trees an enclosure has been made to keep 140 deer from the summer palace in Jehol. There will be tennis courts, football grounds and lily ponds. Several exhibitions have been erected at Jiffeen points in the large compound inside the temple grounds, some built according to Chinese ancient models and others in accordance with modern practice. The museum in which ancient sacrificial instruments are kept will also be open to the visitors."

A Crying Need.

"A lady can wear only a certain quantity of diamonds on her fingers and around her neck."

"Yes; there's a fortune in it for man who invents a way to make lady people write with gems."

HANDICRAFT FOR BOYS AND GIRLS

By A. NEELY HALL and DOROTHY PEKKINS

MODEL AEROPLANE PROPELLERS AND A MOTOR WINDER.

A pair of propellers must be of identical size, but opposites—right-hand and left-hand; that is, the upper end of the right-hand propeller must be shaped to turn to the right, and that of the left-hand propeller to turn to the left, when viewing the mounted pair from the rear of the model. After preparing one propeller in the manner described below, make the

second one with blades turned in the opposite direction.

Figures 1 to 7 show the seven steps in preparing a propeller. Let the "Figure" numbers also represent the "Step" numbers. First of all prepare a propeller "blank" of the dimensions shown in Step 1. The blank should be of straight-grained white pine, and be planed up straight and true on all sides.

Draw a line around the four faces of the block at the exact center of its length. Then on faces C and D,

lay off a distance of one-half inch on the center-line, measuring from the edge of face B, to provide for the thickness of the propeller-hub (Step 2); and from the point representing the end of the thus measurement draw diagonal lines to the upper left and upper right-hand corners (Step 3). Then with a saw cut away the portions above these lines, as shown in Step 3. Mark out the cut-out hub-hub upon faces A and B of the block, and bore a small hole through the center for the propeller-shaft to run through (Step 4). Then draw diagonal lines from the ends of the hub center-line to all four corners (Step 5) and saw away the waste wood below these lines (Step 5).

Step 6 consists in laying out the form of the propeller blade upon all four sides and ends of the block, and Step 7 is the final cutting and sawing of the blades.

Finishing the cutting, place the propeller at its center upon the edge

of your knife, and if it does not balance perfectly cut away enough of the heavy end until it does. Smooth up the surfaces with emery paper, then shellac them.

The rubber-strained motors are wound 1,000 turns or more, for a flight. The pair must be wound an equal number of times. To simplify this winding, boys take a Dover egg-beater (Fig. 14) and cut off the ends of the side loops, and the central pivot wires on which the loops turn. Then they bend the cut-off ends of the loops into hooks, punch the loop ends for the pivot-wire ends to stick through (Fig. 15), and rivet these to keep the hooks in position. Figure 16 shows how the bow ends of the rubber-strand motors are removed from the framework, and turned on to the winder hooks, for winding.

Bigness of Soul.

It is easy to respect to love and kindness but what is our response to unlovely things, when sudden occasion arises to test the quality of our temper? The manner of our response when we have no time to take a second thought, is a sure indication of the character of the individual.—Unity.

Don't Know the World.

Ira Adams and wife, of Bellaire, were in the city Thanksgiving and over Sunday.

Beaver Island mail trips will be tri-weekly after December 1st, weather permitting.

Ray Faulkner, of Chicago, spent the Thanksgiving holiday period with his parents here.

Will Finnegan, of Cheboygan, was here with his parents and friends over Thanksgiving.

Capt. P. D. Campbell and wife were last reported as visiting their daughter at Minneapolis.

Sheriff Novak has been on a three days' Detroit trip this week on personal business.

The roller rink will be open Thursdays and Saturdays of each week after Dec. 1st., until further notice.

Mrs. Alex Cameron is at Minneapolis visiting her son Arba, and will remain there most of the winter.

Mrs. M. M. Hayes and daughter Beryl of Kalkaska, spent Thanksgiving with Mr. and Mrs. Empire Stites.

Saturday night Charlevoix Encampment No. 19 will confer Royal Purple degree followed by supper.

We are in receipt of a communication on "Tree Trimming" that comes too late for publication this week.

Do not forget the Rummage Sale at Bettes' Store every day this week. Baked goods sale Saturday, Dec. 4th.

The masquerade at the roller rink Thanksgiving evening was a grand success; there being the largest attendance of the season.

Next Sunday evening the pastor of the Baptist Church will speak on "Christian Science and the Bible" which service will be followed by a baptismal service. You are invited to attend.

Ted Floyd, a resident of St. James, was found dead at Manistique one day last week. Floyd was well known here. The body passed at Charlevoix on Friday a tug sent to Manistique from the Island.

Through the auspices of the Charlevoix Historical Society, Mr. Arthur Wright, of Harbor Springs, will give a free lecture entitled, "The Northern Michigan Indians, Their Manners, Customs, Legends and Traditions," at the Charlevoix Opera House, Friday evening, December 3rd. None should lose the opportunity of hearing this lecture, and the public are cordially invited to be present.

The Detroit Journal announced a few days since it would eliminate from its columns all whiskey, low theatre and all doubtful advertising. One day last week the Grand Rapids Press announced editorially that no more liquor advertising will be accepted by that paper. However, it said that it still has several live contracts, but as fast as they expire they will be dropped, and then will go on the docket, as a matter of the objectionable traffic seeking publicity through the newspapers.

Reports for the first half of the deer hunting season show that 40 per cent of the number of deer killed last year have been legally shipped this season. The 40 per cent also applies to the number of hunters in the woods as compared with last season. There were 400 deer reported having crossed the straits and there are 2,164 hunters in the woods. Two fatalities have been reported, one from heart disease and the other by the accidental discharge of a gun. Officials of the game warden's department express great satisfaction at the way the new one-deer law is working out.

Bayard Taylor's immortal poem, "The Maiden's Prayer," will be given at the Methodist Church next week after Dec. 1st., until further notice.

Ted Floyd, a resident of St. James, was found dead at Manistique one day last week. Floyd was well known here. The body passed at Charlevoix on Friday a tug sent to Manistique from the Island.

Next Wednesday's special feature at the Majestic will be "The High Hand," featuring Carlyle Blackwell. This picture is taken from the novel by Jacquet Futrelle and is an inspiring romance of love, politics, capital and labor.

Up through the din and musk of the steel works, up by brow and brain until he took his place behind the superintendent's desk came Jim Warren in "The High Hand," the special feature at the Majestic Wednesday, Dec. 4th.

The steamer Stephenson arrived Friday night from a lower lake port with coal for the Coal & Wood Co. She leaves today for a Lake Superior, Canadian port where she takes a cargo of lumber for Muskegon, where she will unload and give her machinery an overhauling.

The local coast guard crew, which under the new regulations must reside at their stands at the station, have converted the old crab room to a mess hall and built a kitchen annex thereto. The station closes this week, but with the opening, of the station next spring each man takes a week's detail as cook during the season.

Mr. A. Voiter, the well known beet sugar expert, who was connected with the Charlevoix factory in its day, and who, the past number of years has been connected with a factory in the state of Vera Cruz, Mexico, left for that country Tuesday morning to resume his work after having spent the summer and fall here with his family.

The postmaster has blood in his eye. It has been customary to leave the postoffice lobby open nights and Sundays to accommodate those having lock boxes. The postmaster asserts that boys make it a place of assembly and make "rough house." Last Sunday they broke a large pane of ornamental glass in the area enclosure. Mr. Finucan says there will be trouble if this is not stopped.

What might have been a serious disaster in the lower channel was narrowly averted Saturday. The steamer Ellen C. with the Consort Mowatt lumber laden were outward bound. The Consort too' a 'sheer' abreast of the coast guard station, and struck the revetment with considerable force, carrying her so badly that the strain of the tow line nearly caused her to capsize. Only when the tow line was cut did she straighten up. The danger was so great that the crew took off their coats to jump overboard and the coast guard sent out a boat. The two boats finally got under way for the straits and the lower lakes.

BOY SCOUTS OF AMERICA

Work is Placed on Running Basis and Real Boy Scout Work Actually Begun

A few weeks ago through the columns of this paper you read of the organization of The Boy Scouts of America. Now that work is placed on a running basis, and real Boy Scout work has actually begun, our Eagle Patrol is making a record not often found in scout circles. Other patrols are beginning fine work, on Thanksgiving more than fifty homes where old people sick or needy were found each was remembered with dainties, clothing or flowers by the Boy Scouts.

A Scout tries to do a good turn every day. It is indeed pleasing to know that most of the boys of our city have enrolled.

While we are glad to be able to submit to you the above report, yet this is not the sole object of this article. In the absence of Y. M. C. A. building Charlevoix young men and boys have no social center. True, we have a splendid library, but we do not go to the library to talk and have a social hour. We go there to read and then not all of us are interested in books, we want our leisure hours reading. We have hotels with large lobbies, but those lobbies are not a social center for the social centers but for their guests. We have stores and restaurants but they are places where we go for our meals and recreation. We have a post office but hanging out there means a "kick" we will have the "coop" after you. We have churches and fraternal buildings, but we are strangers to the churches doors when the night is cold or clear, wet or dry, they are dark and cold as if afraid of those whom they should serve. Their huge doors are bound and locked with steel and knock if you will but some save the chosen of your call will return to you.

There is have other places where our boys can "hang out." We, just as you wish your boy to spend his leisure hours in a place where he is welcome, of course you don't, but if you do not provide the better, wholesome places then there is place where may he find him. Many a boy has gone wrong and found his way and pleasure in the "Dance Cellar" or "Gambling Hell" and would have if proper social environment had been his. What we become depends primarily on our environment and our training, we are responsible to the youths of our land for both. A number of our young men who do not care to do the Boy Scout work have been organized into the Charlevoix Athletic Association with a view to carry out, not only all the work heretofore done by the County Y M C A, but to do a number of things not attempted by them, and more over, to make our work not temporary as was the "Y", but permanent.

As a starting point the Athletic Association and Boy Scouts combined have secured from the Baptist church four rooms in their basement parlors which are being equipped for social rooms. These club rooms will be furnished as neatly as your home parlors, the committee is covering the floors with linoleum and have placed Axminster rugs in all the rooms, shades and lace curtains to the windows. A number of library tables, nice sectional book cases, davenports, rocking chairs, a well selected line of books for youths, three daily papers and a good line of magazines will be placed on the social parlors. Some forty amusements such as checker boards, chess, dominoes, finch, table croquet, table golf, table base ball, carrom and authors, etc., afford a complete repertoire of games and entertainment. A nice group of semi-indirect lighting fixtures have been installed and these rooms will be warmed, lighted and opened day and night, (7 days in the week. They will be in the care of the writer and two other young men. Proper discipline will be maintained at all times and it will certainly be a nice place for our young folks to "hang out."

This work is of city, not in any way denominational, but will, in every sense be disconnected with church or Sunday School. Several wished to get a building away from any church, but the committee did not feel that it would be possible for them to pay some one to superintend the work, as the County "Y" was discontinued because the whole county could not raise funds enough to keep the leader. We expect some of you to pay to aid and have no salary to pay. It is hoped this is to be but the beginning of greater work and earnestly invite the assistance of all churches, their ministers, all the fraternal societies and in fact everybody to help us. Our young men will call on you and ask you to take a membership card and help up to equip and run this work. We shall appreciate anything you might do to help us. Please be as liberal as you can now and when our equipment is paid for then we will not need nor ask for so much.

Yours for better environment and better training for our boys and young men.

County Normal Notes

The third number of the Charlevoix Lecture Course was a lecture with stereopticon views by Henry M. Rose, assistant secretary of the United States Senate. The title of the lecture was "The City Beautiful." It revealed to the people of the Northwest the wonders of such a one. "Fall in love with her" Oh, he has the power to stir up souls and inspire the tender passion."

It is like a woman to be one or two inches his superior and thoroughly mature. He dreads any trace of the bread-and-butter schoolgirl. He likes resembles the strong, heroic women Shakespeare has pictured, full-blooded and vital, full of character and spirit, with a fair spice of temper.

The big man dreads a woman's tongue. He is alarmed at the lightning of her eyes when they flash in anger; but the little man is amused, and rather likes it. That's one of the subtle secrets of the little man's mastery. Tall and willowy, with the promise of richer, fuller curves as the years go by, is the ideal of the little man. He admires a regal carriage, a touch of hauteur and, above all, style. —New York Weekly.

DANGER IN FOOLISH CUSTOM

Those Who Bite Penholders in Public Use Are Heresy Warned of Possible Infection.

That the penholder, such as most of us frequently see in hotels, post offices, banks and other public writing rooms may be a dangerous thing, as disease germs as the rolls towel and public drinking cup is the suspicion for which the boards of health believe they have found ample grounds.

The next time you see one of these public penholders you will notice, if you examine it carefully, that the wooden handle is covered with little dents. These dents are the imprint of the teeth of persons who have used the pen before you; and as the mouth is the favorite port of entry for disease, such dent is usually full of microbes.

To expose yourself to sickness and death, therefore, all you need to do is to bite on the penholder. Every time you do this, you take into your mouth the germs which scores of other pigeons have left by similar bites.

Health officials plan to secure legislation abolishing the public penholder, in the meantime they urge the public to try to break itself of the almost universal habit of holding a pen in one's mouth while folding a letter or blotting a check.

WAR UPON PAIN

Pain is a visitor to every home and usually it comes quite unexpectedly. But you are prepared for every emergency; if you keep a small bottle of Bucklen's Arnica Salve handy. It is the greatest pain killer ever discovered. Burns yield to the skin-healing salve required—it drives the pain away. It is really wonderful.

Mervin H. Sonter, Berkeley, Calif., writes: "Last Saturday, after tramping around the Panama Exposition with my feet, I came home with my neck so stiff that I could not turn. I applied Sloan's Liniment freely and went to bed. To my surprise, next morning the stiffness had vanished, the appeared four hours after the second application. I was as good as new."

March 1910. At Druggists. 25c.

WHERE LITTLE MEN WIN OUT

As a Rule They Have Much More Assurance Than Their Fellows Who Are Big.

As a rule, big men are shy and lacking in assurance. A daughter of the gods, diminutive tall, fills them with something like terror. The woman who appears to them is usually some sparkling, vivacious, fairy like creature with kittenish ways and roguish glances. The little man, on the contrary, is seldom burdened with humility. He is a being of great aspirations and stupendous ambitions; he believes in himself, which is the reason why he generally can get the woman of his choice to smile upon him. The dainty, wee, Tillanilke woman possesses no charm for him.

The little man's wife is always of such a one. "Fall in love with her" Oh, he has the power to stir up souls and inspire the tender passion."

It is like a woman to be one or two inches his superior and thoroughly mature. He dreads any trace of the bread-and-butter schoolgirl. He likes resembles the strong, heroic women Shakespeare has pictured, full-blooded and vital, full of character and spirit, with a fair spice of temper.

The big man dreads a woman's tongue. He is alarmed at the lightning of her eyes when they flash in anger; but the little man is amused, and rather likes it. That's one of the subtle secrets of the little man's mastery. Tall and willowy, with the promise of richer, fuller curves as the years go by, is the ideal of the little man. He admires a regal carriage, a touch of hauteur and, above all, style. —New York Weekly.

DEATH OF OLD SETTLER

Charles J. Allard, of this city, died Thursday at the Little Sisters of the Poor Home for the Aged, Grand Rapids. Deceased was a decendant of the French habitants of the old American Fur Co. days, and was born on Mackinac Island 78 years ago. From his boyhood he was a sailor and fisherman, residing uninterruptedly in the region of the straits and islands all these years. The remains arrived here Friday afternoon, the funeral occuring Saturday morning from St. Mary's church.

He was the father of Charles and Louis, of this city; Oliver, of Muskegon; Miss Jennie, of Chicago; Mrs. Jessie Stoberg, of Muskegon, and Mrs. Elien Posen, of Leland.

CHRISTMAS STATIONERY

Splendid line of Christmas Stationery at the Rexall Store. We bought right and will make good prices. Come in and see it.

WEDDING ANNIVERSARY

Mr. and Mrs. D. S. Fairchild, of E. Upright avenue, celebrated their golden wedding on Thanksgiving day, with a family reunion. Those present were their son Eugene and family, who reside with them; their daughter and husband from Boyne City, their son Lorne, wife and daughter from Beaverton, and their nephew Walter Fairchild and family of Charlevoix.

A bountiful Thanksgiving dinner was prepared by Mrs. Eugene Fairchild in which figured the usual pumpkin pie, cranberry sauce, fricassee chicken and a huge turkey that came from Beaverton. A pretty floral piece occupied the center of the table, for which thanks are due to the Boy Scouts who brought Thanksgiving cheer to the homes of many sick and afflicted.

Mr. Fairchild is a veteran who served through nearly the entire civil war, from the effects of which he has been an invalid for many years. At the close of the war he was married to Miss Martha Allen, both being natives of Ohio. In 1864 they moved to Gladwin County, Mich., where they endured the hardships of pioneer life and saw Gladwin County develop from a wilderness to the thriving agricultural county of the present day. In 1912 they came to Charlevoix for the benefit of his health, where they have since resided.

To expose yourself to sickness and death, therefore, all you need to do is to bite on the penholder. Every time you do this, you take into your mouth the germs which scores of other pigeons have left by similar bites.

Health officials plan to secure legislation abolishing the public penholder, in the meantime they urge the public to try to break itself of the almost universal habit of holding a pen in one's mouth while folding a letter or blotting a check.

Afternoon: Sermon at Burgess.
Thursday eve— Special Temperance lower meeting followed by business session of the church.

Northern Michigan

"Petoskey News: Jacob Stroble, who for forty years has been a resident of Petoskey, died suddenly at 10:30 Monday forenoon at his apartments in the Alcomia from diabetes and heart trouble. No one expected his death at this time as he was as well as he had been for some time and Sunday evening was out calling on friends. He was taken ill late in the night.

Boyne Citizen: There are but few legitimate advertising schemes floating by transients who canvas a town with a catchy scheme for advertising a meritorious piece of merchandise. The average scheme is absolutely worthless to the advertiser and costs far more than legitimate advertising would cost. This city has been visited by several of these gold brick men in the past few months.

Petoskey News: The Blackmer Pump company of this city received its first order Saturday afternoon, and this was also the first war order of any kind to come direct to Petoskey. The New York office of the company received the second 10 year period of the contract.

My object for insisting on the above contract is to demonstrate to the world the matter of cost and expense of producing power and pumping water for transmitting it to Charlevoix was largely experimental at that time and then the equipment for the 20 year contract was undertaken to be cared for by the city. What the city did is best evidence by the material of the legislature, the enacting clauses of which are as follows:

"AN ACT to authorize the City of Charlevoix, in the county of Charlevoix, and state of Michigan, to make and enter contracts for the purpose of purchasing and installing a hydro-electric current for the use of said City and to be used in the operation of its electric water, to prescribe the terms for which such contracts may be made, and to ratify any and all such contracts heretofore made and entered into and now in force.

And also a general act which the legislature passed for the benefit of all fourth class cities covers the legality of the cities light contract to say nothing of the moral obligation involved in an attempt to break an agreement or contract, and which general act reads as follows:

"The People of the State of Michigan Enact: Section 1. The respective cities of the councils of all cities of the fourth class are empowered to, and by ordinance, with persons or corporations, to use streets and public places, for the supply of such cities or the inhabitants thereof with water, heat, gas, electric or other lights, for periods of time exceeding ten years, but not exceeding thirty years, are hereby legalized and made valid."

To my positive knowledge there was no trickery or star chamber details or secrets of any sort in connection with the passing of the contract or the special act upon my part. In view of the personal interests to be advanced by those who are promoting with their official council and advise the present agitation, I leave it willingly to the people of Charlevoix. You all know the former representative, the Hon. A. J. Stroud and the Hon. Fitch R. Williams, neither of whom memory can be fairly assailed, and to the comfort of the sinnations as have recently been made in poor local papers. At the time the light contract was made with the City of Charlevoix the city employed Geo. S. Parsons, C. E. M. of Kalamazoo, to investigate this power proposition and his report shows that he advised your city in the following language:

"Interruptions in the power current as it is delivered to you through the various processes of generation, transformation, transmission and so forth are bound to occur, so far as these interrupt the operation of the lighting plant they are merely an inconvenience but if they leave you without fire protection, are hazardous."

The above shows that your city was advised and aware of possible interruptions of current. It has been my aim to serve your city to the best of my ability, I have employed first-class assistance and have given this business my personal attention almost constantly. I feel that up to this time I have given you as good service as is possible. Although some interruptions have occured it is a fact that many more have occured on the light system of distribution within your city where by chafing of limbs of trees on the wires, the over loading of transformers and switches and many other causes tend to produce disturbances, which I have no control, for my responsibility ceases where my wire touches your city limits; nevertheless the Bellaire plant is usually held responsible for every wink in the light.

About one month ago your electric light committee requested my presence in your city for the purpose of considering the price and arrangements that shall prevail during the succeeding 10 years of our contract, commencing June 1, 1916. I advised the committee that if the conditions remained as they were in the past, the price would have to advance. But if the city would consider a suggestion from me I would recommend it to buy my steam unit consisting of a Sterling boiler, a Harris Corliss Engine and a Bullock Generator, and one of these parts capable of delivering 500 horse power. The committee seemed to be very much interested in the proposition and I was requested to come before the council with a proposition, to which I advised that if the council would agree to have an engineer and a committee come to Petoskey to examine the machinery first. The above steam unit supplied your city with electric current last summer to the satisfaction of all concerned

CHAPTER I.

A Small World.

Canalet set up so suddenly that his head hit the woodwork over the upper berth. His own voice stiffened in his ears. He wondered how much he had said, and how far it could have startled above the roar of the timbers, screws and the mighty pounding of the water against tar plates. And then he remembered how he had been left behind at Naples and relished the Kaiser Fritz at Genoa, only to find that he no longer had a cabin to himself.

A sniff assured Canalet that he was neither alone in the moonlight nor yet the only one awake; he pulled back the swaying curtain, and there on the settee, sat a man with a strong blue chin and the quietest solemnity of an expiring wire.

It was his cabin companion, an American named Hilton Toye, and Canalet addressed him with nervous familiarity.

"I say! Have I been talking in my sleep?"

"Why, yes!" replied Hilton Toye, and broke into a smile that made a human being of him.

Canalet frowned a responsive grin. "What did I say?" he asked, with an assumed curiosity at variance with his shaking hand and shining forehead.

"Five or six times he called out in fingerties, with something deep behind his kindly smile. "I Judge," said he, "you were dreaming of some drama you've been seeing ashore. Mr. Canalet."

"Dreamless," said Canalet, wiping his face. "It was a nightmare! I must have waved to too soon after dinner. But I should like to know what I said."

"I can tell you word for word. You said, 'Henry Craven—dead!' and then you said, 'Dead—dead—Henry Craven!' as if you'd got to have it both ways to make sure."

"It's true," said Canalet, shuddering. "I saw his lying dead, in my dream."

Hilton Toye took a gold watch from his waistcoat pocket. "Thirteen minutes to one in the morning," he said, "and now its September eighteenth. Take a note of that, Mr. Canalet. It may be another case of second sight for your psychical research society."

"I don't care if it is," Canalet was smoking furiously.

"Meaning it was no great friend you dreamed was dead."

"No friend at all, dead or alive!"

"I'm sorry to hear it," said Hilton Toye, winding his watch slowly, "if he's by way of being a friend of mine. I know a Henry Craven over in England. Lives along the river, down Kingston way, in a big house."

"Called Uplands?"

"Yes, sir! That's the man. Little world, isn't it?"

The man in the upper berth had to hold on as his curtain swung clear. The man filled back on the settee, all attention all the time, was more than ever effective for't to him. Without the kindly smile that went as quickly as it came, Hilton Toye was sober, subtle and demure. Canalet, on the other hand, was of amazing complexion and impetuous looks. He was taller a inch, brown above the middle of the face, but it broke off across his forehead like the coloring of a mountaineer's. Both men were in their early prime, and each stood ready for his cabin and typify the traveled American who knows the world, and the colonial Britisher who has made some one knock out of it his own.

"I thought of my Henry Craven," continued Toye, "as soon as ever you came out of your cabin, and I thought kind of ordinary name. I might have known it was the same. If I'd remembered the name of the firm. Isn't it Craven & Canalet, the stockbrokers, down in Tokenspace Yard?"

"That's it," said Canalet bitterly. "But you have been some of us, I'll bet, since my father died ten years ago."

"But you're Henry Craven's old partner's son?"

"I'm his only son."

"You'll wonder you dream about Henry Craven," cried Toye, "and no wonder, it wouldn't mean much to you if your dream came true."

"Why?" Canalet thrust through the hair with his left hand.

"He wasn't a white man to me or mine—whatever you may have found him."

"I had a little place near his one summer. I know only what I heard down there."

"What did you hear?" asked Canalet. "I've been away ten years myself since the crash that ruined everybody. Let me hear it the bottom of the whole thing. It would be a kindness to tell me what you heard."

"Well, I guess you've said it yourself right now. That man seems to have heard everybody all around except himself, that's how I make it out," said Hilton Toye.

"He did worse," said Canalet through his teeth. "He sinned my poor father to be hanged, and to the wife of Australia, and he sent a letter man than himself to spread the horrors right."

"Toye opened his dark eyes for once. "Sinned your father, Mr. Canalet? Why, I thought it was the sinning of his that way assume their regular functions, with the restoring of the normal temperature to the body.

Above all do not allow yourself to become discouraged if your efforts for reinstitution are not prompt to result, says Outing. One might cite dozens of cases reported by absolutely reliable medical journals to prove that life does not become extinct nearly so soon as is generally believed. Men who have been apparently drowned, dragged from the water after thirty or forty minutes of submersion, have been saved. Again, operators have worked artificial respiration for as long as four hours without a sign of recovery and then were their joile persistence rewarded by the revival of the patient.

Never despair, therefore. A human life is at stake. Don't give up until the last ray of hope is lost. Keep at it and you'll find that success will usually crown your efforts.

The Schaefer or prone pressure method is now accepted the world over

MUCH PATIENCE IS REQUIRED

Do Not Get Discouraged in Attempting to Revive Apparently Drowned Person If Results Are Slow.

Are treatment of the apparently drowned to be thorough, must take into consideration, first, clearing the mouth and nostrils of phlegm and mucus; second, the expulsion of pot nonous gases from the lungs; third, the replenishing of the expelled gases by pure oxygenated air; fourth, the stimulating of the respiratory organs so that they may assume their regular functions, fifth, the restoring of the normal temperature to the body.

Above all do not allow yourself to become discouraged if your efforts for resuscitation are not prompt to result

Never despair, therefore. A human life is at stake. Don't give up until the last ray of hope is lost. Keep at it and you'll find that success will usually crown your efforts.

The Schaefer or prone pressure method is now accepted the world over

but once more Toye was regarding him as shrewdly as when the eighth was younger, and the fullness of the world had not yet made them confident and born companion.

Eight bells actually struck before their great talk ended and Canalet swore that he missed the "watches aft, strike" of the sailing-vessel ten years before.

"Say!" exclaimed Hilton Toye, knitting his brows over some bulbous recollection of his own. "I seem to have heard of you and some of your yarns before. Didn't you spend nights in a log-hut miles and miles from any human being?"

It was as they were turning in at last, but the question spoiled a yawn for Canalet.

"Sometimes, at one of our outstations," said he, looking puzzled.

"I've seen your photograph," said Toye, regarding him with a more critical stare. "But it was with a beard." "I had it off when I was ashore the other day," said Canalet. "I always meant to, before the end of the voyage."

"I see. It was a Miss Mannair showed me that photograph—Miss Blanche Mannair lives in a little house down there near your old home. I

"I Say—Have I Been Talking in My Sleep?"

thought she looked a pretty girl, and I'd send him my card if I ever met him. But I wasn't a fellow I'd been at school with so I worshiped as no end of a swell, and I thought, 'Yes, I did that too.' And I can tell you they don't think any harm of him in the Bay of Biscay, and they don't think any harm of him in the Bay of Biscay, and Canalet cold now he had been in it a fortnight, as was only half twenty years. He even told it with considerable humor, and hit off sundry passengers of ten years ago as though they had been aboard the German boat last night and Toye drew him out about the book until the shadows passed for minutes from the redness in his face and the white-brick forehead.

"I remember thinking I would die for gold," said Canalet. "That's all I knew about Australia. But you don't have adventures and sorts if you go far enough up-country for 'em; it still pays to know how to use your fists out there. I remember once at a bush shanty they dished up some Irish stew that I said I'd fight the cook if

"Second Sight!" He Ejaculated, as Though It Were the Night Before.

Judge here is another old bone that's been broken up since your day."

"They've all got married," said Canalet.

"Except Miss Blanche. You write to her some, Mr. Canalet?"

"I hope he has," said Toye. "It was a promise. We were kids together," he said, musingly, as he dimpled back into the upper berth.

"Guess you were a lucky kid," said the voice below. "She's one in a thousand, Miss Blanche Mannair!"

CHAPTER II.

Second Sight.

Southampton Water was an ornamental lake dotted with fairy lamps. It was a midsummer night, leaping a whole season behind its fellows. But already it was so late that the English passengers on the Kaiser Fritz had abandoned all thought of catching the last train for London.

They tramped the deck in their dinner waistcoats, leaning hence; they manned the rail in lazy inarticulate appreciation of the nocturne in blue and silver, with green and red and countless yellow lights. But Achilles in his tent was no more conspicuous above, tor than Canalet in his cabin as the Kaiser Fritz steamed sedately up Southampton Water.

He had finished packing; the stateroom door was impassable with the baggage that Canalet had wanted on his five-weeks' voyage. There was scarcely room to sit down, but in what there was sat Canalet like a soul in torment. All the vultures of the night before, of his dreadful dream, and of the years reminiscences to which his dream had led, might have been gnawing at his vitals as he sat there waiting to set foot once more in the land from which a bitter blow had driven him.

Yet the bitterness night have been allayed by the consciousness that he at any rate, had turned it to account. It had been, indeed, the making of him; thanks to that, strong incentive, even some of the sweets of a deserved success were already his. But there was no hint of complacency in Canalet's stunned face and heavy attitude. His face was pale, even in that torrid zone between the latitudes protected by the bush by beard and wide-awake. And he jumped to his feet so suddenly as the screw stopped for the first time. The same thing happened again and yet again, as often as ever the engines passed before the end. Canalet would spring up and watch his stateroom door with clenched fists and haunted eyes. But it was some long time before the door flew open, and then slammed behind Hilton Toye.

Toye was in a state of excitement even more abnormal than Canalet's nervous dependency, which indeed it prevented him from observing. It was instantaneously clear that Toye was astounded, thrilled, almost triumphant but as yet had drawing the line at that. A newspaper fluttered in his hand.

"Second sight!" he ejaculated, as though it were the night before and Canalet still shaken by his dream. "I guess you've got it in full measure, pressed down and running over, Mr. Canalet!"

(TO BE CONTINUED.)

The Real Thing.

It is not numbers that count but importance.

Meant to Withstand Wear or Weather

With little concession to the last word in fashions these two severely tailored suits present themselves to those who know the strength of their good style. They are suits made to stand the stress of wear and weather and to make their owners look trim and "well set up," rain or shine.

The first suit is made of cravenetted dark blue serge. The coat is straight, with a little extra fullness at the sides and back in the skirt portion by way of recognition of the season's demands. It fastens to one side with bone buttons and the revers, cuffs and pockets are bound with silk braid.

The skirt is plain and moderately wide, sloping outward from hip to hem. It is cut ankle length and has lapped seams. Small bone buttons finish the plain coat sleeves.

Such a suit is not hurt by the rain and returns from the cleaners as good as new.

In the second model the skirt is widened by the introduction of three plaits at each side, and trimmed with a row of bone buttons set on the middle plait. The coat is a box model with a single small slip pocket at one side. It is finished with machine stitching and small bone buttons are used for decorating it at the sides and on the sleeves. A double row of larger ones take care of the fastening at the double-breasted front. The skirt is worn smoother than shown in the picture and is both more sensible and more up to date when cut to reach a very little below the shoe tops.

The Brilliance of Small Hats

Those whose allegiance holds to the small hat have been repaid by the brilliance as a millinery achievement this season. Though dressmaker models with the wide-brimmed styles, the small hat has been allowed greater latitude in the matter of trimming, and millinery has marked its draping. Even so, its trimming may be classed as simple compared to that which has gone before. But designers have spent their ingenuity in finding odd poses for the season's odd trimmings and in the management of flowers and lines.

Beautiful velvets in colors that are an inspiration to the designers have been used for making many of the small hats, and velvet ribbons may be said to predominate. But there are others. A few handsome ones are confeter of fashion. Novelty beads and fabrics, plush, metallic laces and tur are all conspicuous in the composition of the small hat.

Two turbans in which velvet is used but as a foil, drawing the line at that. A newspaper fluttered in his hand.

"Second sight!" he ejaculated, as though it were the night before and Canalet still shaken by his dream. "I guess you've got it in full measure, pressed down and running over, Mr. Canalet!"

(TO BE CONTINUED.)

The Real Thing.

It is not numbers that count but importance.

Velvet Blouses.

Among the dressier blouses those with velvet yokes are bound to be prominent place. As the material is very heavy, it is usually combined with chiffon, lace or Chinese crepe. In some instances the velvet is used to form bib effects. Other blouses are all velvet except for the sleeves. Many chiffon blouses are trimmed with bands of velvet. In harmonizing or contrasting color. At any rate one's wardrobe will not be complete this season unless one has a blouse showing some sizes of velvet about it somewhere.

Trinkets of Rock Crystal.

Rock crystal jewelry is the latest fad. The square oval or pear-shaped crystals are carved in cameo effect and are set in a rim of silver. Those small boxes at top and bottom of the setting show the black silk cords which meet in a tassel in about one per cent. as compared with eight or nine per cent in former methods.

CRANKS AND SELF-STARTERS

"Platonic friendship" is the story a woman puts up to a man before and the world afterwards.

The love of a man for a woman is a perfectly natural phenomenon—to everyone but the other woman.

What a lovely world it would be if one could recover the money and the love and the time one has misspent.

The woman who knows just when and how to make a scene is not nearly so clever as the woman who knows just when and how not to make a scene.

One of the many difficulties in the arrangements of a society women's program is to be found in by the right people and not found out by the others.

We all have different ideas of attainment—the unworldly may want to help others, the worldly to help themselves. And somtimes wants to be found out.

It is absurd to talk of a "dead past." There is no such thing. The past never dies, except it looks so different from a distance that it is hard to recognize it.

It is a splendid plan to make a man run after you, but it is a mistake to let him go on running indefinitely mere you get bilious from exercise. The time will come when you'll sit down to rest—with someone else.

By some curious dispensation of Providence, if a woman with big feet and a man with small feet start even, the one with big feet probably has to wait all the way while the one with small feet probably finishes up in an automobile de luxe.

JUDICIALLY DECIDED

The best point in the average argument is the period.

Sin doesn't find some people out until they are all in.

The thinking cap seems to be too small for some heads.

The man of winning ways uncovers many ways of winning.

Old styles come in fashion again, but back numbers never do.

In the school of experience most of the lessons are learned by rote.

Most of the unsuccessful men meet failure more than half way.

Some people don't think honesty pays unless it pays their bills.

The less some people have to say the more they let you know it.

The society woman can always find her sweet smile where she put it.

The optimist doesn't have to do but once, but the pessimist is buried alive every day.

The more we learn about this world the more we want to stay and see it. It is true—judge.

ACTIVITIES OF WOMEN

Women farmers in Oregon number over 2,000.

Pennsylvania has nearly 800 women physicians.

The woman suffrage petition which will be presented to congress when it meets in December was signed by 250,000 women.

In order to be able to dance all over the world at the same time, Pavlova, the famous dancer, is now appearing before the movies.

Miss Eleanor Fullerton, although thirteen years of age, recently won first prize at the American dahlia show, held in New York city.

The work of introducing modern sanitary measures in China is in charge of Mrs. Lotta C. Hume, a graduate of Johns Hopkins university.

Miss Mabel Kelso of Hickory, Pa., passed the best examination as wireless operator under the direction of the navy department at Washington, Wash., and was the first woman to be assigned to duty on shipboard, with the Alaska Steamship line.

MAXIMS FOR THE NEWLYWEDS

An angry speech never with anger meet.

If you give and take no heart will break.

Bitterness dies before a temper sweet.

Confession of a fault makes halt amends.

Silence is often the golden key of happiness.

Trust in Providence, but keep the kettle boiling.

Make no display of the sacrifices you make for each other.

Never deceive; confidence once lost can never be wholly regained.

Avoid "conditions," and cultivate cheerfully the give-and-take spirit.

Don't both be angry at the same time; it takes two to make a quarrel.

Always remember it is better to be a laughing stock of children than to be an object lesson.

Achy Joints Give Warning

A creaky joint often precedes stiff, painful, disabling rheumatism. Don't wait for this warning. Help your kidneys now. When your kidneys are not filtering the blood as they should, poisonous matter is left to clog the blood and cause trouble.

Bad backs, rheumatic pains, sore, aching joints, headaches, dizziness, nervous troubles, heart flutterings, and urinary disorders are some of the effects of weak kidneys and if nothing is done there's danger of dropsy, gravel or Bright's disease. Use Doan's Kidney Pills, the most widely used, the best recommended kidney remedy in the world.

DOAN'S KIDNEY PILLS

50¢ at all Stores

MOONE'S Emerald Oil

The famous and unexcelled antiseptic and germicide, only a few drops required on application. So marvelously powerful that Enlarged Glands, Wens and Tumors disappear with its use. Price $1.00 sent anywhere charges paid on receipt of price.

Generous sample sent on receipt of 10c from

Moone Chemical Co., Dept. W, Rochester, N.Y.

BROUGHT HOME THE MONEY

Youngster's Ideas of Finance Somewhat Primitive, But They Were Also Effective.

A four-year-old son in a Winchester (Ind.) family often is a help to his mother when he returns family washings to different houses. Often he is puzzled when asked how much is due for the work.

One day last week the lad returned a washing to a certain Winchester home. Several extras were included in the laundry and, naturally, the amount expected an additional expense.

"How much is it this week?" the owner asked.

The child appeared to be in deep study and did not answer.

"How much is it?" the owner asked for a second time.

"Ah-h-h—three nickels more than the other week," the youngster said.

The owner had formerly paid $1.25 each week, so $1.40 was paid this time—Indianapolis News.

A GRATEFUL ACKNOWLEDGMENT.

Mr. F. C. Class of Welcome Lake, Pa., writes: "I suffered with Backache and Kidney Trouble. My health suffered, my sleep was broken and unrefreshing. I felt heavy and sleepy after meals, was always nervous and tired, had a bitter taste in my mouth, was drowsy, had a floating sensation before my eyes, was always thirsty, had a dragging sensation across my loins. Difficulty in collecting my thoughts and troubled with shortness of breath. Dodds Kidney Pills have cured me of these complaints. It is an liberty to publish this letter for the benefit of any sufferer who doubts the merit of Dodds Kidney Pills."

Dodds Kidney Pills, 50c. per box at your dealer or Dodds Medicine Co., Buffalo, N. Y. Dodds Dyspepsia Tablets for Indigestion have been proved. 50c. per box.—Adv.

Expensive.

"Poor Simeon! You know his wife used to be a dressmaker's model."

"Yes. What of it?"

"Nothing much, only she expects slimpkins to pay for the kind of gowns she used to get paid for wearing."

To keep clean and healthy take Dr. Pierce's Pleasant Pellets. They regulate liver, stomach and bowels.

Briefly defined, faith is a fixed belief that the impossible is going to happen.

When all others fail to please Try Deniker's Coffee.

Hard work brings success—some titles.

The worse the weather today, the better it may be tomorrow.

WANTED TIMBER

Choice White Oak, White Pine and other timber, plank and boards. If you have a car load and can so order, write giving particulars of your lumber and facilities.

GIGANTIC PLANT BORN OF WAR'S AWFUL DEMANDS

Millions of Dollars' Worth of Explosives to Be Made in Pennsylvania.

GREAT SECRECY MAINTAINED

Mammoth Industry Due to Europe's Demands for War Materials Springs Up—Hazardous Work for Which Men Are Paid Big Wages.

Philadelphia.—In order to fill vast war orders, a mighty high explosive plant is being built in the quiet town of the small town of Emporium, Cameron county, Pennsylvania. Emporium for years has manufactured powder and dynamite, the explosives being used chiefly for mining and blasting purposes. An explosive company, backed by millions of dollars, has bought up the old powder and dynamite plants in Cameron county and has started the manufacture of gun cotton and other high explosives in the plant now being brought to completion near Emporium.

The company has huge war orders to fill and to fill them on time it has been necessary for hundreds of imported men to work night and day in building the new explosive plant, which extends over one mile up the valley and which is composed of over 500 separate buildings, the "cotton plant," as the guncotton department is called at Emporium, being the most extensive of the new buildings.

At this time the creation of a great industrial plant near the village of Emporium has taxed the housing capacity of the town far beyond its limits. In order to the necessary building and to start work in the buildings as soon as completed, over 600 outside men have been brought into Emporium. In order to house the future permanent workers of the new plant, practically a new town will have to be built, either by the company or by local speculators. Many new houses are now under construction and many more are to be built.

Suspicious of Strangers.

On account of the filling of war orders for high explosives the company is suspicious of strangers who visit the new plant. On duty all the time at the plant are 26 armed guards, deputy sheriffs, besides many employees who do not hesitate to hold up strangers on the state highways near the plant and question them as to their business in Emporium. Naturally, the company fears some fanatic will gain entrance to the plant and do mischief which might result in the killing of workmen and a delay in filling war orders. The town of Emporium was thrown into a panic a few days ago by the report that an aeroplane was hovering over the new guncotton plant at night. Upon all the writer could learn at Emporium the story of the aeroplane was a mere fabrication. Nevertheless, the company leaves no stone unturned to protect its property from strangers who might be bent on making mischief.

Reports have circulated throughout western Pennsylvania and western New York to the effect that there is work at Emporium for hundreds of men. As a result, the little town has been and still is deluged with job seekers, most of whom are fitted in no way for the work the company desires done. Emporium and towns near it have raised many good powder and dynamite workers. These men have been given employment in the new plant at greatly increased wages and they are the real backbone of the new industry. Explosive makers are not made over night and the big company is not hiring amateurs and novices to do the work of filling its great orders. Carpenters and masons, concrete workers and steamfitters, and various other skilled workmen have been in demand at Emporium and the demand has been pretty well filled. There is no place there, however, for the average common laborer who is out of work, for the average common laborer cannot be trusted with the handling of high explosives.

Attracts Many Workers.

The boom at Emporium has attracted many men in search of work, men who would have been hired by the company if they had not been ahead of them in the new explosive centre. The majority of high explosives is a hazardous occupation, and many men who would like to draw the good wages paid by the explosive company have given up their chances of employment at the last moment through fear. Above all one, too, who have come to Emporium for work who have left the places because they did not care to work upon war orders. In fact, the creation of the new plant, which will bring great prosperity to the little mountain town of Emporium, has played hob with the consciences of hundreds of people. It is one thing to make powder for firing shots in coal mines and quarries and quite another thing to make high explosives for the use of an army or armies. In Emporium and in the neighboring large towns of Ridgway and St. Marys the old-fashioned conscience has been discovered even among big business men, who will have nothing whatever to do with the new company as long as it manufactures explosives to be used in the killing of human beings.

While the company is absolutely secretive as to its orders, it is building a plant which has every evidence of being a permanent establishment. Were the war in Europe to stop, no more there would be a slump in the making of high explosives in the United States. It is rumored at Emporium, all statements there positive to be the new explosive plant being built by the holding company may eventually be taken over by the United States government for the manufacture of explosives to be used by the United States army and navy. The presence of government inspectors at the big plant has given rise to this rumor. Influential men in Emporium, men who are supposed to know a little of the inside workings of the explosive company, are noncommittal as to the government's interest in the plant, stating that it is perfectly natural for government inspectors to inspect the manufacture of explosives at any plant in the country and that it is not at all unlikely that the government is having guncotton made for future use, a fact which would account for the presence of the federal inspectors at the plant.

A Gigantic Concern.

The completion of the new explosive plant at Emporium will have been done in record time. The company recently raised the wages of all its workmen 50 per cent promising them an additional 50 per cent raise if the war in Europe continues another year. It is unofficially stated the company has orders from Europe for $75,000,000 worth of explosives. It is estimated the Emporium plant in combination will have cost $5,000,000. The company has other plants, but the new one at Emporium will be its largest. The most modern machinery designed for the making of high explosives has been installed in the plant at great expense. There are hundreds of miles of 2,000 pounds, which have been put into position lately, the biggest returns ever used in the manufacture of explosives. Everything about the new plant is on a vast scale, a scale which dwarfs the old explosive plants still operating in the Emporium district.

Into the closely-guarded, high-fenced plant the Pennsylvania railroad has run a track and cars are loaded with explosives inside the enclosure at a great shipping depot. Great quantities are thus removed from the plant daily. The utmost secrecy is maintained as to the destination of the explosives shipped out from the plant. Box shops are kept busy night and day making boxes to hold the explosives, the boxes being labeled within the plant. There are two construction offices and a general office maintained by the company at the plant. The whole plant is connected by telephone wires. If a guard encounters a suspicious person in the road near the plant, he at once notifies other guards of the presence of the person if the stranger elects to walk along the road the length of the plant. The guard system gives a very warlike appearance to the new plant. A state police and also patrols the highway along the plant daily, but does not interfere with some of the high-handed holdups made by the deputized guards.

In Ideal Location.

Emporium is an ideal situation for an extensive explosive plant for it is in the heart of the great chemical district in which is made acetate of lime, much of which goes into the manufacture of high explosives. Quite near at hand are some of the wood products factories in which acetate is made. Emporium was formerly a lumber center. The timber in its vicinity has now been almost all cut off and with the passing of lumbering the creation of the new explosive plant means a great business boom to the residents of the town. Since the town is a boom overturn with new employees and with men looking for work, the merchants have taken on new life. Emporium today being one of the busiest towns of its size in the United States. Its hotels are crowded to their limit, its boarding houses are overcrowded, and many men have been forced to go out into the country and put up at farmhouses in order to get the shelter necessary for their comfort.

The new plant presents a mile-long scene of great activity, such activity as Emporium never before knew. The employees are not close to each other as a general rule for in case of explosions, the company desires to save as many of its buildings as possible. The recent explosion at Nitramonian, big not far from Emporium, in which six men were blown to bits, drove terror into the hearts of the new workers at the Emporium plant. Some of the men left the plant in haste after the Nitramonian explosion. The company finds no difficulty at present in filling up its ranks of laborers, there being men on hand at Emporium who do not balk at the most hazardous or jobs. While there are men willing to risk their lives in their hands and join the working force at the plant, there are residents of Emporium who fear to drive past the new plant, thinking they may be caught in an explosion. Of course, the business men of the town are boosting hard for the new company which has been the means of trebling their business during the past few months.

Peaceful Little Valley.

It is a peaceful little valley in which the giant explosive plant is situated, a valley, however, which may be shaken by a tremendous explosion some day or night, any valley which harbors a guncotton factory. Pitched down as it is between mountains, the force of the possible explosion will be somewhat broken before it reaches the town of Emporium. Nevertheless, the Emporium folks, used to the presence of the dynamite factories near their town, do not feel as secure as they once did as the magnitude of the new plant has stirred their imaginations. That is why they are seeing aeroplanes hovering over the plant at night and looking for spies from Europe when strangers enter the town. It is necessary to make high explosives for armies under the present schems of civilization and it may as well be made at Emporium, Pa., as any other place in the United States, but the making of it there is being carried on in terror and mystery, which ill accords with modern civilization.

SPORTING KING OF EUROPE

DOGS NO MATCH FOR BUCK

Animal at Bay Proved Itself Master of Pack That Had Been Put on Track.

Animals of different species do not often fight one another because they cannot comprehend or guard against an attack different from that used to one of their own kind.

The predatory beasts in many cases overcome their prey, not because they are very much stronger, but because of the fear and confusion that their strange method of attack rouses in their quarry.

For example, of a dozen fighting hound chargers like a lion, and nearly every member of the deer tribe, including even the elk and moose, flies from him in panic, but when one of these animals turns the real power of the dog it is a different matter.

Hobart Ames kept a number of deer in a park at his winter home in Tennessee, and he had a buck with a fine set of horns. The buck came to have a great contempt and dislike for dogs, and any unfortunate dog that got into the deer enclosure did well to escape with his life.

The buck had learned that no dog could withstand the charge or the thrust of his horns, and running from them was the last thing in thought of. On the other hand, the dogs were greatly puzzled by an animal that kept to all rules to run away, but did not.

One night the big buck jumped out of his yard, and Mr. Ames' foreman put the dogs on the deer's track and found him in a thicket a quarter of a mile from the house. There was a fight, and then the deer were seen coming home at top speed, followed by the annoyed buck.

His hair was turned the wrong way and his eyes burned really as if he chased every dog he could overtake. Several of the hounds were badly hurt and all of them were scared.

They fled to their own quarters, and it required the combined efforts of the kennel men and stable boys to rescue the pack. Probably if a single member of the hounds had learned to beat a deer at bay his example would have been followed by his mates.—Youth's Companion.

Whale Cuts Submarine Connection.

A short time ago the cable connection was suddenly cut off between Skagway and Juneau, up in the Southeastern corner of Alaska, and for some time the trouble could not be located. At last the cablehip Burnside found what was wrong. In some inexplicable way a large whale had become entangled with the cable, and the divers from the cablehip found him with a bulldoid of the cable around his head and lower jaws. They removed the dead whale and re-established the connection by mending the break in the cable.—World's Advance.

Honey Shortage in Britain.

Even the bee feels the war. Germany has cheated honey for her number of American honey, but this year has taken only $100,000 worth. There is a honey shortage in England, however, and our bees may be happy yet. Takes an optimist, according to official reports coming to the department of commerce. American bees have behaved handsomely this year. They have made an unusually large crop, the average yield being 26.2 pounds for every colony, as compared with 22.2 pounds last year.

Our ordinary crop is 50,000,000 pounds, and it will be greater than that this year. Prices are down, however, because of the shifting market and heavy yield, and also because of a very much heavier crop in the West Indies, which is handle' here. This country has never sent much honey to England. Only $4,000 worth went there last year.
